The Co. was formed & commenced business in April, 1897, when it took over the management, but the railway & lighting business was purchased as a going concern as from Oct. 15, 1896. After discharging the liabilities & collecting the book debts, & the payment of working & special management expenses & of the $\frac{1}{2}$ years' interest, due April 15, 1897, on the debentures, the revenue for this interim period showed a surplus of £836. 10s 7d., which the directors transferred to reserve account. During the year the purchase of the business & property which the Co. was formed to acquire has been completed. Non-cumulative 6% income bonds, to the amount of £44,200, up to Mar. 31, & since to the amount of £56,100, have been issued at par, & the proceeds devoted to improvements. Little revenue, if any, was derived from these improvements until Dec., as the first works of any importance were only then completed, & by far the larger portion of the works, namely, the installation of water power at Victoria, was only completed in Sep. of this year. The future increase in revenue from this latter source is estimated by Mr. Campbell at \$44,365 a year.

Although the directors had before them reports of several experienced engineers employed by the Co.'s predecessors, strongly recommending the installation of water power in Victoria from the falls at Goldstream, as a means both of effecting large economies & of greatly increasing the amount of electrical power, they decided to have an independent report before proceeding to the very large expenditure involved, & asked F. Nicholls, of Toronto, President of the American Institute of Electrical Engineers, as to the most reliable engineer to employ for this special purpose. Mr. Nicholls recommended J. M. Campbell, whose services were secured, & he entirely confirmed the experts who had previously reported, & placed the additional profits to be derived from the installation as above. A careful examination of the various other water powers near Victoria showed them to be impracticable, & the lease from the Esquimaux Water Works Co. for the exclusive use for electrical purposes of their power at Goldstream, on which Mr. Campbell's estimate is based, was concluded for 40 years. The Co. has recently secured the permanent services of Mr. Campbell as Chief Engineer.

The custom of reading electric light meters at the end of each month made it inconvenient to close the books on April 14, when the Co. completed its first year, & Mar. 31 was adopted as a more convenient date. In consequence, in the period under review, only 11½ months are included. The net profits in B.C. for the 11½ months amount to \$97,692 @ 4.85 £20,142. 14s. 1d. From this the directors declared in Mar. last the full dividend of 6% on the income bonds; & after deducting the interest on the debentures, the expenses in London & fees of the trustees of the two issues, there remains £5,098. 13s. 5d. available for distribution. The directors do not recommend a dividend on the shares, but propose that £1,218. 8s. 6d. be applied to writing off 20% of the preliminary expenses, & £8. 15s. 9d. to writing off the small item for office furniture in London; that £3,663. 9s. 5d. be transferred to the reserve account, making that up to £4,500, & the balance of £207. 19s. 9d. be carried forward to next year.

The progress made in the year under review, & since Mar. 31, has been most encouraging, & is about equally distributed between the railway & lighting departments, & between the branches at Vancouver, Victoria & Westminster; it is also well spread over all periods of the year.

Following is a statement of earnings & expenses for the 11½ months from April 15, 1897, to Mar. 31, 1898:

Railway, Vancouver	\$12,281	
Westminster	6,000	
Victoria	73,888	\$187,274
Lighting, Vancouver	57,000	
Victoria	14,870	71,870
Total Earnings		\$259,144
Expenses		161,452
Net Profit		\$97,692

Percentage of expenses to gross earnings 68.01.

The directors are aware that the proportion of operating expenses is very high compared to many other similar companies, but this is due to abnormally large expenditure on maintenance account, owing to the Co's predecessors having allowed the rolling stock, road bed, &c., to get into a bad state of repair. In the period under review there is a steady improvement in this respect, which the directors hope will be still more accentuated this year. The following comparison with the statistics of some of the leading companies known on the London Market and carrying on the same business will be of interest:

	Receipts	Expenses	Profit	Percentage of working expenses to gross receipts
Montreal S. R. Co.	\$1,342,367	736,428	\$605,939	55.3
Ottawa Elec. Ry. Co.	224,501	151,402	72,999	67.6
Toronto Ry. Co.	1,077,012	573,891	503,121	48.8
London S. Ry. Co.	101,365	58,451	42,914	57.66
Twin City Rapid Transit Co. (Minneapolis & St. Paul)	2,009,120	1,068,550	940,570	53.18
B. C. Elec. Ry. Co.	136,441	97,757	38,684	68.1

The rolling stock has been put in excellent condition, all the cars having been thoroughly done up & where needed, the old type of truck replaced by modern trucks of the most approved pattern, and the motors renewed. The road bed & track on the Vancouver & Westminster branches are in excellent condition, & with a few small alterations, now nearing completion, the Co. will have an excellent permanent way throughout these two branches. With very slight exception the road is laid with 40-lb. rails, & where the old 25-lb. rails remain they are in such good condition that the management has not considered it wise to discard them; whenever they are worn out they will be replaced with heavier metal. On the Victoria branch the road was not in good condition & the rails are light, but as they & most of the ties will do good service for some years yet, the road has been brought into a temporarily efficient state, & a system of improvement has been entered upon by which the road bed & track will be entirely renewed over a period of a few years.

The Co's land grant & town lots have increased in value during the year, owing principally to the expansion of trade, which has been experienced in Victoria, Vancouver & Westminster. The population of these cities has largely increased. Building operations have been undertaken on a large scale to satisfy the new demands for business premises & residences, & consequently the unoccupied town lots have increased in value. Settlement along the line between Vancouver & Westminster has also increased; & the settlement of Central Park has sprung into a place of considerable size, yielding substantial traffic. Other stations on the railway at which there have been extremely few residents, & scarcely any business, are now developing.

The plant & machinery have been maintained in good condition during the year, but the increase in business will necessitate much rearrangement in Vancouver during the coming year. The improvements & extensions authorized to June 30 involve the expenditure of \$240,770, say £50,879, of which £24,095 4s. 3d. has been already charged to account at Mar. 31, 1898. The larger part of this is on account of the installation of water power at Victoria, & the re-organization of that branch in accordance with Mr. Campbell's recommendations, which absorbs approximately \$120,000. The double tracking of Government Street, re-arrangement of switches & other improvements were completed towards the end of Feb., but the branch was not worked by water power before Sept. The Oak Bay suburb of Victoria, hitherto unreached by the Co.'s lighting system, is being added to the area of its operations, & a large number of new subscribers has been secured.

On the Westminster branch new trolley wire & feeder copper has been added to increase the capacity of the leads, & the whole line has been put in excellent order, the old motors have been replaced by modern ones of approved pattern, & additional switches have been put in, greatly reducing working expenses, & enabling a more frequent train service as the increase in business justifies it. A considerable increase in the freight business, & in the sale of fire-wood obtained from the Co.'s lands, has been secured by the purchase of 2 additional special cars. A station has been built at Central Park. A long distance telephone has been erected between Vancouver & Westminster, & the intermediate stations.

In Vancouver an extension of the railway to Stanley Park, via Pender Street about 1½ miles, was completed in Nov., which enables the Co. to handle efficiently the large summer holiday traffic to the Park on Saturdays, Sundays & holidays. New engines & dynamos were purchased & installed towards the end of Mar., thus enabling the Co. to take fresh lighting business, which it would not otherwise have been able to cope with next winter.

Besides the installation of water in Victoria, the following improvements are now under construction:—In Vancouver a double track is being laid on the small portion of Hastings Street which remained with a single track, & also along Westminster Avenue. This will complete the double tracking of the whole of the main line in the business & more important residential sections of the city. The Co. is also extending its line through Powell Street, with a view of securing traffic from the east end of the town, & the important manufacturing, foundries & sugar refinery situated along that part of the water front.

During the present year, the directors propose to carry out the following improvements, which they are advised will prove remunerative:—The reconstruction of the Vancouver power-house is urgently needed, as it is now cramped with the new machinery recently placed in it, & is for other reasons at present unsatisfactory & uneconomical. Acting on the advice of the General Manager & Mr. Campbell, the directors propose to put up a suitable building in stone & brick, with all modern improvements, & to do away with the 2 existing power-houses on the Vancouver & Westminster lines, combining their machinery & driving both branches from one house. This will effect a considerable economy. It is also proposed to install a separate metallic circuit of large capacity for the purpose of supplying electrical power, for which there is a demand. The management estimate that the increase of business during the current year will justify the expenditure of from £6,000 to £8,000 in extending the lighting plant & mains, & a further £2,000 will be needed to thoroughly rearrange the lighting circuits in Vancouver on a more economical & scientific basis than that at present employed. The present circuits

were designed when the business was very much smaller, & are unable to cope economically with present requirements. The directors propose to build an extension from the Westminster city line to Sapperton, on the Fraser River, which has been petitioned for by the inhabitants, & which the General Manager recommends as a profitable investment, in view of the traffic created by the salmon canning industry. They also propose to extend the Vancouver line along Denman Street to the beach. This is a very short extension, but one, it is believed, which will produce considerable increase of traffic in the summer, when the beach is thronged by bathers. The approximate cost of the foregoing programme is estimated at £30,000, which the Directors propose to raise by the sale of shares, & in addition they propose to redeem the £56,000 of 6% income bonds by the same means. They therefore recommend the shareholders to increase the ordinary share capital by £100,000, & to authorize them to dispose of the shares as, & when they think it to be in the best interests of the Company to do so.

All the foregoing propositions made by the directors were adopted.

The authorized capital of the Co. when established was £250,000, of which £200,070 was subscribed. Up to Mar. 31 last the Co. had issued 4% 1st mortgage debentures amounting to £250,000 & non-cumulative 6% income bonds amounting to £56,100 being part of an authorized issue of £75,000.

The directors are: R. M. Horne-Payne, Chairman; F. S. Barnard, J. Horne-Payne, A. C. Mitchell-Innes, R. Northall-Laurie, G. P. Norton & R. K. Sperling. Mr. Barnard resides in Victoria, the other directors being in England. The head office is at 1 & 2 Great Winchester St., London, E.C.

The officials in Canada are: J. Buntzen, General Manager, Vancouver; J. M. Campbell, Chief Engineer, Victoria; E. H. Wilcock, Asst. Comptroller, Vancouver; A. T. Goward, Asst. Comptroller, Victoria; C. Aird, Supt. of Traffic, Vancouver; H. Gibson, Supt. of Traffic, Victoria.

Under date of Oct. 8 General Manager Buntzen wrote us that it had not then been definitely decided to build either the Sapperton branch or the Denman St. line in Vancouver.

In the directors report reference is made to the installation of water power at Victoria from the falls at Goldstream. About 16 miles from Victoria, the waters of the Sooke Mountains form a lake covering 150 acres, into which empties Goldstream River, which is tapped 3 miles from its source by an artificial lake or reservoir covering 7½ acres, 1,122 ft. above sea level. From this reservoir the water passes through a steel pipe, 33 in. in diameter, 6,700 ft. to the electric power house which is 460 ft. above sea level, thus giving a fall of 1,000 ft. from the main lake, through which 15,000,000 ft. of water pass every 24 hours, forming 1,500 h. p.

Maritime Province Lines.

Dartmouth, N.S.—A proposition has been made to the Minister of Railways to run the Dartmouth Branch of the I.C.R., by electricity. This branch extends from Windsor Jct. to Dartmouth, 13 miles.

St. John, N.B.—The Co. has spent about \$100,000 this year in enlarging & adding to the equipment of its Union St. power house, so as to concentrate there all the power for the railway & for electric lighting, & to abandon the Wentworth St. power house. The equipment of the Union St. power house now includes 12 engines from 250 to 600 h.p. each, & boilers rated 1,250 h.p. The new smoke stack is 175 ft. high. The Co. has added 5 open motors & 2 closed cars to its rolling stock this year. There have been no extensions of track.

Yarmouth, N.S.—It is said the Yarmouth Electric St. Ry. will be extended to Port Maitland next spring.

Ontario Lines.

Brantford.—At a recent meeting of the City Council the Clerk was instructed to notify the St. Ry. Co. that unless the terms of the charter were complied with steps would be taken to forfeit it. This was the result of complaints as to the service.

Galt, Preston & Hespeler.—J. W. Leonard, General Superintendent of the O. & Q. division of the C. P. R., has been elected a director of this Co.

The Hamilton, Grimsby & Beamsville has issued a pamphlet describing its line & the tributary districts. The reading matter is well prepared, but unfortunately it is printed with a pale ink. It is profusely illustrated & no doubt the original photographs from which the illustrations were made were very attractive, as there are some charming views along the line, but they have been spoiled in the lithographic reproduction. Our advice to the management is to suppress the balance of the edition, if it has not all been distributed, & to get out for next season an up-to-date pamphlet with first-class half-tone illustrations.

A deputation of farmers & fruit growers from Vineland and Louth Township recently waited on the H. G. & B. directors to urge an extension of the line from Beamsville to St. Catharines. The directors stated that the cost of building a line over the ravines, either on the stone road or the middle road, would be great, & they would not think of undertaking it without a substantial bonus from St. Catharines & also from Louth Township. It would also be necessary to get the Co.'s charter amended. J. Paterson, C. E., has since reported to the directors that 11 big ravines would have to be crossed between Beamsville & St. Catharines, which would cost over \$100,000. When Mr. Paterson's estimate for the whole work for the extension is before the board a decision will be come to. At present there is considerable doubt as to whether the work will be gone on with.

The Co. recently applied to Barton township council for permission to change its route by running a line along Main St. to Trolley Avenue. As the Hamilton St. Ry. Co. contemplates extending its line to Barton Hill, the Council agreed to pass a by-law to have the line used in common by the 2 companies, but this did not suit the H. G. & B. people.

The village of Grimsby is trying to get an injunction to prevent the H. G. & B. from obstructing Murray St. by leaving cars standing on the crossings.

Besides having increased its passenger traffic the Co. is doing a very heavy freight business this year. Fruit growing has developed marvellously along the line. Strawberry shipments commenced in June, & the season for other fruit shipments will extend to Christmas. The road has handled as many as 100 tons of grapes a day.

Hamilton Street.—The term extension by-law having gone into effect, it is said some improvement will be made in the system as soon as financial arrangements are completed.

Hamilton Radial.—It is said the line will be extended east to the Guelph Road, near Port Nelson.

London.—A board of county judges having confirmed the assessment of the Co.'s cars by the City, the Co. has taken the matter to the Court of Appeal.

Ottawa.—The crowds during the recent Central Canada Exhibition were so large that the Street Railway had difficulty in handling them, the equipment being insufficient. A number of open cars will be built during the winter.

Port Arthur.—W. Phillips, Manager of the Niagara Falls Park & River Ry. has been inspecting the Port Arthur & Fort William Electric Ry. on behalf of the Dominion Government.

St. Catharines & Niagara Central.—Haines Bros., of New York, who recently bought this line, have paid over \$3,529.91, being 10% of the purchase price under the judicial sale. As we mentioned last month their intention is said to be to electrify the road & make a number of improvements. An extension from St. Catharines to Beamsville, to connect with the Hamilton, Grimsby & Beamsville Electric Ry. is talked of. Haines Bros. have applied to the Council of Niagara Falls, Ont., for permission to extend the line from its present terminus on Bridge St. to the Mowat Gate. (July, pg. 118; Sep., pg. 179 & 193.)

Thamesville to Rondeau.—At a meeting at Ridgetown, Oct. 10, of which R. Ferguson, M.P.E., was Chairman, & W. E. Gundy, Secretary, it was decided to apply for a charter for an electric railway from Thamesville to Ridgetown, Morpeth & Rondeau as soon as the necessary funds were secured.

Toronto Ry.—The gross earnings of this Co. are as follows:—

	1898	1897	Increase.	Decrease
Jan.	\$80,562.36	\$71,545.55	\$12,016.81
Feb.	82,402.19	69,744.61	12,657.58
Mar.	92,818.12	78,891.45	13,926.67
April.	86,898.83	73,756.38	13,142.45
May.	92,670.35	82,461.51	10,208.84
June.	94,119.32	91,533.44	2,585.88
July.	104,302.92	105,381.64	\$1,078.72
Aug.	110,300.54	93,224.33	17,076.21
Sep.	138,021.74	113,672.44	24,349.30

On the September earnings the city received \$10,900.37 as percentage, compared with \$9,137.87 in Sep., '97, & \$8,522.36 in Sep., '96.

The Co. recently sued the Seimens & Halske Electric Co., of Chicago, for the recovery of \$20,326.27, amount paid for a large generator for its power house. The Co. got the machine in 1896, & found after using it a time that it was not up to the guarantee given, & cost a large amount to keep it in repair. The Co., therefore, concluded it was useless, & sought to recover the amount paid for it. No defence was offered, & the evidence of a couple of the Co.'s officials was sufficient to cause the Chancellor to give judgment for the full amount with costs. J. Bicknell appeared for the Co.

Province of Quebec.

Montreal Park & Island.—The sale of this line, advertised to take place Sep. 22 in the sheriff's office, did not come off. It was stopped by a large number of oppositions by parties having claims against the road. Oppositions were filed, among others, by W. B. Lambe, Collector of Provincial Revenue, J. Cousineau et fils, & the Maison St. Joseph, of Sault au Recollet, E. N. Senecal & others. The Court will have to pronounce on the value of these oppositions before the sale can take place.

At the recent annual meeting the old board was re-elected as follows: H. S. Holt, W. Strachan, A. Brunet, Hon. A. A. Thibadeau, J. R. Thibadeau, D. Morrice & Hon. L. Beaubien. The annual statement was read & adopted without discussion. It is said it was very satisfactory & showed increased earnings.

Montreal Street.—The gross earnings are as follows:—

	1897.	1898.	Increase.
Oct.	\$116,292.09	\$109,110.38	\$7,182.71
Nov.	110,029.60	103,578.37	6,451.23
Dec.	113,128.91	103,116.02	10,012.89
1898.			
Jan.	110,140.83	89,620.55	10,520.28
Feb.	102,073.16	86,311.08	15,762.08
Mar.	114,077.90	96,441.57	17,636.33
April.	103,801.16	91,111.33	12,689.83
May.	133,008.59	109,222.93	23,785.66
June.	123,164.61	130,076.78	2,487.83
July.	143,986.62	129,245.92	14,740.70

Aug.	143,891.09	131,431.77	12,459.42
Sep.	136,564.80	120,634.57	15,930.23

\$1,449,641.51 \$1,323,431.97 \$1,200,209.44
The Co. declared a dividend of 2½% for the quarter ended Sep. 30, payable on & after Nov. 2. The annual meeting will be held Nov. 2.

The question of the liability of the Co. for accidents indirectly attributable to the narrowness of the space between the double track & the sidewalk on both sides of Notre Dame Street, Maisonneuve, has been decided by Judge Loranger in a sense favorable to the Co. The action had been brought by the Dominion Transport Co., the complaint being that one of that Co.'s waggons, loaded with iron beams, was being driven along Notre Dame Street, destined for the asylum at Longue Pointe. The waggon was being driven on the tracks on the right side. A car came up behind, & the driver of the waggon, being unable to turn to the right of the track on account of the space being occupied by another vehicle, turned to the left track, leaving the way clear for the electric car. When that car came alongside, however, the wheel of the waggon—the driver continuing to drive to the left—caught in one of the tracks. One of the iron beams, sticking out behind, struck the electric car. The shock frightened the horses, & they bolted, one running against a post & receiving injuries which made it necessary to shoot him. The Transport Co. sued for the value of the horse; but the court exonerated the Street Ry. Co. No negligence had been proven against that Co. or its employees. The space between the tracks was at the disposal of the public, but it was only reasonable that vehicles should give way to street cars, the latter being handled with proper prudence.

The West India Electric Co. which is a Canadian Concern, the principal stockholder being Jas. Ross, of Montreal, expects to have about 22 miles of electric railway in operation at Kingston, Jamaica, by March next. Mr. Holgate is Manager & Chief Engineer, & F. P. Brothers is Manager of Construction.

SHIPPING MATTERS.

Iron Shipbuilding in the Maritime Provinces.

The Maritime Board of Trade is composed of delegates from the various Boards of Trade in New Brunswick, Nova Scotia & Prince Edward Island, 17 of these boards being represented on the Maritime Board by delegates. At a recent meeting at Truro, N.S., the question of iron shipbuilding in the Maritime Provinces was discussed. It was introduced by J. M. Carmichael of New Glasgow, N.S., who began by presenting the following figures to show the decline of shipping in the Maritime Provinces during the past 20 years. He selected for comparison 1878, when the shipbuilding industry had reached its zenith, & 1895, which was the last of which he had any official record. The figures were as follows:

	1878. Tons	1895. Tons	Loss. Tons
New Brunswick	335,965	122,417	213,548
Nova Scotia....	553,368	343,356	210,012
P. E. Island....	54,250	19,323	34,927
	943,583	485,096	458,487

The enormous decline in our mercantile marine revealed by this statement was, he said, surely calculated to arrest the attention of all interested in the development of the trade of these Provinces. Indeed, it was a marvel that this great industry had been permitted to go so far on the way to extinction, without some effort on the part of the press or the public men of the country to arrest its backward progress. The fact was that,

whereas, in days not long gone by, the ships built & owned in these Provinces not only monopolized the foreign trade from our own ports, but were also competitors for the carrying trade in all parts of the world; to-day most of our large ships had disappeared, & the tonnage remaining upon our registry books was made up largely of the small craft around our coast.

The reason of this alarming decline in our shipping was perfectly obvious. Iron & steel had superseded wood, & sailing ships had given place to steamers. But it was evidence of small enterprise on the part of Provincial shipowners that they allowed the march of progress in this direction to drive them out of a business in which they had been eminently successful, & for which the people of these Provinces were so well adapted. A few Provincial shipowners had not been content to abandon a business to which they had devoted their lives, & finding it impossible to get ships of iron built in this country they had gone to Great Britain for their tonnage. Had this practice been more generally adopted there would now be a constituency of shipowners of the larger class, which would warrant the erection of extensive plants capable of turning out ships of 4,000 or 5,000 tons capacity. This advantage we have lost, but inasmuch as there is evidently a growing disposition to purchase ships in the British market for the home & foreign trade, we may hope that in a few years the situation will be entirely changed so far as large tonnage is concerned. This is a practice that should be encouraged by those who desire to see steel ships of the largest class built in the Maritime Provinces. The more quickly our people get back into the carrying trade, no matter where they get their ships for the first few years, the more quickly will large ship-yards be established here.

In the meantime there is nothing to prevent the construction of a smaller class of steel vessels immediately. Indeed, such had already been built by the firm with which the speaker is connected, & the experience gained had demonstrated that vessels of moderate dimensions could be built in the Maritime Provinces at this hour as efficiently & as cheaply as anywhere else in the world. He had no doubt that vessels of any size could be built to compete with British builders whenever we had a demand for them sufficient to warrant the undertaking. But our duty at the moment in these Provinces was with the class that we were able to build to-day. Numbers of small vessels such as fishing vessels, tugs, ferry boats, barges & coasting craft were constantly being required. Owners were content with wooden hulls for such purposes whereas steel was a better material, & for equal efficiency, quite as cheap, if not cheaper. The chief thing to be done was to convince the owners of such craft to build their vessels of the better instead of the inferior material. There was also a large trade in the West Indies done by small steamers of from 1,000 to 1,500 tons capacity. This trade to-day was largely in the hands of the Norwegians & was a profitable business. There was no reason in the world why our people should not take it up & have their boats built in the Maritime Provinces.

It was a mistake to suppose that there was any great difficulty in building iron ships. It might be a formidable undertaking for some people, but not for Nova Scotians who had built ships for half a century. The very men who are best qualified to undertake the actual work are the ship carpenters who are accustomed to building wooden ships. Such men would find it easier to turn out a iron ship in a week, whereas the work of rivetting & fitting could be done by less skilled hands. In fact, we have the very men to carry out iron shipbuilding, & in every way they are superior to the old country workmen. Indeed, one of the chief advantages we possess is in

the safety & versatility of our workmen, & in the fact that we could get the very best men for wages considerably less than are being paid to platers, rivetters, &c., in the British yards, where it is not uncommon for men to earn 15s. to 25s. a day.

The question was often asked whether a very expensive plant was not required to build steel ships. Much, of course, depended upon the size & character of the ships to be built. For battle ships & fast Atlantic liners a very large & very expensive outfit was certainly wanted, but to build cargo vessels of 500 to 2,000 tons capacity, which was as much as was within our reach at the moment, a very modest plant was needed. Indeed, the plant of a shipbuilding yard is a very elastic thing, & the department in which we find ourselves weakest is the engine & boiler department. We can build bigger ships at this moment than we can machinery to run them.

There is no difficulty whatever about material. We can purchase our angles & plates either in Britain or the U.S., & lay them down in our yards practically at the same price as the Belfast shipbuilders buy theirs. It is a mistake to suppose that the steel is such a large factor in the cost of a ship. In a steel vessel of 180 tons register built by his firm he had made a calculation & found that the angles & plates cost less than 10% of the whole ship. It would be well if these materials could be manufactured at hand, but so far as the shipbuilder was concerned it was of little consequence where they were made, so long as he got them cheap enough. There was no trouble whatever about angles & plates. The other materials, such as forgings, castings, brassware, canvas, &c., gave him more concern, as there was a heavy import tax upon them. This import tax was the chief hindrance to the advancement of shipbuilding, & some means should be adopted by the Government to relieve the shipbuilder from such a handicap. There was not an ounce of protection given to ships built in the country. It was well known that ships built in Britain were admitted into Canada free of duty, consequently it was not asking any special advantage from the Government to ask them to make the materials composing ships at any rate as free as the ships themselves. When this matter was properly represented to the Government they would doubtless remedy this anomaly in the tariff. But the main thing required to advance shipbuilding interests in these Provinces was to restore the interest of the mercantile class in the shipping trade which had been the glory of these Provinces in past years. When the people became aroused to the loss we had sustained by our apathy towards this great business we would see scores of ship yards established in these Provinces.

In conclusion Mr. Carmichael moved: "This Board recognizes that the business of wooden ship-building, which, 20 years ago, was a flourishing industry in the Maritime Provinces, has become practically extinct. It is of opinion that no insuperable obstacle to the construction of steel shipbuilding exists, but on the contrary it is a business peculiarly suited to the genius of our people. The Board, therefore, urges the importance of this matter upon the attention of all persons interested in the development of the resources of the Provinces, & that the Government be requested to remove any hindrances now in the way of the prosecution of iron shipbuilding in the Maritime Provinces."

GEO. ROBERTSON, St. John, N.B., seconded the resolution. He recognized that the men who had engaged in wooden shipbuilding were well-adapted for iron shipbuilding. He believed there was as cheap labor here as on the Clyde. He referred to the growth of Belfast as due largely to her iron shipbuilding industry, & he thought the Government might do for the iron & steel shipbuilding industry what it is at present doing for other industries.

If anything in the tariff was an obstacle, they should ask the Government to ameliorate that condition.

HARVEY GRAHAM, New Glasgow, N.S., followed, emphasizing the fact that steel shipbuilding cannot be successfully carried on in Nova Scotia till all the material is made in this country, & it cannot be made without a protective duty. That is where we are, but there is a way out of it. Let there be a bonus to the shipbuilder, as there is a bonus to the butter maker or others who have such an inducement to develop business. The great difficulty is not in putting the materials together, but in the engineering department for the manufacture of articles required. He showed how greatly beneficial to the country would be the establishment of such an industry as steel shipbuilding to Nova Scotia.

G. J. TROOP, Halifax, thought this iron shipbuilding must be overcome by individual enterprise—all agreed that it would be a grand boon for the country. The difficulty of cost of construction must be overcome. To make a complete success of iron shipbuilding in the Maritime Provinces, the firm which starts the enterprise must be able to build as cheaply as firms in Scotland build. Parties who want iron ships built will go where they can get them constructed the cheapest. He was in favor of starting this enterprise, but to be practical, it must be shown how cheaply, comparatively, iron ships can be built in these Provinces. If the Government is in any way hampering this industry, the Board should try to have the obstacles removed.

The resolution was unanimously adopted.

In this connection it will be of interest to reproduce the remarks of Ex-Mayor Geo. Robertson, of St. John, N.B., on this subject in a report he recently presented to the city council there on a visit he paid to England this year in connection with matters relating to that port. He said:—"A word or two with respect to iron shipbuilding. After having been shown through one of the noted yards on the Clyde, & having seen the scientific skill, the machinery capable of doing almost every part of the work, the vast army of mechanics & skilled artisans employed building vessels for the British navy, for the navies of the world, you may say, & for the mercantile fleets of the world, why should not the citizens of St. John give serious thought to the possibility of her citizens taking up this great industry & prosecuting it with success? It is along the line of the past history of our city & the genius of our people. We have the coal & the iron & the need for ships (the ever-increasing ocean commerce of the world can only be carried by iron steamships now & in the future). It is not a mere day dream, it is not an impossibility, it is not something that we cannot hope to attain because we have neither the material, resources or the name; but it is well within the legitimate hope & aspirations of our people, & it only requires a beginning—a beginning made by determined men, men of enterprise & pluck, to make iron shipbuilding in the port of St. John a success, & doubtless the results in time, aye, maybe in a very short time, would not be less than the results that have already accrued on the Clyde & in Belfast & at other great centres of the iron shipbuilding industry in Great Britain."

At a recent meeting of the Maritime Electrical Association at Halifax, F. A. Hamilton read a paper on electric gong buoys, audible vs. visual signals. The idea formulated was briefly as follows: To connect by means of a submarine cable a system of buoys fitted with powerful electric gongs. The buoys to be placed in the offing in such position that vessels could, without risk, run to leeward of them & consequently come within range of the gong signals.

The Baltic Insurance Case.

On Jan. 2, 1897, the Great Northern Transit Co., of Collingwood, commenced action in the High Court of Justice for Ontario against the companies mentioned below, claiming payment for loss by fire to the S. S. Baltic which was covered by fire policies in each of the companies, and which was destroyed by fire Sep. 5, 1896, while lying at the town dock in Collingwood harbor. The Insurance was as follows: Commercial Union, \$2,500; Alliance, \$2,500; London Assurance, \$2,500; Atlas, \$1,000; Waterloo Mutual, \$1,500; National of Ireland, \$1,500; Keystone, \$2,000.

Each of the policies contained the following description printed on a small slip attached to the body of the policy:—"On the hull of the S. S. Baltic, including engines, boilers, etc., etc., on board said steamer whilst running on the inland lakes, rivers & canals, during the season of navigation. To be laid up in a place of safety during winter months from any extra hazardous building. Ordinary outfit to be allowed in winter & spring."

The Baltic, at the time the insurances were effected, was laid up at the town wharf in Collingwood, & had not been in commission since the close of 1893, i.e. during the currency of any of the policies. The insurance companies claimed that they were not aware of the fact that the steamer was not in commission. The insurance was effected through a broker, & no applications were made to the companies. The case was tried before Chief Justice Armour with a jury, at Toronto, Sep. 23 & 24, 1897. The only questions submitted to the jury were as to the value of the boat & of the salvage. The defendants moved for a nonsuit on the ground that the policies never attached, owing to the fact that the Baltic was not in commission & did not therefore come within the definition of the risk "whilst running," &c., contained in the policies. The Chief Justice, however, directed judgment to be entered for the plaintiff, holding that the word "inland" was the emphatic word, & that the proper meaning to be given to the whole clause was that it distinguished inland from ocean insurance.

The cases were carried by the defendants to the Court of Appeal, which gave judgment Oct. 4, instant. The court of 4 judges was evenly divided & the judgment of Chief Justice Armour therefore stands, the appeal being dismissed with costs. Burton, C. J. O., & Osler, J. A., agreed with the contention of the defendants & held that the words "whilst running" mean "in commission" & that they form part of the definition of the risk & form a condition precedent, so that they were of opinion that in this case the policies had never attached. MacLennan & Moss, J. J. A., held that the policies were time policies in force for one year & that as it was obvious & admitted by the defendants that a strictly literal meaning could not be given to the words "whilst running" that they should not be held to form part of the definition of the risk in the manner laid down by the two other judges. They held further that if the words "whilst running" must be considered to constitute a condition, that such a condition must be held to be void as not being indicated on the policy as an addition or variation to the statutory conditions in the manner required by the Ontario Insurance Act R. S. O., 1897, cap. 203.

The amount involved in each individual case is not sufficient to entitle the defendants to go direct to the Privy Council, but it is apparently probable that they will carry an appeal to the Supreme Court of Canada. McCarthy, Osler, Hoskin & Creelman acted for the Great Northern Transit Co., & Beatty & Co. represented the insurance companies.

The Port Stanley-Conneaut Ferry.

The illustrations on this & pg. 221 give 2 views of the car ferry Shenango No. 1, which is being run between Port Stanley, Ont., & Conneaut, Ohio, in connection with the Lake Erie & Detroit River Ry. The ferry formerly ran between Port Dover, Ont., & Conneaut, connecting at the former point with the G.T.R. To accommodate the ferry the L. E. & D. R. Co. has built docks at Port Stanley, costing about \$45,000, the approaches costing about \$10,000 more. The main object is to get a good connecting link between the coal & iron regions of Ohio & Pittsburg respectively, & the west, by means of the ferry & the Port Stanley Ry. to London. During the past 2 years the Co. has handled a large quantity of coal & iron for London by the lake route, but the greatest drawback, especially in the coal trade, was experienced in the trouble of having to transfer it from schooners to cars, entailing considerable expense & loss of time.

The Shenango No. 1 is a large vessel, costing \$150,000, & has a capacity of 26 cars,

The Atlantic Steamship Service.

At a meeting of the Dominion Cabinet, Oct. 12, a contract for the winter Atlantic mail service was awarded jointly to the Allan & Dominion lines for 6 months up to May 1, 1899. The service will be a weekly one from St. John, N.B., to Liverpool, calling at Halifax both ways. The Allan steamers used will be Parisian, Numidian & Californian, & the Dominion steamers will be the Labrador, Vancouver & Scotsman. The subsidy is £500 a trip. Tenders are now being invited for a 2 years contract from May 1, 1899, & it is said that when that is disposed of negotiations will be commenced for a fast service.

Henry Norman, the English press correspondent, proposes an International fast Atlantic line. Great Britain & Canada & the U.S., ought, he thinks, to join in establishing a really first-class service. The U.S. is paying pretty dearly for a fast service of its own which sails from New York, and it is not, after all, the fastest service. The contract, which carries a subsidy of about \$1,250,000 annually, has

John's, Nfld., to which the southern fogs reach, & that in this clear zone Green Bay & its sea route to Galway is. It is said that a Turbinia steamship, making all allowances for delays, would do the sea voyage between the two ports well inside of 3 days. The London Spectator, which has always been a stout advocate of the railway tunnel project between Scotland & Ireland, sees in this fast Atlantic service proposal a strong argument in favor of the immediate carrying out of its favorite work, which it believes would unite the interests of Ireland & Great Britain as nothing else has been able to do. From Green Bay, in Newfoundland, a short branch line would connect with the Newfoundland & Western Railway to Port au Basque, giving an almost direct route to Sydney, & by way of the Intercolonial & connecting lines to Boston & New York, & a short route via the C.P.R. main line from St. John, N.B., to Montreal & Canadian points.

In this connection it may be mentioned that 2 boats, now in process of construction at Wallsend-on-Tyne, are exciting the liveliest interest in naval circles, not only in England,

THE PORT STANLEY-CONNEAUT CAR FERRY SHENANGO NO. 1.

having 4 tracks, the 2 centre tracks holding 7 cars each, & the two outside ones 6 cars each. In addition to this she can carry 1,200 excursionists on her upper deck, & is fitted with staterooms for regular passenger business. She is propelled by twin screws, steered by steam, & lit by electricity, & is owned by the U.S. & Ontario Steam Navigation Co., of Conneaut.

The distance from Conneaut to Port Stanley is 58 miles; Port Stanley to St. Thomas 9 miles; & Port Stanley to London 24 miles. By this new route Western Ontario is practically placed in direct connection with Pittsburg & the central states, from which a large amount of business comes into Canada. The L. E. & D. R.'s direct connection at Conneaut is the Pittsburg, Bessemer & Lake Erie Ry. (largely owned by the Carnegie Co.), which works direct with the Baltimore & Ohio, the Pennsylvania & other railways running out of Pittsburg.

The schooner Delphine was seized at Port Gilbert, N.S., recently, with over \$2,000 worth of smuggled spirits on board.

yet a considerable period to run, & they are not likely to do anything more until they see how their present project develops. The U.S. people are very friendly towards the British people at present, but they have not ceased to be exceedingly anxious to look after number one in all matters of international trade, commerce & industry, & a proposition to support a fast passenger steamship service between Canada & Great Britain would strike the average United Stateser as out of the question, no matter how clearly it might be proved that such a line would best & most cheaply serve the U.S.

The newest thing in fast Atlantic steamship service projects, is, says the Montreal Witness, the Newfoundland and Ireland one. The idea is to secure vessels of the Turbinia type, which will steam between 30 & 40 knots an hour, & place them on the route between a port in Galway & Green Bay, on the north-east coast of Newfoundland. There would be on this route an almost clear, uninterrupted course of open sea navigation. It appears there is a zone which is seldom foggy, between a point south of Belle Isle, down to which the northern fogs come, & a point north of St.

but on the European continent generally. They are to be fitted with the new system of turbine propulsion, which proved so brilliant a success on the Turbinia. They are both much larger than the pioneer vessel, & both are guaranteed by the builders' contract to attain a minimum speed of 35 knots. It is hoped that they may reach 50. One of them is for the British admiralty, while the ownership of the other is uncertain.

A London, Eng., cable of Oct. 10 says three 17 knot steamships have been purchased for the Canadian line between Milford Haven & Pasbebiac, Que., the first sailing in Nov., & that satisfactory arrangements have been made for a special service of trains between London & Milford Haven.

The Ontario Court of Appeal has recently held, reversing the Court below, that while under the Merchants Shipping Act unregistered equitable interests can be enforced as between the parties immediately affected, a purchaser from the registered owner takes a title free from unregistered equitable interests even though he has notice of them.

Notices to Mariners.

The Dominion Department of Marine has issued the following notices since Sep. 1.

No. 51, Sep. 5.—British Columbia. 1. Rocks in Temple channel. 2. Denny Rock reported not dangerous. 3. Position of Mouse Rock. 4. Perrin anchorage. 5. Lighthouses in course of erection.

No. 52, Sep. 9.—Nova Scotia. 1. Pease's Island fairway bell buoy. 2. Lockeport fairway bell buoy.

No. 53, Sep. 12.—Nova Scotia. Buoy on Chester Rock.

No. 54, Sep. 10.—Ontario. Improvements in the entrance to Parry Sound. 1. Old, or north, channel adopted. 2. Gas buoy on Hooper Island Shoal. 3. Gas buoy on Spruce Island Shoal. 4. Gas buoy on Seguin Break. 5. Probable improvement of buoy on Knight Shoal. 6. Removal of lighthouse from Hugh rock to Carling rock, & establishment of lighthouse on Cousin Island. 7. Proposed buoys off Carling rock & on Davy rock. 8. Discontinuance of temporary range lights marking south channel. 9. Lighthouse on Depot Island. 10. Sailing directions.

No. 55, Sep. 16.—Prince Edward Island. Annandale range lights, wharf light, day beacon & sailing directions.

No. 56, Sep. 19.—Ontario. Range lights at Baymouth.

No. 57, Sep. 28.—Nova Scotia. Buoy on Gull Ledge.

No. 58, Sep. 29.—British Columbia. 1. Lighthouse on Cape Mudge. 2. Heights of Yellow Island range lights.

No. 59, Oct. 8.—Newfoundland. 1. Harbor light & buoy in Port-au-Basques. 2. Shoals between Cape Pine & Cape Race. 3. Cleopatra rock expunged from charts. 4. Telephone cable across St. Pierre roadstead.

No. 60, Oct. 8.—New Brunswick. New buoy entering Dalhousie Harbor.

No. 61, Oct. 10.—British Columbia. 1. Rock in Queen Charlotte channel. 2. Hydrographic notes, Active Pass.

No. 62, Oct. 11.—Nova Scotia. Improvement in light on Freestone Islet.

UNITED STATES MARINE NOTICES.

The Notice to Mariners for the Great Lakes, issued by the U. S. Hydrographic Office Sep. 15, contains the following among others:—

144. Lake Superior, Superior Bay, Duluth Harbor. Raising of dredge no. 4.

145. Lake Superior, St. Louis Bay, East & west ranges. Change in character of lights.

146. St. Mary's River, Middle Neebish cut. Government tug in attendance. Signals.

151. St. Clair River, Woodtick Island. Marine city shoal buoy established.

152. St. Clair River, Woodtick Island. Establishment of spar buoy.

153. Detroit River, Limekiln crossing dredged channel. Temporary substitution of lantern on float for lightvessel (south) no. 64.

Transfer of Lake Shipping.

The following from Seaboard, a New York marine publication, will be read with interest: "If the Canadian canals will accommodate vessels 270 ft. long, 45 ft. wide, & 14 ft. draught, next year, one of the most remarkable exoduses of vessels ever witnessed may follow. It is said that there are as many as 100 modern steamships on the Great Lakes, within the dimensions named above, capable of carrying cargoes of 3,000 tons on the coast or ocean, which are unprofitable to their present owners in competition with the more modern lake carriers, which carry cargoes of 6,000 & 7,000 tons on a draught of 16 & 17 ft. The latest of the lake carriers are the only ones that are able to earn profits in the lake trade. It is only in about 2, or at the most 3 months in the year

that the smaller carriers—those capable of carrying not to exceed 3,000 tons on the lakes—are able to earn anything, & their earnings during that short period do not permit them to pay dividends on their cost & repair expenditures.

"In our coastwise, our Central & South American & our West Indian trade, vessels of just the cargo-carrying capacity of these lake vessels are now engaged. It is unlikely that the lakers could successfully compete in the coastwise trade, for the reason that vessels better adapted to that trade, capable of making better speed, are now engaged therein. But in the other trade, the trade with the West Indian Islands, Central & South America, where British & Scandinavian ships now do the bulk of the carrying, our 3,000-ton lake carriers ought to be able to supersede them. There is no doubt that they would soon drive foreign ships out of our entire carrying with the islands & countries of this hemisphere, if Congress would give a preference to U. S. vessels in competition with foreign vessels in that trade. The lake vessel interests are very strong & powerful. The Lake Carriers' Association is one of the most successful, because the most influential, association of vessel owners ever organized in the U. S. A majority of its membership is made of men holding interests in lake vessels that are now unprofitable, living in all of the states bordering on the Great Lakes.

"The opening of Canada's canals to the safe passage of these at present unprofitable ships, would probably have the effect of relieving the Great Lakes of a class of vessels that have been superseded by larger carriers that could not pass through those canals. That there would be a rapid exodus of them if Congress would pass a bill extending a preference to U. S. ships engaged in the carrying of U. S. imports & exports, goes without saying, because there would be a profit to attract them from a trade in which profits have long since vanished. It would have the effect, too, of making the lake marine trade more profitable, because it would permit vessel owners to exact a living rate, instead of a losing one.

"If the trade between Cuba & Porto Rico is confined to U. S. vessels, & the coastwise trade of those islands also so confined, this legislation alone would provide a market for more than half of the lake vessels that are capable of much usefulness on the ocean, but which are unprofitable on the lakes. Sea board, therefore, urgently invites the attention of the Lake Carriers' Association to the possibilities of a profitable market for their at present unprofitable ships in the West Indian, Central & South American trade, under reasonable & necessary protective legislation by Congress—legislation that has been solemnly promised by the party which is in the majority in Congress & which is in full accord with the administration.

"It would be a most remarkable & gratifying result of the opening of Canada's canals to the passage of vessels 270 ft. in length next year, as is promised, if such a great boon were conferred upon the present owners of unprofitable modern lake carriers as we have suggested, & which, the more we contemplate it, seems attainable, if the powerful & influential association of lake vessel owners, of which Senator Hanna is a member, would exert itself to secure the passage of such long-promised & much-needed legislation as would provide profitable employment for U. S. ships in its foreign trade.

"Evidently the opportunity for rehabilitating U. S. shipping in a portion of our foreign trade is to be afforded through the enterprise of our Canadian friends in conjunction with a wise exertion of the potential influence of the Lake Carriers' Association. This would be a case, indeed, where the British have 'builted better than they knew.'"

Early in October a deal was effected whereby the Atlantic Transportation Co., of New York, secured the transfer from the Great Lakes to the Atlantic coast of 4 steamers & 39 barges, with an aggregate carrying capacity of 69,500 tons & an insurance valuation of \$1,184,500. The Marine Review publishes a list of the craft, showing that the steamers capacity in net tons runs from 1,700 to 2,500 & the barges from 1,000 to 2,500. All of the vessels are on their way by the St. Lawrence route, it being the intention at the time of writing to have them in Montreal by Oct. 15, though it was doubted if this would be accomplished.

Shipping & ship building interests on the Atlantic coast, which were at the outset decidedly apathetic regarding the effect of this accession of tonnage, have, says the Review, in some degree been aroused, now that its actual consummation has been recorded. Schooner owners & agents on the coast express the fear that the transfer of this large number of barges from the lakes will ruin the schooner business, & in justification of their opinion point to the number of coastwise vessels which have been laid up on account of freight rates.

Vessel men on the lakes, have, in some instances, been surprised by the statement that the older wooden vessels, such as have been chartered, although in some cases unable to secure insurance of any kind on the lakes, would have no difficulty on that score on the Atlantic coast. That such is the case is due to the route on which the vessels will be placed. From Newport News, the terminal, to Delaware breakwater is only 110 miles, & from Delaware breakwater to New York is only 125 miles. Above New York the vessels can, for a considerable portion of the distance, make use of the "inside" route, passing between Long Island & the mainland. It will thus be seen that the course is a remarkably safe one, whereas these vessels, when engaged in lake trade, would be obliged to make runs very much longer & decidedly more hazardous. In almost all cases the captains who have been on the vessels will be retained. Most of them are quite as pleased with the prospect of winter work as is the owner with the opportunity to draw checks for the use of his vessel during the months when, had she remained on the lakes, she would have been laid up.

Maritime Province Shipping Companies.

Dominion Letters Patent have been issued incorporating J. T. Hamilton, H. McC. Hart, G. Musgrave, C. W. Outhit, R. T. Braine, T. Dixon, W. J. Butler, F. J. Phelan, L. Hart, W. N. Wickwire & J. A. Johnson, of Halifax, as the Briardene Steamship Co., with a capital of \$60,000.

Notices of application for incorporation under The Companies' Act (Dominion) are given as follows:—

The Ship Harvest Queen Co., headquarters Wolfville, N.S., capital \$25,600. Incorporators, C. R. Burgess, Wolfville; N. V. & M. Munro, Bridgetown; A. E. Forsyth, Windsor; T. E. Blagden, Halifax; & J. A. McBride, of New York City. Directors, C. F. Burgess, N. V. Munro & A. E. Forsyth.

The Barquentine Skoda Co., headquarters Wolfville, N.S., capital \$16,000. Incorporators, C. R., R. E., & A. B. Burgess, Wolfville; R. Lee, Aylesford; C. E. Dixon, London, Eng. Directors, C. R. & R. E. Burgess, R. Lee.

The Ship Kambria Co., headquarters Wolfville, N.S., capital \$28,800. Incorporators, C. R. Burgess, J. F. Tufts, G. W. Borden, W. H. Chase, Wolfville; J. J. Brownell, Baie Verte, N.B.; W. Y. Fullerton, Port Williams; C. E. Dixon, London, Eng. Directors, C. R. Burgess, W. H. Chase, J. F. Tufts.

The Ship Kings County Co., headquarters Wolfville, N. S., capital \$32,000. Incorporators,

tors, C. R. Burgess, J. F. Tufts, G. W. Borden, Wolfville; N. V. & M. Munro, J. W. Salter, Bridgetown; C. E. Dixon, London, Eng. Directors, C. R. Burgess, J. F. Tufts, G. W. Borden.

The Barque Conductor Co., headquarters Wolfville, N. S., capital \$19,200. Incorporators, C. R., R. E., & A. B. Burgess, Wolfville; J. C. Lombard, Kingsport; C. E. Dixon, London, Eng. Directors, C. R. & R. E. Burgess, J. C. Lombard.

The Ship Canada Co., headquarters, Wolfville, N. S., capital \$32,000. Incorporators, C. R. Burgess, Wolfville; N. V. Munro, Bridgetown, T. E. Blagden, Halifax; J. A. McBride, New York City; C. E. Dixon, London, Eng. Directors, C. R. Burgess, N. V. Munro, J. A. McBride.

New Winter Steamer for P.E.I.

The Minister of Marine has awarded to Gourlay Bros. & Co. of Dundee, Scotland, a contract for a steamship to take the place of the Stanley on the winter run between Prince Edward Island & Pictou, N.S. The price is £36,050. The specifications call for a single-screw steamer. Length between perpendiculars, 225 ft.; breadth moulded, 32½ ft.; depth moulded amidships, 20½ ft. The engines are to be of not less than 2,900 h.p. As copious extracts from the original specifications were given in our July issue, pg. 131, we will merely refer to some of the most important changes which have since been made. The extreme draft aft is not to exceed 14½ ft. with all equipments on board, steam up, & 50 tons of coal in the bunkers.

To have a straight stem, forged of the best selected scrap iron, or cast steel with 5% nickel if preferred.

Cellular double bottom not to be made 6 ins. deeper than usual to give better room for cleaning, as originally provided.

Platforms to be provided for four 6-lb. quick firing guns, 2 forward & 1 on each quarter, instead of 2 only. Magazine to be provided 12 x 6 ft., zinc or copper-lined & fitted with sea cock for flooding.

Officer's bridge to be strongly built of steel angles, instead of galvanized angles.

Donkey boiler to be fitted in to stoke hole 5½ ft. diameter by 11 ft. high, 90 lbs. working pressure.

The vessel, when completed & finished, with steam up, 50 tons dead weight, coal & cargo on board, not to exceed in draught 14½ ft. The vessel to be tried at or near Dundee, & over a series of 4 consecutive runs, to ascertain the results as per contract, & that the requirements thereof have been complied with in all respects to the satisfaction of the Minister or his representative. The vessel to be finished in every respect ready for sea, & delivered with compasses adjusted, at Dundee Aug. 31, 1899.

Engines to be not less than 2900 h.p., H. P. cylinder 26 ins. diam., I. P. 41 ins., L. P. 65 ins., stroke 39 ins. Pistons extra deep to dispense with tail rods.

Crank shaft of Siemens-Martin steel, of sufficient increased size, not less than 20% over Lloyd's requirements to give the required strength.

The propeller to be of approved diameter, pitch & surface.

Boilers to be of such dimensions as to supply a constant full pressure of steam of 170 lbs. a sq. in. when the engine is working under the full pressure stipulated of 2900 h.p. Boilers to be fitted with forced draft on the closed stokehold principle, having 2 fans, & capable of working under natural draft at less power when required. The boilers to be designed to obtain the stipulated results with the forced draft.

The Minister has not yet decided on a name, but it is said to be probable the vessel will be called the Minto, after the incoming Governor General.

Mr. Tarte on Transportation.

Speaking in Montreal recently, the Minister of Public Works, Mr. Tarte, dwelt at length upon the question of transportation. The deepening of the canals to 14 ft., which he hoped would be accomplished by the opening of next season, would bring the grain fleets from Duluth & the west to Montreal. The

fast line service is not a sinecure, & experience shows that we must at least make efforts without delay to have a line, a business line, if I may so style it, in the sense of which I have spoken. I think this whole question of transportation is the question of the hour. But, you say, money will be needed. No doubt; but the people of this country are a thrifty people. They are also a people of progress & of enterprise. Other people spend money on their harbors. In Boston they are about to add \$20,000,000 to \$50,000,000 already expended. There have been only \$3,000,000 spent on the Montreal harbor as yet. If we want to contend advantageously with our competitors we must have the means."

Freight on the Great Lakes.

The season of navigation on the Great Lakes is, says the Marine Review, of Cleveland, Ohio, of Oct. 8, closing to the entire satisfaction of the vessel interests. The volume of business will again be largely in excess of previous years, & conditions attending the closing months of the season are such as prompt activity in the shipyards, not only in repairs, but also in new ships. The Atlantic Transportation Company, of New York, takes 43 ships (39 barges & 4 steamers) from the lakes to engage in the coal trade on the Atlantic coast. The combined capacity of these vessels is 69,500 net tons. They are all vessels of the past in the matter of earnings when compared with the modern steel ship, but they were nevertheless a factor in lake freights. A conservative estimate as to their capacity for a full season is 1,251,000 net tons of freight. This is based on 18 cargoes in a season for each of the vessels, & that number of cargoes is undoubtedly low when the steamers are taken into account, & when it is understood also that several of the barges—those of the Mack-Becker fleet, for instance—were so engaged that they would carry nearly double that number of cargoes in a season. The loss of these vessels will be felt especially in the coal trade at the so-called out-of-the-

REAR VIEW CAR FERRY SHENANGO, NO. 1.

Parry Sound Ry. was another great avenue of trade to which he had frequently drawn attention. The fight over the improvements to the harbor of Montreal was over, & the completion of those works assured, but more was needed. The channel between Montreal & Three Rivers must be deepened, & the system of buoys, lighthouses & pilotage must be improved. "When we have equipped, as I have told you," said Mr. Tarte, "our railways, our canals & our river route, we will want ships, & the C.P.R. will be obliged, if it wishes to keep its place, to fit up fleets of steamers on the lakes to transport to Montreal the grain received at Fort William. But we will also have to equip the fleets of steamers that will come to Quebec & Montreal in summer, & to St. John & Halifax in winter. I am not quite free to tell my whole mind, but there is one thing at least I may express, the desire to see ships arrive in Montreal like the steamer Canada. Do you not believe, if we had ships at 17 to 19 knots, with passenger accommodation & freight capacity, we should be sure to have an immense current of passenger & freight traffic? The establishment of the

way ports, & in the ore trade at places like Tonawanda, at all of which ports modern dock machinery must be provided to care for vessels of a larger class that will take the place of those leaving the lakes.

The advancing of freight rates, due mainly to a large grain crop, has more than equalled the expectation of vessel owners. The C.P.R. has taken care of all vessels offered for nearly a month past at grain rates based on 1¼c. for corn to Buffalo, & on the northwestern wheat crop, moving through Duluth, a rate of 2¼c. to Buffalo has been well maintained. Contracts covering 2,000,000 bush. of Duluth & Fort William grain, to be moved to Buffalo during the first half of Nov., were made in Duluth a few days ago at a 2½c. rate. It was said that 1,000,000 bush. of this grain was taken by the Bessemer Steamship Co. (Rockefeller fleet), and its management said that it would say nothing on the subject when inquiry was made regarding the transaction. Sep. ore shipments were about 200,000 tons short of shipments in Sep. of last year, & it is now expected that the supply of ore will be grossly deficient for a long time.

time ago, will not be reached. A general shortage of mining labor in the Lake Superior region & high grain freights are the causes of restriction in ore. The output will probably not exceed 13,500,000 tons. There is satisfaction in the shortage to both ore & vessel operators, however, as it means reduced stock prices on Lake Erie docks next May. Rates on ore up to this time have been held down to 75c. from the head of Lake Superior, 60 to 65c. from Marquette & 55 to 60c. from Escanaba, but at these figures, which are lower than the grain rates, the ore shippers have secured only a small part of their share of vessel capacity during the past 10 days. It is more than probable that quite a little chartering could be done from the head of the lakes at 80c. if vessels were to be had at that figure.

Yukon Navigation Matters.

The 2 sternwheel steamers, Dalton & Walsh, built at Port Blakeley, Wash., for the C.P.R., for the Stikine trade, but which did not go into commission owing to the slump in Yukon traffic, are to be wintered in the fresh water of the Fraser River, opposite New Westminster, where another C.P.R. steamer has been moored for some time. The Dalton is a passenger boat with accommodation for 200, & the Walsh was built to carry 300 tons of freight.

In our Sept. issue we mentioned that the Canadian Development Co. was running the steamer Anglian between Teslin Lake & Fort Selkirk. She made 1 trip from Teslin Lake to Dawson & 2 trips from Dawson to White Horse, & was returning to Teslin late in the season but could not ascend the Hootalinqua & had to turn back. On the way down she struck a rock & was beached at the mouth of the Hootalinqua. Capt. Foster, of Victoria, who took the steamer Canadian to Dawson, was sent to the Hootalinqua to attempt to float the Anglian, & to get her to Fort Selkirk for winter quarters.

A despatch to the Globe, dated Teslin Lake, Sep. 8, said:—"The last detachment of the Yukon force & supplies reached Teslin Aug. 24. The steamer Anglia, due by contract Aug. 25, not having returned, the remainder of the force, numbering about 140, with the officers & 3 Victorian Order nurses, left Teslin for Selkirk, a distance of 400 miles, in scows & small boats. Four large scows, with about 13 tons of freight, & 5 small boats constituted the fleet. The scows when loaded with supplies drew about 18 in. of water, & were navigated with sails & oars. Capt. Thacker, in a small boat, went half a mile in advance, seeking a channel; Major Young came 2nd, & was in signal communication with the 1st boat. There was a space of 100 yards between each scow, each being in charge of an officer & carrying about 30 men. The procession was considerably over a mile in length. It is expected an average of 25 miles per day will be made, & that a camp will be made on shore each night. Selkirk is expected to be reached in about 15 days. The down-river current on the Hootalinqua is 4 miles an hour."

Another dispatch, dated Dawson, Sep. 16, said:—"The scow fleet, carrying the main body of the Yukon force & supplies, have reached Selkirk, all well. The trip, 450 miles, was made in 13 days. The river was beautiful & navigation excellent. On Sep. 1 the steamers carrying the winter supplies were reported at Rampart, 700 miles below Dawson. They will probably arrive before winter sets in."

There is war among steamboat men, & if the breach widens much further the rates will be down so low that it will be cheaper to travel than to stay at home. Since the disruption of the Puget Sound Steamship Association in

September the breach between the different companies has been steadily widening, until now from day to day there is no prophesying what passenger rates between Victoria & Vancouver & Lynn Canal will be. The smaller companies have, in the main, stood by the first Skagway cut to \$25 & \$15 for 1st & 2nd class, which went into effect when the Association was dissolved, but it seems that the Pacific Coast S.S. Co. has stolen a march on them & been getting business at a much lower rate. The rates now quoted by them are \$15 & \$10 to Skagway & Dyce, & \$12 & \$8 to Juneau. The competitors soon found out that a cut had been made, & immediately met their rivals. Some have, it is said, gone the P. C. S.S. Co. one better, & there is promise, a well-known steamship man says, of more slashing, & people who have been watching the progress of events say they should not be surprised if one could soon go to the head of Lynn Canal for \$5, & have the best cabins at that. The rates down the inner passage have not had a fixed ratio in many weeks. Any figure that will sell tickets seems to have been the controlling influence of agents, & some passengers are known to have been brought to Victoria from Skagway for \$10 1st class. The Alki carried a number for \$12 & \$7.50 1st & 2nd class. The local agent at Skagway explained that the cut was made as a special rate to a crowd of railway men.

Should the rush northward of last spring be repeated next spring there will be no stronger competition in the transportation than that which the C.P. Navigation Co. has for the last year been making preparations for. The Co.'s fleet will probably be no larger next year than it is now, but it will be much better equipped & suited to the handling of crowds. The Danube was the first to receive attention after last spring's rush & her overhaul & improvements effected every part of the ship. Her deck-house was enlarged & alterations internally were made so that her passenger accommodation would be greatly increased. Afterwards, the Islander was laid up & considerable money expended in improving her. Now the Tees, which has been a busy ship from the day she arrived from England, is to be treated somewhat after the fashion of the Danube. Her deck forward is to be done away with & the little house on the after deck extended to where the pilot house is now, so that when the alterations are complete the upper works of the Tees will be very similar to those of the Danube. In addition to these 3 ships the Co. has now the Queen City & Beaver, neither of which were in service last spring. There are, too, belonging to the Co.'s fleet, the Yosemite, the R. P. Rithet, Charmer, Willapa, Transfer & Maude. The Yosemite has replaced the R. P. Rithet on the Fraser run & the latter has been retired to winter quarters.

Although the Pacific Coast S. S. Co. has cut B.C. out of its Alaska schedule, it has practically decided to reverse its decision to have its northern steamers give Victoria the go-by. The Puget Sound Superintendent of the Company was in Victoria recently looking over the situation, & came to the conclusion that the prospects for business from that port were too good to allow the boats to pass by.

There has been much talk on the part of the Boston & Alaska Transportation Co. of putting the Laurada on the Honolulu-Seattle route. Recently it was announced that she would not go to Honolulu, but was to make a trip to Vladivostok & other Siberian ports with freight. It was stated that she was to leave as soon as repairs were completed & the cargo taken on board. It now seems that the Co. has changed its plan, & intends to put her on the Lynn Canal route. There are at present 8 steamers on the run. The presence of another vessel is unwelcome to the other companies.

The Victoria steamer Barbara Boscowitz, was driven on a rock 4 miles above Kitkatlah, Sept. 16, while on her way northward, by the swift current, & is a total loss. At high tide she is all but covered. The passengers, crew & most of the freight were taken ashore in Indian canoes, the salvage party being still aboard when the Boscowitz keeled over & sank, until she rested on the rocks with only her upper works visible. She was built in Victoria in 1883 & was 120 ft. long, 23 ft. beam, & 10 ft. hold. She was built by Capt. J. D. Warren, her present owner, although she has not been in his possession ever since, having been sold about 12 years ago to Capt. J. S. Williams, for \$20,000. He cleared \$22,000 on her the first season. She was a money maker from the day she was launched.

The little Lynn Canal steamer, Lady of the Lake, one of the Pacific Coast Co's Northern fleet, lies on the rocks off Haines Mission, probably a total wreck. She went ashore in one of the storms that swept along the South-eastern Alaskan coast late in September. She was on her way to Skagway with 2 big barges in tow. The wind was so strong that she was compelled to anchor, but still held on to the barges. The wind veered round & her anchors began to drag. There was no way to keep her off shore & she went on the rocks taking the barges with her. The crew escaped with some difficulty. She may be raised, but she is under water entirely at high tide. The barges were not badly damaged. She was an 80-ton steamer of considerable power. 68 ft. long & 16 ft. beam. She was built at Seattle in 1897 & was considered a staunch craft.

The C.P.R. Co's steamer Yukoner is said to have made the fastest round trip in the history of the traffic between St. Michael & Dawson, doing it in 30 days, 14 days being occupied in going up the river, 9 days tied up at Dawson & 7 days returning. She was under command of Capt. J. Irving, the Co's Manager. The Midnight Sun says, that when leaving Dawson, the Yukoner backed out, & under full steam turned completely round, going ahead at a rapid rate. It was a fancy trick of Capt. Irving, & showed what could be done with her. On returning to St. Michael, Capt. Irving sold the Yukoner to P. Galvin for \$50,000.

Advices received at Vancouver, Oct. 11, stated that navigation on the Yukon had closed. The last steamer to leave for St. Michael was the Sarah. The steamer James Donville went aground near Rink Rapids & the steamer Clara is aground in a slough close to Indian River. Both steamers were going up the Yukon.

Three men left Lake Bennett, just over the White Pass, 5 months ago, in a galvanized iron boat 25 ft. long, rivetted & soldered, which they made themselves. In this they went down the Yukon, shooting White Horse Rapids, & calling at Dawson only for provisions. Nine hundred miles further along they replenished supplies at St. Michael's & continued their voyage across Behring Sea to Unalaska. Thence they were sailing to San Francisco, when overtaken by a gale which cost them their provisions. The Viva picked them up off Clayoquot, & they went in to re-outfit. Their voyage in the open boat covers more than 8,000 miles.

It is stated at Tacoma, Wash., on good authority, that the Northern Pacific S. S. Co. is arranging to put under the U.S. flag 6 British steamers which it is operating to China & Japan from Tacoma. These steamers include the transport Arizona, which was sold to the Government last July; the Tacoma, Olympia, Columbia & Argyle. It is believed that the Arizona will be transferred back to the Northern Pacific at Hong Kong when the Government no longer needs her.

Maritime Provinces Notes.

At the annual meeting of the Canada Atlantic & Plant S. S. Co. at Halifax Aug. 30, the following were elected: H. B. Plant, President; M. F. Plant, Vice-Pres. & Mgr.; R. B. Smith, Treasurer; H. L. Chipman, Secretary & Canadian Agent; H. E. Jacobs, Auditor.

The S.S. Halifax, of the Plant Line, running between Nova Scotia & Boston, carried a larger number of passengers during Sept. than in the corresponding month of any previous year. Her passenger list from Halifax to Boston averaged over 400 each trip. The Plant Line will add another steamer to its fleet next spring.

R. G. Reid, owner of the steamer Bruce, which runs between Sydney, N.S., & Port-au-Basque, Nfld., is said to be having several large & fast steamers built in Glasgow, to be ready by the spring. One of them, it is said, will run between St. John's, Nfld., Halifax & Boston, while the others are principally for the coastal service.

Geo. Robertson, of St. John, N.B., whose scheme to secure a dry-dock there was explained in our Aug. issue, pg. 185, recently visited Ottawa to see the ministers about a subsidy. A St. John's dispatch says that on his return there he was reticent, saying he got encouragement, but that he seemed to have no definite assurance.

It is rumored that the Sydney Ferry Co. has sold the S.S. Vega to the Richmond S.S. Co.; that arrangements are being made at Lunenburg for the construction of a steamship hull, & that the Richmond S.S. Co. will place the engine & boiler of the S.S. Vega in the new hull, & will secure a suitable steamer for the St. Peter's-Mulgrave route.

The steamer Newfoundland, of Halifax, caught in attempting to run the blockade at Havana, July 19, & condemned by the U.S. District Court at Charlestown, S.C., together with her cargo, to forfeiture as a lawful prize of war, has been released, but the case has not yet been concluded. Further evidence will probably be taken at Washington during the winter. In the meantime the ship has been delivered up to the owners on the personal undertaking of Capt. Farquhar.

The Yarmouth S.S. Co's steamer Express, which was wrecked off Port Latour, Sept. 16, as described in our Aug. issue, pg. 186, has been abandoned. Arrangements were made for an attempt to raise her, but the storms in the 3rd week of Oct. completed her destruction. She was insured for \$60,000. The Co. has put the steamer City of St. John on the south shore route, in her place, leaving Yarmouth every Friday at 7 a.m., & returning, leaving Halifax every Monday at noon.

The Tartar & the Athenian.

These steamships, which, since being taken off the Yukon trade have been lying at Vancouver, have afforded a fertile subject for the daily press. A few weeks ago it was stated in a Vancouver paper that the C.P.R. Co. had decided to establish a regular line between Vancouver & Vladivostok, & that the Tartar & Athenian would be put on that run. The information was incorrect. The two vessels have been put into the Co.'s regular Pacific trade between Vancouver, Japan & China, & incidentally on the first outward voyage they take some flour & merchandise from Puget Sound to Vladivostok, & will then proceed to Japan for freight.

A few days later the London correspondent of a Vancouver paper wrote that the C.P.R. Co. had sold both vessels at a profit of several thousand dollars. We are officially informed that "the statement has not a symptom of truth in it."

In British Columbia Waters.

A tug 85 ft. long, 16 ft. beam, is being built at Nelson, to handle the C.P.R. freight barges on Kootenay Lake & River between the temporary terminus of the Crow's Nest Ry. at Kuskanook & Nelson.

The wrecking tug Pilot, which was fully described in our June issue, pg. 104, made her first trip from Victoria Oct. 6, to Departure Bay, Nanaimo, & other points on the east coast of Vancouver Island. Capt. J. W. Butler has been given command of her, with A. Warren as Chief Engineer.

The lumber rafts which are sent from Puget Sound & the Columbia River to San Francisco, are looked on as a serious danger to vessels on the coast run, including those between Victoria, B.C., & San Francisco. Many of the booms are broken up by storms, the logs being sent adrift in every direction.

Under date of Oct. 6 the Canadian Pacific Navigation Co's management advised us of being in the midst of negotiations for a new steamer for the Vancouver-Victoria run, but matters had not advanced far enough for any definite announcement to be made in this issue. (July, pg. 134, Aug. pg. 161, Sep., pg. 188.)

The U.S. commissioners of navigation have instructed all collectors of customs on & after April 1, 1899, to require British yachts visiting U.S. ports to enter & clear & pay tonnage taxes the same as merchant vessels. This step is said to be taken in consequence of Great Britain imposing light dues on U.S. yachts visiting English ports.

TELEGRAPHS & CABLES.**Western Union Telegraph Co.**

At the annual meeting, Oct. 12, the following statement of business for the year ended June 30, was submitted.

Surplus, July 1, 1897.....	\$7,647,541 06
Revenues.....	\$23,915,732 78
Expenses.....	17,825,581 52
	6,090,151 26
	\$13,737,692 32
From which there was applied:	
Dividends.....	\$4,867,911 25
Interest on bonds.....	896,554 95
Sinking funds appropriations.....	9,991 00
	5,774,457 20
Surplus, June 30, 1898.....	\$7,963,235 12
The expenses of the year were:	
Operating & general expenses.....	\$12,749,272 76
Rentals of leased lines.....	1,570,006 41
Maintenance & reconstruction of lines.....	2,688,283 42
Taxes.....	506,224 51
Equipment of offices & wires.....	251,794 42
	\$17,825,581 52

The revenues were \$1,276,873.62 more than for the preceding year.

The increased revenues made necessary an increased outlay for operating & general expenses of \$655,111.63. For reconstruction & maintenance, to preserve the efficiency of the property, \$342,913.91 more was spent than for the preceding year, & the cost of equipment of new offices & improving old equipments was increased \$48,371.51. Taxes were \$144,033.50 more than during the fiscal year 1896. Rentals of leased wires were \$3,491.09 less. The net increase in expenses for the year was \$918,925.49.

The average tolls received were 30.1c. a message. The average cost per message was 24.7 c. It cost 4 mills a message more to handle business than in the year previous.

The decrease in the average tolls received, & the increase in the average cost per message, are accounted for by the large number

of Government & press messages, consequent upon the war, transmitted during the latter part of the fiscal year, on both of which classes of messages the tolls are the lowest, although the highest grade of operating service has to be employed for their efficient transmission.

The cost of construction of new property for the year was \$1,117,651.61. The surplus account was increased \$315,694.06.

J. Stillman was elected a director in place of R. G. Rolston, deceased.

The report shows there are 189,847 miles of poles & cables, 874,420 miles of wire, & 22,210 offices in the system; 62,173,749 messages were handled during the year, against 58,151,684 the previous year.

The Co's extension of lines from Wooley, Wash., via Fairhaven, Blaine & New Westminster, was completed to Vancouver, B.C., early in October, & an office opened at the latter point, in charge of T. W. Goulding, formerly of the G.N.W. Co's Winnipeg staff. The W.U. Co. has built its lines in B.C. under the powers contained in the G.N.W. Co's charter, & the offices are conducted in the latter's name.

W. J. Dee is Manager of the office which has been opened at Victoria. It is said the Co. is contemplating a further extension of its lines in B.C.

The Grand Trunk Telegraphers.

A committee of the employees of the G.T.R., who are members of the Order of Railway Telegraphers, have arrived in Montreal from different parts of the system, & are seeking a conference with General Superintendent F. H. McGuigan. It is their purpose to request a readjustment of wages, looking to an increase. The telegraphers have had under consideration for some time the perfection of the organization of their union on the G.T. system, the same as on the C.P.R., & it is likely further steps may now be taken in that direction. Grand Organizer Davis, of the Order of Railway Telegraphers, represents the Executive of the order at the meeting. He has been working along the G.T. system for some time, under instructions from the head office in Peoria, Ill. It is not unlikely that the Grand Chief of the order, W. V. Powell, may also put in an appearance at Montreal before the work of the committee has been completed. The committee of the men meets at the Richelieu Hotel, going thoroughly into the question of what demands will be presented when they are prepared to go before Mr. McGuigan. One of the chief things the men want adjusted is the hours. They claim they are obliged to work 12 hours for an average wage of \$1.25 a day, with, perhaps, a few exceptions. They say the position of telegraphers is one of great responsibility as regards the safe running of trains, & their remuneration, they claim, is out of all proportion to the work performed. It is claimed there is not another class of employees where the responsibility is so heavy who are so poorly paid, owing, they say, to the fact that they have never been organized until just recently. When the meeting between the interested parties takes place, it is said the telegraphers will firmly insist on getting what they want, failing which, other means of a settlement may be resorted to.

Great Northwestern Telegraph Co.

At the annual meeting in Toronto, Sep. 28, the following were re-elected: H. P. Dwight, President & General Manager; A. Brown, Hamilton, Vice-President; H. N. Baird, J. Hedley, A. S. Irving, W. C. Matthews, Toronto; R. Fuller, Hamilton; Hon. W. McDougall, Ottawa; C. A. Tinker, New York, other directors; G. D. Perry was reappointed Secretary & Auditor, & A. Cox, Treasurer.

The Co. does not issue an annual report, but we are informed that the statement of the year's business showed a considerable improvement over the previous year, & the opinion was expressed that with the new connections & extensions of the Co. it might reasonably look for a still further improvement during the current year.

Alex. Hunter, assistant chief operator of the Co. at Toronto, & who had been in the service of the Co. & its predecessors for over 30 years, died Oct. 3, aged 57, of typhoid, leaving a widow, 2 sons & 3 daughters. He went to the front with the Queen's Own in the Fenian Raid of 1866.

Canadian Pacific Railway's Telegraph.

The Co. is stringing a wire between Truro & Halifax, N.S.

The new commercial office in Winnipeg is being fitted up under the personal supervision of Electrician Camp, of Montreal.

The Co. recently assumed control of the 74 miles of telegraph lines formerly owned by the Erie & Huron Ry. Co., extending from Sarnia to Rondeau, which it is now operating as it does the lines on the other part of the L. E. & D. R. Ry. Co.'s system.

The new copper wire from Montreal received a practical test recently, when a message was sent from Vancouver to Montreal & reply transmitted in the space of one minute. The wire was duplexed. The handling of 2 messages took just a minute.

The Postal Telegraph Co. is extending its lines from Rossland, B.C., to Spokane, Wash., which will give the C.P.R. telegraphs another U.S. connection. The only line between these points at present is operated in conjunction with the Western Union.

A Yukon Telegraph Line.

Last session the Dominion Parliament granted a charter to some English & Canadian investors, empowering them to construct a telegraph or cable line from the coast of Alaska through to Dawson City by way of the valleys of the Yukon & its affluents. The promoters allowed the summer to slip away without making a move towards construction, & now the charter has fallen into other & more active hands. J. Roche, M.P., has charge of the scheme for a number of English capitalists, including Sir John Pender, of cable fame. Mr. Roche has secured the transfer of the franchise, & has been in Ottawa arranging with the Government in regard to the importation of the plant & location of the line. The plan is to construct a double land line from Skagway via Lake Tagish & Fort Selkirk to the Klondike. It is said the work will be begun forthwith, & that the line is expected to be in operation by Jan. 1 next. It is also said that as soon thereafter as possible a cable will be laid to connect Vancouver with the land line at Skagway.

Telegraph Office Changes.

CANADIAN PACIFIC.

OPENED: Fernie, B.C.; Cascade City, B.C.; Cranbrook, B.C.; Ferguson, B.C.; Grand Forks, B.C.; Greenwood, B.C.; Kuskanook, B.C.; Wardner, B.C.; Cache Lake, Ont.; Masokama, Ont.; Ostersund, Ont.; Woman River, Ont.; Darwin, Man.; Dauphin, Man.; Hargrave, Man.; Macdonald, Man.; Midway, Man.; Plumas, Man.; Sifton, Man.; Winnipegosis, Man.; Ernfold, N.W.T.

CLOSED: Stanley, B.C.

GREAT NORTHWESTERN.

OPENED: Myrtle, Man.; Oakville, Man.; Marieapolis, Man.; Rosebank, Man.; Dunham, Que.

CLOSED: Glanworth, Ont.; Treadwell, Ont.; Aylwin, Que.; St. Janvier, Que.

Queen Victoria & other members of the royal family have shown great interest in experiments in wireless telegraphy which have been conducted at Osborne, Isle of Wight, by Mr. Marconi, the inventor of the system. Many messages were exchanged between Osborne House & the royal yacht, having on board the Prince of Wales, & during a period of 10 days the Queen received a morning bulletin of the condition of the Prince. The yacht was anchored 2 miles from Osborne House, the positions being intercepted by a hill. All the messages were successfully transmitted, some of them while the yacht was under steam.

Among the old-time telegraphers of Ottawa, Ont., who have become prominent in other walks of life, are C. W. Spencer, now a General Superintendent of the C.P.R.; O. Higman, now Superintendent of Standards & Chief Electrical Engineer of the Inland Revenue Department; W. Y. Soper, an electrical engineer & capitalist; T. Ahearn, an electrical engineer & capitalist; N. W. Bethune, Superintendent of the G.N.W. Telegraph Co.; G. F. Macdonald, Superintendent of the Ottawa fire-alarm system; J. A. Parr, Chairman of Public School Board; H. B. Spencer, a Superintendent of the C.P.R., & D. C. Dewar, now Local Manager of the Bell Telephone Co. in Montreal.

TELEPHONES.

The Bell Telephone Company.

The following, from the Carberry, Man., Express, is a sample of the nonsense that finds its way into recklessly conducted newspapers:—"The long distance telephone scheme which was announced some weeks ago, has fallen through, owing to the action of the directors of the C. P. R. It appears that the directors of this big corporation are also directors of the Bell Telephone Co., & on hearing of the steps being taken to extend the long distance telephone throughout the province, a hurried meeting of the directors was called at Montreal, when it was decided that as the long distance telephone would, to a certain extent, hurt the telegraph business of this country, a quietus should be put on the scheme, at least for this year. The poles were on the spot & everything was in readiness to commence building the line from Carberry to Neepawa, but the C. P. R. has spoken & operations have ceased. It is lucky that they had no control over the private line to Wellwood."

The directors of the Bell Telephone Co. are C. F. Sise, R. Mackay, J. E. Hudson, R. Archer, W. R. Dwyer, H. Paton, C. Cassils, & T. Sherwin. We fail to recognise any of the C. P. R. directors in this list, & it would be interesting to know on what the Carberry paper based its information. Is it aware that the Bell Co. has its long distance lines throughout Ontario & Quebec? If the C. P. R. Co. had any control over the Bell Co., & wanted to stop long distance extension, is it not likely that it would have exercised it in the most populous provinces?

We are informed there was no warrant for the publication of the rumor to which we referred in our Sept. issue, pg. 196, to the effect that it had been decided to establish a long distance service in Manitoba. The Carberry-Neepawa line may be constructed this fall.

The Co. has declared a quarterly dividend of 2%, payable Oct. 15.

The application of the People's Telephone Co., of London, for a franchise in Kingston, Ont., was refused by the City Council.

Spokane & British Columbia T. & T. Co.

The controlling interest in the Spokane & British Columbia Telephone & Telegraph Co., which operates the line from Spokane, Wash., to Republic, & nearly into Rossland, B.C., has been transferred from W. H. Oakes to C. O'Brien, Reddin & Co., of Rossland. The deal involved stock of the par value of \$255,000. The capitalization of the Corporation is \$500,000 in 55 shares, & the purchasers secured 51,000 shares. The Company's lines reach from Sheep Creek station into Spokane, & all the business at present transacted by telephone between Rossland & the Washington cities is conducted over its system in connection with the wires of the Vernon & Nelson Telephone Co., which connect between Rossland & Sheep Creek. It is possible the new management of the Co. will extend its own lines into Rossland. It has a franchise for that purpose. The extension would give it independent service between Spokane, Rossland, Greenwood, Republic & all way stations. C. O'Brien, Reddin & Co. have not yet announced how they will handle the controlling interest which they have acquired. The purchase, they say, was for themselves & not for clients.

Telephone Items.

A contemporary recently stated that a telephone exchange was being established at Indian Head, Assa. Several telephones have been installed there for private use, but hardly on the exchange system.

The Baltimore & Ohio Ry. is stringing copper telegraph lines between Baltimore & Pittsburg, 340 miles. They will be so arranged that when necessity arises they will be available for long-distance telephone communication, & if the experiment proves a success, other lines of a similar nature will be put up.

The New Brunswick Telephone Co. has recently been put to considerable trouble by parties breaking insulators on telephone poles & cutting wires, & the Co. offers a reward of \$10 for information that will lead to conviction. The Co. is now stretching copper wires on the eastern section, & near Moncton some miscreants climbed the poles & cut the wires in 7 or 8 different places.

At the annual meeting of the Merchants' Telephone Co., in Montreal, Oct. 4, it was decided to increase the capital \$100,000. The directors were re-elected as follows:—President, A. S. Hamelin; Vice-President, J. E. Beaudoin; Treasurer, L. E. Beauchamp; other directors, A. S. Delisle, L. H. Henault, S. L. Archeveque, J. B. Thibodeau, J. N. Ducharme, R. Beauchamp.

The People's Telephone Corporation, of New York, was incorporated at Albany Oct. 12, with a capital stock of \$5,000,000, to operate a telephone system in New York City & other cities, towns & villages in New York & other States, & in Canada. The capital stock is divided in \$2,000,000 preferred & \$3,000,000 common stock. The directors are S. B. Dutcher, J. E. Nichols, E. S. A. Deluna, F. C. Travers, F. Brainard, J. F. Ackerman & D. R. James, of New York City.

A contemporary says:—"An effort is being made in Winnipeg to establish a rival telephone system which promises very much reduced rates. Two wealthy U. S. telephone manufacturing firms are said to be backing the scheme." No doubt. They are probably acting in line with the People's Telephone Co., which has been operating in Ontario, but which, up to date, has not accomplished much. We are probably not far wrong in expressing the opinion that what the "wealthy U. S. manufacturers" want to do is to sell instruments.

TORONTO, CANADA, NOVEMBER, 1898.

SIX A YEAR.

Senator Forget.

The Hon. Louis Joseph Forget, whose portrait appears on this page, belongs to a family that came to Canada from Normandy about 1600. He was born at Terrebonne, Que., Mar. 13, 1853, was educated at Masson College, & in 1873 commenced business as a stock broker in Montreal, where he has been for many years the senior partner of the firm of L. J. Forget & Co., bankers & stock brokers. On the retirement of H. S. Macdougall from the presidency of the Montreal Stock Exchange in 1895, Mr. Forget was elected to succeed him & was re-elected in May, 1896. He has been President of the Montreal Street Railway Co. since 1892, & of the Richelieu & Ontario Navigation Co. since 1895. He is a director of the Royal Victoria Life Insurance Co., & of the Notre Dame Hospital, & is Vice-President of the Board of Governors of Laval University, Montreal. He was called to the Senate in June, 1896. In religion he is a Roman Catholic; in politics a Conservative. He married in May, 1876, Maria, daughter of G. A. Raymond, of Montreal.

Tit for Tat.

The Chicago Times-Herald, which is an ardent supporter of the efforts of the U. S. railway managements to exclude Canadian railways from participating in U. S. freight or passenger traffic, in recently discussing the meeting of the arbitrators in that city to decide whether the C. P. R. was entitled to a differential on transcontinental freight, said—

"Every time the Canadian Pacific takes a train-load of freight from Chicago to San Francisco, via Winnipeg, it deprives railway employees in the U. S. of the wages that they would earn on that train-load of freight. The supplies consumed pay no tribute to the American producer."

Per contra, every time any railway takes a train-load of freight from any point in Eastern Canada for Winnipeg, Vancouver or Victoria via Chicago, it deprives railway employees in Canada of the wages that they would earn on that train-load of freight. The supplies consumed pay no tribute to the Canadian producer.

The moral for Canadians is obvious.

G. F. Phillips, Dominion Government Boiler Inspector, returned to Winnipeg recently from a trip which took him to the Arctic Circle & to within 40 miles of the Arctic Ocean. He left Winnipeg May 20, & travelled 2,000 miles north of Edmonton by canoe & York boat.

FINANCE, MEETINGS, &c.

The Grand Trunk's Semi-Annual.

Our last issue contained the full text of the directors semi-annual report for the first 6 months of the year & a brief cable report of the proceedings at the shareholders meeting Oct. 13. We have since received a verbatim report of the speeches of the President & Vice-President as follows:

THE HON. L. J. FORGET.

The President, Sir Rivers-Wilson, said: The ½-year ended June 30 last, which we have under review to-day, is the best June ½-year we have had since the year 1890, & it further presents this interesting & agreeable feature, that after an interval of 4½ years it places us in a position to resume the payment in full of the dividend upon our guaranteed stock, with every prospect, I trust, of further progress in the same direction within a very limited future. While, however, the gross

receipts for the first 5 months of the ½-year were favorable, there was a large falling-off in freight traffic in June caused by the diminished shipments of grain in consequence of the abnormally large quantities previously sent forward owing to the Leiter speculations. The stocks of grain in the country were thus depleted, & our receipts from this source of traffic have consequently been adversely affected up to the present time. This year's harvest, both in Canada & the U.S., has,

however, been very abundant, & there is every probability that shipments will soon reach, if they do not exceed, last year's proportions. The gross receipts of the G. T. from all sources in the past ½-year were £115,167 more than in the corresponding ½-year, the working expenses were increased by £47,240, leaving the net result of the traffic operations more favorable by £67,927. The amount payable by the G. T. to the Chicago & G. T., & Detroit, Grand Haven & Milwaukee companies, under traffic agreements, was £39,484 less than in the corresponding ½-year, making a total improvement in the working of the entire system of £107,411. There was an increase in the net revenue charges of £3,467, & therefore, the increase at the credit of net revenue account on the working of the ½-year was £103,944. There was a net surplus for the ½-year ended June 30, '97, of £2,708, which, added to the increase of £103,944, makes a total of £106,652, as the net result of the past ½-year's operations. You will remember that after writing off £264,974, the balance of the revenue deficiency which had accumulated to June 30, '96, there remained at the credit of net revenue account at December 31, '97, an amount of £10,289, of which, as explained in the report, \$50,000 or £10,274, has been written off on account of the amount chargeable to revenue for the reconstruction of the Victoria Bridge, the balance of £15, 2s., 10d being brought into the past ½-year's net revenue account, & making a total sum available for dividend at June 30, '96, of £106,667, which

will admit of a declaration to-day of the full ½-year's dividend on the guaranteed stock, & leave a balance of £2,271 to be carried forward to the next ½-year's account.

It may be interesting to recapitulate, in a very few words, the movement in the G. T. since the directors came into office in May, '95. On June 30, '95, the net revenue account stood at £100,556. For the ½-year to Dec. 31, '95, there was a debit of £1,000. For the ½-year

OFFICIAL ORGAN.—THE RAILWAY & SHIPPING WORLD, Toronto.

to June 30, '96, there was a deficiency of £82,062, making a total of £306,769 at June 30, '96, when the inability of the G.T. Co. to meet all the pre-preference charges terminated, & £39,086 of the total deficiency of £306,769, was liquidated out of surplus net revenue for the ½-year ended Dec. 31, '96, £2,708 from surplus net revenue for the ½-year to June 30, '97, & the remaining amount of £264,974. I may say by the wise decision of the proprietors upon the recommendation of the board, was provided from surplus net revenue for the ½-year ended Dec. 31, '97, & as I have said, we have now a net revenue surplus at June 30, '96, of £106,667 available for dividend. I am really sorry to trouble you with so many figures, which you may, perhaps, have some difficulty in following, but which, no doubt, you will see elsewhere in print; but I think the figures are remarkable themselves & especially interesting as indicating what the G.T. can really do when it finds itself under firm & economical management; & with reference to the question of economical management I will add one

or two more figures which are of interest. The ratio of working expenses of the G.T. proper for the past year was 66.46, as contrasted with 70.84 for the ½-year, when we first took office, showing a saving of expenditure in the ratio of 4.38. Those who are conversant with railway matters will, I think, appreciate the great importance of that statement.

The improvement in the revenue results of the Chicago & G.T. Ry. is a satisfactory feature in the past ½ year's operations. There was an increase in the gross receipts of that line of £74,951, & in working expenses of £31,950. The net traffic earnings were, therefore, £43,001 better than in the corresponding ½ year, and, deducting from that amount the increase of £1,319 in the net revenue charges, there remained a deficiency to be advanced by the G.T. Co. under the provisions of the traffic agreements of £8,392, against £50,074 in the corresponding ½ year of '97, an improvement of £41,682. On the other hand, the working of the D.G.H. & M. has been of a less satisfactory character, the deficiency for the ½ year to be provided amounting to £22,282, as compared with £20,084, an increase of £2,198. The aggregate gross receipts of the G.T., the Chicago & G.T., & the D.G.H. & M. amounted to £2,334,591, as compared with £2,154,222 in the corresponding ½-year of '97, an increase of £180,369. The working expenses were £1,609,803, against £1,537,868, an increase of £71,935; and the net traffic receipts were £724,788, against £616,354, an increase of £108,434. The net revenue charges of the entire system show an increase of £4,490, making the net results better by £103,944. I gave you just now the ratio of working expenses to gross receipts only in respect to the G.T. As regards the whole system the ratio of working expenses was 68.95 in the last ½-year, while for the ½-year ending June 30, '95, when we came into office, they were no less than 74.99. You will, therefore, see that our management in Canada has been able to obtain a reduction of no less than 6.04 %. I think I may say, with some confidence, that—to use an expression in use on the other side of the Atlantic—this reduction in expenses "has come to stay."

The charges to capital in the past ½-year are practically confined to expenditure on account of the Victoria Jubilee bridge, & for equipping the rolling stock with air-brakes & automatic couplers to meet the requirements of the U.S. Safety Appliance Act. Six per cent. bonds of the Co. amounting to £409,400 matured on June 1 last, almost the whole of which have now been acquired, & will be held as required by the Act of 1888, as security for the 4% debenture stock. As stated in the report, a saving of £8,000 a year in our interest charges by the substitution of 4% debenture stock for these bonds has been effected. I will just add, while speaking of our financial position, that we have no floating debt whatsoever. I have mentioned when previously addressing you that in order to keep pace with our competitors for through business, & to economise to the fullest extent in the working of the line, it is essential not only to provide locomotives of modern type & greater haulage capacity, which is being gradually accomplished, but also to renew or strengthen such bridges as may be found inadequate to properly bear the heavier loads now required to pass over them, & it has therefore been determined to renew forthwith certain bridges on the G.T. line in heavier material, & thus increase their bearing capacity. It is proposed to charge the cost of these improvements to revenue account, but in order to avoid burdening the maintenance charges unduly in any one year, it has been decided to spread the expenditure over a period of at least 5 years. This period may, of course, be extended as circumstances may render expedi-

ent. The same plan will be followed in regard to the revenue proportion of the expenditure for reconstructing the Victoria bridge at Montreal, which has been fixed at £110,000, being the amount it is estimated would have been required to replace the old structure by a single girder bridge. It is stated in the report, & I am happy to confirm it to you, that we expect that the double track of the new bridge will be in full operation by the commencement of next year—a matter of the greatest consequence to us when you consider the traffic which passes over the bridge. The number of trains that run in and out of our Bonaventure station at Montreal is about 130 daily, & about 75% of these pass over the bridge. In view of the greatly increased weight of both locomotives & cars, I cannot sufficiently congratulate you & the Board, who have had a good deal of anxiety on the subject, upon the fact that we are now going to have a really strong bridge adequate for all purposes, which, moreover, will be the cause of a good deal of economy in the future.

Before leaving this question I should like to say one word as to the improvement of our line. The competition now among the great Transatlantic lines is so keen that it is only the best equipped lines & lines with the best tracks that are able to secure the bulk of the business, & it is the best equipped lines that have the most traffic. Therefore, we must look forward to a reasonable, but continual, expenditure in the direction of improvements of the rolling stock, of the track, of the gradients, & so forth, & the effect of that will be that we shall be in a position to acquire more traffic, & also that we shall in the future materially reduce our working expenses. I will give you an illustration taken from the Victoria bridge. Hitherto the cost of the upkeep of the bridge has been about £4,000 a year. Well, for the next 10 years we estimate that the expenditure will not be more than £400 a year, & in addition we expect to receive a considerable revenue from the tolls on the carriage road & the pathways with which the new bridge will be provided. A moderate estimate places that addition to our income at £5,000 a year, & I daresay it will be more. All these improvements of our line have these great advantages: we reduce our expenses, & by so doing we improve our income, & we improve the credit of our company, & we improve the value of your securities. You will remember that we recently made an agreement with the Wabash Co. for running over a section of our line from Windsor to Fort Erie, & from Welland Junction to Niagara bridge; & that agreement has been in operation since Mar. 1, & has been attended with very advantageous results to our company, & it is a pleasure to know that the same result has accrued to the Wabash Co. In its last report it adverts also to the advantages of working in a friendly understanding with our company.

I have recently returned from Canada, & whilst there I took the opportunity, as usual, of visiting several portions of our system. At the same time, I spent a good deal of time in Montreal in conferring with our officers. On this occasion I visited several points in the northwest of Ontario & studied with much interest the arrangements which are being made for improving our lake connection with Lake Erie & the Georgian Bay ports. I had also occasion to observe with satisfaction, that there has been a considerable augmentation of traffic in that interesting region in which is situated the Muskoka Lakes. It is one of the most beautiful & picturesque parts of the world, & is gradually becoming known over the whole continent of America, & the consequence is there is a great influx of tourists there every year, & we have almost the monopoly of the carriage of those travellers. That promises to be a very good business in future. The increase this year has been

about 100% over what it was last year. I did not proceed further west on this occasion, because I had the satisfaction of being accompanied by your Vice-President, Mr. Price, & he undertook to make a careful inspection of the lines, more particularly in the west. He has gone over them with great care, & I shall ask him to be kind enough to convey to you his impressions of all he saw, & of all he heard, & you may be sure that whatever expressions of opinion come from Mr. Price they are entitled to the greatest weight, because he knows what he is talking about, being an expert in all railway matters, & also being intimately acquainted, as an old official, with the whole of our property. However, I shall leave Mr. Price to speak for himself.

Leaving Mr. Price, therefore, to go to the west, I took the opportunity of making an inspection of the lines of our new connection—the Intercolonial, which, as you are aware, is a Government line. Accompanied by the General Manager, I went all over that line, which presents many features of interest. I observed with regret that the population of the country traversed by the Intercolonial in New Brunswick & Nova Scotia, was not greater than it is, & it is a matter of astonishment to me that the advantages & the opportunities offered by those countries are not better known to the public of this country. There is land of excellent quality to be had upon very cheap terms, with assistance from the Government, & the climate is temperate & agreeable. But somehow or another, the tendency of immigration, as it has always been, is from East to West, & so these fertile lands & these fine timber countries are left almost behind in the race of immigration. I can only hope that in course of time, when the West has been gradually filled up, people will remember that there is in the East of Canada, most admirable land for the purpose of immigration. You will remember that we have made arrangements with the Intercolonial Ry.—that is to say, with the Government—by which it obtained running powers over a portion of our line, so as to bring it into Montreal instead of stopping at Point Levis. I must say, after examining all the conditions of the Intercolonial line, I think the Dominion Government has acted most wisely in making that arrangement, which, at the same time, will be beneficial to ourselves.

I was in hopes that I might have brought back from Canada a message of peace & conciliation from our neighbors the Canadian Pacific authorities, & I much regret to say that no such message was given to me, & I have no such message to deliver to you to-day. I explained at some length upon the occasion of our last meeting here what were the differences which existed between our two companies. You will have understood that the reason for the attitude of the C.P. Co. in antagonising us was stated to be that we were aiding & abetting the Western American lines in the contest which was going on between them & the C.P. Co. I explained to you that much as we dislike to find ourselves at variance with our C.P. friends, it was absolutely impossible for us, under the circumstances explained, to dissociate ourselves altogether from our Western connections. The so-called trans-continental rate war has practically come to an end in consequence of the decision of the Interstate Commerce Commission to whom the matter was referred, & by the acceptance, more or less completely, by the C.P. of the finding of the commission. Well, it was naturally expected that that cause of dissension being removed, the action taken by the C.P. Co. in cutting local rates would come to an end, but I am sorry to say that has not been the case, & that the directors of the C.P. Co. have announced their intention of continuing their hostile attitude to us until we come into line with them in respect of other matters—viz., in respect of our transportation

of traffic to the Northwest Territory. It really amounts to this, that they consider—they insist, I may say—that we must conduct our passenger traffic with the Northwest Territory in subservience to & under direction from themselves. That is a position which is utterly impossible for us to accept. With the very best intentions to act in a friendly spirit towards the C.P. Co., it is absolutely impossible for us to ignore our western connections. We cannot do it, even in order to obtain peace with the C.P. Co. This being so, we are powerless in the matter. We must seek compensation in other directions, & I have no doubt we shall find it; & we must leave the C.P. authorities to be judged by public opinion, & perhaps by their own shareholders. I may add that in the course of the discussions we had with Sir Wm. Van Horne & Mr. Shaughnessy, finding it impossible to come to an understanding, we made them this proposal, to refer all the questions at issue without any reservation whatsoever to arbitrators. I think that is a fair offer. It shows that we are not conscious of doing anything which is otherwise than fair & reasonable. That offer was as distinctly refused as it was distinctly made by us, & so the matter stands. Sir Wm. Van Horne will not declare himself opposed to the principle of arbitration, or to the arbitrators whom we suggested, but he would only agree to enter into arbitration under such conditions & limitations & restrictions as would have placed us at the very outset in a position of inferiority & subservience to his company which we never could accept.

Well, I turn with satisfaction to another matter, as to which I am able to make an announcement which I think will give you pleasure. You are aware that for a considerable time past negotiations have been pending between the G.T. Co. & the Central Vermont for the establishment of relations on a proper business-like footing, & I am able to tell you that in the last few days, & since the issue of the report—otherwise it would have been mentioned in the report—we have heard that all the interests connected with the Central Vermont have combined & entered into an agreement of a satisfactory description. It would not be proper for me to go into details as to what the arrangement is, for this reason—that certain formalities have yet to be conducted on the other side before the matter is absolutely settled, but I think I can affirm with some confidence when I tell you that the arrangement is virtually completed, & on the next occasion of our meeting I hope to have the honor of explaining the details of the arrangement & asking you to ratify it. I can only say at present that we shall continue on a permanent footing with a company whose operations in concert with our own will be most advantageous to both companies. I must not omit to say that this result is in great measure attributable to the skill & unwearying patience of our General Manager, Mr. Hays.

While the retrospect of the last year or two affords matter for considerable satisfaction, I think we may confidently look forward to the future. On all sides there are evidences of improving prosperity in the U.S. There has been an abundant harvest, the farmers have paid their debts, & they are so well off that they are holding back their harvest at the present time in expectation of higher prices. Politics are quiet in the U.S., & as a result of the general prosperity, that strange but dangerous controversy—the currency controversy—is dormant. I wish I could say it were dead. Everything points to prosperous times in the immediate future, & therefore there should be increased prosperity for the railways, & no doubt they will partake of that prosperity. At the same time it has been the case that while other industries & other business have improved, the railways have not progressed in the same ratio, & the reason has been this

—that they have been exposed, & you know the old story which has been told in this hall over & over again, they have been exposed, owing to the uncontrolled competition which prevails amongst American roads, to a perpetual falling away of the rates. The losses thus occasioned have been met, so far as possible, by improved methods of transportations, by improved types of locomotives, & so forth, & by decrease of operating expenses. But there must be an end even to that. Fortunately there appears to be gradually growing up in the U.S. a more friendly & better feeling on the part of the community towards railways than has hitherto existed. It was said at one time, in the earlier days of the English railways—I am happy to say it does not apply to the English railways now—that railways have made everybody's fortune except their own. That observation applies with much truth to many of the American lines, & people are beginning to realize it. The remedy for the evils I have pointed out is generally recognized to be some interference on the part of the legislatures so as to protect railways against themselves, to allow what are called pooling arrangements—that is to say, contracts among the different companies, by which they may divide their business or maintain their rates, such contracts to be enforceable in the courts of law. The direction of the public mind, I think, is gradually tending to the introduction of some legislation of that sort. It would be unattended with any danger to the public, who fear increase of rates, because the Interstate Commission could be given powers to prevent any undue raising of the rates.

Turning to Canada, you know the Dominion is doing extremely well. The Finance Minister was able, for the first time for some years, this year to declare a surplus—a surplus, I think, of \$1,575,000. The imports during last year have increased by \$21,000,000, & exports by \$25,000,000. All these things are in the right direction, & imply good business & increased prosperity for the carrying trade. We are doing everything we possibly can to put ourselves in a position to avail ourselves of this current of prosperity. At Portland we are making every preparation for a great export trade during the winter months, & are expecting to have a heavy, & I hope, a prosperous season. As it is, during the past ½-year there was an increase in our exports at that port of no less than 74,425 tons. There is one other hopeful feature of high importance in its bearing upon the mutual prosperity of the U.S. & Canada, & that is the appointment of the International Commission which has been holding its sittings lately in Quebec, & which is shortly to meet again at Washington. Several of the questions submitted to the Commissioners are matters which intimately concern the G.T. Co., such, for instance, as the question of bonding privileges. At the present time goods are allowed to go through in bond from one part of the U.S. through Canada to another part of the U.S., & from time to time there have been agitations with a view to abrogating those privileges. For my own part I believe the great American interests concerned will never allow such a retrograde step to be taken, because it is to the interest of the Western States of America & the New England States that this privilege should remain. At the same time a good deal of bad blood has been occasioned by the removal from time to time of this agitation, & it would be very satisfactory if the matter could be dealt with in a treaty undertaking so as to remove it from the sphere of everyday politics. Then there is another question of interests us, what is called the alien law, by which citizens of one country are debarred from working in the other country unless they reside there, & for us, in such touch as we are with the U.S. frontiers at Niagara, Fort

Flint & Windsor, where there is constant traffic of passengers between the American shore & the Canadian shore, it is a matter of great importance that this restriction should be removed. When the law was passed it was never intended, I believe, to apply to Canadian citizens, but it has been so applied & it has caused a great deal of disagreeable friction on the frontier. That is one of the matters which I hope will be adjusted by the Commissioners. Then there is the question of tariff, in which we are vitally concerned, because the Grand Trunk is the largest taxpayer in the Dominion of Canada. Therefore any relief we can get in reduction of duties will be so much to the advantage of this company. Whatever measures of success may attend the labors of the Commission the real significance of their appointment lies in this, that it is the outcome of the strong desire which has been expressed in many ways by the two countries to live together on terms of good fellowship, so that while each maintains its own separate nationality they may tend more & more to become one community for all purposes of social & industrial development.

In conclusion, I will ask you to pass the following resolution: "That the report of the directors & accounts for the ½-year ended June 30, '98, now presented, be approved & adopted, & that a dividend of £2% be paid to the holders of the 1st guaranteed stock."

Vice-President Jos. Price said: I have recently returned from Canada & the U.S., where I spent about 2 months, having during that time made a very careful inspection of the track & rolling stock of the G.T.R. After spending several days in Montreal considering some important matters with the President & General Manager, I commenced with the Portland division, 297 miles, & the terminal property at that point. I found the permanent way well cared for, & the ballasting well attended to. Great improvements have recently been made at Portland, where 13 miles of new sidings have been laid ready for this winter's business. The elevator, which was finished about a year ago, is a fine structure & is answering all expectations; 9,000,000 bushels of grain were passed through this elevator last winter. While there we discussed what was the most useful traffic for railways. With modern rolling stock immense areas of land are required to feed a 1st-class railway like the G.T.R. with grain traffic. For example, the average crop of wheat is about 15 bus. per acre (except in Manitoba, where it is heavier). One of our 30-ton box cars has a loading capacity of 1,000 bushels; therefore, it takes about 70 acres of land to feed one box-car, & as our new locomotives are capable of hauling 40 cars, it will be seen that to supply one of these trains takes the produce of no less than 2,800 acres of land. With the boundless extension of the great West, however, the railways are well supplied with tonnage. After finishing the Portland division I went over the Quebec & Montreal section, 174 miles, which is in good order, & quite equal to the traffic on that section. From Montreal I proceeded west to Niagara, 421 miles, over the main line of the G.T.R. & the Great Western division. Both were in excellent order. A very large portion of the G.W. division, that from Toronto to Niagara Falls, has been rebalasted with a very superior quality of ballast obtained from Lake Erie, near Port Colborne. At Niagara Falls the new double track girder bridge, erected in place of the old Suspension bridge, is a very fine, solid structure, capable of supporting any amount of traffic. Proceeding west to Port Huron, 182 miles, I went over the workshops at that point. These shops are fitted with the most modern improvements, & very good work is done there. From Port Huron I went over the Chicago & G.T. to Chicago, 335 miles, & found the track very much improved. The

gradients are good, & one of our new large 85-ton locomotives can haul a train of 40 cars over that section needing the assistance of pushers at only two points—viz., Flint & Valparaiso. Returning from Chicago, I came over the Wabash connection to Detroit, 272 miles, the shortest line between Chicago & Detroit. It is a line with very favorable gradients, & with the good gradients upon the loop line division of the Great Western, affords the Wabash a very good line from Chicago to the Niagara River, under our contract with that company, which is working satisfactorily. From Detroit I returned to Montreal, 557 miles. Altogether I found the permanent way of the main line of the G.T. system in excellent order, so that trains can be run as fast as upon any other line in the country with perfect safety.

With regard to the rolling stock, the improvements since I was there 3 years ago have been simply wonderful. Our trains are made up of new cars, & the best of the old rolling-stock reconstructed in the same style as the new cars; in fact, I may safely say that they compare favorably with the best trains in the country. I did not see a shabby train upon the whole system. Some misgivings have been expressed here lest the rolling stock & roadway were being impoverished to secure the reduction in expenses. The shareholders may rest that this is not the case. Indeed, at the very time when Mr. Hays was reducing the working expenses he was actually charging in the expenses more than he was spending, & this enabled him to build up a locomotive & car renewal fund, all at the expense of revenue, out of which he has been able to pay for 20 new 85-ton locomotives & 26 new 1st-class passenger cars (all of which have been put upon the line during the last 6 months), still leaving a reserve fund of £85,000 for further improvements. It is really wonderful how he has been able to accomplish so much in this direction & still to establish such a large saving in the ratio of working expenses. With regard to the stations & station yards, they are models of neatness, & lately there have been finished 2 very complete

yards where the traffic is heavy, one at York, near Toronto, & the other at Belleville. The yards are so constructed that access is given to every siding from one straight line on the outside. During my examination I had the advantage of the attendance of the practical operating officers. Mr. Hays has selected a very efficient staff of energetic men who thoroughly understand their duties. In Mr. McGuigan, the General Superintendent, we have a most efficient officer, & in Mr. Reeve, the traffic Manager, Mr. Morse, the Mechanical Superintendent, & the divisional superintendents, we have men who are rendering excellent service to the Co.

Having passed over 3,000 miles of the system, all by daylight, & some of it, including the main line, twice, I am able to speak with confidence of its good general condition. Notwithstanding the competition which has been introduced by new lines, you may rest assured that the old G.T.R. is undoubtedly the strongest line in Canada in the district which it occupies, having access to every important town in Quebec & Ontario, & through its connections at Chicago, with all the important U.S. railways. Mr. Hobson, the Chief Engineer, who was associated with me for many years on the Great Western of Canada, is another valuable official of the Company. He has under his supervision the new Victoria-bridge, which will be completed in January, a magnificent work. As it is built outside the old tube, one can easily see the difference between the two, as the old tube is still in existence, being gradually cut away, but the trains are now passing over on the new girders from one end to the other. The old tube looks only about ½ the size of the new bridge, & looking from the rear of the train, the difference is very perceptible after you have passed through. I will conclude by giving an example of the thorough manner in which the line is being operated by mentioning that in passing both ways on the main line, between Toronto and Montreal, with the working time-table before me, I could have set my watch by our arrival at any station on the line. The freight traffic is also moved ex-

IMITATIONS. PAGE FENCING HAS 'EM.

like every article of great merit. But none of the imitations equal the Page in quality of material and construction. Page fencing is made of coiled steel wire of highest grade. The cross wires are in one piece, and wrapped around the horizontals. Ours is the only fence that will not be injured or destroyed by snowbanks. If you want a cheap fence, buy barbed wire or one of the imitation woven fences. If you want a fence that is the best, and one that is much the cheapest in the end, buy the Page. The Page Wire Fence Co., Limited, Walkerville Ont.

peditously; for instance, goods delivered at Toronto before 2 o'clock in the afternoon are delivered in Montreal on the following morning by 10 o'clock—333 miles. I wish to return my best thanks to Mr. Hays for the facilities rendered me in carrying out this inspection, which was rather trying work owing to the extreme heat, the thermometer being about 94 to 100 all the while. But the work was extremely interesting, enabling me to see the enormous improvement in the property & rolling stock compared with what it was when I last saw it 3 years ago, & the shareholders can rest assured that they have in Mr. Hays one of the most competent managers on the continent of America. In 2 years the debt incurred to keep up the debenture stock interest, over £300,000, has been paid off, we are paying £100,000 in dividends, & at the same time the roadway & rolling stock have been placed in 1st-rate condition. I have much pleasure in seconding the resolution proposed by the President for the adoption of the report & accounts, & for the declaration of the dividend on the guaranteed stock.

Mr. JEFFRIES regretted the Chairman had been unable to come to an arrangement with the C.P.R. Still, he thought they might congratulate the board on the improvement that had taken place in their property, & upon the fact that their General Manager had been able to reduce the expenses to such an extent as had been mentioned. He should like to know what decision had been come to with regard to the Belt Toronto line.

MR. BAKER considered the Chairman had hardly correctly represented the cause which originated the unfortunate & unsatisfactory war of rates from which the various trans Atlantic lines had suffered.

THE CHAIRMAN, in reply, said that they were so much impressed, on inspection of the Belt Line, with the undesirability of retaining it, that they took upon themselves the immediate responsibility of closing the line. Although endeavors had been made to get rid of the line they had been unable to do so. Mr. Baker had charged this Co. with being the originator of the rate war. There was no foundation for such a statement.

The resolution was then put to the vote & carried unanimously amid applause.

MR. JEFFRIES—I have great pleasure in proposing a vote of thanks to the President & his colleagues.

The motion was carried unanimously.

THE PRESIDENT—Mr. Jeffries & gentlemen, I am extremely obliged to you on behalf of my brother directors & on my own part for the very kind expressions you have used.

Grand Trunk Earnings, Expenses, &c.

The following statement of earnings supplied from the Montreal office, includes the G.T. of Canada, the Chicago & G.T., & the Detroit, Grand Haven & Milwaukee Rys.

	1898	1897	Decrease.
July.....	\$1,860,884	\$1,992,028	\$131,144

Calgary & Edmonton Railway Co.

The following report for the year ended June 30 was presented at the adjourned annual meeting at Toronto Oct. 26:-

The gross earnings, after deducting earnings from Government service, amounted to \$357,586.96, as against \$131,630.21 for the previous year, an increase of \$225,956.75, or 171.66%. The total expenses amounted to \$163,207.88, as against \$64,315.46, an increase of \$98,892.42, or 153.76%. The percentage of expenses to earnings is 45.64%, as compared with 48.86 per cent. for the previous year. The net earnings amounted to \$194,379.08, as against \$67,314.75 for the previous year, an increase of \$127,064.33.

Earnings from passenger traffic (including Government service) amounted to \$96,250.17, as compared with \$38,965.74, an increase of \$57,284.43, or 147.01%, this increase being to a considerable extent attributable to earnings from fares of laborers for Crow's Nest Pass Ry., as well as from passengers for the Yukon over the Edmonton Branch. Freight, express, mail & miscellaneous earnings (including Government service) amounted to \$266,663.96, as compared with \$96,493.06 for the previous year, an increase of \$170,170.90, or 176.36%. Of this increase about \$74,000 has been derived from earnings on Crow's Nest Ry. construction freight, leaving a natural increase of about \$96,000, or 100%, which must be considered very satisfactory.

The total increase in operating expenses of \$98,892.42 is, the directors consider, not unsatisfactory, taking into account the large increase in traffic & the fact that the Co. had to meet some exceptional expenditure, such as, water supply, \$6,179.62; wrecking, \$5,386.49; & damage by freshets, \$9,190.83, caused by the high water during June, 1897. A considerable further amount will have to be paid out during the current year for work rendered necessary as a result of damage by freshets in 1897.

The total tonnage carried during the year amounted to 127,847 tons, as against 27,018 tons for the previous year, an increase of 100,829 tons, of which 73,113 tons consisted of Crow's Nest Pass Ry. construction material.

During the year the railway carried 1,103,050 bus. of grain, as compared with 234,235 bus. during the previous year, an increase of 868,815 bus., & it is estimated that, though the yield per acre may not be as heavy this year as last, the increased area under cultivation in the districts tributary to the Co.'s railway will give a larger crop than last year. The cattle trade is increasing, as well as the export of dairy & other farm products, & settlers along the line of railway are doing well.

GENERAL BALANCE SHEET JUNE 30, 1898.

ASSETS.	
Cost of road	\$6,458,040 00

As security for the annual subsidy the Government retained & now hold 407,402 acres of the Co's land grant.

The following were re-elected: President, H. C. Hammond; Vice-President, N. Kingsmill, Q.C.; other directors: J. J. Kingsmill, Q.C.; E. B. Osler, M.P.; C. E. L. Porteous, D. W. Saunders, R. A. Smith. Secretary, R. A. Smith.

Pullman Palace Car Company.

At the annual meeting of this company, in Chicago, Oct. 13, the directors were re-elected. The stockholders voted to issue \$18,000,000 of new stock to capitalize the existing surplus. This will be distributed to stockholders of record Nov. 1, making a stock dividend of 50%, each holder receiving 1 share of new stock for each 2 shares now held by him. The report for the year ended July 31 shows the following statistics of traffic, earnings & capital:

Earnings of cars	\$8,508,837
patents	12,138
from manufacturing, etc.	2,063,893
	<u>\$10,674,868</u>
Operating expenses	\$3,776,315
Paid other interests in lines partly owned	831,634
Repairs in excess of mileage	793,036
Dividends	2,880,000
	<u>\$ 8,280,985</u>
Surplus	\$ 239,838

ASSETS.	
Cars & equipments	\$22,153,304
Investments in other car ass'ns	2,896,468
Plant at Pullman	8,113,767
Other shops & real estate, etc	1,573,295
Lumber, supplies, etc., inc. cars unfinished	4,099,948
Patents	114,009
Furniture	75,000
Securities, loans, cash, cash items, etc.	24,056,714
	<u>\$63,083,105</u>
LIABILITIES.	
Capital stock	\$36,000,000
Special dividend Aug. 15	7,200,000
	<u>\$43,200,000</u>
Surplus	19,883,105
	<u>\$63,083,105</u>

The surplus invested in the assets of the Co. is \$29,896,842; but from this deductions are made aggregating \$10,013,737, reducing the net surplus to the sum stated above. The deductions include depreciation of cars & other property, \$1,577,666; settlement with Central Transportation Co., \$1,195,930; franchises, patents, etc., \$1,190,760; special dividend, \$7,200,000. These written-off items are partly offset by an item of \$1,150,619 appreciation in value of securities.

Following are comparisons with the preceding year:

	1898.	1897.
Car earnings	\$ 8,598,838	\$ 7,743,344
Other income	2,076,030	1,231,544
Total	\$10,674,868	\$ 8,974,888
Operating expenses	3,776,314	3,511,868
Other ass'ns	831,634	812,164
Other expenses	793,036	
Dividends	2,880,000	2,880,000
Total	\$ 8,280,984	\$ 7,204,037
Surplus	2,393,884	1,770,851

From the statement made by Acting President R. T. Lincoln at the annual meeting the following additional statistics are gathered:

Cars built for the Co. during year	23
Cost of same (av. \$15,989 each)	\$367,739
Passengers carried	5,356,912
previous year	4,852,398
Car miles	201,295,321
previous year	190,652,758
Cars owned & controlled, 1st class	2,039
2nd class	371
Mileage of roads	121,662
(a) Product of car works, value	\$10,368,256
(b) Product of other industries, inclng rentals	1,032,087

Total a and b	\$11,400,343
previous year	4,681,618
Average number on pay roll at Pullman	5,012
Average pay per capita	\$539
Average pay of journeyman mechanics at Pullman per day	\$2.39
Same, previous year	\$2.28
Deposits in Pullman Savings Bank	\$679,332
Increase from previous year	175,893

If the cars run during the past year had made the 201,295,321 miles in trips of 375 miles each, the number of trips would have been 536,787, & the 5,356,912 passengers would have averaged just about 10 to each car for each trip.—Railroad Gazette.

Canadians in Kentucky.

The Richmond, Nicholasville, Irvine & Beattyville Ry. was resold under foreclosure at Versailles, Ky., Oct. 6. The road was sold last year to D. Shanahan & Co., who transferred the property to A. Segal, of Philadelphia. The latter defaulted in the payments after making a deposit of \$25,000, & a resale of the road was ordered. At the sale, Oct. 6, the property was purchased at \$160,000 by Col. B. H. Young, of Louisville, who represents a syndicate composed of: A. E. Fawke, Liverpool, England; G. P. Magann & A. Fraser, railway supply dealers, Toronto, Ont.; G. W. Evans, C. D. Chenault, C. H. Chenault, J. S. Powell, B. B. Million, D. W. Chenault, J. C. Chenault, G. W. Evans, jr., J. B. Chenault, of Richmond, & Col. B. H. Young, of Louisville. In addition to the purchasing price of \$160,000, the syndicate agrees to return to Mr. Segal \$12,000 for improvements made in the property.

The road extends from Versailles, Ky., to Irvine, 61 miles. It was built about 8 years ago at a cost, it is said, of nearly \$2,000,000, including equipment. Mr. Fawke & other English investors recently purchased 2,500 acres of coal & timber lands in Perry County Ky., & the railway will probably be extended to them. The road is said to be in splendid shape & to now be on a paying basis. It is understood that Messrs. Magann & Fraser have a controlling interest in the new organization.

The sale above mentioned has been set aside by Judge Barr, in the Louisville Circuit Court, on the petition of Shanahan & Co. Special Commissioner G. Durelle has been ordered to make another sale at the upset price of \$210,000, which was offered by J. Stiles, Trustee.

Victoria & Sidney Railway.

At the recent annual meeting at Victoria, B. C., the report presented covered from July 1, 1896, to June 30, 1898, as follows:

RECEIPTS.

Passenger	\$16,902 50
Freight	17,031 63
Mail & telephone	824 09
	<u>\$35,358 22</u>

EXPENDITURE.

Maintenance	\$ 5,744 30
Motive power	13,065 23
Repairs to cars	346 21
Operating	15,504 35
	<u>\$34,720 90</u>

Number of passengers carried..... 37,536.
Tons of freight carried..... 35,110.

The following were elected: President, George Riley; Vice-President, P. C. Dunlevy;

THE BARRETT TRACK JACK.

Recommended as a standard by the

Road Masters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low et loads.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting capacity,

10 to 15 tons.

For Catalogue and Price List, apply to

THE DUFF MANUFAC. CO.

Marion and Martin Avenues, ALLECHENY, PA.

Stock carried by

JAMES COOPER, Agent, 299 St. James St., Montreal.

No. 2 Automatic Lowering.

No. 1 Trip.

Directors, W. Macaulay, R. L. Drury, S. Rounding. The officials are: General Manager, T. W. Paterson; Sec.-Treas., S. Rounding; Auditor, A. H. Harman.

Financial Notes, &c.

Calgary & Edmonton.—The net earnings or Sept. were \$5,767.93 as against \$15,734.43 in Sept. '97.

Central Vermont.—Steps have been taken in the Vermont Legislature to re-incorporate this Co. under the name of the Central Vermont Ry. Co., instead of R.R. Co. as heretofore. The capital stock is to be \$3,000,000, & the incorporators are authorized to buy the property of the old Co., as well as the Missisquoi Valley, the Burlington & Lamoille Valley, to lease the New London Northern, & to hold the stock of the Montreal & Vermont Junction. The incorporators are E. C. Smith, D. D. Ramlet, C. M. Hays, C. Percy, J. G. McCullough, Wm. S. Webb, E. H. Baker & S. E. Kilner. Messrs. Hays & Percy are G. T. R. officials.

Columbia & Western.—The annual meeting will be held at Trail, B.C., Dec. 14.

F. A. Heinze, who sold the C. & W. Ry. from Robson to Rossland, & his smelter at Trail to the C.P.R. Co. for some \$800,000, has, it is said, made a claim on that Co. for another \$100,000 for personal property at the smelter, which, he contends, was not intended to be included in the transfer to the C. P. The latter, on the contrary, claims that it bought everything in sight.

Great Northern (U.S.)—The annual report for the year ended June 30 is as follows:—

	1898.	1897.
Gross earnings railway system proper.....	\$22,577,544	\$19,436,060
Gross earnings other proprietary companies.....	2,443,650	2,300,165
Total earnings.....	\$25,021,194	\$21,736,225
Operating expenses & taxes.....	13,469,013	13,230,222
Net earnings.....	\$11,552,182	\$8,506,003
Miscellaneous income.....	1,523,715	691,921
Total net income of system.....	\$13,075,897	\$9,197,925
Fixed charges & guarantee dividend on St. P. M. & M. stock.....	6,413,714	6,380,208
5 dividend on G. N. preferred stock.....	1,500,000	1,250,000
Total charges.....	\$7,913,740	\$7,632,208
Surplus.....	\$5,162,157	\$1,565,717

At the annual meeting at St. Paul, Minn., Oct. 9, J. H. Schiff & H. W. Gannon, whose terms had expired, were re-elected directors. J. N. Hill was elected to succeed Lord Strathcona & Mount Royal.

Kaslo & Slocan.—At the annual meeting at Victoria, B.C., Oct. 16, R. Irving, heretofore Traffic Manager & Secretary, was elected President in place of D. J. Mann. G. F. Copeland was elected Vice-President & Treasurer in place of A. Guthrie, & J. Jeffries was elected Secretary.

Kingston & Pembroke.—A special meeting of shareholders will be held in Kingston Nov. 21, to authorize the directors, pursuant to the Act passed at last session of the Dominion Parliament, to issue preference stock not exceeding \$1,000,000, to pay the interest on the Co's bonds or debentures issued up to Jan. 1, 1899, & the floating liabilities of the Co.

Kootenay Valley.—V. H. Thompson, A. Allen, C. Shields & L. F. Gordon, Seattle, Wash.; G. Alexander, Kaslo, B.C., & H. M. Foster, London, Eng., have been incorporated at Spokane as the Kootenay Valley Ry. Co., to take over the line which is building from Bonner's Ferry, Idaho, to Kaskanook, B.C., & the portion of which on the Canadian side is called the Nelson & Bedlington. The line will form a part of the Kootenay Railway & Navigation Co.'s system, full particulars of which were given in our Sept. issue, pg. 181.

Northern Pacific.—At the annual meeting in New York, Oct. 20, the following directors were elected:—E. D. Adams, R. Bacon, D. Clark, C. H. Coster, R. M. Gallaway, B. Ives, D. S. Lamont, C. S. Mellen, J. G. Moore, W. Oakman, S. Spencer, J. Stillman & E. B. Thomas.

Qu Appelle, Long Lake & Saskatchewan.—The net loss in operating for Sep. was \$3,-323.25, compared with net earnings of \$126,-60 for corresponding period.

Quebec Central.—The traffic receipts for Sep. were \$46,647.29, compared with \$43,-932.26 for corresponding period. There was an increase of \$3,787.88 in passenger receipts & a decrease of \$1,079.06 in freight.

The aggregate traffic receipts for the 9 months to Sep. 30 were \$344,178.90, compared with \$357,267.48. Passenger receipts increased \$7,938.87, & freight decreased \$20,-977.96. The earnings per mile per month were \$179.54, a decrease of \$6.82 from corresponding period.

Quebec & Lake St. John.—The gross earnings for Aug. were \$3,894 more than for the corresponding period.

Quebec, Montmorency & Charlevoix.—For information respecting this Co., see under head of Electric Railways further on in this issue.

Rutland R. R.—The control of this road has passed into the hands of a few New York & New England capitalists, including W. K. Vanderbilt, C. M. Depew, W. S. Webb, H. McK. Twombly, of New York; W. H. Ball & E. Harding, of Boston, & P. W. Clement, of Rutland, Vt. Mr. Clement has for many years been the President of the road, & about a dozen years ago he sold to the Delaware & Hudson Canal Co. a controlling interest in the shape of \$3,000,000 of preferred stock & \$1,000,000 of common stock. This Delaware & Hudson interest constitutes part of the securities embraced in the present transfer. The Central Vermont Ry. Co. had a 999-year lease of the Rutland road up to May 7, 1896, on which date the property was surrendered to its owners in consequence of a default by the lessee company in the payment of the stipulated rental of \$365,000 a year. Since that surrender the Rutland road has practically been in the market, & there has been considerable conjecture regarding its final disposition. The Grand Trunk has been mentioned as a probable purchaser. Its present control insures its operation in the Vanderbilt interest. The total capitalization of the Rutland R. R. Co. is \$6,719,100, including \$2,480,000 of common stock & \$4,239,100 of preferred stock. The funded indebtedness consists of \$3,500,000 of 1st, 2nd & consolidated mortgage bonds.—Railway World.

For further information about this line, see under head of Railway Projects elsewhere in this issue.

The Northern Pacific announces a quarterly dividend at the rate of 4% per annum on the preferred shares.

The St. Louis, Kansas & Southwestern Ry. was sold at auction at Arkansas City, Oct. 22, by the Master-in-Chancery for \$150,000 to S. Barker, of Hamilton, Ont., a representative of bondholders, to the extent of \$800,000. The road, which is 59 miles long, runs from Arkansas City to Anthony, & was at one time part of the 'Frisco system.

The Halifax Chronicle very kindly says: "THE RAILWAY AND SHIPPING WORLD, devoted to the interests of steam & electric railways, shipping, express, telegraphs & telephones, is a publication which is certain to become very popular with Canadians. It is neatly printed & has an abundant supply of well-arranged & interesting facts relating to the interests it aims to serve."

RAILWAY PROJECTS.

Amherst to Northport.—At a meeting of the ratepayers of the town of Amherst, N.S., Oct. 26, the council was authorized to make a grant toward the construction of a railway from Amherst to Northport on Northumberland Straits. The length of the road would be about 20 miles, & it would open up some valuable coal properties, rich agricultural areas, & afford facilities for the dry shipment of lumber to European markets. The route would be parallel to that of the unfinished Chignecto ship railway, about 4 miles from it at Amherst & 10 miles at the eastern terminus. The Co. expects to run a survey through this autumn.

Chilcoot Pass to Dawson.—A. Ferguson, Solicitor, Ottawa, gives notice of application to the Dominion Parliament for the incorporation of a company to construct & operate a railway from, on, or near the International Boundary at or near the head of Chilcoot Pass & the commencement of the Dalton Trail, thence along or near the Dalton Trail to or near Selkirk, & thence to a point in or near Dawson City, with the usual powers.

Dawson Belt Line.—D. G. Macdonell, Solicitor, Vancouver, gives notice of application to the Dominion Parliament for the incorporation of a company to construct & operate a railway from, at or near Dawson City, along Klondike River to the confluence of Hunker Creek, thence along Hunker Creek to Dominion Creek, thence to Indian River & along its course to its junction with the Yukon River thence along the Yukon River to Dawson City, with a branch up Bonanza & Eldorado Creeks to Dominion Creek.

Hardy Bay Tramway Co.—W. Jensen & L. Goodacre, Victoria, give notice of desire to form a Co. under this title, under the Tramway Incorporation Act (British Columbia), for the purpose of building & operating a tramway from a point on Hardy Bay, Rupert District, Vancouver Island, southwesterly to Coal Harbor, Quatsino Sound, & with power to build branch lines therewith, & to build telephone or telegraph lines in connection.

Kamloops Lake to Atlin Lake.—Bodwell & Duff, Solicitors, Victoria, give notice of application to the B.C. Legislature for the incorporation of a company to build a standard or narrow gauge railway from or near the outlet of Kamloops Lake to the plateau of the Bonaparte River; thence to the Cariboo wagon road near the One Hundred-Mile House; thence following generally the route of the Cariboo wagon road to the mouth of Quesnelle River; thence north-westerly, following generally the route of the Telegraph trail to Hazelton, at the Forks of the Skeena River; & thence north & north-west to the vicinity of Atlin Lake; with power to build a branch to Teslin Lake.

Midway to Kettle River.—D. B. Vincent & I. Thompson, agents for applicants, give notice of application to the British Columbia Legislature for the incorporation of a company to construct & maintain a railway from, at or near Midway westerly, following the valley of the Kettle River to its junction with the West Fork of Kettle River; thence up the valley of the West Fork to or near the mouth of Beaver Creek, with power to construct branch lines.

Nipissing & James Bay Ry.—McMurrich, Coatsworth, Hodgins & Co., Solicitors, Toronto, give notice of application to the Dominion Parliament for an Act to extend the time limited for the completion of the several portions of the road.

Northern Pacific.—A rumor is current in Winnipeg to the effect that the Northern Pacific will build a direct line from there to Duluth, by way of the Red River, & that other important extensions on the Manitoba division

are in contemplation. The marvellous crop of this year, and the possibility of the export of wheat increasing to 50,000,000 or 60,000,000 bus. in the next 3 or 4 years, is the incentive to build to Duluth direct. The air line to Duluth would compete with the C.P.R. Winnipeg-Fort William route, as well as with the Manitoba & Southeastern, which is now being built from Winnipeg southeasterly to meet the Ontario & Rainy River Ry., now building westerly from its starting point on the Port Arthur, Duluth & Western, near Stanley, a short distance west of Fort William. The M. & S. E. is subsidized by the Province of Manitoba & was adopted instead of Premier Greenway's first proposal of an air line to Duluth.

Quesnelle Forks to Skeena River.—Wilson & Senkler, Solicitors, Vancouver, give notice of application to the B.C. Legislature for the incorporation of a company to build a railway from or near Quesnelle Forks, to or near Hazelton, near the junction of the Watsau-Kwa or Buckley & the Skeena rivers.

Spokane & Northern.—The Chicago Tribune says: "The Great Northern (U.S.) it is reported, intends to make application to the next session of the Canadian Parliament for a franchise to extend the Spokane Falls & Northern through Southern British Columbia. The franchise desired by the Great Northern is believed to be for a more ambitious enterprise than has yet been revealed. The real object is represented to be a paralleling of the C.P.R. Crow's Nest line through Southern B. C., in addition to the Kettle River road."

Stikine & Yukon.—Blake, Lash & Cassels, Solicitors, Toronto, give notice of application to the Dominion Parliament for the incorporation of a company, with the usual powers, to construct & operate a railway from on or near the Stikine River to Teslin Lake or thereabouts, thence to Dawson City or thereabouts; also from on or near the Stikine River southerly to a point in British Columbia capable of being made an ocean port; also from on or near the waters of Lynn Canal, by way of Fort Selkirk or thereabouts to Dawson City or thereabouts; also branch lines & lines of railway along or near any creek or water-course in the Yukon district; also telegraph & telephone lines from existing lines in B.C. to any points on the above lines of railway. It is said this application is in the interest of Mackenzie, Mann & Co.

Rutland-Canadian.—A bill has been passed by the Vermont Legislature, incorporating the Rutland-Canadian R. R. Co. with a capital of \$1,000,000, for the purpose of extending the Rutland Ry., which now runs from Bellow's Falls to Burlington, Vt., 120

miles. The extension will run from Burlington north to Rouse's Point, N.Y., either through Grand Isle County or by way of St. Albans & Swanton, & will connect with the Canada Atlantic. The incorporators are: W. C. Clement, H. G. Smith, F. R. Wells, F. W. Wilder, W. W. Stickney, George R. Bottom, J. W. Stewart, W. S. Webb & P. W. Clement.

Thunder Bay, Nipigon & St. Joseph.—Some Port Arthur citizens have decided to apply for a charter for a railway from there via Lakes Nipigon & Joseph to James Bay.

RAILWAY APPOINTMENTS, &c.

Canadian Pacific.—A recent telegram from Portage la Prairie, Man., stated that F. L. Newman had been appointed Superintendent of the Crow's Nest Pass Ry. Enquiry at the Manager's office at Winnipeg elicited the information that nothing was known there about the appointment. The line is about to be transferred to the operating department of the Western Division.

T. H. Underwood, formerly of the C.P.R. & latterly Chief Clerk in the general traffic office of the Government Ry. System in Montreal, has gone to England to act as Travelling Freight Agent for the C.P.R. He will be attached to the staff of European Traffic Agent Baker.

Grand Trunk.—Superintendent Fitzhugh, of the Middle Division, announced the following appointments as effective Nov. 1: H. E. Whittenberger, Trainmaster, 16th (Toronto to Hamilton), 17th, 18th, 19th 20th (Harrisburgh to Tilsonburg Jct.) districts, vice C. S. Cunningham, transferred; office at London, Ont. W. E. Costello, Trainmaster, 15th, 16th (Port Dover to Hamilton), 20th (Buffalo to Goderich) 21st districts; office at Stratford, Ont.

Mr. Cunningham has been transferred to a similar position at Island Pond, Vt. Mr. Whittenberger has recently been Trainmaster at Stratford, Ont. Mr. Costello comes from the Columbus, Hocking Valley & Toledo Ry., where he was Trainmaster of the Toledo Division.

General Roadmaster Cheer announces the appointment of T. H. Horner, formerly Foreman at Peterboro', as Roadmaster, Districts 11 & 12, North Parkdale, to South switch, Gravenhurst, & District 9, East switch, Atherly Jct., to Midland, including Medonte Branch, with office at Allendale, Ont., in place of C. Wyatt, transferred to Richmond, Que., as Roadmaster of District 2, in place of T. Stack resigned.

J. McGrath, Foreman of the erecting shops at Stratford, Ont., has been appointed Master Mechanic there in place of J. D. Barnett, resigned. Mr. Barnett was in the service for many years, having previously been in charge of the Midland shops at Port Hope. Mr. McGrath is succeeded as Erecting Shop Foreman by J. Markey, of the fitting department.

E. D. Jameson, heretofore Assistant Master Mechanic at Chicago, has been appointed Assistant Master Mechanic of the Western Division, with office at Battle Creek, Mich., being succeeded at Chicago by W. A. Bell.

J. A. Miller, heretofore Travelling Agent, has been appointed General Agent at Seattle, Wash.

J. L. Gogerty, of Portland, Me., has been appointed Yardmaster at Point St. Charles, Montreal, replacing A. Tarling, who has been transferred to Portland.

Intercolonial.—In our last issue, pg. 204, we published a circular issued by General Manager Pottinger, Oct. 14, announcing the appointment of J. E. Price, Superintendent at Truro, as General Superintendent at Moncton; the transfer of Superintendent Rennels from Campbelltown to Truro, & the appointment of G. M. Jarvis, Chief Despatcher at Moncton, as Superintendent at Campbelltown. This circular was cancelled by another bearing the same date & reading as follows: "J. E. Price has been appointed General Superintendent, with headquarters at Moncton, N.B. The superintendents of districts, the Superintendent of the Parlor, Sleeping & Dining Cars, & the Car Accountant will report to & receive their instructions from him. G. M. Jarvis has been appointed Superintendent of the Halifax & St. John District in the room of Mr. Price." It will thus be seen that Mr. Rennels has been left in his old position at Campbellton & that Mr. Jarvis has gone to Truro instead.

As foreshadowed in our last issue, Mr. Jarvis has been succeeded as Chief Despatcher by H. B. Fleming.

The Railroad Gazette, New York, announces that "J. J. Wallace, heretofore Superintendent of the Halifax & St. John District of the Intercolonial, has been appointed General Freight Agent." Mr. Wallace has been General Freight Agent of the Intercolonial since Nov., 1892; so he can hardly be described as "heretofore Superintendent of the Halifax & St. John District."

W. Williams, Secretary to Supt. Rennels at Campbellton, has been promoted to despatcher in the place of L. S. Brown, lately removed.

INSURE IN

The Canadian Railway Accident Insurance Co.

OTTAWA, ONT. A PURELY CANADIAN CO.

Authorized Capital - - \$500,000.
Subscribed Capital - - \$175,000.

AMHERST, NOVA SCOTIA.

W. H. Olive, formerly Eastern Freight & Passenger Agent at Montreal, who was retired in Jan. last by General Traffic Manager Harris, has been appointed Travelling Freight Agent for Montreal City & Quebec Province, reporting to the Division Freight Agent at Montreal.

Division Freight Agent Hardwell, of Montreal, visited Toronto recently in connection with the reorganization of the office there. W. Robinson, recently Division Freight Agent at St. John, N.B., is confirmed in his new position of General Travelling Agent for Ontario with headquarters at Toronto, & N. Weatherston becomes Travelling Freight & Passenger Agent with headquarters in the same office, 93 York St.

J. D. McNutt, who has been stationed in Moncton for the last 4 years as relieving despatcher between Moncton & Truro, has been promoted to despatcher in the New Glasgow office. I. L. Boomer, operator in the Moncton office, has been promoted to Mr. McNutt's place.

Great Northern (U.S.)—Darius Miller, Third Vice-President & Traffic Manager of the Missouri, Kansas & Texas, has been appointed Chief Traffic Executive, succeeding F. B. Clarke, General Traffic Manager, with headquarters at St. Paul, Minn.

Manitoba & Northwestern.—Hugh Spence, of the office of McCarthy, Osler & Co., Toronto, has been appointed Secretary, vice E. W. Riley, of Montreal.

Ottawa & New York.—New York & Ottawa.—G. H. Phillips has been appointed Travelling Freight & Passenger Agent of these companies, with headquarters at Ottawa, Ont., vice A. W. Flack, resigned.

Spokane Falls & Northern.—A. Jackson has been appointed Resident Engineer with headquarters at Spokane, Wash., succeeding E. J. Roberts, Chief Engineer, resigned.

W. Coyne has been appointed Chief Despatcher with headquarters at Spokane, Wash.

The following are the recently-elected & appointed officers of the Nelson & Fort Sheppard & the Red Mountain Ry's, the subsidiary lines in British Columbia:—W. H. Thompson, President; C. Shields, Vice-President; F. W. Bobbett, Sec'y & Treas.; A. M. Thomas, Auditor; C. G. Dickson, G. F. & P. A.; A. Jackson, Resident Engineer; C. H. Prescott, Master Mechanic. Mr. Thompson has his office at Seattle. All the others are at Spokane.

West Shore.—J. J. McCarthy, Travelling Passenger Agent at Toronto, has been appointed General Western Passenger Agent at Chicago, vice W. Caldwell resigned. Mr. McCarthy is succeeded at Toronto by L. Drago, Travelling Passenger Agent at Suspension Bridge, N.Y., who in turn is succeeded by Mr. McDonald, of Buffalo.

Personal Mention.

Jas. Ross, Vice-President Montreal Street Ry., has arrived in Montreal from England.

C. R. Hosmer, Manager C.P.R. Telegraphs, has gone to England, accompanied by Mrs. & Miss Hosmer.

Hugh Ryan, the well-known contractor, is very ill at his home in Toronto, with acute Bright's disease.

A. Lovell has been appointed Assistant Superintendent of Motive Power for the Northern Pacific. Office, St. Paul, Minn.

It is said E. C. Harris, formerly despatcher on the Intercolonial, & latterly Superintendent of the Fremont, Elkhorn & Missouri Valley Ry. at Chadron, Neb., has received an appointment on the Union Pacific.

R. Miller, Superintendent of Motive Power of the M.C.R. Ry., met with an accident at his home in Detroit recently, whereby he was badly but not dangerously burned by an explosion of gas in a furnace.

W. Mackenzie, accompanied by 3 of his daughters, left Toronto in Oct. for England. The Misses Mackenzie go to continue their studies on the Continent; Mr. Mackenzie expects to return to Canada early in December.

J. M. Egan, at one time General Superintendent of the C.P.R. Western Division at Winnipeg, was re-elected Vice-President of the Central Ry. of Georgia at the recent annual meeting. His headquarters are at Savannah.

Mrs. Matthews, wife of W. D. Matthews, of the C.P.R. directorate, has returned to Toronto from abroad, having spent the summer travelling with her daughter, Ethel, on the Continent, & left her in Paris to continue her studies.

Sir Wm. Van Horne, R. B. Angus & W. Mackenzie are among the directors of the Grand Falls (N.B.) Water Power & Boom Co., the capital stock of which, \$1,000,000, is said to have been subscribed.

Collingwood Schrieber, Deputy Minister of Railways, was married at Ottawa, Nov. 14, to Julia Maud, daughter of Judge Gwynne, of the Supreme Court. After the ceremony Mr. & Mrs. Schrieber left in the official car Montreal for New York.

The Duke & Duchess of York are about to visit Lord & Lady Mount-Stephen at Brocket Hall, Hatfield, Eng. The Duchess' friendship with Lady Mount-Stephen dates from the days when the latter was Lady-in-Waiting to the Duchess of Teck.

T. R. Hewson, Civil Engineer, of Tyrrell & Hewson, died suddenly at Sudbury recently. He was born in Cobourg about 41 years ago. He was Engineer of the Hamilton Radial Ry. Recently he had been at Sudbury superintending the laying out of township land for the Government.

Lord Strathcona & Mount Royal was recently asked about the statement published in Canada that he was about to resign the High Commissionership, & he succeeded by Sir Richard Cartwright. He said that, of course, he knew nothing of Sir Richard Cartwright's movements. He himself was quite innocent of knowledge of any intention such as alleged.

It is rumored that F. D. Underwood, General Manager of the Minneapolis, St. Paul & Sault Ste. Marie, has been appointed General Manager of the Baltimore & Ohio, to succeed W. M. Green, elected Vice-President of the B. & O. Southwestern, & that W. F. Fitch, General Manager of the Duluth, South Shore & Atlantic will succeed Mr. Underwood on the M., St. P. & Ste. S. Marie.

Mrs. Rolph, wife of E. R. Rolph, Architect on the Crow's Nest Pass Ry., died at Macleod, Alta., Oct. 23, of peritonitis. She was a daughter of S. W. McMichael, Chief Inspector of Customs, Toronto, & had only been married a few months. The body was taken to Toronto, & was accompanied by Mr. Rolph, who was so ill with typhoid that he had to be carried off the train on reaching Toronto. He is progressing very favorably.

Gamble Armstrong, the eldest son of H. W. D. Armstrong, C. E., of the Crow's Nest Pass Ry. Engineering Staff, died at Macleod, Alta., Oct. 20, of typhoid. He had been engaged for over a year past in the engineering department of the Crow's Nest Ry., & for the last six months was with his father at Fertile, B. C. The latter, who was laid up in Toronto in September, while on leave, also with typhoid, returned west the second week in October, & on arriving at Macleod, October 17, found that his son had been taken there ill a few days before. The end came three days later. The body was taken to Fertile & interred in St. James Cemetery.

H. A. Price, heretofore District Passenger Agent of the I.C.R., at Halifax, recently transferred to a similar position in Montreal, entered the service of the G.T.R. in the audit office in 1873 & went into the Managing Director's office the following year. He succeeded the late C. J. Brydges as Private Secretary when he was appointed General Superintendent of Government Railways in 1875, & when the former retired in 1879 became Private Secretary to D. Pottinger, the present General Manager, with whom he remained until 1892. Then he was appointed chief clerk in the General Passenger Agent's office at Moncton, N.B., where he remained until last Jan., when he was appointed District Passenger Agent at Halifax.

E. H. Keating, Manager of the Toronto Railway Co., has been sadly bereaved lately. Late in Oct. he received a cablegram from the British War Office, stating that his son Lieut. Keating, of the Leinster Regiment, had been killed in a canoe on the Niger by natives. He had set out in command of a party of native soldiers from Lokaja, & having passed Jebba, was advancing towards the farthest outposts of the British in the Niger region. A mutiny had occurred at Fort Goldie among the native troops, & it is possible that his death may have been caused by some of the mutinous natives. About the same time Mr. Keating was advised of the death in California of his father, Wm. Keating, who was a lawyer, having been admitted to the Nova Scotia bar in 1829. For some years he was registrar of deeds for Halifax County. In 1891 he removed to California from Halifax, with his family.

Jas. Tillinghast died at his home in Buffalo, N. Y., Oct. 25, aged 76. He was born in Cooperstown, N.Y., & entered railway service as fireman on the Utica & Schenectady R.R., now a part of the New York Central. In a few years he became Master Mechanic & Assistant Superintendent of the Rome, Watertown & Ogdensburg. In April, 1856, he was appointed Superintendent of Motive Power & Assistant General Superintendent of the Northern Ry. from Toronto to Collingwood, Ont., now a part of the G.T. system. He remained in this position for 8 years, & then became connected with the Buffalo & Erie Ry. as Assistant General Superintendent. From 1865 until 1869 he held the position of Superintendent, Western Division of the New York Central, becoming General Superintendent in 1869. He held this position for 12 years, when he resigned to become Vice-President of the New York Central Sleeping Car Co. *Railroad Gazette.*

Canada Southern.—Kingsmill, Saunders & Torrance, Solicitors, Toronto, give notice of application to the Dominion Parliament for an act to extend the times limited for the commencement & completion of the unconstructed lines or branches of the Canada Southern Ry. Co.

Sarnia Port Huron Ferry.—The Lake Erie & Detroit River Ry. has purchased the car ferry International from the G. T. R., & will run her between Sarnia & Port Huron, connecting at Port Huron with the Flint & Pere Marquette Ry. On the Canadian side of the river the ferry will connect with the Erie & Huron Ry. lately purchased by the L. E. & D. R., & through it with the Michigan Central at Courtwright, & with the C. P. R. & Wabash at Chatham.

Following is a literal copy of a report made by a track foreman on a Chicago road recently: "Mike was carrying A plank himself & 5 More men & he was going backward with the plank & he fell in his seat in the Nail & went threw him at 10.30, Foreman."

From a Superintendent's Standpoint.

From the Editor of the Railway & Shipping World:

I have just read in your Oct. issue a report of the proceedings of the Canadian Roadmasters' Association, & am particularly struck with the concluding speech of the President, in which he laments that the roadmaster has no official in the railway service from whom he can obtain intelligent direction in the practical work pertaining to the maintenance of way. The superintendent, general superintendent, or manager, it is alleged, are promoted from the ranks of the transportation department, & according to the President of the Roadmasters' Association, never know anything about maintenance of way. The civil engineer is grudgingly admitted to have received a theoretical training in this branch of the mysteries of track maintenance.

I am surprised at the worthy President of the R.M.A. displaying such egotism, & would suggest that he look up the history of railway building & maintenance, past & present. I have had 20 years railway experience, the last 10 of which has been as superintendent of about 500 miles on a Canadian railway. There are 3 roadmasters on my division, & they have never lacked the necessary direction—they have not had to ask for it—it has been given freely & ungrudgingly, & when this direction compelled the changing of old practices, with a view to more economical working, & up-to-date methods, it had almost to be driven into their heads with a maul.

It is not necessary for a man to have worked with a pick & shovel to understand the maintenance of track in all its details. The most progressive railways, with the best track, over which the heaviest & fastest traffic is handled, place the maintenance of the track under the direction of civil engineers, & the trend of present day practice is to make roadmasters from civil engineers.

I cannot recall one improvement in rails, fastenings or maintenance methods which has originated with a Canadian roadmaster, while, on the other hand, I can point out innumerable improvements originated & put in practice by general superintendents, engineers, superintendents, & other officials,—improvements which were considered as impractical, and fought tooth & nail by the roadmasters at the time of their introduction.

If the President of the R.M.A. thought that roadmasters were the only "pebbles on the embankment," it would have been more becoming to have left it to some other official to have given voice to the sentiment.

A SUPERINTENDENT.

Canadian Roadmasters' Association.

In the report of the Ottawa meeting in our last issue, there were some errors in Mr. Leslie's remarks on the elevation of curves, on pg. 210, col. 2. The correct report of what he said is as follows:—

MR. LESLIE.—I find that for 60 miles an hour an inch to a degree is as near as we can come at it. We have curves between Eganville & Madawaska of 5 degrees, & between Eganville and Ottawa the sharpest curves are 3 degrees. I elevated them 1 in. to a degree for 60 miles an hour & found it sufficient. The inner rail is now showing slight signs of cantins on heavy grades. I elevated $\frac{3}{4}$ of an inch to a degree for 45 miles an hour & found it too much for heavy freights crawling up grade at a slow rate. I think this question is a pretty hard one to decide on, & it depends, of course, on the circumstances what elevation must be given. Passenger trains running at 60 miles an hour & freights crawling along at 15 to 20 miles require different treatment, & it is hard to provide for both. We feel like giving more elevation when trains are running fast.

In the discussion on rail joints, pg. 211, col. 1, the following correction is necessary:—

MR. R. SHANKS.—From what experience I have had I do not favor the suspended joint, but at the same time I cannot altogether approve of the 44-inch bar. I find that in quite a number of cases we have to slacken up bolts, where the shoulder is light, in order to let the expansion close up, and prevent track springing out of place. Like Mr. Jelly, I have had a good deal of trouble with the rail giving back from the end of the bar about $2\frac{1}{2}$ ft.

The Ottawa & New York Ry.

At Albany, N.Y., Nov. 2, Supreme Court Justice Chester rendered a decision which, if it is sustained by the higher courts, will prevent the connection of the New York & Ottawa Ry. at Long Lake with the Adirondack Ry. at North Creek, & thereby frustrate the plan for shortening the riding distance from New York City to Ottawa by 59 miles. The State sought by the action to enjoin the Adirondack Ry. from taking or continuing condemnation proceedings to procure a right of way for a railway across Township 15, which lies in the counties of Warren, Essex & Hamilton, & which is wholly within the Adirondack Park, & is part of a forest preserve. Justice Chester holds that as the lands are a part of the forest preserve they cannot be leased, sold or exchanged, or be taken by any corporation, public or private. Some time ago the New York & Ottawa Ry. was given permission to build a road from the St. Lawrence River, 14 miles into St. Lawrence County to Moira. The N. Y. & O. then obtained control of the Northern New York, the Racquette River & Long Lake Rys., extending its line down to Long Lake, Hamilton County, which is about 30 miles from the northern terminus of the Adirondack Ry., which is controlled by the Delaware & Hudson at North Creek. The effect of Justice Chester's decision, if it is upheld, will prevent the construction of the connecting link from Long Lake to North Creek in the proposed short Canadian line.

The G. P. Magann Co., Ltd., has been incorporated under the Ontario Companies' Act, with a capital of \$350,000, & headquarters at Toronto. The incorporators are G. P. & Mrs. Magann, & Mrs. & A. Fraser, the provisional directors being Mr. & Mrs. Magann & A. Fraser.

The Story of the Railroad.

By Cy Warman, author of the Express Messenger, etc. A new volume in the Story of the West Series, edited by Ripley Hitchcock. With maps & many illustrations by B. West Clinedinst & from photographs. Uniform with The Story of the Cowboy, The Story of the Mine, & The Story of the Indian. 12mo., Cloth, \$1.50. D. Appleton & Co., New York.

This book, which follows The Story of the Cowboy, in this series, pictures the building of the earlier transcontinental lines across the true west of the United States. It tells the story of the engineer who found the way & who was the pioneer of permanent civilization among the Indians & buffalo of the plains & in the mountains. Historically, the book is valuable because it gives a comprehensive sketch of a great subject in a brief compass, & furthermore, the strange & picturesque phases of life which are depicted are full of immediate interest. An actual war, now forgotten, for the possession of a canyon in Colorado, is vividly described by the author, who has shared in the work of the railway men, & who made a special journey through the West to gather fresh material for this valuable & entertaining book. An interesting & accurate chapter is devoted to the C.P.R.

Back Numbers Wanted.

In our Sep. & Oct. issues we stated that we were anxious to obtain a few copies of the May & June issues of THE RAILWAY & SHIPPING WORLD, the supply of which had been exhausted, & through an oversight an insufficient number of copies had been retained for our files. We have to thank several readers who have sent in copies of these issues. We still want to get a few more of each, & anyone who has copies & does not wish to retain them for binding, will greatly oblige us by mailing them to us.

We also want to obtain a few copies of the July issue, & shall be very much indebted for these also.

The Western Canada Telephone Co., composed of British stockholders, has been incorporated, with a capital of £60,000, to acquire & construct telephone lines & deal in machinery relative thereto in British Columbia. Among the promoters are J. H. Wade, Bradford, & R. I. Cratchley, Dewsbury, Eng.

Established 1831.

Annual Capacity 1,000.

SINGLE EXPANSION AND COMPOUND LOCOMOTIVES.

Broad and Narrow Gauge Locomotives; Mine and Furnace Locomotives; Compressed Air Locomotives; Steam Cars and Tramway Locomotives; Plantation Locomotives; Oil Burning Locomotives.

Adapted to every variety of service, and built accurately to gauges and templates after standard designs or to railroad companies' drawings. Like parts of different engines of same class perfectly interchangeable.

Electric Locomotives and Electric Car Trucks with Approved Motors.

Burnham, Williams & Co., Philadelphia, Pa., U.S.A.

C.P.R. Stations and Hotels.

The illustration on this page shows the track & harbor elevation of the passenger station & office building now being erected by the C.P.R. Co. at its Pacific Coast terminal, Vancouver. The dimensions of the building are 191 ft. on Granville St. by a depth over all of 70' 5", the building being 8 stories in height above the track levels, which are some 29 ft. below the grade of Granville St. The building is in the French chateau style of architecture, in keeping with the other buildings that the Co. has recently erected in Montreal, Quebec & other places, & consists of a central pavilion 80' x 70' carried up 8 stories & covered with a steep pitched roof flanked on each side by 2 towers, while the wings on each side are carried up 4 stories in height, finished with hipped roofs.

is the general waiting-room 48'x78' in size, & 16' high, with windows opening on to Granville St., & a long series of windows overlooking the harbor. In the centre of the room is situated the ticket office, while on each side of the entrance are to be found the telegraph & parcels office, & the news stand. West of this room is the women's waiting-room, 32'x31' in size, with a secondary waiting-room & toilet rooms attached to it. A generous fire-place has been provided here, built of fire-brick & marble, with the upper panel filled by a painting. Alongside of this women's room is an opening off the general waiting-room, & from Granville St. is the express office with a large security vault in connection with it. The approach to the upper floor is also in this wing, & a lavatory for the use of the Co.'s officers. On the western side of the general waiting-room is the General Superintendent's office &

fuel & other conveniences. Between the basement & the ground floor is an entresol or intermediate story where the Steamship Department is located, 44'x24' in size, with private offices for the officers in charge. Accommodation is also provided on this floor for the Superintendent & his Assistant, & for the train despatchers, who have a large office provided with bay window overlooking the tracks in the east direction.

On the 1st floor the whole of the center pavilion is given up to the Traffic Department 58'x47' in size with 2 large private offices, The Land Commissioner is also accommodated here with a large public office and 4 private offices and a lavatory. Each of these departments has a fire-proof vault 15'x18' in size. The General Superintendent's Accountant & Car Accountant are accommodated in the eastern wing with four private offices & a lavatory in connection.

TRACK AND HARBOR ELEVATION, C. P. R. STATION AND OFFICES, VANCOUVER, B.C.

The material of construction up to the first floor level is of Calgary stone with rock face surface, with moulded cornices, arches, & other decorative members richly carved. The superstructure is a specially made brick from Victoria 5" x 10" x 2" in size, of a mottled buff color, & very hard in texture, being impervious to water, & therefore particularly suitable for a building in a climate such as is experienced in Vancouver. The roof will be covered with slates that are quarried in B.C., while the covering of the dormers & all other metal work in connection with the roof will be of copper.

One enters the ground floor at the level of Granville St. under a low-browed arch 42 ft. span, & 14 ft. high, through a covered porch 16 ft. deep by the width of this arch. Off this

private office overlooking the harbor, while across the corridor is the Treasurer's general office & private office with a large security vault attached to it, an office for the Purchasing Agent, & lavatories for the use of the public & of the Co.'s officers. The main staircase & elevator are situated at this end of the building to give access to the upper stories. One descends to the track level by 2 generous stair-cases 8 ft. wide, which end in a hall on the basement floor 19'x79' in size. An elevator is also provided to take passengers from this hall to the general waiting-room. The remainder of this basement floor is devoted to the baggage-room 45'x32' in size, express-room, a room for the conductors, for the steamship mail service, for the heating plant,

At the 2nd floor level the wings are unfinished, provision, however, being made for further extensions. The whole of the central pavilion being occupied by the engineering staff, with a general office 48'x58' in size, & extensive private offices, large storage vault 19'x15'. The 3rd floor is laid out similarly to the 2nd floor in every respect, & is devoted to the telegraph and cable staffs. The 4th & 5th floors are unassigned, and are reserved for future accommodation and extension. These four upper floors are particularly desirable for the purpose intended, ample light & ventilation being obtained from 4 sides, while the large fireproof storage vaults & lavatories on each floor provide better accommodation than is usually given.

STATION AND HOTEL AT MOOSE JAW.

The Co.'s building a combined station & hotel at Moose Jaw, Assa, which is an important point owing to connection being made there between the main line & the Minneapolis, St. Paul & Sault Ste. Marie trains. The building is 100 m length by 34 deep, consisting of 3 stories & a basement, & is constructed of Calgary stone up to the ground floor sill level, & native brick with stone trimmings above this point. There is a covered passage-way at the center of the building 16 ft. wide leading from the track side to the street. On this is the entrance to the general waiting-room 25'x30' on one side, while on the other side is the hotel office and dining-room 30'x41', serving pantry, kitchen, store-rooms, scullery, & lunch-room 17'x30' at the extreme end of the building. Next to the general waiting-room is the ticket office, then ladies' waiting-room 23'x21' with a retiring-room & lavatories. Then come the baggage room & express room, & a hallway with a staircase leading to the 1st floor.

On the 1st floor in the extreme western end is the train dispatchers' room, with a bay window overlooking the track in each direction, a conductors' room, Superintendent's office, clerks' office, bridge inspector's office, & lavatory. The remaining part of this floor & the floor above are given up to the hotel part, & consist of a large drawing-room & smoking room, & about 30 bed-rooms with bath & toilet rooms.

The exterior of the building presents a very imposing appearance with its high sloping slate roof & large central pavilion treated in the style of Francois 1st, flanked by turrets supported from the buttresses below. At each end are pavilions with elaborate cut stone & carved trimmings, & no expense has been spared on both this & the Vancouver station to make them perfect & complete in every respect, & quite up to the high standard that the C.P.R. has adopted for its permanent buildings. All the rooms will be decorated in a quiet & rich manner, & will be lighted by electricity & thoroughly heated & ventilated. The intention is to make these buildings as nearly perfect as possible without any regard to the expense in connection therewith. The Moose Jaw station is expected to be completed in December.

The architect for both the above buildings is Edward Maxwell, of Montreal, who is also architect of the station now being built by the Co. at Galt, Ont., as well as for the station to be built at New Westminster, B.C., & for the addition to the hotel Vancouver.

The Dominion Government has given the Co. power to expropriate the land necessary for the extension of Windsor St. Station, Montreal, which has been contemplated by the Co. for some time past. The Co. has purchased the Rodier interest in the property on Osborne St. for \$33,500. Negotiations are pending for other properties, & if they are not successful expropriation proceedings will have to be taken.

The Co. is about to build a station on the corner of Washington St. & Second Avenue, Rossland, B.C., to replace the present one on St. Paul St. There will be a commodious waiting-room & a large baggage-room flanking the agent's office. Attached to the station will be a freight warehouse about 40x100 feet.

Servis Tie Plates.—The C. P. R. Co. has recently placed some very large orders for Servis tie plates with F. E. Came, of Montreal, who has also received good orders lately for the Intercolonial, which has used the plates for years, being one of the first lines to generally use them. A committee of the U.S. Roads Masters' Association made a very favorable report on these plates this year, confirming the experience of the Intercolonial for the past 10 years.

C.P.R. Betterments, &c.

Brockville. It was recently reported that the tunnel built for the Brockville & Ottawa Ry. at Brockville, Ont., would be closed up & other improvements made by the Co. at a cost of \$50,000. We have received an official denial of the report.

Columbia & Western.—In widening the gauge of this line between Trail & Rossland there will be some slight changes of location. The standard gauge track will follow along the Enterprise, the Virginia & the Idaho mines ground as much as at present, but instead of curving north of the Iron Mask, as at present, there will be a switchback at that point, whereby the line will be carried up to the War Eagle workings, below the mouth of the main tunnel. A gravity tram, such as is used at the Le Roi, will be used to convey the ore from the War Eagle's new hoist on the top of the hill to the cars on the Columbia & Western tracks. The new workings of the Centre Star will be reached in a different manner. The Centre Star's new hoist will be located beneath the railway line leading to the War Eagle, & as a consequence it would be impracticable to load Centre Star ore on the latter track. Accordingly a spur from the main line will start somewhere near the Virginia & will be carried across the gulch on a high trestle to the Centre Star's new gallows frame. In this manner it will be possible to reach that property at the best advantage. Later on the track may be continued around Red Mountain to reach the Josie & the No. 1.

Mountain Divisions.—Revelstoke is being made the divisional point of the main line in the mountains between Laggan & Kamloops, & the work of erecting the necessary shops & round-house is well under way. The work at Calgary is also making substantial progress. In an interview with Sir Wm. Van Horne the people of Donald were informed that all those who desired to move to Revelstoke & had lots in Donald would receive an equal area at the new divisional point & their goods would be moved free. The shops at Donald will be shut down shortly, but the Co. intends to do all in its power to make the change as advantageous as possible to those who are affected.

New Westminster to Vancouver.—When Sir Wm. Van Horne was in New Westminster in Oct., he stated that the fire which had occurred there a short time previously, & its consequences to the Co., had brought about the building of a better station & the continuation of the line from New Westminster to Vancouver to be used as part of the main transcontinental line one year, at least, nearer accomplishment. Nothing has been said as to just when this latter work will be done, & no survey has yet been made. The object is to give New Westminster better railway facilities. The present main line runs from Westminster Jct., 16.8 miles to Vancouver, passing through Port Moody, Barnett & Hastings. From Westminster Jct. the West-

minster branch runs to New Westminster, 8.2 miles. It is the intention, some time or other, to extend the Westminster branch from New Westminster to Vancouver direct, so that the main line will run from Westminster Jct. via New Westminster to Vancouver, instead of via Port Moody. This will lengthen the distance between Westminster Jct. & Vancouver slightly, but a considerable saving will be effected in the operation of the Westminster branch. Trains from Vancouver to New Westminster now have to travel 25 miles in consequence of going round by Westminster Jct., while the distance by the B.C. Electric Ry. line is only 12 miles.

Pentiction to the Coast.—On his recent visit to B.C., Sir Wm. Van Horne stated that nothing would be done regarding the building of a line to connect Pentiction direct with the Pacific Coast until the line between Boundary Creek & Pentiction was completed.

Pipestone Branch.—Track is being laid on the 25 miles extension from Reston, Man., which, it is expected, will be completed this season. (Aug. pg. 153.)

Port Arthur Elevator.—The Co. is improving its facilities by adding an extension drying plant. Work has commenced upon the foundation for the boilers. When the drying machinery is put in the Co. will have the most complete cleaning & drying house in America.

Stonewall Branch.—Track-laying is about completed on the extension from Stonewall, Man., about 18 miles to Foxton. (Aug. pg. 153. Sep. pg. 183.)

Vancouver Terminals.—The ratepayers of Vancouver having voted affirmatively on a by-law to exempt the Co's yards & works from taxation for 20 years, it is expected work on the proposed improvement will be started next spring. This will include the esplanading of the water front between Carroll St. & the west end of the Co's present wharves. The result of the vote on the by-law, an actual majority of 207 & a three-fifths majority of 21, showed a remarkable change in sentiment. Five years ago a bitter feeling existed among a numerous class against the Co, which Vancouver owed its very existence to, & for 3 or 4 years this feeling seemed to grow rather than diminish. Now all is changed. The letter writers who of old filled the local newspapers with tirades against the railway, have dropped out, & the labor people, now & always consistently opposed to any privileges being granted to the Co., represented about the only opposition against the by-law.

CANADA SOUTHERN RAILWAY CO.

Notice is hereby given that application will be made to the Parliament of Canada, at its next session, for an Act to extend the times limited for the commencement and completion of the unconstructed lines or branches of railway of the Canada Southern Railway Co.

Robson to Boundary Creek.

The 105 miles of work between Robson & Midway, now under construction on the Robson-Penticton branch of the Columbia & Western Railway, is the most difficult & heaviest work ever undertaken in Canada for the same distance, & will cost \$4,000,000, or nearly \$40,000 per mile. Naturally the greatest expense is in the removal of rock, of which hundreds of thousands of tons must be displaced before steel can be laid. The item on tunnels alone is one of the largest of all, there being no less than 7 bores of considerable length along the line.

W. F. Tye, Chief Engineer of the road, has given some interesting details about the tunnel work on this contract on which over 3,000 men are now at work. There are approximately 5,300 ft. of tunnels to be bored, requiring the removing of at least 66,000 cubic yards of hard rock, or nearly 200,000 tons. This, of course, does not account for the additional immense quantity of rock required to be displaced in the open cuts & mountain sides. Between Brooklyn & Robson alone it is estimated that 1,750,000 cubic yards of rock all told must be blasted away. Of the tunnels, the first is 200 ft. long, at Hanson's camp, between Robson & Brooklyn, the second is at Shields' Landing, 8 miles below Brooklyn, & is 300 ft. long. Then comes the 335 ft. tunnel of Burns & Jordan, 4 miles below Brooklyn. The next is over 300 feet long, 4 miles west of Brooklyn, & will require a year to complete, & in the meantime the mountain will be crossed by a series of temporary switchbacks. The 5th tunnel is 36 miles from Robson & is the 2nd longest bore on the line, being 700 ft. in length. From this work to a point 8 miles beyond Grand Forks, towards Greenwood, there are no more tunnels. Not far from Greenwood, where the work is again heavy, there are 2 tunnels, each being between 300 & 400 ft. in length. From Greenwood to Midway there are no tunnels. Each of the tunnels will be 16 ft. wide & 21 ft. high. On all save one hand drilling is the rule. That is the long bore where 14-drill air compressors will be used.

After visiting the work recently Sir Wm. Van Horne said he considered it the hardest bit of railroad construction the C.P.R. has yet encountered. It was much harder than had been anticipated. It was almost like going over the tops of the mountains.

The townsites will be Gladstone, Cascade, Grand Forks & Greenwood, & the Co. has become interested in the development of them. Grand Forks is located at the point where the north fork of the Kettle River runs into the main stream. Gladstone will be the distributing point for the Burnt Basin mining district & Christina Lake. Cascade is on the international boundary line at the foot of Christina Lake & takes its name from the numerous cascades which are found there, & which can be readily utilized for the generation of immense supplies of power. Greenwood will be the principal mining point in the Boundary Creek country & it is surrounded on every side by developed mines. To the east of it are the Brooklyn, Winnipeg, Crown Jewel, Snowshoe & Stemwinder mines, all developed & owned principally by Manitobans. On the north is the B.C. mine, which has a large quantity of ore dumped ready for shipping. On the west side of the valley & overlooking the town is the well-known Copper Camp, the principal mines on it being the Mother Lode & the King Solomon Mine. The former is owned & developed by a New York syndicate, while the latter is the property of D. C. Corbin, of Spokane, the railway man. Nearly all these mines have ore ready for shipment, & are only awaiting the completion of the railway to start shipping to the Co.'s large smelters at Trail. This smelter will reduce all ore

until the development of the country is sufficiently advanced to require local smelters.

Grand Trunk Betterments.

International Bridge.—The situation is practically the same as when we last referred to this matter. The legislation obtained last spring & the action taken at a recent meeting in London, Eng., were but preliminary steps to put the Co. in position should the management, in the near future, see its way clear to go ahead & undertake the actual reconstruction of the bridge.

Montreal Offices.—The Montreal City Council has approved of the plans submitted. Architect Waite writes of them: "The elevations are treated Neo-Greco, that is a modern adaptation of Greek & Roman architecture, not a servile copy, but from the spring whence marvellously simple & logical inspirations of the art of the Greek are obtained, for architecture is required to modify its forms in accordance with the conditions of life, of temperature, & plan of required arrangement. The sculptural parts are concentrated upon features supported by dignified & quiet masses of walls; & while Greek will have the French phase. The plans are naturally adapted with reference to the absolute needs of the Co., entrances, gallery, corridors & apartments, & minor arrangements, are placed with reference to the convenience of the public & Co., yet keeping in view a pleasing impression as to its beauty. The principal facades, now under consideration, are, granite, red or grey sandstone, a grey-bluish limestone, & also a combination of these materials. The construction will be of a most permanent character, working in materials of the highest grades, with all steel & iron parts protected so as to be fire-resisting, & the vital structural parts absolutely concealed in solid masonry. As to cost, this naturally depends upon the materials chosen for the facades. However, the sum named, \$250,000, in the contract between the City & the Co. will be largely exceeded."

It is the intention of the Co. to put in the foundation this fall, & to commence work on the building proper next spring. It is hoped it will be finished by 1900. The stone work, plastering, etc., will be given out separately instead of allowing one contractor to sublet his contracts.

Sarnia & Port Huron Round Houses.—The Co. has recently let contracts for the construction of round houses at Sarnia & Port Huron, —the buildings being very much alike. Each structure will be segmental in form, built of brick, on stone foundations, with cast iron column supports. There will be 30 pit stalls, & 2 entrance tracks. The front, or inside of the building, will be formed with cast iron columns, set on stone foundations. There will be a building for a boiler-room & office, also built of brick with stone foundations, close to the round house. A new G.T. standard 70 ft. turn-table will be provided, & the radius of the building from the centre of the table to the outside face of the outside pilasters, will be 160 ft. 3 ins., the depth of the covered portion being 76 ft. 3 ins. Provision is made to light & ventilate the building in the most modern & improved manner, & all the buildings will be furnished with the latest improvements in the way of water supply, drainage, lighting, steam heating, etc. Adjoining each round house there will be a repair shop & boiler-house, which are also to be of brick. The total expenditure, including round house, turn-table, etc., will amount in the neighborhood of from \$60,000 to \$65,000 for each place. The contractor for the Sarnia buildings is G. A. Proctor of Sarnia, & for the Port Huron buildings, G. S. Germain, of Port Huron. The work at both places is expected to be completed by the end of February.

The Cariboo Railway.

In 1896 the British Columbia Legislature incorporated the Ashcroft & Cariboo Ry. Co., with the late D. Oppenheimer, of Vancouver, H. Abbott, & J. M. Browning as provisional directors. Messrs. Abbott & Browning then occupied the respective positions of General Superintendent & Land Commissioner for B.C. for the C.P.R., & it was understood the charter was obtained in the interest of that Co. The Act empowered the Co. to build a railway of not less than 3 ft. gauge from a point on the C.P.R. main line near Ashcroft, B.C., northerly to or near Barkerville, in the Cariboo district, & gave them the usual general powers, as well as a land grant of 20,000 acres a mile for a standard gauge line, or 10,000 acres a mile for a narrow one. In 1894 an amending Act changed the name to "The Cariboo Ry. Co." & provided that the line might start from the C.P.R. at any point between Ashcroft & Kamloops. A further Act in 1897 provided that the starting point on the C.P.R. & the whole route should be approximately defined by the Co., subject to the Provincial Government's approval, by May 8, 1899, by which date work should be commenced, the line to be completed by May 8, 1903.

The charter has recently been sold to the Cariboo-Omenica Chartered Co., which was incorporated at the last session of the B.C. Legislature, & which was very fully referred to in our June issue, pg. 105. This Co. is composed of English shareholders, the Secretary being C. J. Gardiner, 27 Clements Lane, Lombard St., London. The representative in Canada is R. G. Tatlow, of Vancouver. It is said the prospects for the early construction of the line are good. It would afford railway communication with the Cariboo mining district, which produced enormous quantities of gold in the '60's, & where extensive hydraulic mining is now being carried on. The distance from the C.P.R. at Ashcroft to Barkerville is 280 miles. There is an excellent wagon road built by the B.C. Government between the two points.

There is another charter in existence for a line over the same route, that of the Barkerville, Ashcroft & Kamloops Ry. Co., granted by the B.C. Legislature in 1897, the promoters being A. J. Garesche & H. F. Bullen, of Victoria, & F. G. Ward, of Spokane, Wash.

Surveys, Construction & Betterment.

Atlantic & Lake Superior.—Good progress is being made on the extension from New Carlisle to Pasbebiac, & work will soon be started on the bridge over the Bonaventure River. As announced in our Sep. issue, pg. 178, deep-water terminal facilities are being constructed at Pasbebiac, including a pier which extends 1,600 ft. from the bar into deep water, giving 36 ft. of water at low tide, so as to accommodate the largest vessels afloat.

Brockville, Westport & Sault Ste. Marie.—E. R. Dick, President of the Investment Co., of Philadelphia, recently made an inspection of this line, which is owned by his Co. He says it has been put in good condition & with the renewal of certain bridges now in progress will give a good account of itself to its owners.

Carp, Almonte & Lanark.—Interest has been revived in this proposed line, which is projected to run from Carp, on the Ottawa, Annaprior & Parry Sound Ry., through Lanark County, to connect with the C.P.R. at Almonte, Ont. It is claimed by the promoters that aside from opening up one of the finest sections of new country in Ontario it would also furnish the shortest & quickest route between Toronto & Ottawa. Among the promoters are A. Bell, C.E., Dr. Raines & W. Stafford, of Almonte. President Booth, of

the O. A. & P. S., has, it is said, declined to take stock, preferring to confine himself to his present lines. It is said the route has been surveyed.

Cassiar Central. F. D. Self, General Manager of the Cassiar Central Ry., recently stated to a reporter at Wrangel, Alaska, that the Co. has a great many prospecting parties working near Dease Lake & in the country between Dease & Teslin, many of whom are sending in flattering reports regarding the country. He said, "It is the purpose of the Co. to build a line from Glenora, B.C., to Dease Lake in the Spring. & surveys are now being made for a continuation of the road from Dease to Teslin, making a through route to Teslin via Dease Lake. The country between Dease & Teslin is found to be remarkably level & free from underbrush, making the project very possible. No doubt exists that the country to be traversed by the line is remarkably rich in mineral, both placer & quartz, & the promoters of the scheme expect large returns from their investment."

Coast Ry. of Nova Scotia.—President Baker, of the Yarmouth S.S. Co., having made a trip over this line last month with Superintendent & Chief Engineer Wheaton, gave rise to a report that that Co., in conjunction with English capitalists, would take over the line & push it on to Halifax. Mr. Wheaton informs us there is no foundation for the report. Construction work has been much delayed, & the progress anticipated at the beginning of the season has not been made. Of the 21 miles under construction, beyond the 31 miles in operation between Yarmouth & East Pubnico, the greater part of the masonry is completed, the grading is well advanced & most of the ties are on the ground. Every effort will be made to complete this 20 miles, so that the line may be in operation to Barrington early next season. A survey of the entire line has been completed to Halifax, & plans are being prepared. (Ap., pg. 40; May, pg. 66; Aug., pg. 151; Sep., pg. 183.)

Cobourg, Northumberland & Pacific.—No late news is available about this projected line, & it begins to appear doubtful as to whether the £151,200 5% bonds offered in England some months since were taken up. Some survey work was done during the summer under H. K. Wicksteed. The line as located is 49 miles long, & runs about n.e. from Cobourg through the villages of Baltimore (6 miles), Centreton (14m.), Burnley (20m.), Wardworth (26m.), Campbellford (35m.), Rawdon (42m.), & connects with the C.P.R. & the Central Ontario Ry. at Central Ontario Jct. The maximum grade is 1%, & 6° is the greatest degree of curvature. Leaving Cobourg there is a nearly continuous maximum grade for 15 miles, where it is necessary to cross a divide about 720 ft. above the lake. There is only one bridge of considerable extent, which is across the River Trent at the northern end of Campbellford village. The heaviest bit of work is from the Summit east for about 15 miles, where it is very heavy. There are no serious engineering problems.

The estimated cost is from \$12,000 to \$13,000 a mile. (June, pg. 100; July, pg. 126; Aug., pg. 146.)

Intercolonial.—Rhodes, Curry & Co., Amherst, N.S., have the contract to build a pier 600 ft. long, 160 ft. wide & 80 ft. long at Halifax. There will be steamship berths on each side with 28 ft. of water at low tide. There will be a warehouse 500 ft. long, & numerous tracks on the wharf. The contract price is \$35,000.

A contract has also been let for building a grain elevator at Halifax to be completed early this winter.

A 150 ft. steel span has been erected at Antigonish in place of the wooden structure.

Inverness & Richmond.—This Co. was incorporated by the Nova Scotia Legislature in 1887 to build a line from the Straits of Canso, at or near Port Hawkesbury, to Cheticamp, by way of Port Hood, Mabou, Broad Cove & Margaree, with a branch from or near Mabou to Wycocogmah, thence to connect with the I.C.R. at or near Orangedale. For the 1st 53 miles to Broad Cove mines, the Dominion Parliament has voted a cash bonus of \$3,200 a mile, the Nova Scotia Legislature has voted a similar amount, & the County of Inverness has voted \$1,000 a mile. The 53 miles have been surveyed by H. M. Stone, C.E., of Chicago, assisted by J. Davis, C.E., of Ottawa, & Mr. Noble, of Mabou. Some time ago about 15 miles from Port Hawkesbury north were partially graded, & the Co. has had some men at work since July last to comply with the Act. The charter is controlled by P. Ryan & R. H. Bowes, of Toronto, who recently visited the work in Company with C. M. Wickar, of New York, representing U.S. capitalists who Messrs. Ryan & Bowes are seeking to interest in the undertaking. The principal object of the line would be to develop the coal fields along the route, which are said to be valuable.

Kootenay Ry. & Navigation Co.—It is said a contract has been let to Foley & Guthrie, of St. Paul, Minn. to build 53 miles from Bonners Ferry, Idaho, to Kootenay Lake, B.C. The portion of the line in U.S. territory will be built under the charter of the Kootenay Valley Co., particulars of which will be found on pg. 231 of this issue. The portion of the line on the Canadian side will be built under the charter of the Bedlington & Nelson Ry. Co., the whole being controlled by the Kootenay Ry. & Navigation Co., an English company, full particulars of which will be found in our Sep. issue, pg. 181. The intention is to make connection with the Great Northern Ry. (U. S.) at Bonners Ferry & to run through trains to Kootenay Lake, from which point connection will be made by the steamers of the International Navigation & Trading Co., which have been purchased by the K. & N. Co., with the Kaslo & Slocan Ry. at Kaslo, this railway having also been acquired by the K. R. & N. Co.

Lake Erie & Detroit River.—Bonus by-laws to grant this Co. aid in the construction of its proposed line from Ridgeway to St.

Thomas were voted on on Nov. 10, & were carried in St. Thomas, Dutton, Aldboro & Orford, & lost in Dunwich. The amounts asked for were \$20,000, \$2,500, \$7,000 & \$2,000, respectively. The majorities were 90, 25, 266 & 182, respectively.

Restigouche & Western.—In our Aug. issue we said 15 miles of the survey had been revised & 10 miles would soon have been located, & that then another 10 miles would be located. We should have said "constructed" in each case, instead of "located." On Oct. 8 the Chief Engineer advised us that the first 20 miles of the line had been located & 15 miles revised. The contractors, Malcolm & Ross, had then 500 men at work. The first 10 miles had been graded & work had been started on the next section. A steamer was then at Campbellton dock with the first cargo of rails, & tracklaying & ballasting were to be gone on with at once. On Nov. 18 the Chief Engineer advised us that the section of 10 miles was laid, & would be all ballasted by Nov. 25. There will be a party in the field locating all winter. (See July, page 122, Aug., page 151.)

The Edmonton District Ry. Co. was incorporated by the Dominion Parliament in 1896, the incorporators being H. C. Wilson & other Edmontonites, & W. T. Jennings, of Toronto. The Co. was empowered to construct & operate a standard gauge railway from the terminus of the Calgary & Edmonton Ry. at South Edmonton to Edmonton, with lines from Edmonton northwesterly, via St. Albert, to the Athabasca River, at or near Fort Asiniboia, with a branch to Stony Plains, also from Edmonton northeasterly to or near Fort Saskatchewan, with a branch to Sturgeon River. At the 1898 Session the Co. was further empowered to build from its point of connection with the Athabasca River to the Peace River, thence to Nelson River by way of the Nelson, Liard & Francis Rivers to the navigable waters of the Pelly River. The Co. also has power to operate vessels on the Saskatchewan, Pembina, Athabasca, Peace, Nelson, Liard, Frances, Pelly, Mackenzie, Peel, Porcupine & Yukon Rivers. The charter has been sold by the original promoters, the present owners, among others, being Hon. W. Pugsley, G. McAvity & A. G. Blair, jr., of St. John, N.B. We are officially informed that the Co. is making surveys & intends to commence construction of the line from South Edmonton to Edmonton as soon as the bridge over the North Saskatchewan River, now being built by the Dominion Government, is completed.

C.P.R. Freight Differentials.

Vice-President Shaughnessy issued the following on Oct. 27:

To the Executive Officers of Transcontinental Railway Lines:

"We have been notified of the award of the Arbitrators in the matter of freight differentials claimed by this Company between East-

The Mail Job Printing Co.

Oils and Grease**
WILLIAM C. WILSON & CO., 24 Front Street East,
TORONTO.

ern points and San Francisco. The decision of two of the Arbitrators is:

"That the C.P.R. is not, nor should it be, entitled to a differential under the rates made by the U.S. lines for the carriage of the freight in question."

"The arbitrators do not mention the grounds upon which the decision is based, but we are informed that the question turned upon a technical interpretation of the word 'entitled,' which was taken to mean 'inherently entitled,' instead of 'equitably entitled.'"

"To believe that the word 'entitled' was introduced by the framers of the Denver resolution in any other than the broad sense in which it is used between railways, would be to believe them guilty of trickery, & we refuse to entertain such a thought. We never claimed to be inherently entitled to differentials. Our contention was based upon common usage & upon the practice prevailing among railways under similar circumstances & conditions."

"If we be correctly informed that the decision turned upon the interpretation of a word & not upon the evidence as presented, ordinary fairness would require a re-submission of the case for determination upon its merits. If the other lines interested be unwilling to join in this simple act of justice, we have nothing to do but submit to the decision as rendered."

"The question of a differential having been settled, circumstances will determine the best & most expedient course for the protection of this Co's interests. Notwithstanding the combinations for that purpose, the American lines can scarcely expect to deprive us of participation in inter-state traffic while they are competing freely for the inter-provincial traffic of Canada, nor can they reasonably complain if we seek to make good out of the former what we may lose of the latter."

ELECTRIC RAILWAYS.

Niagara Falls Park & River Ry.

W. T. Jennings, C.E., M.Inst.C.E., Toronto, writes us as follows:

Your October issue contained an article entitled "The Application of Electrical Power on Trunk Line Railways" by G. Forbes. In this article reference is made to the Niagara Falls Park & River Ry. After incorrectly describing the length, etc., of the line the statements are made "that it is operated by electricity generated by water-power at the Falls, & also by a small auxiliary steam plant placed at the Queenston end of the line; that there is 15 minutes headway in the running of the cars, & that the cars when fully loaded sometimes weigh more than 20 tons," etc. The article continues as follows:

"This railway has been referred to, not because of any special merit which it possesses, but because it is not a street railway, & because it shows a method of working. In fact, reference is made to it partly to draw attention to the extremely objectionable feature of it. When water-power was available it was not good policy to use steam power at a distance of 12 miles. Of course, if the electric pressure were only 500 to 600 volts, there would be a great waste of energy or an enormous expenditure of copper in carrying the current to even that short distance; but there would have been no difficulty in transmitting electrical power at high pressure, transforming it down & converting it into a continuous current. This would have saved nearly the whole expense of working the steam plant. It is important to give attention to this matter of the use of water-power on trunk railways. There has been an absurd hesitation to undertake the transmission of power to great distances. If engineers who have had experience in the transmission of power

& in the conversion of alternating into continuous currents would look into this question, they would be convinced that where water-power is available it is generally economical to transmit electrical power hundreds of miles for working railways."

Now, Sir, as the engineer under whom this railway line with its appliances was constructed in 1892, I must take exception to such of the above adverse statements as concern this undertaking, inasmuch as I believe my treatment of the system was at the time commercially correct, & under the peculiar working conditions, it is even now questionable if a change is advisable or economical considering the capital invested.

That your readers may have a correct idea of the situation & governing circumstances, I would first mention that the railway system consists of a double track line, extending southerly some 4½ miles from Niagara Falls to a safe steamboat landing on the River considerably above the rapids, & from the Falls northerly for 9 miles to Queenston, on the same river, & at the head of steamboat navigation from Toronto & other Lake Ontario points. The alignment is in accordance with what the restrictions of the locality, business & charter require, & in it there is no unusual feature for the class of country traversed. Of the gradients, the same may be said, excepting at the Queenston end, where in a distance of 7,725 ft. (say, 1½ miles) a descent is made of 330 ft. on an average gradient of 4½ per 100 ft., with a short maximum section of 5.77 ft. The entire system is in ordinary, & always has been, operated by electricity generated by water-power at the Company's power house at Niagara Falls, & as above stated, distant 9 miles from the heavy gradient at Queenston.

Powerfully equipped motor cars run over the lines on a schedule of 10 or 15 minute headway, but to meet the extraordinary feature of the traffic during the holiday term between, say, June 1 & Sep. 10, when ¾ of the year's business is done, it was found that to transport to the Falls with speed & facility the crowds of excursionists (sometimes 2,000) arriving at various intervals between 9.40 a.m. & 2 p.m., it would be necessary to put on a motor service of 2 minutes headway, running at 7 miles an hour up this 1½ miles of 4½ average gradient, & thence to the Falls, etc., at a speed of, say, 20 miles per hour. The large single observation motor cars, or the short ones with trail car attached, average 15 tons weight when loaded. The time interval & speed of cars on the grade means that six such loads would be continually ascending until the supply of passengers became exhausted. Therefore, to meet the occasional demand for such a service during the holidays, the writer, after making exhaustive inquiries & estimates as to cost of then existing electrical transmission plants, came to the conclusion that the plan entailing the least outlay of capital & continuous expense, including interest, depreciation & working costs, was to install & use when necessary, during the above-mentioned busy period, the present 300 h.p. steam (& corresponding electric) plant, which has proved satisfactory. Its entire cost being, at that time, \$23,000, & \$1,100 per season the cost for operating.

With the above information anyone understanding the question at issue will readily see that the subject was studied out before being acted upon, & that the determination arrived at entailed the least capital expenditure for a class of plant saleable at any time when circumstances demand a change, & the proprietors of the system deem it advisable to expend the necessary capital. Of course, if the line were just now being opened for traffic, an ordinary electrical transmission plant would be used for work on the Queenston gradient instead of steam, but we have more light in electrical matters now than we had in

1892, & good machinery of the required class is rated at less than half the price of that advanced at that time.

ANOTHER REPLY TO MR. FORBES.

R. W. Angus, B.A. Sc., Fellow in Electrical Engineering, Assistant Instructor School of Practical Science, Toronto, also writes us on the same subject, as follows:

In your edition of October an article appeared on "The Application of Electric Power on Trunk-Line Railways," by G. Forbes, whom I am informed is the Professor Forbes who was one of the consulting engineers of the Cataract Construction Co. Perhaps it may seem like presumption on my part to criticise his paper, but it appears that in part of his article, at least, he has not adhered strictly to the facts. The case to which I refer in particular is the information in regard to the Niagara Falls Park & River Ry.

The cars on the line have a 2 minute headway during the busy season, & at the Queenston end have to ascend an average grade of 4½%, one & a half miles long at a rate of 7 miles an hour. The distance between the hydraulic power house & the Queenston station is 9 miles, instead of 12, as stated.

Mr. Forbes says, in speaking of this road, "This railway is referred to, not because of any special merit which it possesses, but because it is not a street railway, & because it shows a method of working. In fact, reference is made to it partly to draw attention to the extremely objectionable feature of it. When water-power was available it was not good policy to use steam power at a distance of 12 miles."

These latter statements, I feel sure, will not be as self-evident as Mr. Forbes would lead your readers to believe, & I have found on making an approximate estimate on the cost of running this section of the line (the Queenston grade) during the busy season, either by steam, as at present, or by means of a 3 phase high voltage transmission receiving power from the water-wheel at the Falls; that there is a good balance in favor of the former method, without making any charge whatever for the power supplied by the water-wheels to the generator, an item which cannot be neglected. I have not had sufficient time to get accurate figures on the subject, but the estimates will be very close, & show a result so decidedly in favor of the former system that little room can be left to doubt the result with more accurate figures. Mr. Forbes probably lost sight of the fact that the power-house at Queenston is only run for about 3½ months in the year, & also that at the time it was built (1892) polyphase transmissions had scarcely passed beyond the experimental stage; but even if the plant were now being installed, it does appear from my figures that the present system is the more economical.

In regard to the statement, "This would have saved nearly the whole expense of working the steam plant," Mr. Forbes seems to assume that the hydraulic power is obtained nearly free of cost, while in reality the extra power which would be required for the transmission would necessarily increase the size of the water-wheels, etc., & the consequent capital expenditure, & taking interest & depreciation on invested capital, & adding to this the actual cost of keeping up the transmission, it will be found to be considerable & in fact, far out-balances the expenditure on the present plant. Further than this the Co. has now substantial engines & boilers, which would bring a good price if it wished to dispose of them, while the forms of polyphase apparatus in use in 1892 would probably now be almost worthless.

Further on the article says: "There has been an absurd hesitation to undertake the transmission of power to great distances. If engineers who have experience in the transmission of power & in the conversion of alter-

...ing into continuous currents would look into the question, they would be convinced that where water power is available it is generally economical to transmit electrical power hundreds of miles for working railways." This statement seems broad, & it must be rather exasperating to the railway engineers to find that they have not properly "looked into the question," or their transmissions would in general be electric, for there is always a source of water power within hundreds of miles of a place. Surely no man can truly lay claim to the title of engineer who would not in such an enterprise carefully investigate all feasible systems as to the proper distribution of power.

In the case of the Niagara Falls road there was no man, Mr. Forbes included, who knew as well as the Constructing Engineer did that the Co. had water power at its disposal, & yet Mr. Forbes would lead us to believe that proper investigation was not made as to the advisability of using it to drive electrical machinery for a power transmission to Queens-ton. Such, however, is not the case, for the cost of this scheme was, I understand, fully discussed along with the others; but the idea had to be dropped on account of its cost & the fact that no sufficient guarantees could be obtained on the operation of transmitting machinery in use at that time.

I regret that I have not had time to obtain a detailed account of the exact cost of operation of the present system & the one suggested; but what I have already done convinces me of the wisdom of building the steam station, & it seems to me Mr. Forbes should endeavor to look more closely into the matter before speaking of what he inconsiderately calls the "extremely objectionable features" of it.

In speaking of rotary transformers for the conversion of alternating into continuous currents, he says: "It does its work admirably, but is expensive, cumbersome & requires continual attention," three points which should immediately condemn its use. Perhaps, however, we have the reason of his antipathy for the above road more clearly pointed out by the following from the same article: "But I have prepared the design for a transforming & commutating machine free from all the defects (of the rotary transformer) referred to, which can be manufactured at small cost," for he can perhaps see no chance for the use of such a machine on the road in question.

It is a matter of regret that Mr. Forbes should without thought refer disparagingly to the work of an engineer who was certainly in as good a position as anyone to know what system of power was most economical in the case under his control.

Montreal Street Railway Company.

At the 38th annual meeting at Montreal, Nov. 2, the following report was presented:

The statement of the past year's business shows a net profit of \$601,704.18, as compared with \$507,855.60 for the previous year. Out of this amount there have been declared 4 quarterly dividends of 2½% each, amounting in all to \$462,916.66, the balance of \$138,787.52 being added to the surplus.

The road-bed, rolling stock & other property of the Co. have been maintained in a

high state of efficiency, the cost thereof having from year to year been charged to operating expenses. The directors consider it advisable, however, to set aside a portion of the accumulated earnings for the purpose of providing against heavy or special renewals, & they have consequently adopted that policy establishing an account for such contingencies by transferring \$100,000 from the surplus to the credit of a contingent account. It will be noticed by the statistical statement that the Co's business continues to increase in a satisfactory manner, & it is also gratifying to note that the percentage of operating expenses shows a further reduction on last year's figures.

A fire occurred on the Co's premises at Hochelaga Sep. 16, destroying a car shed & a considerable amount of rolling stock & electrical equipments. The Co's loss, however, was fully covered by insurance, & immediate steps were taken to replace the rolling stock, all of which will be turned out at the Co's shops according to the latest standard. In spite of this heavy loss in rolling stock the Co's business was done as usual the following day, without inconveniencing the public or affecting the receipts.

The Co's rolling stock has been increased during the past year by the addition of 22 closed motor cars & 60 open motor cars, all of which have been constructed in the Co's shops. There are also under construction 40 motor cars, which will be ready for this winter's service, & 75 open motor cars, which will be ready for next summer's traffic. Seven sweepers are also being constructed to replace those destroyed in the fire; also 3 additional ones, all of which will be ready for service this winter.

A system of cast-welding of the rail-joints has been introduced, which, judging from the results obtained elsewhere, is calculated to produce a great benefit, & also to considerably reduce the expense of track maintenance.

The President, Senator Forget, in submitting the report said that it spoke for itself. The business is still on the increase, & he could add that the 1st month of the present year was the best in the Co's history. It had been thought by some that the limit of increases had been reached, but such was not the case. Oct. showed an increase of \$17,398 over the corresponding month of last year. The increase for Oct., '97, over Oct., '96, had only been \$7,000. The list of stockholders also showed an increase from 609 to 753. This meant that investors were taking up the stock. The Co. wanted all the friends it could get. He hoped they would watch the service as they had done in the past, & help to improve it, if it could be improved.

E. H. Copeland enquired as to the fund which had been laid aside for accidents.

The President replied that \$100,000 had been taken from profit & loss account & transferred to the contingent fund. Every year had borne its own cost for the laying of new tracks, etc. There was a special fund for accidents.

Sectional Pipe and Boiler Coverings

Mineral Wool for deafening, fire-proofing, &c.

EUREKA MINERAL WOOL & ASBESTOS CO., - - 136 BAY ST., TORONTO.

Mr. Crawford asked how the fund stood, but the President did not think it was in the interests of the Co. to give the amount, though he volunteered to tell him privately. The contingent fund was heavy in case they had to meet some heavy changes, as electricity was going ahead every day. Provision was made to assure to the shareholders a minimum of dividends.

Mr. Crawford wanted one fund raised to \$500,000, & the other to \$250,000, the Co. would thus be able to face any serious responsibility which might arise. The President replied that the funds were being increased gradually.

Mr. Crawford enquired as to the progress which was being made in the negotiations with the Seminary, regarding the acquiring of property for the Cote des Neiges route, but the President told them that the gentlemen of the Seminary did not care to have their names in print, but assured him that everything was going on smoothly.

Mr. Joseph enquired the amount of the percentage paid to the city during the year, & was told it was \$69,907.21, & the President promised that in future an entry would be made in the statement of the amounts paid yearly.

Mr. Crawford said that no company was better managed than the Montreal Co., both as regards the interests of the shareholders & public. As to the Cote Des Neiges route, he hoped the Co. would never build that route unless it was compelled to do so at the point of the bayonet. There was no machinery now in existence to stop a car once it got started down the incline of that hill. The Co.'s responsibility would be serious if that line was ever opened.

To Mr. Cochrane, the President said that the city's contract for the removal of snow would expire next year. This was the last winter.

Mr. Crawford expressed satisfaction at the satisfactory way in which the statement was got up. It was most complete.

In reply to Mr. Wilson, R. B. Angus, who had assisted in the creation of the contingent fund, stated that he failed to see any necessity to make it larger than it now was nor did he think that the directors should be bound to any particular amount.

The report was adopted unanimously.

The following resolution was unanimously adopted: That the directors are authorized to apply to the Quebec Legislature next session for a bill to amend its charter to authorize the increase of the capital stock & confirm certain contracts with such modifications as they may deem expedient.

A resolution was also carried voting \$6,000 for the services of the directors for the ensuing year. Mr. Crawford thanked the directors for having granted quarterly dividends so readily. The President returned thanks, & the old directors were re-elected as follows: L. J. Forget, J. Ross, R. B. Angus, K. W. Blackwell, F. C. Henshaw. At a meeting of the directors Hon. L. J. Forget was re-elected President for the coming year.

The Co. is now paying quarterly dividends at the rate of 10% a year.

The gross earnings are:

	1898.	1897.	Increase.
October.	\$144,499.71	\$109,222.22	\$35,277.49

The Montreal Assessors' Department is preparing to place the property of the Street Ry. Co., now exempt, upon the assessment rolls for next year. The assessors were not sure of their ground, & delayed action until the rolls for this year were signed. It is now proposed to study the question thoroughly & place all property of this class now exempt on the rolls of 1899. The Department has been seeking information on the subject for the Toronto Assessment Commissioner.

Quebec, Montmorency & Charlevoix Ry.

This Co. has recently invited applications for an issue of \$1,500,000 25-year 5% gold bonds, in bonds to bearer of \$1,000 each maturing June 1, 1923, interest payable ½ yearly, June 1 & Dec. 1. The bonds are secured by a 1st mortgage on the entire plant, property, franchises, revenues & undertakings of the Co. The authorized share capital is \$3,000,000, of which \$2,000,000 is issued & paid up, the balance of \$1,000,000 remaining in the Co.'s Treasury. The Co. reserves the right to redeem the bonds at 110 & accrued interest on giving 6 months' notice. The price of issue is 104 & accrued interest.

Following are extracts from the prospectus:—The Co. owns & operates the electric railway system of the City of Quebec. It also runs from the City of Quebec past Montmorency Falls & Ste. Anne de Beaupre to Cap Tourmente, a distance of about 30 miles, which is at present operated by steam. It is intended to electrify this road through-out, & also to construct an independent branch along or near the highway to Montmorency Falls, the whole to be run in connection with the electric railway system of the City of Quebec, which the Co. now owns & operates. The estimated cost of these improvements is \$330,000, & out of the proceeds of the present issue this sum, or its equivalent in bonds, will remain in the hands of the trustees to be expended for such work as it progresses. When completed the system will comprise over 60 miles of well equipped electric railway.

The actual result of the operation under one management for the past 3 months of the combined system as it at present exists, viz., partly steam & partly electricity, is as follows:—

Gross earnings	\$79,006.36
Operating expenses	33,947.04
Net	\$45,359.33

It is estimated that the cost of snow removal for the year will be about \$12,000. Distributing this sum over the year, the proportion to be added to above operating expenses would be..... 3,000.00

Leaving net revenue for 3 months.....\$42,359.33

The General Manager states that: "In considering these results, it must be borne in mind that although the summer returns may be regarded as more favorable than those of the winter months, at the same time, the above actual returns are from an incomplete system, being partly steam & partly electric, & that when the improvements & additions to the system which are contemplated & provided for are complete the actual returns will undoubtedly be largely increased."

E. A. Evans, C.E., General Manager & Chief Engineer of the Consolidated System, has made the following estimate of the probable net income of the completed railway system, & as he has had full charge of the construction & operation of the present electric system, his opinion should have weight. He estimates as follows:

Net estimated returns city system as at present	\$137,500
Net estimated present steam system when converted	67,500
Net estimated to Montmorency when constructed	18,900

To provide for interest on bonds, say 5% on \$1,500,000	\$223,900
Surplus	75,000

He further remarks: "By combining the City system with the Cap Tourmente & Montmorency systems the track mileage will be nearly 61 miles, & by placing the whole under one management I have no hesitation in affirming that the property when completed should yield the above returns & that the security is a most excellent one."

R. C. Brown, late General Manager of the Halifax Electric Ry. & now of the Metropolitan Traction Co. of New York City, has thoroughly investigated the matter, & he

estimates the net income of the Co., when the system is completed, after providing for the interest on \$1,500,000 of bonds, will be \$99,650. In closing his report he says: "I think that you may congratulate yourselves on having in this system a well equipped road with remarkable earning powers, & one that under careful management can be operated more cheaply than the average electric railway system."

In addition to the reports of Mr. Evans & Mr. Brown, we have had an examination made of the property by Ahearn & Soper, electrical experts, of Ottawa, & in their report, dated Oct. 17, 1898, appears the following: "We have an intimate personal knowledge of the character of the construction & equipment of the Quebec District Ry., & consider it unexcelled by any electric railway on this continent. The roadbed, rails, overhead electrical construction, cars, trucks & motors are all of the latest & best type. Owing to the railway's exceptional equipment, repairs will be very inexpensive. This fact, together with the operation of the road by water power, & the excellent management which characterizes the Co., render the property one that can be operated with great economy, while the peculiar topographical features of Quebec make the use of the cars almost a necessity & ensure an increasing revenue. In conclusion, we beg to say that we consider the estimate of Mr. Evans fair & conservative. In our opinion the figures given by him for the probable earnings of the steam railway transformed to electricity & the electric railway on the highway between Quebec & Montmorency are somewhat lower than the actual results will prove."

The Co. has a 30 years franchise on most favorable terms with the City of Quebec.

A special general meeting of shareholders at Quebec, Nov. 2, confirmed the resolution passed at the special general meeting held September 13, whereby the directors were authorized to issue 1st mortgage bonds to an amount of \$1,000,000 in part payment of the purchase price of the property, plant, buildings, etc., of the Montmorency Electric Power Co.

The London Street Ry. Strike.

Towards the end of Oct. the motormen & conductors formed a division of the St. Ry. Employes Union & sent a deputation of 5 to Manager Carr, asking for increased pay, a more regular division of work, & that none but union men be employed. Mr. Carr refused to recognize the union, & dismissed the members of the deputation on the ground that they had left their cars without leave. The Co. was willing to advance wages, but refused to recognize the union. Of the 97 men employed, 94 went on strike. The Co. obtained men from other places, but was prevented employing them owing to a clause in the charter providing that residents of the city should be employed exclusively. The citizens and Council showed unmistakable sympathy with the strikers, & the Co. had to abandon running cars, except an occasional one which went under police protection. President Evans & Vice-President Moore came from Cleveland, O., & several conferences were held, but without avail, the majority of the citizens wore badges, "We walk," & the strikers put on a bus line, which contained contribution boxes, as they were not entitled to collect fares. Considerable rowdiness was indulged in, & some damage was done to the Co's property.

It is said the troubles date back to Mar. 1897. Up to that time the scale of wages was 12½c. an hour for the first 6 months; 13½c. an hour for the next 6 months, & 14½c. an hour for the next 6 months, & \$1.00 a week. After a year at this rate of wages the men were given 15c. an hour, or \$7.50 a week on a regular time

in 10 hours a day. A new superintendent was appointed in March, 1897, & from that time the scale of wages remained stationary until Oct. 1, 1898, & there was no advancement. At the beginning of Oct. a change was instituted, whereby the day men on the 10-hour shift were shifted with the night men, who work 7 & 4 hours. The night men were given the day shift for two weeks & changed again, the old men then enjoying the day run for 2 weeks. This fortnightly alternating arrangement reduced the wages of the old employees to the neighborhood of \$6 a week, without, it is said, materially benefiting the men on the relief shift or the spare men.

Summarized, the demands made by the employees were as follows: Wages for motormen & conductors to be 16 $\frac{2}{3}$ c. an hour & 9 hours a day, relief men to be given the remaining 8 hours, & overtime to be paid for at the rate of 20c. an hour. None but residents of London to be employed, & they must first be accepted by the union. Conductors & motormen to be marked up on the blackboard in accordance with length of service. Spare work to be equally divided among the spare men. Employees to report 15 minutes before the run goes out, in default of which the place shall be given to the 1st spare man, & if the employee fails to report inside of 4 hours he shall lose next day also. No motorman or conductor to pay for breakages not due to his own carelessness, or lose his time when obliged to look up accident reports. If suspended wrongfully, the employee to be reinstated with back pay, should the investigation prove the employee not at fault. Disputes to be settled by 3 arbitrators, 1 appointed by the men, 1 by the Co., & the 2 to choose a 3rd, their finding to be binding. Employees to have free transportation over the system. Officers & committees not to lose their positions if required to lay off to transact union business.

The strike continued until Nov. 10, when a compromise was effected, both sides giving way to some extent. The men secured a small increase in pay & recognition of the union. The men demanded 16 $\frac{2}{3}$ c. an hour, the Co. offered 15c. A compromise was made at 15 1-3c. The strikers were reinstated & the line recommenced running on Nov. 11.

James Ross' English Visit.

Jas. Ross, Vice-President of the Montreal Street Railway Co., who, with Mrs. Ross, has recently returned from an extended visit to Great Britain, has made some interesting remarks upon street railways in Britain & other matters. He observed that while he did not wish to cast any reflections upon the municipal bodies of Great Britain as regards the slow manner in which they moved, yet it was a fact that most of the cities were extremely conservative in the matter of a change from horse or steam to electrical power. The overhead system appeared to be generally accepted, & Liverpool & Glasgow, which had purchased their respective street railway systems, had each from 2 to 3 miles in operation. Bristol & Dublin were also to have the trolley. In Birmingham the people were undecided what course to pursue, & they will probably await results in the other cities. He also stated that all lines of business in Great Britain seemed to be prosperous. The Hooley revelations had caused more or less comment in financial circles, & it was quite likely they would have the effect of operating a beneficial change in the near future. It was more than probable that hereafter it would be much more difficult to float projects of a more or less questionable character. Canada & Canadians had a foremost place in British affections, & he spoke of the great interest taken in Britain in Canada's railway enterprises.

Competition of Electric Lines.

President Tuttle, of the Boston & Maine Ry., formerly Passenger Traffic Manager of the C.P.R., believes that the steam roads will have to bow to the inevitable & surrender a portion of their suburban traffic. No matter, he says, how the matter may be viewed, the street railway, within certain limits, has now, and will continue to have, the advantage over the steam roads. The latter may improve their service as much as they can, but they will find eventually that they cannot compete with the trolley lines, which insure service that the steam roads cannot give, & the latter will, therefore, have to abandon suburban business within 4 or 5 miles of the city. They will have to develop their long distance service, & can make improvements within a zone of from 6 to 25 miles, in addition to lowering the longer distance rates. In this way suburbs will be extended. With such an expansion & attention to through freight & passenger business the steam roads will still have an ample & profitable field of operation.—American Engineer.

British Columbia Electric Railway.

The earnings & expenses for Sep. were as follows:

	GROSS EARNING.	1896-7.	1897-8.	INCREASE
Railway				
Vancouver	\$4,501	\$6,456	\$1,955	
Victoria	6,101	7,944	1,843	
Westminster	5,379	10,352	4,973	
Lighting				
Vancouver	5,301	7,572	2,271	
Victoria	3,234	4,248	994	
Total gross earnings	\$24,666	\$35,952	\$11,286	
Working expenses	\$17,336	\$19,855	\$2,519	
Net profits	\$7,330	\$16,097	\$8,767	
Aggregate Gross Earnings				
from April 1 to Sept. 30	\$130,743	\$190,362	\$59,619	
Aggregate Net Profit from				
April 1 to Sept. 30	\$39,230	\$77,000	\$37,770	

The aggregate gross earnings & net profit for 1896-7 are from April 15 only.

The Vancouver World speaks in high terms of the Co's service between Vancouver & New Westminster during the recent provincial exhibition at the latter place. One-third of the gross receipts during the exhibition, amounting to \$1,550, was appropriated in aid of those who suffered by New Westminster's disastrous fire. The regular fare, Vancouver to New Westminster & return, is 75c. During the exhibition it was reduced to 50c.

Maritime Province Lines.

Dartmouth, N.S.—There is nothing new to report on the proposal, mentioned in our last issue, pg., 216, to run the Dartmouth branch of the I.C.R., which extends from Windsor Jet. to Dartmouth, 13 miles, by electricity. It is said there is ample water power for the purpose at Fall River, near Waverly. The matter is under the consideration of Dartmouth Town Council.

Halifax.—The Tramway Co. has added 10 cars to its equipment this season, all of which have been built by Rhodes, Curry Co., at Amherst, N.S., of whose work Manager Huntress speaks in the highest terms.

The St. John Ry. Co. is appealing against its assessment by the city.

The Glasgow municipal government has begun operating a 5 mile section of street railway by electric traction with overhead wire. The cars are of a new design & seat 48 people. If the experiment succeeds electric traction will be introduced for the entire tramway service of Glasgow.

Ontario Electric Lines.

Cornwall.—The Electric St. Ry. Co. is undergoing reorganization, & until this is completed no steps will be taken in carrying out the rumored improvements in the system. It is hoped matters will be straightened out by the end of Nov. One of the principal changes likely to be made will be changing from steam to water power.

The recent strike is referred to in another column.

Hamilton, Chedoke & Ancaster.—S. Barker has become interested in this scheme & is trying to arrange matters with the Hamilton City & Ancaster Township Councils, so that the line may be built to Duff's Corner, about 3 miles beyond Ancaster. The township granted a \$5,000 bonus, which will lapse Dec. 1, unless the terms are changed, as it will not be possible to do the required work by that time.

Hamilton, Grimsby & Beamsville.—It is hardly likely that the proposed extension from Beamsville to St. Catharines will be carried out. J. Patterson, C.E., estimates the cost at \$107,000. There would be a 3% grade.

The Saltfleet Township Council is annoying the Co. in every way possible, & is going to the Courts. The council started out by contending that a crossing was not in good shape, & wanted \$500 solatium for breach of agreement. Now it has added a string of alleged violations & wants \$1,000, as well as a forfeiture of the franchise. The Co. contends there is no forfeiture clause in the agreement.

Hamilton Radial.—W. I. Degear, of Grimsby, has the contract for the extension from Burlington to Port Nelson, about a mile in length.

Hamilton Street.—With reference to the projected improvements in the system, referred to in our last issue, the Manager says that no plans have yet been matured.

For the quarter ended Sep. 30 the Co. paid the city \$4,146.22 for percentage & mileage, against \$3,715.85 for the corresponding period last year. There has been a slight increase in receipts.

Hull Electric Co.—In reference to the statement of the daily press that the Hull & Aymer Electric Ry. is about to be extended to Gatineau Point, the Secretary of the Co. informs us that the Co. has no such intention at present.

Kingston, Portsmouth & Cataraqui.—In the Ontario Court of Appeal, Nov. 16, before Osler, MacLennan, Moss, J.J.A., in the case of City of Kingston v. Kingston, Portsmouth & Cataraqui Electric Ry. Co.—Judgment was given on appeal by plaintiff from judgment of Street, J., (28 O.R., 399), in favor of defendant. The action was brought to compel the defendant to keep its cars running over the whole of its line of railway during the whole of each year pursuant to agreement. The court below held that the agreement was one of which the court would not decree specific performance, nor could it be enforced by mandamus, injunction, or declaratory judgment. Appeal dismissed with costs, MacLennan, J.A., dissenting, the majority of the court agreeing with the opinion of Street, J.

London.—The gross revenue for Sep. was \$15,441.00, against \$14,040.66 for corresponding period, an increase of \$1,400.34. The operating expenses were \$6,000.87, against \$5,607.14. The operating per cent. of earnings was 38.8, against 39.9 last year.

Metropolitan.—This line, which runs from North Toronto to Richmond Hill, is being extended to Newmarket. The work is progressing satisfactorily. In Aurora there was some difference as to the best location for the road, but it is expected the matter will be amicably settled. A large power-house is being built at Bond's Lake, where there will be

350 h.p., which will take the place of the North Toronto power-house. The land in the neighborhood of Bond's Lake has been purchased by persons who intend to make a summer resort there. It is said the line will be further extended, north to Lake Simcoe, west to Schomberg & north-east to Jackson's Point, Roach's Point & Beaverton, & that there will be a regular service for light freight as well as passengers.

Ottawa.—The City Council has taken action to compel the Electric Ry. Co. to extend its track to the Exhibition grounds in accordance with its contract with the city. An injunction has been applied for to restrain the Co. from operating the railway already built until the track has been extended as above mentioned, & the city claims \$10,000 penalty provided in a bond between the Co. & the city entered into in 1893. The Co. has declined to proceed with the extension on account of not having received the sanction of the Railway Committee of the Privy Council to cross the Canada Atlantic tracks. The application is still pending, & if it is granted the Co. will probably go on with the extension.

It is said the Co. still has in view the extension of its line to Britannia, but that nothing will be done before next spring.

Port Arthur.—It was stated in our last issue that W. Phillips, Manager of the Niagara Falls Park & River Ry., had been inspecting this line on behalf of the Dominion Government. The inspection was made for the Ontario Government. The town of Port Arthur, which built the line between that place & Fort William, agreed to build & maintain it in a certain condition within the town limits of Fort William. The Council of the latter place claims that the road is not being properly maintained & asked the Ontario Government to have an expert inspection made.

St. Catharines & Niagara Central.—Haines Bros., New York City, who recently bought this steam road, & who propose to electrify it, wrote us Nov. 12: "Freight is now being carried over the road, & passenger traffic will be resumed about Nov. 16. By that time the road will be in a safe condition again & will be extended to Port Dalhousie at one end & will have better terminal facilities at Niagara Falls. We are under the impression we will do away with the trestlework at once, which will mean an expenditure of \$60,000."

The Niagara Falls Park & River Ry. operates the 1st international electric road between Canada & the U.S. It is run across the greatest steel arch bridge in the world, which spans the Niagara Gorge at Niagara Falls very close to the great cataract. The line has a double track, & the cars that are operated on the bridge connect at the Canadian end with the cars of the road running between Chippewa & Queenston, along the top of the high bank on the Canadian side of the river. On the bridge the centre pole system is employed & the cars speed across the structure every few minutes. Under the present arrangement the bridge tickets purchased by strangers allow them the use of the trolley cars; that is, they ride free if they so elect. Residents of Niagara Falls who pay 10 cents for crossing the bridge are forced to pay an additional 5 cents to ride in the cars, making the price for crossing the bridge in

the cars 15 cents for both strangers & residents. The power for operating the cars on the bridge is supplied from the railway company's power station in the Queen Victoria Park. This crossing of the steel arch by the cars of the N. F. P. & R. Ry. places it in close business touch with the crowds of people in both of the great free parks at Niagara—the Queen Victoria Park on the Canadian side & the New York State reservation on the U.S. side. It is reasonable to suppose that all the people who go to Niagara sightseeing go to these beautiful parks, & therefore the advantages of the road for catching travel are extremely good. Then again, the New York State end of the line is right at Prospect Park, & the cars afford rapid transit between the free parks. The cars now run right up the Riverway, a street within the limits of the New York State reservation. In time it is expected that connection will be made between the N. F. P. & R. Ry. & some line on the U.S. side, either the Niagara Falls &

wider. On the night of Jan. 9-10, 1889, it was wrecked by wind. It was immediately rebuilt, & it is this latter structure that gave way to the arch, which is the largest in the world of its class.

The St. Thomas Street Railway, which for so many years gave to the city the name of the horse-car town, has passed away, and in its place a real, live, up-to-date electric street railway service is in full blast. The work of constructing the new road was undertaken by local capitalists entirely, with one exception, & June 15 last saw it complete & in full operation. C. McBeth, a graduate of the School of Practical Science, was engaged as electrical engineer, & is said to have handled the work with the assurance of a veteran. He superintended the electrical equipment, while T. Kerr, of the London Street Ry., gave him valuable assistance with the track laying. The latter was proceeded with rapidly, no trouble between the city & the Co. arising to hinder the work, as is too often the case. The

Co., instead of building a power house for itself, engaged room in the spacious power house of the Gas & Electric Light Co. & purchased two 150 h.p. generators and 2 engines, the Manager of the G. & E. L. Co. looking after the working of them, & the railway paying for the power generated. The road is equipped with 8 motor cars & 2 trailers of the most improved type. The cars are equipped with 25 h.p. motors & double controllers. The cars at present in use have been found insufficient, & it is the intention of the directors to place several more on the road next spring. The length of track is 7 miles, 5 miles of a belt & 2 branch lines, one to the stations of the L. E. & D. R. & the G.T.Rys. & the other to the Co.'s park, which is one of the features of the road, comprising about 100 acres, & is partly wooded by a beautiful bush. It is situated on the banks of Lake Pinafore, a very picturesque spot. Baseball, golf, cricket, lawn tennis,

G. N. E. CO. STEAMER PACIFIC, BURNED AT COLLINGWOOD, NOV. 3.

Suspension Bridge Ry. or the Buffalo & Niagara Falls Ry., which could be accomplished by the construction of a few hundred ft. of track up to Niagara Street & across the Riverway to the tracks of the N. F. P. & R. Ry. The position of the New York State Reservation Commissioners has always been to oppose the construction of track on the reservation lands, but it seems likely that the present composition of the board might not oppose the granting of the right to cross straight over the Riverway, providing the Legislature did not object.

The recently erected steel arch is of more than passing interest. The cliffs where it stands are 1,268 ft. apart, & it is this space the arch occupies. The length of the main arch is 868 ft., & it is connected to the banks by 2 shore spans, one of which is 210 ft. long, the other 190. It is a single-deck bridge, having a width of 49 ft., 23 ft. of the centre being given up to the trolley car tracks. On each side of the railway tracks are carriage-ways & walks, the latter slightly elevated above the floor, which is 192 ft. above the surface of the water. The arch rests on 4 abutments, 2 of which stand at the water's edge on both sides of the river, & are 67 ft. apart. The bridge is the fourth structure erected on the site. The first on the spot where the arch now stands was built in 1868. It was of wood, & in 1887-88 it was rebuilt in steel & made

& bowling clubs are accommodated there with suitable grounds, bathing, boating & fishing appliances being furnished for these pastimes. Buildings are being erected for the accommodation of picnic & dancing parties. The directors are sparing no pains to make this one of the most beautiful parks in Western Ontario, the natural facilities of the location assisting them very materially. This park is a boon to the city, being just what has been required for a number of years, & the electric railway has made it easy of access. J. H. Still is President, & Col. Stacey, who held the horse car franchise, Secretary-Treasurer of the Co. A. Bingham, who for 14 years was local manager for the Bell Telephone Co. in some of its largest exchanges, gave up that position & assumed the management of the street railway, preferring a larger field than the telephone offered for his labors. The road has every prospect of being a success financially, & should the Co. decide to go to Port Stanley with an extension of the line, which is a possibility, there is no question that the road will prove a bonanza to the shareholders. Condensed from Canadian Electrical News.

Toronto & Suburban.—The right between this Co. & the village of Weston ended, & cars commenced running into the village again Nov. 10. Under the settlement the franchise will be renewed & the Co. will extend its tracks to the Post Office, some 1,000 ft.

Toronto Ry.—The gross earnings of this Co. are as follows:

	1898	1897	Increase	Decrease
Passenger	\$8,881,100	\$7,444,000	\$1,437,100	
Freight	8,881,100	7,444,000	1,437,100	
Mail	8,881,100	7,444,000	1,437,100	
Carriage	8,881,100	7,444,000	1,437,100	
Other	8,881,100	7,444,000	1,437,100	
Total	\$30,000,000	\$25,000,000	\$5,000,000	

The Co's stock has been advanced in the east on rumors that the dividend would be increased, & the excellent earnings appeared to be a good foundation for the reports. It is now stated that there is no chance of any increase. The Co., it is said, will continue to pay 1% quarterly for a long time to come. It is explained that the Co. has been in operation for a number of years, & that, owing to the severe bicycle competition, up to within a few months ago the Co. had been able to accumulate only a small reserve fund after paying dividends. This year the Co. will have sufficient, after paying dividends, to make an addition to the reserve, which will partly make up for the past several lean years. The amount that should be set aside annually toward a fund to retire the bonds at the expiration of the franchise has not been stated, but it is probably in the neighborhood of \$70,000.

The Manager & Secretary of the Co. were recently charged in the Toronto Police Court with breach of a city by-law. This is the case in which the city seeks to compel the Co. to put vestibules on the rear platforms of cars, the same as those which now protect the motormen. A by-law to the effect that vestibules must be erected on the rear platforms was passed some time ago, but has not been obeyed. Some correspondence passed between the city & the Co., & the latter was notified that if the by-law was not complied with by Nov. 1 action would be taken. When the case was called, J. Bicknell for the Co. contended that the Magistrate had no jurisdiction to deal with the case. Under recent rulings, a Police Court magistrate, he said, could not try summarily such a charge against a corporation. After some argument the case was adjourned to Nov. 11, Mr. Bicknell intimating that he would move in the higher court for an order prohibiting the magistrate dealing with the case.

The motion was made, & on Nov. 16 Judge Rose gave judgment on motion by defendant Co. for prohibition to the police magistrate for the city of Toronto to prohibit him from proceeding with the hearing of a charge against the defendant of committing an offence against a by-law of the city of Toronto (passed under R.S.O., ch. 223, sec. 569, subsec. 4) requiring defendants to maintain enclosed vestibules upon the ends of their cars, upon the ground that the defendant being an incorporated company, was not subject to the jurisdiction of the magistrate. A summons was issued against the defendant & served upon its manager & secretary. The offence is not an indictable one, but the procedure (if any) is under the summary convictions clauses of the criminal code. Held, that an incorporated company may be served with a summons within the provisions of the statute, & it is for the magistrate to determine whether there has been a proper service if the corporation do not appear, & if such be the case he may proceed in their absence, & if he awards a penalty it may be enforced by distress. Although some of the provisions of the statute can be enforced only against a person, & not a corporation, the most that can be said is that some of the provisions are applicable to persons only, & others both to persons & corporations. *Regina v. Brennan* (Common Pleas Division, June, 1892); *re Chapman & City of London*, 19 O.R., 33; & *Regina v. Eaton*, 29 O.R., 591, distinguished.

Starey v. Chilworth, etc., Company, 17 Cox, 505, followed. Motion dismissed with costs.

The Co. is building a shed for housing cars. It will be 324 ft. long, 60 ft. wide & 20 ft. high, with corrugated iron siding & having gravel roof.

Toronto & Scarborough.—There is a talk of extending this line about 7 miles from its present terminus near the Hunt Club to the west side of Highland Creek Hill. A survey has been made by J. McDougall, C.E.

Toronto & York Radial Ry. Co.—At the 1898 session of the Ontario Legislature an act was passed incorporating W. D. Matthews, E. F. Clark, M.P., C. H. Ritchie, Q.C., & J. Gunn, of Toronto, & A. Campbell, of Toronto Jet., under this title. The principal feature of the act is that it confers power on the Co. to acquire the franchise, property, etc., of the Toronto & Scarboro Electric Ry. Light & Power Co., The Toronto & Mimico Electric Ry. & Light Co., The Toronto Suburban Street Ry. Co., & the Metropolitan Ry. Co. The capital stock is \$250,000. It is understood that this act was secured in the interest of the Toronto Ry. Co. & it is said the Co. is now considering the building of a system of radial lines, starting from Toronto.

City Engineer Rust, of Toronto, says the most notable development of the present time in municipal engineering is the discarding of the cable car, which is being largely replaced by the underground trolley. Four years ago the cable was laid on Broadway in New York, and when he went through the city recently men were at work putting in conduits for an underground electric trolley. In Washington the overhead trolley never secured entrance, & no difficulty at all is experienced in operating the cars with power from underground conduits. So far as climatic considerations are concerned there is nothing to prevent the underground trolley from being successfully operated in Toronto also. The objection to the overhead wires is of course entirely sentimental. The storage battery is out of the running.

West India Electric Co.—E. H. Haggart, of Kingston, Jamaica, who has recently visited Canada, speaks very favorably as to the prospects for increased trade between Jamaica & the Dominion. In answer to a question regarding the new electric railway system, he said: "I went to Montreal & met a number of the directors there. They were very pleased with the progress that had been made with the work of construction, & were most happy to know that the native labor was turning out so very satisfactorily. In fact, consequent on the good reports, they hoped to take the motormen, conductors, & other necessary employees from the natives. The directors said they were anxious to open up the service at the earliest moment, in fact, they were prepared to run at a loss, by starting earlier than contemplated, so as not to inconvenience the people."

SHIPPING MATTERS.

Iron Shipbuilding in Nova Scotia.

In our last issue we gave a full report of the discussion by the Maritime Board of Trade of the important question of iron shipbuilding in the Maritime Provinces. It is significant that following so close on the discussion the object of the Board appears to be near realization, if a London cablegram of Nov. 5 is to be depended on. The cablegram referred to says:—"British capital for iron shipbuilding in Nova Scotia is soon to be forthcoming. This development is due to the action of a prominent Canadian, who has been promoting

the scheme in London for some time past. There are millions in it. The plant, it is learned, will be established in Cape Breton, where co-operation with the Dominion Coal Co. will be assured. The iron ore is to be found in great quantities on the southern coast of Cape Breton, & this, it is said, will be treated at a smelter erected at Louisburg, C. B. The erection of a shipbuilding plant will follow the development of the ironworks. Experts have been over the ground & their reports are favorable. In this enterprise it is hoped to lay the foundation of a business capable of being expanded like the great establishments at the Clyde & at Belfast."

We have made inquiries about the foregoing from a reliable source in Montreal, without, however, being able to confirm the statements contained in the cablegram. We are informed that the Dominion Coal Co. is looking into the possibilities of the iron business as related to its present coal business, but whether anything will come of it it is impossible to say.

The Halifax Chronicle gives currency to information very similar to that contained in the above-quoted cablegram, & says that H. M. Whitney, of Boston, Mass., President of the Dominion Coal Co., has recently been in Nova Scotia, & with his associates there has had long conferences with Graham Fraser, of New Glasgow, manager of the Nova Scotia Steel Co. Together they inspected the works at Ferrona & Trenton, N.S., & this has given credence to the report that Mr. Whitney is interested in the development of the iron & steel industry of the province. It is, however, said that his recent visit was particularly connected with the further development of the N.S. coal fields.

It is said that a most valuable discovery has been made in Cape Breton, consisting of a big deposit of ore from which specular pig iron or speigle is manufactured. Speigle is largely used in the manufacture of Bessemer steel, & is of great value. Indeed, the Cape Breton deposit is said to be worth \$400 a ton. Samples of the ore were sent to Hamburg to be tested, & the reports sent back show it to be of the best quality. It is placed by Hamburg experts at £80 per ton. There is no information concerning the extent of the deposit discovered, but it is said that it is very large. The discovery was made last fall, & so carefully has it been guarded that, outside of 3 or 4 persons interested, nobody knew anything about it. An expert was taken to Cape Breton ostensibly to look at some gold mines, but really to give an opinion as to the value of this discovery. Since that time the person who discovered the deposit, & 2 or 3 capitalists who were taken in on the ground floor, have been quietly but diligently looking the matter up, & the result is that the deposit is to soon come into the hands of a company now being formed, the people interested in the scheme to establish iron works in Cape Breton being the ones most interested. Whether the specular deposit will be worked by a separate company or in conjunction with the proposed iron works remains yet to be learned. It is said a separate company will develop the property, but it is more than likely that it will form part of the big scheme. If the report of the Hamburg experts is correct & the deposit turns out to be of any reasonable size, there is no doubt a fortune in it for somebody. It is sure to make Cape Breton still more desirable as a location for the great iron industry.

Capt. J. M. Davis, for 30 years master of packets & steamers between Nova Scotia & New York, died at Yarmouth, N.S., recently.

Capt. Michael Nolan, a capable pilot, who had been in the employ of Folger Bros., Kingston, Ont., for 30 years, died recently of cancer of the stomach.

Transfer of Lake Shipping.

In our last issue we gave pretty full particulars in regard to this subject. In referring to it the Marine Record said on Oct. 27: "One of the largest & most interesting enterprises ever conducted on the St. Lawrence River is being carried out by the Manager of the Atlantic Transportation Company, W. S. Besse, of New York. This Co. was organized about a year ago, with a paid-up capital of \$3,000,000, with the intention of engaging on a more elaborate scale than any existing company was doing in the coal-carrying trade of the Atlantic coast. A contract was at once closed with the Chesapeake & Ohio Ry., probably the largest overland coal-carriers on the continent. Within a few weeks a fleet of 40 barges, 8 ocean tugs & 4 steamships had been put into service. This fleet, however, has proved entirely inadequate to the demands of the trade, & it was decided at once to double its size. Accordingly, on Sep. 15 last Mr. Besse left New York for Buffalo, Toledo, Cleveland, Detroit & other lake-port towns to purchase the vessels. Incredible as it may seem, the fact remains that within 30 days he had completed the work of buying 44 vessels, the total carrying capacity of which is 71,000 tons, & by Oct. 3 the first barge was at Cornwall. But having bought the fleet, the task had only begun. The problem was how to get it to its destination, Newport News, Va. Many of the vessels were too long for the locks of the Beauharnois canal, & the only alternative was to run the Cascade rapids. This was not a very promising undertaking in view of the fact that only 3 vessels had made the attempt, & in each case an accident was the result. The pilots assured Mr. Besse that a channel of even 7 feet could not be secured to the Split-rock rapids. Investigation, however, led to the undertaking of the task, & now one-half of the big fleet is safely harbored at Quebec without an accident. The pilots of the line which plied between Montreal & Kingston this summer have been doing the pilots' work through the Cascades, and raft-pilots have been running the Split-rock rapids. Four tugs have been engaged in the work, the Chieftain & Rival, working in the rapids, & the Reginald & Island Wanderer towing between Cornwall & Ogdensburg. If the same good fortune & weather that has attended the enterprise so far are continued, Mr. Besse thinks that \$60,000 will land the fleet at the Gulf by Nov. 1."

In referring to the same matter the Marine Review said on Nov. 4: "Present indications are that the Atlantic Transportation Co. will not be able to get all of the vessels to the coast this season. The Co. had a separate insurance arrangement covering the voyage of the boats from Montreal to New York, with the stipulation that all the vessels were to leave Montreal by a certain time. The departure of some of the barges has been delayed beyond this time, & it is said the insurance companies have refused to accept further risks. This will in all probability necessitate the wintering of the boats at Kingston. The hitch will not, of course, in any way effect the interests of the vesselmen who have made charters to the Atlantic Co.—that is, the boats will in no case be thrown back on their hands, although an effort may be made to induce the owners of the vessels which will be thus delayed to grant an extension & have the charters date from next spring instead of from this autumn. The lake owners who chartered vessels to the Atlantic Co. received checks this week covering the second month of the charter. In this connection it is stated that the steamer Gettysburg, chartered from Alger, Smith & Co., of Detroit, by the Atlantic Transportation Co., will not go to the coast by reason of an inability to go over the rapids. The vessels taken to the coast by the Atlantic Co. are all insured from the time of their de-

livery to the company at lake ports, but it is understood that the underwriters do not agree to bear losses sustained in running the rapids. At the outset the Atlantic people, after conferring with their contractor, fixed the maximum draught at 7 ft. They were so anxious to secure the Gettysburg, however, that an exception was made in her case. She was allowed an additional 4 ins., but it was found impossible to get her up even to that draught, although it is understood \$2,500 was spent in shifting her boilers in the hope that it might be accomplished."

Another company has entered the field to secure lake vessels for the Atlantic coast trade. The newcomer is the Manhattan Steamship Co., of New York. In a letter to the Review, the General Manager of the Company says: "We have about concluded negotiations for 5 steam barges which we propose taking to Philadelphia, where alterations & changes will be made fitting them for coast-wise work." The inference is left that the vessels have been purchased outright. The Manhattan Co. has not made public the names of the vessels for which negotiations are being carried on, but it is understood that 2 of the number are the steamers Linden & H. E. Runnels, owned by the Jenks Ship Building Co., of Port Huron, Mich. The H. E. Runnels, which was built in 1893, is 182 ft. keel by 35 ft. beam. She has a capacity of about 1,300 or 1,400 tons of coal, & an insurance valuation of \$45,000. The Linden was built in 1895 & is 206 ft. keel by 35 ft. beam. She has a carrying capacity of about 1,400 to 1,500 tons, & an insurance valuation of \$62,500. Both are wooden vessels.

Richelieu & Ontario Navigation Co.

There was a story on the street in Montreal lately that a Western syndicate, with headquarters in Chicago, was negotiating for the purchase of the R. & O. N. Co.'s fleet. The story is not true as far as a possibility of purchase is concerned, but it is said to be altogether likely that within a very short time U.S. capital, to the extent of about \$1,000,000, will purchase an interest in the Co. The desire of the present shareholders is that new capital should be secured with as little delay as possible. Some large sums must be spent at once in bettering & adding to the property. For instance, another steamer, at a cost of \$250,000, is proposed to be built, & the Co. wants to erect hotels at Tadousac, Murray Bay & other leading points touched by its Co. steamers. It is expected that the deal will soon be consummated. The Company's stock has been declining lately.

The General Manager says the business of the Co. this year has been excellent, considering the cutting of rates by railway & steamboat companies.

The Co. has commenced paying a semi-annual dividend of \$53,000, which is at the rate of 6% a year.

The Co.'s steamers in service below Montreal will continue running as long as weather permits, when they will be laid up at Sorel for a general overhauling.

The Co. is contemplating an important change in its passenger service next season. With the increased spread of its western service by the introduction of the new vessels, the City of Toronto & the proposed City of Kingston, it will be able to call at a U.S. port. Charlotte, the port of Rochester, is the one chosen. It is almost opposite Cobourg.

The St. Lawrence River steamboat Hamilton was formerly the Magnet, built in 1847. The Caspian was called the Passport when she was launched, the same year. The Algerian is the old Kingston, which burned at Chippewa Point, & when rebuilt was called Bavarian. She burned a second time, & when ready for service again was given her

present name. The old Grecian was lost while going through Split Rock rapids.

Sault Ste. Marie Canal Traffic.

Following is a report of freight & passenger traffic to & from Lake Superior in Oct., including statistics of the Canadian & U.S. canals at Sault Ste. Marie, Ont., & Mich., taken from the Marine Record:

EAST BOUND.			
Items.	U. S. Canal.	Canadian Canal.	Total.
Copper, net tons	10,000	240	10,240
Grain, bushels	1,513,828	82,107	1,595,935
Building stone, net tons			
Flour, barrels	1,400,000	75,250	1,575,250
Iron ore, net tons	1,253,808	149,003	1,399,961
Iron, pig, net tons	6,102		6,102
Lumber, M. ft. B.M.	1,30,448	2,055	1,30,003
Silver ore, net tons			
Wheat, bushels	1,200,000	1,800,000	15,090,745
Unclass'd freight, net tons	22,782	1,000	24,478
Passengers, number	703	470	1,183
WEST BOUND.			
Items.	U. S. Canal.	Canadian Canal.	Total.
Coal (hard) net tons	80,100	5,200	85,366
Coal (soft) net tons	201,800	8,113	299,924
Flour barrels			
Grain, bushels	900	6,000	10,000
Manufact'd iron, net tons	22,077		22,077
Salt, barrels	20,000		20,000
Unclass'd freight, net tons	54,570	4,846	59,416
Passengers, number	497	493	920
East bound freight, net tons			24,052,217
West bound freight, net tons			47,007,070
Total			2,877,003
Total craft, United States			1,071
Total craft, Canadian			315
Total			2,289
Total registered tonnage, United States			1,385,762
Total registered tonnage, Canadian			262,728
Total			2,648,490

Recent Dominion Appointments.

The following appointments have been made by Dominion Order in Council:

Harbor Masters—W. Cochrane, for Port Greville, N.S., vice G. Hatfield, deceased; E. Cohoon, for Port Medway, N.S., vice E. Dolliver, deceased; Capt. J. M. Le Cain, for Clementport, N.S., vice T. Tracey, deceased.

W. Richardson has been appointed a member of the Pilotage Authority for Sydney district, vice J. Rudderham, resigned. C. C. Hamilton has been appointed a member of the Pilotage Authority for Shediac district, N.B., vice H. H. Schaffer, resigned.

J. C. Scrimgeour has been appointed measuring surveyor of shipping for Kings County, P.E.I., vice S. McDonald, deceased.

Atlantic Winter Service.—The contract between the Dominion Government & the Allan & Dominion steamship lines for the winter service from St. John to Liverpool, was signed early in Nov. The first boat left Liverpool Nov. 12. The first sailings from St. John, N.B., will be on Nov. 30. For the first 5 weeks the sailings will be weekly from Liverpool on each Saturday, after that they will be on Thursdays. From this side the sailings will be on Wednesdays, unless other arrangements are made later on. The boats to be employed are the Parisian, Numidian, Californian, Labrador, Vancouver & Scotsman.

The Dominion Government has allotted \$1,000, the balance of the subsidy, to the Canadian Steamship Co. for a steamship to call at Charlottetown, P.E.I., on or about Dec. 15, & deliver cargo from Great Britain, taking in cargo for London & Liverpool, which will be delivered via Milford Haven. It is said that as a result of representations made by C. N. Armstrong as to the proposed steamship line from the Baie des Chaleurs to England, the harbour authorities of Milford Haven are building a wharf & work houses for the accommodation of the vessels & merchandise.

The Pioneer Steamer on the Pacific.

Over three score years have passed since a Hudson's Bay Co. steamer Beaver floated down the Thames. She was the first European steamer to round Cape Horn, & was the pioneer steamer of the Pacific ocean, the passage from London, Eng., to Astoria, Ore., consuming 163 days. The Beaver was 101 ft. long, 20 ft. broad, & 11 ft. deep, the tonnage being 109½. The boiler & the 2 side lever engines of 35 h.p. each were made by Boulton & Watts, at Birmingham. The engines cost £4,500, & weighed 52 tons. The vessel was built in the most substantial manner, of live oak & greenheart, the timbers being held together by copper bolts. The Beaver reached Vancouver Island in 1835, was used as a fur-trading vessel by the Co., & on one of these trips coal was discovered on Vancouver Island. In 1849, during the gold excitement, many miners took passage on this little black steamer. In steaming out of Burrard Inlet in the fall of 1888, she struck a rock, & wrapped in a sheet of troubled waters, with head resting on a huge, barnacle-clad boulder, the pioneer Pacific steamer passed into history. Unsuccessful efforts were made to float her & she remained on the rocks nearly 4 years. An attempt was made to take her to the Chicago World's Fair, but was abandoned, owing to her damaged condition & cost of transportation.

The illustration on this page, reproduced from a photograph taken some 4 or 5 years ago, & copyrighted by Bailey Bros., Vancouver, shows an interesting feature of the early and later navigation of the Pacific. To the left is the magnificent Royal Mail steamship, Empress of India, of the C. P. R. line from Vancouver to China & Japan. To the right is the steamer Beaver on the rocks as described above.

Capacity of the Welland Canal.

The departure of the fleet of vessels chartered by the Atlantic Transportation Co. for coast service, & the frequent discussion of the opportunities for trade that will be opened by the enlargement of the locks of the St. Lawrence canals to Welland size, has induced much inquiry on the part of men identified with shipping interests as to the extreme dimensions of vessels that may be passed through the Welland. This inquiry has, of course, been increased in view of the agitation for abolition of Welland canal tolls, & in view also of the fact that the locks of all canals under construction in the St. Lawrence will be when completed of similar size to those in the Welland. It is understood, of course, that when the work of enlarging the locks of St. Lawrence canals to dimensions of the Welland is completed there will be none of the difficulties now encountered in having vessels destined for the seaboard run the rapids of the St. Lawrence river.

The Welland locks are 270 ft. long from mitres of the gates, & 45 ft. wide, but this does not convey an adequate idea of the largest size of vessel that may lock through, as that is dependent on the model of the bow

& stern of the vessel. A vessel that is sharp forward at the deck line & narrow at the stern can lock several feet longer than one that is full forward or has a broad stern. Moreover, a vessel with a narrow beam can lock longer than one that is nearly full beam of the locks. The lock gates mitre at an angle of 90 degrees, & any designer or builder of vessels can, of course, upon inspection of a drawing of the ship, tell at once whether she will or will not lock through.

According to information furnished by Carter Bros., tug & vessel owners, of Port Colborne, Ont., the steamer Aragon, now on her way down the St. Lawrence, is about the largest vessel that can pass through the Welland. The Aragon is 247 ft. 7 in. keel, & 42 ft. 6 in. beam, the various registers not giving her length over all. The steamer Colonial is about as large a vessel of that kind of model as can pass the locks. Her dimensions are 244 ft. 5 in. keel, & 36 ft. 3 in. beam, the length over all, as nearly as could be measured at the canal, being 258 ft. 9 in. The overhang aft on the Colonial is probably longer than

up through the canal, the stern may be swung one way & then the other in order to permit of the gates being closed. As an illustration it may be stated that whereas a boat might lock 260 ft. over all if only 33 ft. beam, a vessel with the same type of hull could not lock over 255 ft. if of 43 ft. beam.

A wooden vessel that is of very nearly maximum lock dimensions is the Black Rock. She is of exactly the dimensions referred to above—255 ft. over all & 43 ft. beam. Her Captain states, however, that if his vessel was not so full forward & was narrower on the quarters aft she could lock a little longer, as in locking through now the gates strike the bluff of her bows in opening & strike her quarters aft in closing. The Black Rock carries 68,000 bus. of wheat on a draught of 14 ft. of water.

In this connection interest attaches to the dimensions of the steel steamers belonging to R. R. Rhodes, of Cleveland. The Minneapolis & St. Paul, which are sister ships & 238 ft. keel by 42 ft. beam, were built with especial reference to the dimensions of the Welland locks, it being the intention of their owner to place them in the Montreal grain trade as soon as the St. Lawrence canals are completed. Mr. Rhodes recently sent his steamer, the R. R. Rhodes, to the Welland canal for purposes of measurement, & it was found that, although the vessel is 246 ft. keel by 40 ft. beam, she can be locked through. A comparison of dimensions will show that the greater length is offset by the narrower beam in accordance with the theory above outlined.

It will be understood, of course, that vessels passing through the Welland cannot all go on down to the seaboard. Only those of very light draft, not more than 7½ ft. can run the rapids of the St. Lawrence.—Marine

EMPERESS OF INDIA.

THE OLD AND THE NEW.
Copyrighted by Bailey Bros., Vancouver.

BEAVER.

that of the Aragon, which enables the Aragon to lock with a longer keel & more beam. In addition, the Aragon being a steel boat, has a narrow stem & stern & is not bluff forward.

Another vessel that just about reaches the limit of the Welland locks is the W. A. Haskell, owned by the Ogdensburg Transportation Co. Her keel measurement is 242 ft. 5 ins., & her beam 37 ft. The Ogdensburg Co. built the Haskell first, with the idea of taking full advantage of the Welland locks, but when their other vessels, the Governor Smith, A. McVittie, J. R. Langdon & Henry R. James were built, they were made only 240 ft. keel & 42 ft. beam. It will thus be seen that whereas the beam was increased 5 ft., the keel length was shortened 2 ft. 7 ins. The overhang aft of the last mentioned vessel is practically the same as that of the W. A. Haskell.

When a vessel is a close fit in length more or less delay is encountered in the operation of locking. It will thus be readily understood that the reason why a steamer of narrow beam can lock longer than one of greater beam, or nearly full width of the locks, is found in the fact that the vessel of less beam may be swung to one side of the lock & one gate opened, & then to the other side while the other gate is being opened. In a similar manner, coming

Review.

Through the Lachine Rapids.

The steamer was entering the most dangerous part of the far-famed Lachine Rapids of the St. Lawrence. The forward deck was crowded with passengers, & all eyes were fixed on the famous Indian pilot, on whose skill & nerve their lives depended. Immovable at his post on the high pilot tower he stood, his sinewy brown hands firmly grasping the spokes of the wheel, while his piercing eyes darted glances now here, now there, over the surface of the river, as though seeking the most advantageous point from which to commence the descent. Now & then one could catch a glimpse of a plain Hibernian countenance in a window below where the Indian stood.

The steamer plunged into roaring waves, which shook her from stem to stern. Great black & glistening rocks grinned at the staunch vessel from the boiling waters. Strong men shuddered as they looked at the ragged rocks & raging river, & in their hearts thanked God that they were safe in the hands of the famous pilot. Women stared fascinated at the water, & then turned their eyes on the Indian, clasping their hands together with all their strength, as though

they would sustain the effort which his mighty arms were exerting to hold the vessel in her course. And well did he merit their confidence—now spinning the wheel like lightning to escape a dangerous rock, now holding it firm with all his vast strength to prevent the vessel's swerving, now leaning far from his station to scan the water with hawk-like eyes for hidden dangers. Nothing could appal him or shake his iron nerve, & barely grazing a dangerous crag he shot the steamer into calm water.

Once more had a shipload of souls been safely brought through the rapids by the intrepid savage. Few of the women restrained their tears, & men looked at their wives & little children, shuddering to think of the dangers they had passed, & then turned with swelling gratitude to the Indian. A mighty cheer burst from their throats, women threw him flowers, a purse fell solidly at his feet, & a subscription list was rapidly circulated.

Amid all this the stern child of primeval race was the only one apparently unmoved. His features, fixed in the traditional composure of his race, betrayed no emotion, & his steady & piercing glance did not regard the cheering crowd. In the room in the pilot tower below where he stood, the plain Irishman, who had been steering the steamer all the time, took a chew of tobacco. The iron-nerved savage performed with a dummy wheel on top of the tower, so the tourists would get their full money's worth of thrill. —New York Times.

Notices to Mariners.

The Dominion Department of Marine has issued the following notices since those enumerated in our last issue:

No. 63, Oct. 13, Ontario.—1. Light house on Ayler Island. 2. Reefs in the east end of Lake Superior.

No. 64, Oct. 15, British Columbia.—1. Light house & fog bell on Prospect Point. 2. Light house on Egg Island. 3. Light house on Ivory Island. 4. Denny Rock dangerous.

No. 65, Oct. 17, New Brunswick.—Improvement in light house on Sand Point.

No. 66, Oct. 20, Nova Scotia, buoyage on Atlantic coast.—1. Buoy on Middle Ground Shoal, Halifax. 2. Removal of southwest breaker bell buoy to Port Medway fairway. 3. Conical buoy on southwest breaker. 4. Can buoy off Neil Point.

No. 67, Oct. 19, Ontario.—1. Light house removed from Hugh Rock to Carling Rock. 2. Rocks in Parry Sound Channel.

No. 68, Oct. 22, Ontario.—1. Additional buoys in Detroit River. 2. Buoys in South Bay entrance. 3. Dangerous wreck in River St. Mary.

No. 69, Oct. 22, Ontario.—1. Temporary range light at Port Dalhousie. 2. Wreck on Bay of Quinte.

No. 70, Nov. 2, British Columbia.—Aids to navigation in Victoria Harbor.

No. 71, Oct. 31, Quebec. Improvements in ship channel, River St. Lawrence.—1. Barre à Boulard cut completed & buoyed. 2. Removal of patches & rearrangement of buoys. 3. Widening of channel opposite Montreal.

No. 72, Nov. 3, Quebec.—St. Emelie Range lights.

UNITED STATES MARINE NOTICES.

The Notice to Mariners for the Great Lakes, issued by the U. S. Hydrographic Office, Oct. 15, contains the following among others:

158. St. Mary's River, Lake Superior entrance. Shoals between Gros Cap & Point Iroquois; establishment of buoy.

159. St. Mary's River, upper end, Point aux Pins. Foundering of the lighter Monitor, danger to navigation.

165. Lake Erie, mouth of Detroit River, Bar Point.—Establishment of buoys.

B. C. Freight & Shipping Report.

R. P. Rithet & Co. say during the past month there has been some enquiry for vessels to take general cargo, but practically no demand for grain carriers either at San Francisco or in the north. In the latter quarter there has been an unusually fine crop, but freights have failed to respond, partly because of the firmness with which grain is held, & partly, no doubt, owing to the want of encouragement from consuming markets.

In the lumber market rates have been maintained fairly well & quotations are either unchanged or only slightly down from last month. There is reported to be a very well-defined shortage of logs, shared by all exporting mills, & this is having considerable effect both on the freedom of shipments & the prices of finished lumber.

The David Morgan, of the prospective salmon fleet, having been given up for lost, has been replaced by the Celtic Race, of which the charter is now announced at a lump sum.

We quote freights as follows:—Grain—San Francisco to Cork f.o., 23s. 9d., nominal; Portland to Cork f.o., 32s. 6d., nominal; Tacoma to Cork f.o., 30s., nominal. Lumber—British Columbia or Puget Sound to Sydney, 37s. 6d. to 38s. 9d.; Melbourne or Adelaide, 47s. 6d. to 48s. 9d.; Port Pirie, 46s. 3d. to 47s. 6d.; Fremantle, 57s. 6d. to 60s.; Yokohama, 42s. 6d. to 45s.; Shanghai, 47s. 6d. to 48s. 9d.; Tientsin, nominal; Valparaiso f.o., 40s. to 42s. 6d.; U.K. or Continent, 65s. to 67s. 6d.

In British Columbia Waters.

C. W. Bush & D. G. Kurts have registered a partnership as the Balfour Steam Navigation Co., at Kokanee Creek.

It is reported that the Fijian Government has decided to withdraw its yearly subsidy of £1,500 from the Canadian-Australian steamship service. If so, the boats will not call at Suva.

On Oct. 20 35 vessels of over 1,000 net tonnage each were in B.C. ports. Of this number, 16, representing over 36,000 tonnage, were loading or discharging cargoes at Vancouver.

The C.P.R. Co.'s steamer Moyie was launched at Nelson, Oct. 22. She will ply on Kootenay Lake between Kuskanook, the temporary terminus of the Crow's Nest Pass Ry., & Nelson.

Still more boats will be placed on the Vancouver-San Francisco run. The Pacific Coast Steamship Co. has chartered the steamers Laurada & South Portland from McCalden Bros., of New York, & will run them in connection with the Queen, Umatilla & Walla Walla.

The new trade opened up by the annexation of the Hawaiian Islands by the U.S. is not to be monopolized by U.S. shipping. The steamer Garonne, which has just been placed on the Puget Sound-Honolulu route will call regularly at Vancouver for freight, a good part of which will be carried over the C.P.R.

The B.C. Marine Railway Co. has bought a site in the east end of Vancouver, & it is said that work will soon be started on a marine railway plant there. W. F. Bullen, Manager of the Co.'s Esquimalt plant, has been looking over a number of plants in the U.S. to gather ideas. The Esquimalt plant has all the work that can be handled there.

The Government steamer has lately replaced the lighthouse beacon on the sandhead, the north beacon on Sturgeon bank, Spanish Bank beacon & the east beacon, first narrows Burrard Inlet. The beacons, with the exception of the north beacon on Sturgeon bank, which is 3 cables south of its old position, are in the positions shown on the present Admiralty charts.

Local shipping suffered a severe loss by 3 steamers being destroyed at the New Westminster fire. This was followed by the wreck & almost total loss of the steamer Boscowitz, & the wreck, on the northern coast, of the steamer Brixham, engaged in the Klondike trade. She was an iron-built steamer of 396 tons, owned by the Boston & Alaska Steamship Co., operating from Seattle, but was well-known at Vancouver, as she took on the supplies for the Northwest Mounted Police there.

On Oct. 21 the C.P.R. steamer Athenian sailed from Vancouver for Vladivostok on her initial trip. The steamer Tartar followed shortly after, & the steamer Selkirk is under charter to load flour at Tacoma to be taken to Vancouver port & transhipped to Vladivostok ex the R.M.S. Empress of Japan. Several tramp steamers have also recently loaded lumber cargoes at Vancouver for the Russian port. As stated in our last issue, the Tartar & Athenian are going in the C.P.R. Co.'s regular Pacific trade between Vancouver & China & Japan.

The Customs returns show that 2,732 sea-going vessels called at Vancouver during the year ended June 30 last. The value of goods that passed through the city, on transit to & from foreign ports, was \$10,232,716. To this should be added some \$5,000,000 for the value of manufactured articles & products of Canada arriving at & shipped from Vancouver. The total revenue collected at the port for the fiscal year was \$667,842.56. The statement of the imports consumption shows a total value of \$2,983,291, while the exports, under their various heads, are as follows: Mining, \$95,255; fisheries, \$347,644; forest, \$251,652; animal products, \$45,326; agricultural products, \$62,217; manufactures, \$176,102; miscellaneous, \$29,449; coin & bullion, \$106,555; grand total, \$1,114,200.

For some time it has been apparent to the management of the Union Steamship Co. that a larger steamer with greater passenger accommodation was needed for the northern run from Vancouver, 150 miles up the coast as far as Port Neville, now handled by the steamer Comox. This boat is a business-like little steamer & has done good service in the past, but the route has become too much for it, & the Co. has decided to procure a new boat. Just what kind of boat is needed is a question that will require serious consideration. The Cutch, which goes to Skagway in a week or two, draws rather too much water to go into all the coves & bays that make the route handy for the settlers. A flat-bottomed vessel, something like the Joan, is the kind of boat that will probably be secured. Whether a new one will be built or another bought is also an unsettled question. It is intended that she will be fitted up in good style, as far as passenger accommodation is concerned, & will be fast enough to make 3 trips a week without trouble, so that the service will be vastly improved.—Vancouver World.

Yukon Navigation Matters.

A Washington, D.C., dispatch says:—The discovery of 2,500 miles of additional U.S. territory on the Alaskan coast, & of a new channel for Yukon-bound vessels, which will minimize distance, time & danger, is officially reported to Superintendent Pritchett, of the U.S. Coast & Geodetic Survey, by J. F. Pratt, the assistant in charge of the expedition which has been working in those waters. What the expansion of the mileage of the Alaskan territory is due to is not known. There is a possibility of constant outward growth of the land since the first charts were made, but the better opinion is that it is due to previous inaccurate charts, the present being the first regular & reliable survey of the region.

The finding of the new channel will effect a saving of about 400 or 500 miles on reaching the Yukon. At present vessels destined for the Yukon region have to proceed up the ocean outside the long bar some 25 miles off from the coast up to St. Michael's, & there tranship to small boats, which have to creep along the coast down to the Aphoon channel, 10 miles or so below St. Michael's. This channel carries the water only 2 ft. over the bar at low tide.

The new channel just found is the Kualivak, which will carry 8 ft. over the bar at low water, & according to present expectations, will permit ships of moderate draught to proceed directly into the Yukon from the south, & then continue up the river 400 or 500 miles to a safe landing before transhipping to the smaller boats, which will go the remainder of the way up the river.

The 3 steamers Governor Pingree, Philip P. Lord, & New York, of the Boston Alaska Co., which had the contract for carrying a portion of the supplies for the Yukon force, reached Dawson, after many delays, Sep. 25.

Ice was making on the Yukon & there was thin ice at Dutch Harbor when the Portland sailed from St. Michael's, Oct. 11. At least 12 river steamers are stuck on sandbars in the Yukon, & all will probably be lost. The Dawson City is a total wreck. The Herman & Tacoma are aground, & the other boats are in such perilous positions that when the ice breaks up they may go to pieces.

Two Stikine River boats, the Skagit Chief & the Glenora, owned by the Tacoma & Port Orchard Navigation Co., have been sold by auction. Prior to last Spring, & for 10 years past, the Skagit Chief was a familiar member of the fleet of steamers plying between Tacoma & the Sound ports, the steamer being on the Tacoma-Seattle run for years. The Glenora is a new vessel, having been built & launched early in the year. Both vessels were towed through the inland passage & placed on the Fort Wrangel-Glenora run. Both made several successful trips after arriving in the North, & then came the Stikine route "slump." Liens amounting to nearly \$9,000 for labor, material & provisions existed against the 2 steamers. The creditors grew impatient. No relief was offered. At last the matter was taken into the U.S. courts & judgments received. On Oct. 13 Marshal Grant sold the 2 steamers at auction in Tacoma. The Skagit Chief was bid in by L. R. Manning at \$2,600; the Glenora by S. Barber for \$3,975.

The Lake Bennett & Klondike Navigation Co. announces that it will not cut its rates. An official recently said:—"Cheap fares mean cheaper living—canned meat & canned fruit on the bill-of-fare—that is something we won't have. We will feed our passengers with the best that can be bought—everything that is in season—and we will expect passengers to pay a living rate. This rule we will stand by, & when our service begins to be known, then I believe we will be patronized."

The Lake Bennett & Klondike Navigation Co.'s steamer Ameer is to be overhauled at Victoria, so as to provide greater passenger accommodation.

It is said that the North American Transportation & Trading Co., a U.S. concern, has decided to put a fleet of steamers on the Upper Yukon, to run from Dawson to Bennett. An agent of the Co. has been surveying the river.

It is said the Manauense & 2 other steamers will be put on between Vancouver & San Francisco, the Manauense to be the passenger boat & the others principally for freight. The same owners talk of putting on 2 steamers between Vancouver & Skagway, & next spring a river boat on Lake Bennett & another on the Yukon, to run in connection with the steamer James Domville, which Capt. Ferris

says was not nearly as badly injured on the Yukon as was originally reported, & will be able to go to work again when the river opens next year. It is said the owners will ask the city of Vancouver for assistance in the form of a guarantee of 3% on debenture stock & the free use of the city wharf if one is built.

The Maritime Provinces.

J. B. Coyle, Manager of the International Steamship Co., which runs boats between Boston & St. John, N.B., died recently at his home, Portland, Me., aged 57.

The marine slip at Lunenburg, N.S., which opened for work last April, has proved a successful enterprise. It cost about \$19,000, & the earnings so far this season have been upward of \$2,000. Its capacity is 600 tons.

The Steamship Pharsalia Co. has been incorporated under the New Brunswick Joint Stock Co.'s Act, with a capital of \$200,000, for the purpose of owning & sailing a British steamer, the Pharsalia. The incorporators are: R. & P. W. Thomson, Rothesay, N.B.; J. H. Thomson; W. W. Turnbull; J. K. Dunlop, St. John, N.B.; & C. De W. Smith, Windsor, N.S.

The St. John, N.B., city council, has formally adopted a series of resolutions pledging the city to give a free site, exemption from taxation, & a bonus of \$2,500 a year for 40 years, for the proposed graving dock, which is to be of granite & not less than 800 ft. long, with all needful equipment. The grant is subject to the granting of aid by the imperial, federal & provincial governments, the formation of a company satisfactory to the council & the council's approval of the site chosen. The work is to be begun within a year from Nov. 1, & to be completed, if possible, within 5 years, but surely within 10 years.

A. D. Provand, M.P., for Glasgow, Scotland, was in Ottawa recently in the interests of the shareholders of the Chignecto Ship Railway Co. In January last the Government refused to recommend Parliament to grant an extension of time in order that the Co. might earn the Federal subsidy of \$150,000 a year for 25 years. Mr. Provand wants the reinstatement of the Co. in a position that it may secure the annual subsidy, or, failing that, compensation for the capital expended in the enterprise. The Co. considers if this request be not granted that it will, in effect, mean the loss of about £750,000 of British capital expended in Canada.

The Dominion Government has been advised that hereafter navigation between ports of the U. S. & Cuba & Porto Rico will be confined to the vessels of the U.S., or, in other words, that the U.S. coasting laws have been extended to these new possessions of the Republic. The U.S. Customs tariff also takes effect in Cuba & Porto Rico immediately, so that Maritime Province fish will have to face the disadvantages of that tariff. The possession of these two islands by the U.S. means a great deal for Nova Scotia. Last year Canada exported to the Spanish West Indies 215,271 cwt. of salt codfish, valued at \$785,748, & the total trade in fish from Canada to these new possessions of the U.S. is valued at nearly \$1,000,000.

A 1,700 ton steamer that travels 1,500 miles a week on a regular route, with 4 ports of call, & carries an average of 17,000 passengers & 55,000 thousand tons of freight a year, must be popular. When it is added that such a ship has been covering this route for the past 10 years & has never met with an accident nor had a claim for a pound of freight damaged, it follows that she is surely one of the best managed & therefore one of the most successful craft in operation on any line. The ship that holds this record is the Halifax, of the Canada-Atlantic & Plant S. S. Co.,

which plies weekly between Boston, Halifax, Hawkesbury & Charlottetown during the summer, & between Boston & Halifax only during the winter months, when Charlottetown is closed to navigation. The Halifax was built especially for this service under superintendence of Capt. S. R. Hill, who commanded her for several years & is now chief inspector of steam vessels under the Canadian government. After 10 years service she is even better than when she was new, can travel faster, is thoroughly as staunch, & so steady that no vibration is felt in any part of her, even when steaming full speed in a rough sea. She makes the run of 389 knots from wharf to wharf, Boston to Halifax, in from 28 to 31 hours, according to the weather, & always sails on schedule time, no matter what the weather.—Marine Journal.

Ontario & the Great Lakes.

The str. Ontario, of the Beatty Line, has been purchased by Capt. John Cornwall & others, of Port Huron, to be converted into a lumber carrier.

It is said the Hamilton Steamboat Co. is negotiating for the purchase of Oaklands, across Hamilton Bay, with a view to making it a summer pleasure resort.

Hiram Walker & Son, Walkerville, have purchased from the U.S. Government the old revenue cutter Andrew Johnson, which was recently used by the Cleveland volunteers.

The new Welland canal was used for the first time on Sunday this season on Oct. 30, when the steambarge Geo. Spencer, of Cleveland, O., broke 3 of the gates of lock No. 8.

Complaint is made that there are only 12 ft. of water in the Eastern Channel of Toronto Harbor, instead of 16 ft., & that the harbor is simply closed to vessels drawing more than 10 or 11 ft. of water.

The Government dredge, tug & scows have finished their work for this season in Kingston Harbor. They have been at work since May 18, & have made a 200 ft. channel near the M. T. Co's elevator.

The Montreal Transportation Co. loaded the first lot of new Manitoba wheat on one of its steamers at Fort William Oct. 3, comprising about 100,000 bushels. The rate quoted from Fort William to Montreal was 5¼c. a bushel.

The Toronto city officials have deposited in the Public Works Department at Ottawa plans showing the proposed chain ferry over the western channel at the Queen's Wharf, Toronto, with a description of the proposed site.

The Montreal Transportation Company's schooner Kildonan, which went ashore on Nicholson's Island recently, has been released. The Hector is still hard aground, & great difficulty will be experienced in releasing her.

The Donnelly Wrecking & Salvage Co., Kingston, which raised the Rosedale a short time ago, have a contract to raise the barge Puritan, loaded with 200 tons of iron ore, sunk in the channel abreast of Captain John's Island, Bay of Quinte.

An Ottawa despatch says E. F. Johnson, of L'Original, Ont., has organized a company with U.S. capital, & that the steamers Empire State & St. Lawrence will be secured & placed on the route between Ottawa & Montreal next season in opposition to the Ottawa River Navigation Co.

The Star Cole line Co. (Red & White Star line) whose boats run between Detroit & Port Huron, Mich., are about to build a boat to carry 4,500 people. She will be a duplicate of the steamer New York running on the Hudson river between New York & Albany, & will ply on the Detroit river.

M. R. Davis, Kingston, Ont., will, it is said, superintend for Capt. D. Noonan the building of a twin screw steamer, costing about \$20,000, having 30 staterooms, & designed to carry about 300 passengers. It will be built at Westport, Ont., & is intended for service on the Rideau canal.

Capt. C. Lewis has decided to have another steamer built for the Rat Portage-Rainy River line, to accommodate about 40 cabin passengers. There was a large business on this route during the past season. Some 50 small steamers now navigate the Lake of the Woods, being largely employed in the mining trade.

Capt. W. L. Visger, of Alexandria Bay, has been suspended for 3 months by the U.S. Government inspector for disobeying pilotage rules. He was racing with the New Island Wanderer, & would not give the latter the latter the right of way, to which she was entitled, & an accident was averted by the Wanderer coming to a sudden stop.

The steamer Rosedale, that went ashore last year near Kingston, & was abandoned by her owners to the insurance companies, & which was afterwards sold to the Edwardsburg Starch Company, has been purchased by Haggarty & Crangle, Toronto, for, it is said, \$55,000. She is at present engaged carrying grain from Chicago to Kingston.

The str. North King has finished her season's work, showing a remarkable record. During the season she covered over 33,000 miles, with an average speed of 14 miles an hour, without any delays, or the slightest damage to the boat or machinery. The North King was on the Charlotte-Cobourg route from Kingston during the early part of the year.

The returns of traffic through the Sault Ste. Marie canal for Oct. show a further falling off—315 vessels passing through the Canadian lock, as against 404 in Oct. last year. Up to Nov. 1, 3,363 vessels had passed through, a decrease of 510, & a decrease in vessel tonnage of 1,000,000 tons, & of freight carried of 1,750,000. The total freight was 2,657,585 tons.

The Great Northern Transit Co. has had 2 steamers burned recently. On Nov. 3 fire broke out in the G.T.R. freight sheds at Collingwood, & spread to the steamer Pacific moored alongside. She was valued at \$55,000, & insured for \$25,000. On Nov. 7, while the steamer Northern Belle was near Byng Inlet on the return trip from Collingwood to Killarney, fire broke out in the hold, & the crew & passengers had to take to the boats.

Port Stanley harbor was inspected recently by the Minister of Public Works, & to members of the London & St. Thomas councils & boards of trade, who joined him on his visit to the port, he expressed his surprise at the condition of the harbor, & intimated that he would urge upon his colleagues the need of putting it in first-class shape. A cut to change the outlet of Kettle Creek was suggested by the local men as the desideratum.

The Canadian schooner Edward Blake, on which McGarigle made his escape from Chicago a few years ago, lies a charred wreck on Duke Island, south of Manitoulin Island. The Blake was owned by Thomas Mills, a banker of Kingston. She went ashore on the island & caught fire while there, & became a total loss. She was in charge of Capt. John Sidney, of Belleville, & valued at \$3,000. She had no cargo.—Marine Record.

Deputy Minister Schreiber visited the canal works on the St. Lawrence front early in Nov. At the north channel, Farran's Point, & Iroquois, he found that the works during his absence have been proceeding apace. On the Cardinal section Davis & Sons were delayed by bad weather during Oct., but are rapidly making up for lost time. Mr. Schreiber looks

for continuous 14-ft. navigation between Toronto & Montreal by Dominion Day next year.

Next summer there will be lots of competition on the lake for business to the Thousand Islands & Montreal. The Northern Transit Co. has arranged to add 6 steamers to its fleet. Four of these will ply direct between Cleveland & Alexandria Bay, forming a daily line. Two will ply from Port Dalhousie, & passengers for these steamers will be brought by train from Port Colborne. All the steamers will touch at Toronto & Kingston, & form a link in the American Line of daily steamers on the St. Lawrence to Montreal.

The Canadian schooner Selkirk was sighted flying signals of distress off Thunder Bay Island Oct. 19. The life-saving crew went to her assistance, & found that the vessel had 3 feet of water in her hold, & her rudder was gone. She was bound from Fort William to Kingston with 60,000 bus. of wheat, & was being towed by the steamer Rosemount. After entering Lake Huron the tow encountered the northeast gale, & the Selkirk broke away from the steamer. She was towed into Alpena by the tugs John Owen & Frank W. Steam pumps kept her free. Temporary repairs were made to enable her to proceed.—Marine Record.

In an article entitled, "The Great Lakes & Our Commercial Supremacy," in the North American Review, John Foord brings out the fact that while the capacity of the lake freighter has been doubled since 1885, the cost of building & running it has been reduced in ratio of from 30 to 40%. "That is to say, the 5,000-ton steamer of to-day costs only \$5 a ton to build, while the 2,500-ton steamer of 1885 cost \$7 a ton; the coal cost per trip of the 5,000-ton steamer, instead of being double that of the 2,500-ton steamer, does not average 25% more; & while 16 round trips between Lake Superior & Lake Erie ports was considered a good season's work in 1885, 22 round trips are now merely a fair season's work."

The Montreal Transportation Co.'s tug James A. Walker, & 2 barges, Hector & Kildonan, from Charlotte to Kingston, with coal, sank during a gale off Nicholson's Island, 75 miles southwest of Kingston. The tug & tow left Charlotte Oct. 20, & made their course across to Nicholson's Island, where they dropped anchor to ride out the southwest gale. The wind suddenly shifting down the lake, the boats were caught in the sea, & the Walker sank completely out of sight. The consorts broke loose from their anchorage & went ashore at Wellington, 5 miles below. Both barges are full of water, & one of the crew, a Frenchman, named Laduke, of Valleyfield, drowned. The crew reached Nicholson's island in safety. The Walker & her consorts were valued at \$75,000 to \$100,000.

An item has been widely published to the effect that the steamer Empress of India, which is lying in the drydock at Picton, is at present cut up into 3 parts, & that her length will be increased by 45 ft., which will make her 227 ft. long. We are officially informed that this is incorrect. The Lake Ontario Navigation Co. is constructing a new hull for the engines that were in the Empress. It will be composite with heavy steel keelsons & steel plate bilges & steel engine frame. It will be upwards of 200 ft. keel, probably 20 ft. more over all. The new boat, which will not be called Empress of India, will have a saloon with dining room on the main deck, finished in oak, the floor will be cherry & maple, with oak border. She will be equipped with an electric plant of 250 lights capacity, & will have a search light. She will be up to date in every particular, & a speed of 17 to 18 miles an hour is guaranteed. We are informed the new boat will ply out of Toronto. A Kings-

ton telegram, however, says she will go on the route from Rochester, N.Y., to Montreal, & along with the steamer Alexandria will provide a semi-weekly trip. The hull & cabin of the Empress of India have been so cut away that for the present nothing will be done with them.

The Province of Quebec.

The Lac Temiscamingue Navigation Co. has been incorporated by Dominion Letters patent. Capital \$25,000. Head office, Baie des Peres, Que. The incorporators are L. Lacouture, Sorel, Que.; J. O. Blondin, La Baie des Peres, Que.; D. & J. Gillies, Carleton Place, Ont.; and J. Gillies, Braeside, Ont.

The Canadian steamship lines are going this year to have one of the most successful seasons in their history, & at the present time they are obtaining their business right out of Ontario. There is more tonnage out of Montreal this year than ever before in the history of the port; in fact, there are more vessels running out of Montreal to the old country than out of the port of New York. Every boat leaving Montreal is going out with every inch of space taken up, & in some cases they have to leave cargo behind. Rates, too, are higher than usual at this season of the year; in fact, good profitable rates have prevailed all season.

The S.S. Turret Age, of the Black Diamond Steamship Line, bound for Montreal, collided with the U.S. steambarge Lloyd S. Porter near St. Croix, about 40 miles above Quebec, on the night of Oct. 23. The U.S. craft, which was struck full across her bows, filled rapidly, & sank within 5 minutes, only her masts & wheelhouse remaining above water. No lives were lost. Captain Snow, of the Porter, & 11 of the crew escaped in a lifeboat, & landed on the north shore, a short distance above the village of St. Croix. The remaining 5 & the pilot climbed the masts & were rescued by a lifeboat lowered to their assistance by the Turret Age. The responsibility would seem to rest with the U.S. boat, as she lies on the north side of the channel. Ordinarily, she should have taken the south side, & as she only drew about 12 ft. she would be obliged to make way for the larger boat. The Porter lies in about 60 ft. of water, & a contract has been let to raise her.

Chief Engineer Anderson, of the Department of Marine, has reported the result of his examination of the ship channel between Montreal & Quebec, in which a number of steamers have recently grounded. He says the opinion is freely expressed that a good deal of the trouble in the navigation of the river arose from the ignorance of some of the pilots. He voices the belief that a thorough reorganization of the pilotage system is necessary, so as to weed out the poor men, to provide punishments for negligence, drunkenness & incompetency, & to open the system to competition. He declined to discuss the question of deepening & straightening the channel, as it does not come within the control of the Marine Department. Many recommendations for the improvement of the signal service are made. He found no buoys seriously misplaced, but as a result of consultation with representatives of the Montreal Harbor Board he says:—"The feeling is very strong that the buoy service should be under the direct control of the parties interested, either the Government or the Harbor Commissioners of Montreal."

One of the most important sections in his report is that that anchors standing 8 ft. or more ft. above the channel bottom are a danger to navigation, & should be done away with. When they are used, cast-iron sinkers being used to anchor the buoys next year.

EXPRESS MATTERS.

The Banks and Express Orders.

At the recent meeting of the Canadian Bankers' Association, in Toronto, J. H. Plummer made a suggestion towards the simplification of the new money order business, by the issuing banks taking all the commission, instead of its being divided, as now, between the issuing & the paying banks. Out of this arose a discussion, which almost eclipsed the original idea, upon the best means of meeting the competition of the express companies' money orders.

Mr. Farwell, of Sherbrooke, raised the issue. Mr. Charles, of Galt, urged that the banks should stand together against the express companies. Mr. Plummer suggested that the banks should not accept express money orders at par. D. R. Wilkie pointed out that this was once before attempted, but failed, because the banks holding the accounts of the express companies would not concur in such an arrangement. He pointed out also that some of the banks could not refuse express orders, while others did, because their customers, who received a large number of express orders in payment of accounts, would then be at a disadvantage.

It was finally decided that the incoming Executive Council be asked to consider the question of commission on money orders, with a view to displacing the orders issued by express companies, & that they should be asked specially to consider whether a modification of the rules of commission would not be helpful in this regard.

Our advice to the Executive Council would be not to waste time in trying to do something which we look upon as impossible of accomplishment. Express money orders have undoubtedly come to stay, & the public, having become thoroughly satisfied of their convenience, would not be willing to do without them. The express companies went into the money order business, not with a view to compete with the banks so much as to provide a cheap system of remitting small amounts without putting remitters to the trouble and inconvenience involved in the cumbersome red-tape-laden system of the post office money order department. That they have admirably succeeded is abundantly shown by the results. As a matter of fact the express companies do not compete with the banks to anything like the extent which the latter seem to imagine they do. The great bulk of express money orders issued are for small amounts, probably under \$10 each, on which the highest commission charged is 6 c. For this class of business the banks cannot compete. It must not be lost sight of that the express companies have thousands of offices compared to the banks' hundreds. The action of the banks in reducing rates for remittances is an admission that their rates have been too high & is a tribute to the service rendered to the public by the express companies in providing an unequalled system at a minimum cost.

Express Goods in Bond.

The following letter received by the General Manager of the Northern Pacific Express from the U. S. Treasury, explains a recent ruling of the Department:

"The department duly received your letter relative to the action of representatives of the Treasury Department in exacting a separate transportation & exportation bond for each shipment, & stamp tax of 50c. on all such bonds covering entries of merchandise shipped by express through the U.S. to & from points in Canada & British Columbia.

"Your letter was referred to the Collector of Customs at Port Townsend, Wash., who states that consignees or agents are permitted

to include in one entry & bond all consignments of various marks arriving on the same vessel or other conveyance in transit through the U.S. when destined to some port or place in Canada.

"Bonds of the above description are those required of a consignee or agent, in accordance with the provisions of Article 432, Customs Regulations, 1892, & are separate & distinct from the class of bonds of common carriers, under the act of June 10, 1890, so that your bond as a common carrier cannot be substituted for the bond required of you as consignee or agent of transit goods in order to avoid the payment of the stamp tax on the latter class of bonds, under act of June 13, 1898.

"Inasmuch as the action of the Collector in this case is sustained by a ruling of the department under date of June 30 last, prescribing a stamp tax of 50c. for each bond on all bonds with sureties taken by the Collector in the transaction of customs business, no relief can be afforded you in the premises."

The Canadian Express Co.

Offices have been opened at Loggieville, N.B., & St. Eloie, Que.

The merchandise rate from Seattle to Dyea, Juneau, Sitka, Skagway & Wrangel has been changed to the following:

1 lb. & under	50c
Over 1 lbs. to 2 lbs	75c
" 2 " " 5 "	1.00
" 5 " " 20 "	1.25
" 20 " " 30 "	1.50
" 30 " " 40 "	1.75
" 40 " " 50 "	2.00
" 50 " 4c per lb. Minimum charge	50c

Rates on mdse. between Seattle & Dawson City, Yukon, at which an office has been opened, are:

2 lbs. & under	2.00
3 "	2.25
4 "	2.50
5 "	2.75
7 "	3.00
Over 7 lbs. up to 10 lbs	3.50
" 10 " " 15 "	4.00
" 15 " " 20 "	4.50
" 20 " " 25 "	5.00
" 25 " " 30 "	6.00
" 30 " " 35 "	7.00
" 35 " " 40 "	8.00
" 40 " " 45 "	9.00
" 45 " " 50 "	10.00
Over 50 lbs. 20c per lb. or \$20.00 per 100 lbs.	

Packages exceeding \$50.00 in value will be charged 2 p.c. additional for valuation. Marine insurance of 1½ p.c. covers to sea ports only & not to inland points.

The Western Express Company.

L. L. Stesneth has been appointed Route Agent, with headquarters at Marquette, Mich., vice H. E. Gilmore, resigned.

It has been agreed between the Great Northern Pacific & Western Express Cos. to put in effect from St. Paul, Minneapolis & Duluth the plan already in force from Chicago & Milwaukee for the handling of collections of ordinary bills, accounts, drafts, notes, etc., for sums of \$100 & under, not requiring protest, from manufacturers, publishers & others having a large number of collections yearly, at greatly reduced rates. These special rates are not intended to supersede those in force heretofore, except upon collections forwarded from St. Paul, Minneapolis or Duluth destined to points on W. E. Co.'s lines having outward charge, prepaid 10 cents upon each item for collection.

In view of the recent plebiscite in Canada it is interesting to read the following from a circular recently issued by this Co.:—"Within

the State of North Dakota the law prohibits the transportation of wines, liquor, ale, beer or other similar properties, & agents must refuse such shipments. A recent decision of the U. S. Supreme Court, however, makes it lawful for transportation companies to carry such articles, C.O.D. or otherwise, for delivery within the State of North Dakota, if such shipment originates outside of the State."

A Yukon Express Co.

The following notice has been posted up in Dawson City, Yukon:—

The Northwest Mounted Police,
Dawson, August 23, 1898.

To whom it may concern:

The Yukon Mail & Express Delivery Co. is going to endeavor to establish a service for the delivery of mail in the town of Dawson & on the creeks adjacent to Dawson. They have interviewed me regarding this service, & I have agreed to assist them in any way I can in giving them letters for those who may wish to avail themselves of this accommodation for a small charge. This is entirely voluntarily on any one's part who may wish to obtain their mail through this source & is done entirely for the public benefit. As a good deal of expense will be incurred in connection with this delivery, I have given the within mentioned the sole right of this delivery for the time being.

FRANK HARPER, Postmaster, Dawson.

The Arctic Pacific Express Co.

On returning from a recent trip to Alaska, M. G. Hall, Superintendent of the Western Division of the Northern Pacific Express, & General Manager of the Arctic Express Co., said:—"I have established joint agencies for the Arctic Pacific & the Northern Pacific Express Cos. at Dawson, White Horse, Tagish & Lake Bennett; that is, the same agency handles the business of the two companies. The office at Skagway was established a year ago, with H. E. Battin as General Agent for the other agencies in that whole Northern country. The Arctic Pacific Express Co. was established 3 years ago, having offices at Wrangel, Juneau & Sitka, the Skagway office not being established until a year ago. The express messengers on the steamers, however, accept & deliver packages at all way stations en route."

TELEGRAPHS & CABLES.

The Pacific Cable.

A London, Eng., cablegram of Nov. 1 says:—"Little, if any, progress has been made with the Pacific cable question since the Australian colonies expressed to the joint conference the view that the proportion of cost should be Australasia four-ninths, & Britain & Canada together providing five-ninths. The Canadian Government, I am assured, would be glad to see the scheme fulfilled, but they contend that the smallness of the Canadian commercial interests with Australia would not justify the suggested Canadian contribution of two-ninths, as against Great Britain's three-ninths. There is no doubt felt that if Canada is really in earnest in desiring to have a cable, & if she insists on this point of the proportion, Mr. Chamberlain would induce the Treasury to make the British share more than three-ninths, but if the scheme is not to collapse utterly before pushing rival schemes come into the field, it must be urged forward promptly & resolutely."

In the Fortnightly Review C. Bright, F.R.S.E., answers the question, "Who blocks the Pacific cable, & why?" He says:—"Thanks to the energy of Sir Sanford Fleming &

Canadian statesmen, all physical obstacles are now proved to be easily surmountable. Even the Colonial Office conference of 1896, after carefully examining experts during a 6 months' session, adopted a report on the whole in favor of the all-British Pacific line. Yet no steps towards realization have yet been taken—and why? The answer, says Mr. Bright, "is because the Admiralty reported against it, thus affording the Treasury a loophole. The Admiralty appear to have taken this step in view of the tempting bait offered them at that moment by the allied telegraph companies (opposed to the Pacific scheme) of connecting up 2 important naval stations, in the course of another proposed 'all-British' line. Having in mind the improbability of the Treasury taking up both schemes, the Admiralty was of opinion—perhaps, naturally, from their immediate point of view—that the preference should be given to the route via Gibraltar, Ascension & St. Helena." How the Admiralty can defend strategically a cable which runs right into the midst of our enemies' seas as this Gibraltar-St. Helena line must do, we fail to understand. It would be difficult to conceive a line which more completely came within the assertion Lord Wolseley once made in reference to the Mediterranean & Red Sea cables, that "to depend on lines so placed is not only unwise but suicidal." They would be cut by the foreigner at the very outset of war—and then? The all-British Pacific cable is free from nearly all such risks. It would be in deep water, in the open broad ocean, far away from other European powers, & would have but few ends, all of which could be kept strictly under British surveillance.

A Line to the Yukon.

At last session of the Dominion Parliament J. M. Catton & W. S. Rainbow, of London, Eng., & C. T. Dupont, of Victoria, B.C., were incorporated as the Dawson City & Victoria Telegraph Co., with a capital of £200,000, & employed to construct & operate telegraph & telephone lines by cable, or otherwise, from Victoria by way of Telegraph Creek & Teslin Lake to Dawson City.

A charter was also granted to Lord Thurlow, T. Van Puten, & E. Friedburg, of England, W. Braid & W. Naismith, of Vancouver, B.C., A. Haley, of Windsor, N.S., & I. Burpee, of St. John, N.B., as the Northern Commercial Telegraph Co., with a capital of £100,000, to construct & operate telegraph & telephone lines by means of cables through the waters of the west coast of B.C., with connecting land lines, so as to connect Vancouver with Dawson City.

In our last issue it was mentioned that J. Roche, a British M.P., had been in Ottawa in connection with a scheme to provide the Klondike with telegraph communication, but we have been unable to obtain any later or more definite particulars.

It was recently telegraphed from Ottawa that the Dawson City & Victoria Telegraph Co. above-mentioned had arranged for construction work to commence immediately, that a cable would be laid from Vancouver to Skaguay & a land line thence to Dawson. We have been unable to secure a confirmation of this.

At the same time it was announced from Ottawa that at next session of Parliament the Minister of Public Works would ask for an appropriation to build a telegraph line to the Klondike via the Ashcroft Cariboo route. The Government now has a line from Ashcroft, on the C.P.R., to Barkerville, 276 miles. This line was built as far as Quesnelle, in the Cariboo country, in 1895; it will be found described in our Aug. issue, pg. 167. Mr. Tarte's scheme will, it is said, provide for the extension of this line over the route originally projected in the 60's to Telegraph

Creek, thence to Teslin Lake, from which point cables will be used in the rivers & lakes to Dawson, as it is thought they would be less liable to interruptions than a land line. In response to an enquiry, Mr. Tarte informs us he is unable to make any statement about the matter at present, as the Privy Council has not come to any decision about it.

In this connection we may state that President Dwight, of the G.N.W. Telegraph Co., Toronto, recently received a cablegram from a Mr. Helm, of London, Eng., asking him to quote a figure for building a line from Dyce to Dawson & for maintaining it for a year. It is hardly necessary to state that Mr. Dwight was not prepared to give such an estimate off hand.

Western Union Telegraph Company.

In addition to the particulars given in the report of the annual meeting of this Co. in our last issue, pg. 223, it may be stated that the capital stock outstanding is \$97,370,000, of which \$28,850.35 belongs to & is in the treasury of the Co. The bonded debt on June 30 was \$15,356,282, from which has to be deducted the balance of sinking fund appropriations not yet used for redemption of bonds, \$497,406.48, making the net bonded debt, \$14,858,875.52.

The balance sheet to June 30 was as follows:

ASSETS.	
Telegraph Lines; Stocks owned of leased telegraph companies that are merged in Western Union Co.'s system franchises, patents, etc.	\$102,969,201 75
Stocks and bonds of leased telegraph companies, received in exchange for collateral trust bonds.	8,502,000,00
Stocks of not leased telegraph companies, and other securities.	8,023,068 34
Real estate.	4,977,933 74
Supplies and material in supply departments.	149,162 50
Sundry accounts receivable, etc.	2,606,836 60
Cash in treasury and in hands of agents (since remitted to treasury)	2,142,603 48
Sinking funds for redemption of bonds	497,406 48
	\$129,807,312 80
LIABILITIES.	
Capital stock	\$97,370,000 00
Funded debt	15,356,282 00
Gold & Stock Telegraph Co. for stocks of other companies held through lease of that Co. until 1881.	1,050,600 00
Sundry accounts payable, etc. (including dividend July 15, 1898)	5,023,011 74
Surplus of income prior to Oct. 1, 1881, appropriated for construction & acquisition of telegraph lines & property (in excess of the \$15,526,590 capital stock distributed in 1881, on account of such appropriations of income during the 15 years preceding)	1,393,184 03
Surplus of income subsequent to Oct. 1, 1881 (\$7,333,425.21), plus the proportion of surplus of income prior to Oct. 1, 1881 (\$629,759.91), that was not appropriated as above	7,963,185 14
	\$129,807,312 80

The Railway Telegraphers.

For some time past there has been a good deal of matter in the daily press in reference to the contemplated demand of the G.T.R. telegraph operators for a new arrangement with the Co. A committee of the operators has been in session at Montreal for some time, & it is said that they will ask for a similar agreement to the one in force between the C.P.R. & its operators, which provides for a fair trial before suspension or discharge; right of promotion by merit & ability, but, these being equal, by seniority; that telegraphers will not be discriminated against for serving on boards of adjustment representing telegraph employees; permission to attend their meetings, & free transportation for that purpose; free transportation when transferred; full pay & expenses when called upon by the proper official to attend court or investigation; compensation for attending switch & semaphore lamps; exemption from shovelling snow; exemption

from Sunday work as far as possible consistent with the requirements of the service; percentage on commercial business, hours, overtime & wages, & numerous minor details of regulations. Grand Chief Powell, of the Order of Railroad Telegraphers, with headquarters at Peoria, Ill., has been in Montreal in consultation with the operators.

Mr. Powell recently had an interview with the Minister of Railways in Ottawa in reference to the operators on the Intercolonial, who complain that they are poorly paid, & that they are not secure in their positions, owing to political partisanship charges being raised to vacate positions to accommodate friends of whatever party may be in power. Mr. Powell states that the alleged grievances have been arranged on a satisfactory basis.

Mr. Powell also saw General Manager Chamberlin, of the Canada Atlantic, & is said to have made a satisfactory arrangement regarding the telegraphers on that system.

Vancouver's Telegraph Facilities.

The Pacific Terminal City people are immensely pleased with the telegraph facilities they enjoy. The News Advertiser says Vancouver holds the foremost position on the Pacific Coast as a centre for the receipt & handling of telegraphic news & business. No other city on the Coast, not excepting San Francisco, it is believed, can rival Vancouver in its facilities for handling & transmission of telegraphic communications. Two companies operate in the city—the C.P.R. Co. & the G.N.W.T. Co. The latter is the only company having direct telegraphic service to points in Mexico.

The C.P.R. has 3 through & 3 local wires to Eastern points. The main (copper) wire is worked duplex direct to Montreal; the other 2 to Winnipeg. One local is worked direct to Rossland, Nelson & other Kootenay points, & the 2 others to points on the main line between Donald & Vancouver. To Victoria it has 2 direct wires, & a third one is about completed. To points on the Coast there is a direct quadruplex connection with San Francisco & Portland, & 3 wires—one via Victoria—to Seattle & intermediate points.

The cable business is handled with but one repetition between Vancouver & the Commercial Cable Co.'s office at Canso, N.S., thus ensuring promptness & accuracy in transmission.

Canadian Pacific Railway's Telegraph.

Extensions & improvements in the Co.'s service are the order of the day in the Kootenay district of B.C. Two additional wires have been strung between Trail & Rossland, making 3 in all. On Oct. 22 the first through wire via the Crow's Nest Ry. was completed, thus affording a duplicate line between Medicine Hat & Revelstoke. Another wire is to be added on the Crow's Nest route. There are 2 lines running north from Nelson to the main line of the C.P.R. One of these runs via Slocan City & New Denver, & the other via Kaslo & Three Forks. These meet at New Denver & then go to Nakusp, to Arrow Head & on to Revelstoke. With these means of telegraphing there will not be much chance of all the lines getting down at one time during the winter.

The Co. has discontinued its boxes in Winnipeg for calling messengers, & announces that it will send messengers in response to telephone requests. The City Electrician says the wires for the call boxes were constantly coming in contact with electric light wires & causing fires in buildings.

The Co.'s operators at Winnipeg have established an institute containing a reading room & library. Means will be afforded for the study of electricity.

Telephoned Telegraph Messages.

The Michigan Supreme Court has decided that the Western Union Telegraph Co. is responsible for failure to promptly transmit & deliver a telegraphed message, though it is a failure of the complainant's address. The complainant had telephoned to the company and had no authority to receive the message by telephone, & that in so doing he was acting as agent for the complainant, but the court held that the use of a convenience like the telephone should not be entirely at the risk of the patron.

Telegraph Office Changes.

GRAND NORTH WESTERN.

OPENED: East Broughton, Que.

CLOSED: Avonmore, Ont.; Bamberg, Ont.; Chateau Richer, Que.; Kiskisink, Que.; Port Albert, Ont.

The North Shore Telegraph Line from Quebec to Labrador has been extended this year to Big Romaine River, 76 miles below Natashquan, & 60 miles below Murray Bay. An office has been opened at Big Romaine, & work is still going on farther east with the intention next season of extending it to Belle Isle. The extension to Belle Isle is in response to a memorial from the masters of nearly all the steamships engaged in the St. Lawrence trade, in order that, in case of accidents to vessels, the nature of such accident may quickly be made known & assistance sent to the scene.

The Postal Telegraph Co., which at present reaches Rossland, B.C., via the Canadian Pacific wires, has made arrangements with the Inland Telephone Co. so that it will use the latter's poles in extending the Postal wires into Spokane. The change will mean a lively competition for Spokane business between the Spokane & Northern Telegraph Co., which is now in the field, & its new rival.

TELEPHONE MATTERS.

Recent Legal Decisions.

A city street 66 ft. wide had upon it, near an angle formed by the sharp turn in the road, a telephone pole planted 12 ft. from the centre line & far enough from the side-walk so that there was a beaten track for carriages between the two. The horses attached to a sleigh which were being driven in daylight up & down the street for the pleasure of the occupants. The driver lost control when approaching the pole, but at some distance from it & before reaching the angle. In making a turn the horses & sleigh swung round, bringing the latter against the pole, overturning it, whereby the horses and sleigh were damaged & bodily injury was caused to one of the occupants. Mr. Justice Ferguson, of the Ontario High Court, recently held that the pole was an obstruction on the highway, which at this point, from this cause alone, was out of repair, & not in good or reasonable repair, & the city corporation having notice & knowledge of the obstruction, & of its dangerous character, were liable in damages for the injuries sustained, there being no contributory negligence. It seems that driving a horse that has run away before, as one of a pair of horses, is not of itself negligence contributory to the disaster. Held also upon the evidence that the pole was planted where it stood under the superintendence of the Corporation, & with their sanction, & they could recover indemnity from the Telephone Co. by whom it was erected.

The Bell Telephone Co. & the City of Hamilton.—In assessing, for purpose of taxation, the poles, wires, conduits & cables of the telephone company, the cost of construction, or the value as part of the concern, is not the test; they must be valued in the assessment division in which they happen to be, just as materials which, if sold or taken in payment of a just debt from a solvent debtor, would have to be removed & taken away by the purchaser or creditor.

The Longest Long Distance Line.

A feat in telephony, marking the farthest advance yet in the science, was recently accomplished by talking over the wire from Boston to Kansas City. The distance is about 1,560 miles, & it is the longest distance ever covered by a single telephonic circuit, & was supposed to be impossible a few years ago. The eastern district superintendent of the New England Telephone & Telegraph Co., managed the affair, assisted by the chief operator. They succeeded in making themselves easily understood over such an enormous stretch of land. The wires over such very long distances are known as no. 8, with only 4 ohms resistance to the mile, as opposed to no. 12 wires, with 16 ohms resistance, used in such short stretches as from Boston to New York. One end of a wire connects to one side of the transmitter & then is connected with a small battery of 2 volt power. A wire from the battery goes through a primary coil, thence to the other side of the transmitter. A secondary coil, also in the transmitter, is connected on one end to the line, on the other end to the receiver & also to the line, & the talking is done by the agency of an induction current from the primary to the secondary coil. The mechanical details are only important to a lay observer as indicating the extreme complexity of the process of conveying the vocal vibrations successfully, & the necessity of lessening the resistance to the smallest possible terms. The gap from Boston to Kansas City is thought to be near the extreme limit of successful transmission through the telephone, & much longer distances are only expected when some repeating system is devised, when, as with the telegraph, nearly any practicable distance is feasible. Talking from Boston to Chicago has been an old story for some time, & it was only recently that the right sort of wire connection was obtained to Kansas City; that is, the big no. 8 wire. The route followed was via Troy, Buffalo, Chicago & St. Louis.

San Francisco to Nelson, B.C.

The longest section of the Sunset Telegraph & Telephone Co.'s telephone line that is to extend from San Diego, Cal., to Nelson, B.C., has been completed & works splendidly. The section of the line completed is that extending from San Francisco to Seattle, which was recently opened for business. Speaking of the new line, F. C. Millard, the Superintendent at Seattle, Wash., said recently: "I have tried the line between New York & Chicago, & I consider this line a good deal better. We have all the latest improvements. In testing the line with the President of the company, I could tell at once who was talking, so clear was the sound. The Assistant General Manager 'came on the line' during the test, & I recognized his voice after he had uttered but a few words. The Eastern line, that from New York to Chicago, charges \$9 for 3 minutes or less conversation. Our charge will be only \$2.50 a minute, but the distance is just as great."

The right of way was secured along the country roads which parallel the railways in California, Oregon & Washington, & the highways were used as much as was practi-

cable. Twelve different construction gangs have been at work for 6 months. The wire weighs 430 lbs. to the mile, & 2 wires are strung the whole distance, for the latest type of long-distance transmitters is used, & the circuit is double metallic. The estimated cost of the line is \$250,000.

From Seattle to San Francisco the lines run almost south in direction, & Portland & Tacoma can be connected. The Siskiyou mountain range is crossed in Oregon & California. Here men will have to be stationed along the more exposed parts of the line, so that in time of storms communication will not be interfered with.

Telephone Notes.

The British Columbia Telephones, Ltd., was registered in London Eng., Oct. 8, with a capital of £100,000, in £10 shares (of which 3,000 are £6% cumulative preference) to acquire any telephone lines in British Columbia or elsewhere in Canada, & any shares in telephone companies, to enter into an agreement with the New Westminster & Burrard Inlet Telephone Co., & to carry on the business of telephone & telegraph proprietors in all its branches. The number of the directors is not to be less than 3, nor more than 7. The first are: E. Gray, F. Priestman, J. Wheatley & W. Farrell. Qualifications £500. Remuneration as the Co. may decide. It is said the B.C. Telephones Ltd., has bought out the local shareholders of the N.W. & B.I. Telephone Co. The Co. has about 700 miles of wire in Vancouver. At least 100 miles were lost in New Westminster by the recent fire, but the Co. has had a large force at work & has replaced the system as far as can be done till the burnt district is built up again.

Hamilton & Dundas.—There was a rumor current in Hamilton, Ont., recently that the Bell Telephone Co. proposed charging Hamilton subscribers for Dundas service. The officials deny it, & explain that the only instruction issued lately has been that pay stations shall collect a fee from non-subscribers for Dundas service.

The Inland Telephone Co. will, it is said, extend its system into Rossland at once. A line will be strung to Rossland from Spokane, where connection will be made with the trunk wires of the system. The poles have already been erected from Spokane as far as Northport, & are being carried into Rossland with all possible speed. The Inland Telephone Co. is a part of the big Bell Trust, & has a telephone system now in Spokane covering that town completely. With the Inland lines connected with Rossland, it will be possible to have telephonic connection with the entire Pacific Coast. The Inland Co., when it reaches Rossland, will have active competition in the Spokane & B.C. Telephone Co., which already connects Rossland & Republic camps with Spokane.

Nova Scotia & New Brunswick.—It is said that the double-metallic circuit, recently established jointly by these two telephone companies between St. John, N.B., & Halifax, is working very satisfactorily.

The Roberval (Que.), Telephone Co. has been incorporated, capital \$10,000.

Toronto City Hall.—The Bell Telephone Co. submitted an offer for the telephone service of the new City Hall. The Local Manager recommends the local switchboard system, & offers to complete the service for an annual subscription of \$1,750, this offer only applying under a contract of not less than 5 years, because of the large initial expenditure. The cost of the present City Hall service is \$1,017.50. In addition there will be the salary of an operator at the new City Hall exchange station, probably \$400 or \$500 a year.

VOL. I., NO. 10.

TORONTO, CANADA, DECEMBER, 1898.

\$1 A YEAR.

The President of the C.F.A.

Chas. J. Smith was born at Hamilton, Ont., March 10, 1862, & was educated at Hamilton High School & Wentworth College. He entered the railway service in 1879, since which he has been consecutively, 1879 to 1880, clerk local freight office Hamilton & North-western Ry. at Hamilton; 1880 to 1882 with Audit & Purchasing Department Chicago & Alton Ry.; 1882 to May, 1885, in Construction Department C.P.R.; June, 1885 to 1886, in Traffic Department New York, Lake Erie & Western Ry.; 1886 to 1888 Chief Clerk to General Manager Chicago & Atlantic Ry.; Jan., 1888, to July, 1888, in Traffic Department Sault Ste. Marie Line; July, 1888, to Jan., 1890, in Traffic Department St. Paul, Minneapolis & Manitoba Ry.; Jan., 1890, to April 30, 1898, General Freight & Passenger Agent Canada Atlantic Ry., & appointed General Traffic Manager Canada Atlantic System May 1, 1898. Mr. Smith has for several years been a prominent member of the Canadian Freight Association, of which he is now President.

Politics & the Intercolonial.

Mechanical Superintendent Joughins occupies a house at Moncton, adjacent to the General Offices, & owned by the Government. The fact that the plumbing is being replaced by a more modern system, is used by Opposition papers or political purposes, & it is gravely stated that if this is a specimen of Mr. Joughins' economy increasing deficits may be looked for on the I.C.R. We have no mission to defend the Minister of Railways, that is a matter that can be attended to by the Liberal newspapers, but as representing the railway interests of Canada we must protest against such a style of political warfare. Mr. Joughins went to the I.C.R. with an excellent record. We know that in the Master Mechanics' Association, composed of the chief mechanical officers of nearly every road in America, he stands very high as an authority, & we think he should get fair play from the political newspapers. If he is not hampered by political interference, he will, we are satisfied, make a good record on the I.C.R., & if given a free hand, as he should be, we think he would make a marked & much-needed improvement in the general condition of the equipment in a very short time.

Politics are the curse of Canadian Government railways. With the Liberals in power, the Conservative press attacks almost every act of the management. With the Conservatives in power the Liberal press followed a similar policy. As long as this state of affairs, aggravated by similar conduct of members in Parliament, continues, so long will the permanent officials be hampered in their work & prevented from making the service as efficient as it should be. A Government

which would have the courage to change the present system, to clothe the officials with full powers, & to remove them from the sphere of political interference, would perform a service of unbounded importance. That such a step will be taken this side of the millennium is, however, very unlikely.

Alberta Railway & Coal Co.

At the recent annual meeting in London, Eng., the following directors were re-elected: E. T. Galt, Lethbridge, Alta., President; Col. K. R. B. Wodehouse, London, Vice-President; W. Burdett Coutts, M.P., E. Crabb, Hon. T. C. Farrer, & E. Waterhouse, Lon-

CHARLES J. SMITH.

don; Sir R. W. Cameron, New York, W. M. Ramsay, Montreal, T. Davidson, Montreal, having declined re-election, H. Joseph, Montreal, was elected in his place. Following are extracts from the annual report:

The Lethbridge-Dunmore section of the railway was taken over Dec. 31 last by the C.P.R. Co. in terms of agreement, & the purchase money received. Out of the purchase consideration the Canada Life loan of \$550,000 was repaid, & £2,907 15s. 6d. appropriated towards paying of a portion of the "B" debenture stock.

The business of the Co. during the year was satisfactory. The coal sales in Canada

reached 96,964 tons as against 76,371 the previous year. The Montana coal sales amounted to 38,735 tons compared with 39,809 tons, but the general freight earnings, apart from coal traffic, of the Montana railway were \$64,383.77 against \$38,138.15. This increase of business is mainly attributable to the improved commercial conditions prevailing in the Northwest.

There is a net credit balance in the balance sheet of £6,453 19s. 8d. By a resolution of the "A" debenture stockholders, passed in 1896, it was provided that "during the period of 5½ years ending June 30, 1900, the interest on the 'A' debenture stock shall be non-cumulative, & shall only be payable in respect of each year, exclusively out of the surplus net revenue of the Co. for that year," & it was further provided that subject to the provisions in the resolution, "the Co.'s auditors shall each year certify the amount of the surplus net revenue applicable for payment of interest in respect of that year to the 'A' debenture stockholders, & the same shall be paid to them pro rata forthwith." The auditors have certified that £6,453 19s. 8d. can now be divided amongst the "A" debenture stockholders, or equivalent to £2 11s. 6d. % on the £250,000 of "A" stock. Warrants in payment of interest at that rate have been sent to the "A" holders.

Coal sales since June 30 last, both in Canada & Montana, are better than for the same period last year. The general freight earnings are also larger.

The Crow's Nest Pass extension of the C.P.R., now about completed, will bring Lethbridge into direct communication with the Nelson, Slovan & Rossland mining districts. The President reports that the Co. has not benefited to any great extent from the construction of this extension, for the reason that it has not yet reached these mining districts; but he is of opinion that upon its completion increased passenger business on the Montana railway may reasonably be looked for, as there should be considerable travel between Montana & B.C., both being important mining countries.

For a considerable time past the directors have given their closest attention to projects having for their object the irrigation & colonization of the lands. Their efforts have met with a measure of success. The Alberta Irrigation Co. was some time ago incorporated by the Dominion Parliament, with a capital of \$400,000, & of this \$200,000 have within the last few months been issued & subscribed for in cash. After a special inspection & report by J. Head & Son, a contract has been entered into between the Alberta Co., the Lethbridge Land Co., & the Alberta Irrigation Co., whereby the 2 first-named companies have in effect sold to the last-named Co. 100,000 acres of land at \$1.25 an acre, payable in instalments, with the right to the Irrigation Co. to purchase up to an additional 150,000

Canadian Ticket Agents' Association.

PRESIDENT, W. E. Rispin, Chatham, Ont.; 1st VICE-PRESIDENT, S. O. Perry, St. Thomas, Ont.; 2nd VICE-PRESIDENT, G. Duncan, Quebec; 3rd VICE-PRESIDENT, W. H. C. McKay, St. John, N.B.; SEC.-TREAS., E. de la Hooke, London, Ont.; AUDITOR, S. H. Palmer, St. Thomas, Ont.

EXECUTIVE COMMITTEE, J. A. Macdonald, Arnprior, Ont.; W. H. Harper, Chatham, Ont.; C. E. Morgan, Hamilton, Ont.; T. Long, Port Hope, Ont.; A. Calder, Winnipeg.

NEXT ANNUAL MEETING at Winnipeg, Oct. 13, 1899.

acres at the same rate an acre, the right to be exercised on or before July 1, 1901. The Irrigation Co. has commenced operations, & it is anticipated that before the end of 1900 a large area of land will be irrigated & capable of raising good crops. The directors are of opinion that the Alberta Co.'s business should be considerably benefited by the work of the Irrigation Co., whose object it is to effect not only the irrigation but the colonization of the lands. It seems clear that with the successful irrigation & settlement of the lands sold to the Irrigation Co., the remaining lands be-

longing to the Alberta Co. & to the Lethbridge Land Co. should become more valuable & saleable, & the coal sales & traffic of the railway should be increased.

The revenue account for the year ended June 30, 1898, is summarized as follows:

By balance on following accounts.	£	s.	d.
Railway & colliery.....	21,499	4	0
House rents & water privileges.....	352	16	8

	£21,762	0	8

Manitoba & Northwestern Bondholders.

At a meeting of 1st mortgage bondholders in London, Eng., Nov. 11, Col. F. D. Grey, one of the trustees, who presided, gave a history of the Co. since their connection with it, showing that in 1896 the Co., under powers received from the Dominion Parliament, made an issue of mortgage bonds to the amount of £540,000. The Manitoba Legislature made the Co. a grant of 6,400 acres of land for every mile of road completed; thus, on the completion of the 1st section, 180 miles in length, there were 1,152,000 acres, less 74,000, which had previous to the bond issue been sold by the Co., which might be considered included in their mortgage as additional security. In 1893 immigration was practically at a standstill, & default in the payment of their interest on the bonds was made on June 1 of that year. He then referred to the litigation which ensued, the funds for which were raised by six-sevenths of the bondholders entrusting their certificates to the committee appointed. The action was, however, still pending. The land question was now, he believed, settled upon terms on the whole satisfactory. It appeared that the Railway Co. had sold some acres of land, & had received part of the purchase money for the same. It had been arranged that the Railway Co. should find the warrants for 1/2 of this land, & warrants for the remaining 1/2 should be found by the Trustees, they being paid \$2.30 an acre, the average at which the whole of the land was realized. Clients of Coates & Co., in Canada, had offered to purchase, en bloc, the certificates issued by the bondholders' committee, thus obtaining the bonds represented by the certificates, & the offer had been accepted by the owners of the certificates. The committee consequently deemed that their duties had come to an end, & that it was incumbent on them to retire. As Mr. Coates, the Chairman of the committee, was no longer a bondholder, it might be that this action would not be continued by him; at any rate, some of the bondholders—the outstanding one-seventh—might desire to be represented on those proceedings, & therefore he had thought it right to call them together, so that if they thought it desirable they might combine & take such steps as might be necessary for the purpose. They had instructed Ewart, Fisher & Co., their solicitors in Manitoba, to represent the matter properly to the court, but they might consider independent action desirable.

It was afterwards agreed that the bondholders who had not supported the committee in their action should meet & consider whether they should become parties in the suit, as suggested by the Chairman. They after-

wards met in private, & as a result, a circular signed "Randall Mercer, Chairman of the Committee" & marked "urgent" was issued on Nov. 22 to the English holders of the bonds. The circular says: "As an action is now pending in the Canadian courts for foreclosure & sale of the railway, it seemed to those of the holders of bonds in this country who attended the recent meeting that, unless the remaining English bondholders speedily arrange to be officially represented at this juncture, they may find when too late that the property which has been mortgaged to them in conjunction with the other holders of bonds has been parted with for such a sum as will yield an inadequate—possibly an infinitesimal—return for the moneys loaned by them to the Co. Under these circumstances, the bondholders who attended the meeting elected certain of their number to constitute a committee to watch over your interests & take such action at once & from time to time as, in their judgment, may appear desirable to protect them. The committee beg that you will, in your own interest, give them your support, & enable them to act promptly. It is hoped that when the purchasers of the majority of the bonds have the facts placed before them they may see their way to offer at least the same terms to the minority as were obtained by the majority, & every effort will be made to bring about an amicable settlement. At the same time the committee desire to be empowered to enforce their rights, should they deem it in your interests to do so, by taking legal proceedings. If you are still a bondholder, will you communicate to us, by return of post if possible, the amount of your holding & the distinctive numbers of your bonds; but, if you have already parted with your bonds, will you kindly communicate to us the name & address of the buyer, or of the banker or broker through whom they were sold?"

A Duluth S. S. & A. Suit.

A suit has been begun in the U.S. Circuit Court by J. E. Burwind, on behalf of himself & other stockholders of the North Star Construction Co., against the C.P.R. Co., the Duluth, South Shore & Atlantic Ry. Co., & Sir Wm. Van Horne, to compel them to make an accounting of their management of the North Star Construction Co. & other companies under its control, & to pay over all profits accruing from such management.

The plaintiff alleges that the N. S. Construction Co. was organized under the laws of New Jersey in 1888 for the purpose of constructing the Minnesota line of the Duluth & Winnipeg Ry. The construction company was to receive payment in the bonds & stock of the railway company. In 1892 a majority of the stock of the construction company was transferred or sold to the C.P.R. through Sir Wm. Van Horne, he agreeing to pay the debts of the construction company, & to hold the stock sold through him until bonds of the construction company could be marketed & the amount of the debts repaid with the proceeds.

The construction company gave a promissory note for \$710,000, secured by the assets, bonds & stocks of the Duluth & Winnipeg Ry., the North Star Iron Co. & the Duluth & Winnipeg Terminal Co. In Nov., 1894, a demand was made by the C.P.R. Co. for the payment of the note, in alleged violation of the agreement on the part of Sir William to hold the stock. The Board of Directors of the construction company, elected through the influence of the C.P.R. Co., the complainant alleges, notified the C.P.R. representative, who had demanded payment of the note, that they could not pay it, whereupon all the securities deposited by the construction company were sold & bought in by the repre-

sentative of the C.P.R. Co. at a price far below their value, the proceeds not being sufficient to defray the note in full.

The C.P.R. Co. instituted proceedings against the Duluth & Winnipeg Ry. Co. to compel it to pay a balance alleged to be due the construction company. Judgment was obtained, & the C.P.R. obtained control of the Duluth & Winnipeg road in the fall of 1896, & with it of the allied corporations. In the place of these the C.P.R. organized the Duluth, South Shore & Atlantic Ry. Co., & it is alleged, in the summer of 1898 the defendants transferred all of the original securities deposited by the construction company to persons under the defendants' control at a price more than sufficient to pay the entire indebtedness of the North Star Construction Co., & to pay to the stockholders of the construction company more than the par value of their stock.

Grand Trunk Earnings, Expenses, &c.

The following statement of earnings supplied from the Montreal office, includes the G.T. of Canada, the Chicago & G.T., & the Detroit, Grand Haven & Milwaukee Rys:

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net profits & increases or decreases over 1897 from Jan. 1, 1898, are as under:

	Earnings.	Expenses.	Net Profits.	Increase or decrease.
Jan. \$1,672,372.04	\$1,156,744.45	\$515,627.59	\$142,284.49+	
Feb. 1,494,596.98	1,070,929.62	423,667.36	38,844.28+	
Mar. 2,078,479.06	1,326,245.55	752,233.51	233,020.67+	
April 1,958,461.88	1,241,371.19	717,090.69	89,973.35+	
May 2,252,999.16	1,326,336.85	926,662.31	51,092.47+	
June 2,138,110.04	1,320,714.67	817,395.37	68,731.93+	
July 2,051,363.27	1,320,674.48	730,688.79	183,679.08+	
Aug. 2,210,865.29	1,327,838.41	883,026.88	121,380.23+	
Sep. 2,396,385.29	1,393,871.63	1,002,513.66	32,022.62+	
Oct. 2,688,730.39	1,432,881.90	1,255,848.49	158,092.79+	

\$20,943,363.40 \$12,847,611.75 \$8,115,751.65 \$55,162.85+
+ Increase. - Decrease.

The approximate earnings for Nov., 1898 were \$2,457,000.00, against \$2,537,000.00 in Nov., 1897, a decrease of \$80,000.00.

AUXILIARY LINES.

DULUTH, SOUTH SHORE & ATLANTIC.—The approximate earnings for Nov. were \$132,996, as compared with \$127,592 for the corresponding period, an increase of \$5,404.

The net earnings for Sep. were \$52,458, as against \$57,002, for corresponding period. The net earnings for the 9 months to Sep. 30 were \$477,549, as against \$383,580 for corresponding period.

MINERAL RANGE, HANCOCK & CALUMET.—The approximate earnings for Nov. were \$35,600, as compared with \$33,070 for the corresponding period, an increase of \$2,530.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—The approximate earnings for Nov. were \$482,566, as compared with \$460,806 for the corresponding period, an increase of \$21,760.

The net earnings for the 3 months to Sep. 30 were \$234,080, as against \$264,703 for corresponding period.

Canadian Pacific Railway Land Sales.

Nov.....	25,979	38,772	82,828.64	129,530.84
Totals.....	331,584	178,538	\$1,068,843.64	\$598,301.84

Financial Notes, &c.

Calgary & Edmonton.—The net earnings for Oct. were \$8,476.18, as against \$23,346.90 for corresponding period.

Canada Eastern.—A special general meeting will be held at Fredericton, N.B., Dec. 22, to authorize the sale of the Co.'s railway, rolling stock & franchises to the Alex. Gibson Ry. & Mfg. Co.

The Central Vermont R.R. bill passed by the Vermont Legislature last month authorizes the reorganization of the corporation, the new body to take the old Central Vermont road after it is sold under decree of the U.S. Court. The capital stock is to be \$3,000,000 & the bonded debt \$12,000,000 in 4% gold bonds. If the bill is not accepted by the Grand Trunk and other interested roads within 60 days from its passage it will become void.

Dominion Atlantic.—The net earnings for the 10 months to the end of Oct. were \$456,833, as against \$428,362 for corresponding period.

Grand Trunk.—Rumor has been busy selling & leasing G.T. branch lines recently. A report was recently sent out from Burlington, Vt., that Dr. Seward Webb had about completed arrangements with the G.T. for 99 years' lease of the line between Massena, N.Y., & Howick, Que. The G.T. Management says there have not even been any negotiations. The Management also denies the report that the Co. proposes selling its 3 Michigan branches, the Detroit, Grand Haven & Milwaukee, the Toledo, Saginaw & Muskegon, & the Cincinnati, Saginaw & Mackinaw. These roads have a mileage in all of 369 miles, & were bought some years ago to act as feeders to the G.T.

Kingston & Pembroke.—The Sec.-Treas. gives notice that pursuant to Dominion legislation of last session, & a resolution adopted at a general meeting of shareholders Nov. 21, applications will be received until Jan. 9, 1899, for 20,000 shares of preference stock of the par value of \$50, which will be issued 1st pro rata to the holders of ordinary stock & 1st preference bonds or debentures, at the rate of 40c. in the dollar. If applications for the 1st preference stock by the persons first entitled, shall not be sufficient to take up the whole issue, the directors will allot any part of it to other persons as they may see fit. The preference stock will be entitled, in priority to all other stock, to dividends not exceeding 5% a year out of the net earnings of the Co., after the interest on all outstanding first preference debentures is paid. Debenture coupons past due & maturing Jan. 1 next will be accepted in payment for preference stock. The ordinary stock has been reduced to \$2,500,000. Stockholders are requested to forward their present scrip, to be exchanged for new scrip, for one half the shares held by them or for any fractional share.

Lake Erie & Detroit River.—Application will be made to the Dominion Parliament next session by this Co., & by the Erie & Huron Ry. Co. for an Act authorizing the amalgamation of the 2 companies & to define the bonding & other powers of the amalgamated Co.

Lake Manitoba Ry. & Canal Co.—Application will be made to the Dominion Parliament next session for an Act to ratify & confirm a bond issue & a mortgage securing the same made by the Co.

The Michigan Air Line R.R. Co. has filed notice of the decrease of its capital stock from \$4,000,000 to \$1,000,000. The road is controlled by the G.T.R. system, which owns the entire capital stock. It runs from Lenox to Jackson, Mich.

The New York Central is said to have gained control of the Lebanon Springs Ry. This is a short line & has for the most part been in disuse for some years. It affords the Central, however, an important link in the direct route between New York & Montreal, for which the control of the Rutland Ry. was the first step.

Manitoba & Southeastern.—Application will be made to the Dominion Parliament next session for an Act to ratify & confirm a bond issue & a mortgage securing the same made by the Co.

Qu'Appelle, Long Lake & Saskatchewan.—The net loss in operating for Oct. was \$1,976.85, as compared with net earnings of \$1,709.78 for corresponding period.

Quebec Central.—The traffic receipts for Nov. were \$34,214.51, as against \$33,149.45 for corresponding period. There was an increase of \$1,822.40 in freight receipts & a decrease of \$840.39 in passenger receipts.

The aggregate traffic receipts for the 11 months to Nov. 30 were \$419,473.23, as against \$429,651.38 for corresponding period. Passenger receipts increased \$9,754.51. Freight receipts decreased \$20,037.19. The earnings per mile per month were \$179.03, a decrease of \$4.34 from corresponding period.

Rutland.—At a meeting Dec. 3 the resignations of D. Wilcox, C. Griswold & C. A. Walker were accepted, & Dr. W. S. Webb, E. W. Rossitter & G. Bird were elected directors in their places. The directors who resigned represented the Delaware & Hudson Ry., while the 3 newly elected members are closely connected with the N. Y. Central, Mr. Rossitter being the Treasurer. The change came because of the recent sale of a controlling interest in Rutland stock by the D. & H. to a syndicate which included Dr. Webb, W. K. Vanderbilt & others with allied interests, as well as some Fitchburg railway men.

Rutland—Canadian. The following directors have been elected: R. Bottum & C. L. Pierce, of Rutland; F. Wells, of Burlington; W. W. Stickney, of Ludlow; & W. P. Clement, of New York. Mr. Bottum is Chairman, & Mr. Wells Secretary. (Nov., pgs. 231 & 232.)

Temiscouata.—At the annual meeting at Montreal Dec. 6, the following were elected directors: C. Riordan, Toronto, President; F. Grundy, Sherbrooke, Vice-President; J. G. Riordan & W. J. Douglass, Toronto; T. Malcolm & D. Ross, Edmundston, N.B.; T. Crockett, Riviere du Loup. The officers of the line are T. Crockett, General Manager; D. B. Lindsay, Sec.-Treas.; W. J. Walsh, Locomotive Foreman; W. E. McEwen, Trackmaster.

The last interest coupon upon the main line bonds of this Co. payable by the Quebec Government having now been cashed, & default being, therefore, said to be imminent, the bondholders have appointed a committee to enforce their security & rights. It has been registered in England as the Temiscouata Bondholders Committee, Ltd. Capital £100 in £1 shares.

Canadian Pacific Equipment.

The Co. is building, at Montreal, 10 large compound consolidated freight locomotives that will weigh in working order about 150,000 lbs. They will have extended wagon-top boilers with Belpaire fire boxes, 200 lbs. pressure; 57" driving wheels with cast steel centres, Westinghouse American brakes, cylinders 26 & 33x26, steel tender frame, with tank having capacity of 4,000 imperial gallons. The Co. has also placed orders for 13 similar locomotives & has ordered material for 6 large passenger engines for service between Montreal & Toronto.

The Co. is building 2 rotary snow plows, embracing all improvements that have been made up to date, 4 C.P.R. standard wing snow plows, 2 dining cars, 60 thirty-five ton ore cars, & 400 thirty ton 35 ft. box cars. The latter are being turned out at the rate of

10 a day. Some stock cars & possibly 10 or 12 suburban cars may also be built.

In a recent interview, J. Osborne, Assistant to the Vice-President, said:—"We think ourselves in a remarkably good condition to meet the requirements of the Northwest grain traffic this season. Our equipment of freight cars in the western district is better than I have ever before known it, & I have had charge of the freight car service for 8 years. We did not begin to move the wheat this year until Nov. 1, but that was largely owing to the weather being unfavorable. In Oct. we brought some cars to the east, but there have been from Sep. 1 until the present time 1,500 more cars in the grain belt than there was a year ago. Not only that, but the capacity of the new cars is larger. The cars we are now constructing are capable of carrying 30 tons, whereas those we had formerly could only accommodate 20 tons. There had been representations from shippers until we got to the front during the 3 or 4 weeks of Nov., as they did during Sep. & Oct. of last year, & naturally the rolling stock is very severely taxed. But can you point to a single grain-handling road on the continent of America that is not in the same condition? The equipment of all the systems is taxed to the utmost capacity from Sep. until the end of the year. As I have already said, we consider ourselves in a remarkably good condition at the present time."

Last month the boiler of locomotive 678, a Richmond heavy compound, exploded near Shuswap, B.C., killing the driver & a brakeman. Some idea of the force of the explosion can be gained, when it is stated that the crown of the fire-box blew out, the entire body of the locomotive was lifted off its carriage, tearing away the bolts & everything that was holding it in place, & it completed a gigantic somersault in the air, landing end for end about 100 yards in front of the train & so causing the train to stop. A little of the track was torn up & 2 box cars were completely smashed; in fact, there was nothing to be found but the wheels to suggest that one of them had ever existed. The cab was blown

an immense distance, part of it falling on the wires & remaining suspended. The cause stated by Master Mechanic Stronach, after an examination of the wreck, is that the explosion occurred through no fault in the material, but in consequence of a scarcity of water in the boiler.

Government Railways Equipment.

In addition to the 3 postal & baggage, 4 baggage, 6 second-class sleeping, 300 box, & 100 platform cars which we have mentioned in recent issues as being under contract for the I.C.R., a number of other contracts have been given out lately. The principal one of these is an order for 20 freight locomotives, which has been placed with the Baldwin Locomotive Works, of Philadelphia. Of these 19 are Vauclain, 4 cylinder compounds, & 1 with Cleveland cylinders. They are for freight service, & are of the consolidation class. They have a tank capacity of 4000 gallons & will haul 1000 tons up a 1% grade. They will be equipped with pneumatic tenders, wrought iron tender and truck wheels, steel driving boxes and cross heads, iron tender frame, steel cab, & will conform to the best up-to-date practice in every respect. The general dimensions are as follows:

CYLINDERS.—Diameter (High Pressure).....	15½ in.
" (Low Pressure).....	26 in.
" Stroke.....	28 in.
" Valve.....	Balanced Piston
BOILER.—Diameter.....	66 in.
" Thickness of Sheets.....	11-16 in.
" Working Pressure.....	200 lbs.
" Fuel.....	Soft Coal
FIREBOX.—Material.....	Steel
" Length.....	114½ in.
" Width.....	41½ in.
" Depth.....	Front 65½ in.
" Thickness of Sheets.....	Back 62½ in.
" Sides.....	Back 38 in.
" Crown.....	Crown 12 in.
" Tube.....	Tube 12 in.
TUBES.—Number.....	230
" Diameter 2¼ in.....	Length 14 ft. 0 in.
HEATING SURFACE.—Firebox.....	161.1 sq. ft.
" Tubes.....	1934.6 sq. ft.
" Total.....	2095.7 sq. ft.
" Grate Area.....	32.69 sq. ft.

QUALITY FIRST PRICE AFTERWARD.

The Page Fencing is composed of a high grade of steel wire made especially for the Page Co. and no one else. This wire is 60 to 100 per cent. stronger than that used in other fences. It is coiled, which makes it still more effective because of its elasticity. The common wire fence has no "life." It cannot recoil and "pull itself together" after the attack of an animal, or from the effects of a snowdrift freezing to it and settling. Page Fencing that was properly erected years ago is in perfect condition to-day. Others that have been in use only half as long present a sorry spectacle.

THE PAGE WIRE FENCE CO., LTD., Walkerville, Ont.

MATCHES

The biggest seizure ever made by the Customs Department, involving 18 locomotives & 1,000 box cars, was recently made public. The rolling stock belongs to the Canada Atlantic, & O. A. & P. S. Rys. The seizures were made on 2 different occasions. The 1st was on Dec. 14, 1897, when 5 engines & 500 freight cars were seized for alleged non-payment of duty. The freight cars were marked V. & P. L., & the whole are valued in the customs books at \$350,000. The other seizure was made in July, 1897, of 13 engines & 500 freight cars, marked Canada Atlantic Ry., via Central Vermont Ry. The last seizure is entered as worth \$400,000, thus making the enormous total of \$750,000. The seizure was made for alleged non-entry of the engines & cars upon their arrival in Canada. The Customs Department requires that all new cars entering the country must be reported to the Customs Department. The officials of the railways mentioned have had several interviews with the Commissioner of Customs, regarding the disposition of the cars, but so far, it is said, a decision has not been given. It was asserted by the railway officials that the cars were for international traffic. The Customs Department is, however, in possession of a copy of the following order, issued

At cost of capital 104 passenger cars were equipped with air signals, 60 passenger cars

RAILWAY APPOINTMENTS, &c.

Canada Atlantic & O. A. & P. S. Rys.—Traffic Manager Smith issued the following circular Nov. 1: R. A. Carter is appointed Travelling Freight & Passenger Agent of these companies, with office at Ottawa, vice G. H. Phillips, resigned. Mr. Carter will also continue to discharge the duties of Contracting Agent at Montreal until further notice.

J. E. Conner has been appointed New England Travelling Passenger Agent, with headquarters at 100 Washington Street, Boston, Mass.

Canadian Pacific.—Manager Whyte, of the Western Lines, issued the following circular Nov. 15: "M. H. Macleod has been appointed Superintendent of the Crow's Nest Branch, having charge of the line between Macleod & Kootenay Landing, with headquarters at Macleod, Alta. G. Erickson has been appointed Trainmaster."

Roadmaster W. S. Newman, of the Selkirk & Arrowhead sections of the Pacific Division, has been transferred to the district west of Revelstoke.

Grand Trunk.—Superintendent Herbert, of the Eastern division, issued the following circular, Nov. 1: "The following changes & appointments are effective this date. The office of acting trainmaster, 1st district is abolished, & J. Irwin, trainmaster 2nd & 3rd districts, is assigned to other duties. C. S. Cunningham, Trainmaster 1st, 2nd & 3rd Districts, office, Island Pond, Vt. J. Munday, Assistant Trainmaster 1st District, office, Island Pond, Vt."

The position to which Mr. Cunningham has been appointed is the one formerly occupied by Mr. Herbert.

On the Western Division, Trainmaster F. L. Corwin having resigned has been succeeded by J. Irwin, transferred from districts 1 & 2 to districts 27, 28 & 29, with headquarters at Detroit, Mich. Mr. Corwin, who was formerly Superintendent of the Breckenridge Division of the Great Northern, went to the G.T.R. early this year & resigned recently to become Superintendent of the Union Stock Yards Co. at Omaha, Neb.

J. D. McDonald, City Passenger Agent of the G.T.R. at Buffalo, N.Y., has also been appointed City Ticket Agent of the Western New York & Pennsylvania there, succeeding E. J. Quill.

J. C. Talmage, who was recently appointed General Agent of the Passenger Department of the G.T.R. at Los Angeles, Cal., is a son of the late Col. A. A. Talmage, for many years Vice-President and General Manager of the Wabash, St. Louis & Pacific. Mr.

Talmage has been General Agent of the Grand Trunk at Chicago for some time, but owing to ill health was compelled to resign to go to California. He has been identified with the Wabash & G. T. systems for many years, & is responsible for some of the important changes made in the operation of the G. T. at Chicago within the past year. His many friends will earnestly hope that he may completely regain his health in the mild climate of Southern California.—Railway Age.

Great Northern.—A recent circular reads: "F. E. Ward is appointed General Superintendent, vice R. Harding, resigned to accept service elsewhere. Mr. Ward will have full charge of the operation of all the Co.'s lines, his duties being defined by the Co.'s code. Mr. Ward will continue, as heretofore, General Superintendent of the Montana Central Ry., with headquarters at St. Paul, Minn., instead of Great Falls, Mont."

C. Shields, Vice-President of the Spokane & Northern, has been appointed also as Assistant General Superintendent of the Western Division of the Great Northern, with headquarters at Spokane, Wash., vice F. H. Britton, appointed Division Superintendent of the Dakota Division. Mr. Shields' district includes also the Montana Division, of which J. M. Davis, heretofore Division Superintendent at Breckenridge, Minn., has been appointed Division Superintendent at Havre, Mont., succeeding L. B. Button, resigned.

Intercolonial.—B. C. Gesner has been appointed General Air Brake Inspector, with headquarters at Moncton.

V. F. Farrell has been appointed Ticket Agent at Hollis St., Halifax.

White Pass & Yukon.—The officers of this line, as recently announced, are, President, S. H. Graves, Chicago, Ill.; Purchasing Agent, W. L. Wilson, Skagway, Alaska; Traffic Manager, L. H. Gray, Skagway; Chief Engineer, F. C. Hawkins, Seattle; Master Mechanic, W. H. Garlock, Skagway; General Storekeeper, J. W. Young, Skagway; General Agent, C. C. Figgins, Seattle.

F. W. Morse, Superintendent of G.T.R. Motive Power, is to be married shortly to Miss Grace Bass, daughter of a well-known iron manufacturer of Fort Wayne, Ind.

E. J. Traverse, Chief Clerk for District Freight Agent Hanna, of the G.T.R. at Stratford, has been appointed Western Freight Agent at Toronto of the Leyland steamship line, which runs from Portland in connection with the G.T.R. He was formerly in the Canadian Freight Association Office.

Personal Mention.

M. Van Harligan is in charge of the Coast Ry. office which has been opened in Halifax, N.S.

C. J. Wiggin has been appointed General Baggage Agent of the Boston & Maine, succeeding O. W. Greely.

D. E. Brown, General Agent for the C.P.R. in China & Japan, is returning to his post after extended leave of absence.

W. Mackenzie, President of the Toronto Ry., returned from Europe Dec. 3, having left his daughters in Florence.

R. Archibald, General Manager of the Canada Coal & Ry. Co., at Joggins, N.S., was married at Oxford, N.S., recently to Miss Minnie Robbs.

Miss M. M. Colclough, daughter of the Superintendent of the International Bridge & Agent of the G.T.R. in Buffalo, will appear upon the concert stage shortly.

R. S. Logan, Secretary to the General Manager of the G.T.R., was married at St. Louis, Mo., Nov. 10, to Miss Annie Ranken. Mr. Hays was among the wedding guests.

Hartley Gisborne, M. Can. Soc., C.E., of Winnipeg, has been appointed by the Council of the Institution of Electrical Engineers, London, Eng., their local Hon. Sec. & Treas. for Canada.

Sir C. Rivers-Wilson, President of the G.T.R., is Chairman of the British Electric Traction Co., which has a subscribed capital of £300,000, preference shares of £100,000 & £100,000 5% debenture stock.

On Thanksgiving Day the Montreal Herald published a symposium, "What we have to be thankful for." Among the contributors was Sir William Van Horne, who gave the laconic answer, "The Dingley Tariff."

W. W. Dawson, of New York, is acting as District Superintendent of the Wagner Car Co., at Montreal, with headquarters at Bonaventure Station. It is said the appointment is only temporary, however, as M. C. Garey expects to resume his duties shortly.

C. R. Hosmer, Manager of the C.P.R. Telegraphs, & Mrs. Hosmer, returned to Montreal Dec. 9, after a 6 weeks' trip to London & Paris, having left their daughter Olive in the latter city to pursue her studies. On Dec. 12 a cable was received stating that she was very ill & Mr. & Mrs. Hosmer started for Paris again immediately.

A daughter of J. Lake, engineer of the St. Catharines Niagara Central Ry., narrowly

THE BARRETT TRACK JACK.

Recommended as a standard by the
Road Masters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

No. 2 Automatic Lowering.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting capacity,
10 to 15 tons.

escaped death during a recent storm about midnight. A telephone wire was attached to a large chimney, & under the great weight of snow on the wires the chimney fell, crashing through the roof into the bedroom where she was sleeping. The bed was covered with debris, & she was struck, her head being badly cut & her body badly bruised.

P. F. Hodgson, who for the past 5 years has been Signal Engineer for the G.T.R., with headquarters at Toronto, has resigned to accept the position of Secretary & Manager of Saxby & Farmer, Ltd., manufacturers of railway signals & safety appliances, Kilburn, London, Eng., & will leave for England this month. During Mr. Hodgson's term of service on the G.T.R. he has carried out a lot of important work, particularly the interlocking switch & signal system at the Toronto Union Station yards. He will be succeeded by W. H. Patton, of Montreal.

At the recent Canada Club dinner in London, Eng., Sir C. Rivers-Wilson, President of the G.T.R., made an earnest appeal to the Dominion Government to seriously grapple with what he regarded as the most vital problem of immigration. Canada could not rest content while three & a half millions of square miles were occupied by less than six millions of people. Hon. Mr. Dobell retaliated by imploring Sir Rivers-Wilson's help to bridge the St. Lawrence at Quebec, & make the Ancient Capital what it must ultimately become, the great trans-shipping port of North America. He also urged a railway & steamship route via Hudson's Bay. "What is the population?" interjected Sir Charles Rivers-Wilson humorously; "A little off our line, I am afraid."

The Railway Agent recently published a portrait & interesting sketch of Jas. Charlton, General Passenger & Ticket Agent of the Chicago & Alton. He entered railway service April, 1854, as junior clerk in the Freight Department of the Newcastle & Carlisle Railway, Newcastle-on-Tyne, Eng. When he resigned his connection with that Co. he had attained the position of chief clerk & cashier in the freight department. He entered the Auditor's office of the Great Western Ry. of Canada April, 1857, as assistant to the Chief Clerk, & served as clerk in charge of statistics & freight accounts, Chief Clerk, Auditor & General Passenger Agent. He left the service of the Great Western Ry. in Mar., 1870, for the position of G. P. & T. A. of the North Missouri Co., which he held until he resigned in July, 1871, from which date he has occupied his present position with the Chicago & Alton, with headquarters in Chicago.

Geo. S. McKee, Master Mechanic of the Western Division of the Wabash at Moberly, Mo., has been transferred to the Eastern Division, & his supervision extended to include the Buffalo Division. His headquarters are at Fort Wayne, Ind.

Under the management of Archer Baker, European Traffic Agent of the C.P.R., a series of lectures, at which the cinematograph is used to illustrate Canadian Northwest life & farming in a realistic series of pictures, is being given in Great Britain. The idea is most cordially welcomed by the schools, colleges & clubs.

White Pass & Yukon Railway.

In previous issues (June, pg. 98; July, pg. 123; Aug., pg. 152) we gave very full particulars in regard to the construction of this line. Very few people, probably, have any idea that over \$1,200,000 have already been expended in construction from Skaguay to the summit of White Pass. In addition to what we have already published, supplied us from official sources, the following, condensed from the Railway Age, will prove of interest. This fall work was somewhat retarded by bad weather & the necessity of establishing & moving into winter camps & making trails & waggon roads connecting the new camps. Some 1,500 men were employed most of the summer, but towards fall the discovery of gold at Lake Atlin caused a large number to abandon railway work & become prospectors. Many have returned & some 1,200 are now employed. Notwithstanding these embarrass-

whatever have been encountered beyond Cariboo Crossing, & the principal items of expense will be a bridge about 350 ft. long over the Tahkeena River & a span 150 ft. over the crossing of the river at Five Fingers. The distance from Skaguay to Ft. Selkirk via the surveyed line is 312½ miles, & the distances from Skaguay to intermediate points between that place & Ft. Selkirk are as follows: To summit of White Pass, 20 miles; to head of Too-chi Lake, 40 miles; to head of Windy Arm, 56½ miles; to Cariboo Crossing by way of Windy Arm, 74½ miles; to crossing of the Tahkeena River, 144.6 miles; to the Hoochi River, on the Dalton trail, 186.9 miles; to point 5 miles west of Rink Rapids, 266.6 miles. A survey is being made for a branch from the main line at Log Cabin to the Lake Atlin gold fields & a preliminary reconnaissance shows that no engineering difficulties are presented. It is proposed to push the work on the branch line so as to accommodate the requirements of this new & extensive gold region.

From Log Cabin to Cariboo Crossing 2 routes are under consideration, one of which runs along the shore of Lake Bennett. If the latter line is decided upon, some heavy work will be necessary to cross the mountains, which cannot be undertaken until next summer. If the route to the east of Lake Bennett by way of Windy Arm is selected, the work will be comparatively easy. From Cariboo Crossing to Ft. Selkirk there is nothing but plow & scraper work, & the grade can be completed with great rapidity with favorable weather. The line passes through grass lands & small timber, & there is no work of a difficult nature. The Co. has not only been granted right of way & has its track laid on the main street of Skaguay, but it is also building a line to encircle the entire city, giving it control of the principal part of the water front. The passenger depot in Skaguay at the foot of Broadway is about completed, & work is in progress on the freight depot. The machine shop & blacksmith shop are completed & in operation, & material for 50 cars is on the ground ready to be put together. The principal part of the work on these cars is done at Seattle, & the various portions are shipped to Skaguay ready to be put together with little work.

The road from Skaguay to the summit of White Pass is a veritable shelf in the mountains, & in order to secure a line, the

maximum curvature of which is but 16 degrees, & which has a maximum grade of only 3.9%, some very heavy work has been necessary to reach the summit, which is 2,850 ft. above sea level, with so light a grade. Another item of heavy expense on the first 20 miles has been the construction of 3 long, level sidings, where trains can pass—these in addition to a number of short sidings & switches. At the summit there is a mammoth granite cliff, which will have to be shot off into the canyon below to make way for the roadbed. The road has a gauge of 3 ft., & is laid with 56 lb. rails.

During the summer the Co. was able to keep 2 shifts at work 11 hours a day each, without the use of artificial light. The workmen received 30c. an hour & board, & the Co. has its own tents, hospitals & physicians. Although the present year will close with not over 35 miles of road constructed, it is the hope of President Graves to build the line

GRADING AT PORCUPINE HILL ON THE WHITE PASS AND YUKON RY.

ments, good progress has been made along the line, & all the heavy work, including that most likely to be retarded by bad weather, has been completed to the summit, & 2 miles of comparatively light work has been done beyond, finishing the line to the provisional international boundary. Work is still being pushed on beyond, & it is hoped to have the road ready for operation to Log Cabin, 15 miles beyond the boundary line, before Christmas, by which time it is anticipated the severe weather will cause a cessation of active operations, although it is the intention to keep somewhat of a force employed throughout the winter. In addition to the 1,200 men now employed, arrangements are being made to bring several hundred more from Dawson City to work on the grade.

The survey has just been completed from Cariboo Crossing to Ft. Selkirk, which shows a much better line than it was thought possible to obtain. No engineering difficulties

through to Ft. Selkirk next year, as all of the heavy work is practically out of the way.

The company is now operating a pack train from White Pass to Bennett, having a train of 60 mules, & more are being purchased for this service. There is a large, warm warehouse at Log Cabin, & another at Bennett, with agents stationed at each. Every shipper sending freight over the line will have his goods cared for in these warehouses, storage free for any reasonable length of time.

Canadian Freight Association.

The following circulars have been issued :

"In order to overcome the difficulty existing at present in connection with the cartage in Canada on business to & from U.S. points, the rates upon which are governed by the official classification, the railways in Canada have decided that in the application of the cartage arrangement the Canadian Joint Freight Classification shall govern, excepting articles taking 6th class rates as per official classification which will be entirely exclusive of cartage. Also that the rates to & from U.S. points on commodities which classify 5th class or higher (official classification), but upon which 6th class or lower basis of rates may be authorized, shall be entirely exclusive of cartage. Also that the present arrangement covering a minimum charge of 25c. to or from the junction point on any shipment of freight consigned to or shipped from points in the U.S. shall continue, as also the exaction of a minimum cartage charge of 10c. for each cartage service performed. This to take effect Jan. 1, 1899."

MINIMUM CARLOAD WEIGHTS.

"The Canadian railways have agreed that on & after Jan. 1, 1899, the minimum carload weight of 5th & 6th class freight will be 24,000 lbs. instead of 20,000 lbs. as at present, with some exceptions of light & bulky goods as provided for in classification. This arrangement will apply on standard cars of 35 ft. long or under. The present improved car equipment of Canadian railways are capable of carrying this & greater weights, & the business public will no doubt appreciate this change, which will enable them to ship larger quantities in one car & thus extend their business in many directions."

Freight Notes.

The G.T.R. is making a change in its rates on pulpwood, basing the rate on weight instead of bulk, as at present.

The Dominion Atlantic Ry. has carried this year from different points of the Annapolis Valley to Halifax over 100,000 barrels of apples, which have gone to the English market.

One of the conditions under which the C.P.R. received a subsidy of \$3,500,000 from the Dominion Government for constructing the Crow's Nest Pass Ry., was a reduction of 3c. a bus. in the rate of freight on grain. This went into effect Dec. 5.

The Ways & Means Committee of the U.S. Congress has authorized a favorable report upon a bill to remove the restrictions which at present prevent the shipment of goods in bond to interior points in less than carloads. Under the terms of the bill, goods can be shipped in less than carloads under regulations to be prescribed by the Treasury.

The new Parry Sound route, may or may not "revolutionize" grain transportation from the Northwest to the seaboard, but when, as we are informed was the case, a shipment of grain to Montreal from Toledo recently took that route in preference to the Buffalo route, it is clear that Parry Sound cannot be ignored by the routes which have questioned its ability to compete with them.—American Elevator.

The Lumbermen's Association of Ontario has asked the railways for the equalization of freight rates on hardwood & pine lumber. There is a difference of from 1c. to 2½c. per 100 lbs. in the rates charged from different points in Canada, & as the export trade in hardwood is increasing, it is contended that it would be a distinct advantage to the country generally to have all hardwood worked up closely, in place of being often wasted. Lumbermen think that the discrimination against hardwood in freight rates should be done away with.

The Rate War Settlement.

The G.T.R. & C.P.R. having settled their differences, rates were restored Nov. 26, & C.P.R. northwest traffic was resumed between Toronto & North Bay. The officials will not give the text of the agreement, but enough is known of it to give a fair idea of how the difficulty was settled. The C.P., it is understood, agrees to pay the G.T. on all business originating on C.P. points the full fare for the haul between Toronto & North Bay, that is, \$6.85. On all business for the west, originating at G.T. points, the latter road is to receive the proportion it would obtain were it to send the business by way of Chicago, & over the U.S. lines into Manitoba. In return for this, the G.T. agrees to restore rates on 2nd-class business to what they were previous to the rate war, which gives the C.P. its old differential of \$5.45 over the U.S. route. By this means the C.P. forces the business over the Canadian route, which, it has always claimed, is the way it should go, while the G.T. obtains as much out of the haul as it would had it routed the business by way of Chicago. The extra the C.P. pays the G.T. in this way is expected to be made up by the increased business the line will receive. The losers under the new arrangement will be the Chicago-St. Paul lines, & the Northern Pacific & Great Northern Ry. The G.T. routing its Manitoba business over the C.P. will deprive those lines of a large amount of 2nd-class business which they enjoyed while the rates were equal.

Under the previous arrangements, the C.P. paid the G.T. about \$80,000 a year for passenger business over the North Bay route; under the new agreement the latter road will receive very much more than this. It is under-

stood also that the G.T. agrees to give C.P. agents the privilege to issue tickets over the North Bay line, so that they will be able to sell through tickets from all C.P. points to the West, an arrangement that will facilitate business. Under the old arrangement the C.P. was required to send all its transcontinental business from points east of Peterboro' by way of North Bay, instead of sending their passengers round by way of Smith's Falls. Some such division of territory is probably included in the new agreement which also includes the running of freight trains again over the North Bay line.

A number of railway men from the U.S. met the officials of the C.P.R. & Grand Trunk in Montreal Dec. 14, for the purpose of adjusting a number of matters, some action in reference to which was necessitated by the recent re-arrangement regarding traffic by the G.T.R. & C.P.R. upon the termination of the rate troubles between those two lines. All the details dealt with were of a technical character & were satisfactorily arranged. Several of the Western officials gave an unqualified denial to the report that their lines had charged the G.T. with disloyalty in connection with the recent resumption of traffic relations with the C.P.R. A Star reporter in the course of an interview with P. S. Eustis, General Passenger Agent of the Burlington System; A. F. Merrill, Assistant General Ticket Agent of the Milwaukee System, & J. W. Lee, representing Mr. Caldwell, the Chairman of the Western Passenger Association, was informed that the recent newspaper reports that the Western lines were charging the G.T. with disloyalty, were entirely unfounded, that there was not now nor had been at any time any lack of confidence in the present relations heretofore existing between the G.T. & the Western lines, & the amiable settlement of grievances between the G.T. & the C.P.R. had their full approbation. The reports arose out of the fact that by the new arrangement with the C.P.R., considerable Western traffic originating on the G.T.R. is now handed over to the C.P.R. at North Bay, instead of being handed over to the Western roads at Chicago.

L. L. Stenseth has been appointed Route Agent of the Western Express Co., with headquarters at Marquette, Mich., vice H. E. Gilmore, resigned.

Established 1831.

Annual Capacity 1,000.

Baldwin Locomotive Works.

SINGLE EXPANSION AND COMPOUND LOCOMOTIVES.

Broad and Narrow Gauge Locomotives; Mine and Furnace Locomotives; Compressed Air Locomotives; Steam Cars and Tramway Locomotives; Plantation Locomotives; Oil Burning Locomotives.

Adapted to every variety of service, and built accurately to gauges and templates after standard designs or to railroad companies' drawings. Like parts of different engines of same class perfectly interchangeable.

Electric Locomotives and Electric Car Trucks with Approved Motors.

Burnham, Williams & Co., Philadelphia, Pa., U.S.A.

Bridge at Edmonton, Alberta.

Edmonton is on the north side of the north branch of the Saskatchewan river, situated on the high table land above the deep valley of the river. On either side of the river, the higher plateau is at an elevation of about 190 ft. above the river level, & the slope toward the lower plateau, or narrow valley, is very sharp. On the south side of the river is South Edmonton, the terminus of the Calgary & Edmonton Ry., from which all freight for Edmonton & the northern districts has to be taken by waggons using ferries to cross the river.

In 1892, a survey was first made by the Dominion Government to select a site for a traffic bridge across the Saskatchewan at Edmonton. The location of the bridge was fixed nearly opposite the centre of the town, where roads, leading to the foot of the hills, existed, or could easily be built. It was first intended to build a highway bridge for general traffic only, & the location was made with this end in view. Subsequently the town of Edmonton offered a contribution of \$25,000 on condition that the Government would build a combined railway & traffic bridge. After some delay this was accepted & plans ordered. Tenders were called for the substructure & the contract awarded in Aug., 1897, to F. Lemoine, of Montreal. The contract for the superstructure has not yet been given, but it is expected it will be shortly.

The superstructure, as designed, consists of 4 through steel spans of the riveted type of girders, resting on 3 piers & 2 abutments. The length of each span is 170 ft. 11 in., the distance

yds. capacity daily, was used in removing the material. The caissons are built of British Columbia red fir. Piers no. 1 & no. 3 are founded on piles driven in the caissons, & cut off 5 ft. below low water level. The caissons were then filled in solid with Portland cement concrete from hard pan foundation.

After some borings & tests at pier no. 2, it was decided not to drive any piles there. The material underlying the gravel was found to be much harder than at piers nos. 1 & 3. Tests as to its bearing capacity showed that under a load of 350 lbs. to the sq. in., or 25 tons to the sq. ft., no signs of yielding were apparent. Concrete was deposited under water in the caissons, with a specially constructed box. When 2 or 3 ft. had been deposited in this way, the caissons were pumped out & the concrete continued in the dry up to low water level. From that level the body of the pier proper was started in a timber casing which was built up as the work progressed. A service bridge was built for piers nos. 1 & 2. For pier no. 3 the materials were brought by scows, a steel wire having been strung across the river for the handling of the scows.

As regards the materials used in the substructure, which, as mentioned before, is entirely built of concrete, the cement employed is the best Portland, finely ground. The tensile strength for most of the briquettes made, after 9 days' immersion in the water, was over 500 lbs. to the sq. in., the briquettes having been previously allowed to set 18 hours before immersion. Quite a number of tests gave a strength of over 650 lbs. to the sq. in. at that age. The weight per striked bushel was between 115 & 120 lbs., with a residue for several tests of not more than

resumed Mar. 27, 1898. From that time the work was pushed rapidly & completed June 20, 1898.

The work done & forming the nature of the contract was as follows: Building of 3 concrete piers & 2 abutments; excavation in foundations; piling in foundations; three caissons for piers; rip rapping; filling north approach; cutting south approach.

The illustration on this page shows a section of the river & side elevation of the bridge, scale 80 ft. to in.

Surveys, Construction & Betterment.

Brandon & Southwestern.—It was recently stated that surveys had been completed from Brandon southwest to Waskada, 90 miles, & that construction would begin at the southern end before Nov. 1, the date by which the extended charter required that it should be started. We have been unable to confirm these statements. The promoters & the reputed contractor do not answer enquiries addressed to them. We do not think any construction work has been done. If it has it was simply infinitesimal, to make a show of holding the charter. (Aug., pg. 156.)

Brockville, Westport & Sault Ste. Marie.—This line, which extends from Brockville, Ont., to Westport, 45 miles, has been considerably improved this season. The whole line has been relaid with cedar ties & largely reballasted. Cattle guards & culverts have been renewed with new timbers, several bridges have been entirely rebuilt, & the frame work of all water tanks has been reconstructed. (Nov., pg. 237.)

from centre to centre of piers being 173 ft. 8 in., & the total length of the bridge 694 ft. 8 in. The roadway is 18 ft. in width, & 2 foot passenger ways, each 4 ft. 4 in. wide, supported on brackets, are provided on both sides of the bridge. The same flooring is used for both trains & wagons. The clear height under the bridge at low water is about 30 ft.

The piers, which are made entirely of concrete, are of rectangular section, & at the top carry a cap of cut stone for the bridge girder plates. At the base, both up-stream & down-stream ends are rounded, & the ice cutter brought up with a slope of 1 to 1. The smallest section of the pier at the top is 7 ft. x 24 ft., & the largest section at base is 9.4 ft. by 35.4 ft. The caissons have a width of 14.6 ft., & an extreme length of 52.6 ft., the foundation area being 656 sq. ft.; the average total height of the piers from the foundation bed is 38 ft. The piers are not founded on rock, nor is there any available rock to be found in the location close to the surface. They are founded below the alluvial gravel deposit made by the river, on indurated clay, permanent in character, which is the same material as forms the foundation of the bluffs adjoining the river. This material is called by the miners hard pan or country rock. It varies very much in hardness, some spots being found relatively soft, some other places as hard as shale. Generally it crumbles to pieces when exposed to the air, excepting the hardest variety. At the bridge location the depth of the drift gravel is from 1 to 6 ft., the foundation bed level for the three piers averaging 8 ft. below low water level. A small dredge built for gold washing on the Saskatchewan, of about 150

1.7% after passing through a sieve of 2,500 holes per sq. in. The concrete is composed of 1 part of Portland cement by measure, $1\frac{3}{4}$ part of sand & 5 parts of stone; a special finer concrete for the surfaces being composed of 1 part Portland cement, $1\frac{1}{2}$ part of sand, 4 parts of broken stone. Some gravel was also mixed with the broken stone, but it required so much washing to get it free from silt & coarse coal particles, that very little of it was used. Mortar composed of 1 part of cement & 1 part of sand was used to flush all the surfaces along the timber casing. The facing was very successful, showing after the removal of the timber work a smooth dense surface without pits or irregularities.

As it was necessary to complete the piers before the high water in June, work on the 3 piers was pushed simultaneously & with rapidity. For this reason a great number of iron rods passing through the body of the pier were used to keep the casing from bulging out under loads of fresh concrete. After stripping off, these rods were cut flush with the face of the concrete & the ends painted over to keep them from rusting. The abutments were built well up into the river banks, the foundation bed being about 16 ft. above the river level. Piles were driven down to firm stratum & cut off 6 in. above the formation level. A strong grillage was laid & well spiked on top of piles, & then the concrete was started, rammed around the head of the piles & between the pieces composing the grillage. No timber was left exposed. The abutments are rectangular in shape with short wing walls. Work, which had been started early in Sep., 1897, was stopped Nov. 9, 1897, on account of freezing weather, &

Canada Atlantic. President Booth states that plans are being prepared for a Union Station in Ottawa to cost about \$130,000, & to accommodate the 3 lines now running into Ottawa. The station will extend from the present building at the canal basin over the vacant lot of land to Rideau St., with an entrance from Sapper's bridge. There will be a train shed in the rear. The lower floor will be used for waiting rooms, ticket offices & dining hall, & the upper floors will be devoted to railway offices. The building will be of stone & brick, & it is expected the work will be commenced early next spring.

The announcement was recently made that the New York Central had purchased the Lebanon Springs Ry. from Bennington, Vt., to Chatham, N.Y., 60 miles. The plan, as stated by a prominent railroad man, is to operate a road from the Canada Atlantic line to New York, by a route over the road for which a charter has been procured by the Canada Atlantic line to Burlington, then a road to Rutland by the Rutland road, now controlled by the Central, thence over the Bennington & Rutland & Lebanon Springs Ry. to Chatham, & from there to New York by the Harlem road, owned by the Central.

In connection with the foregoing, General Manager Chamberlin of the C.A. says: A survey party is at work on the C.A. right of way at Swanton, & the new road will connect with the C.A. system either at that point or at Alburg Springs. When this road is completed the route from Ottawa to New York, via the C.A. & connections, will be shortened by about 20 miles, & the running time, which is now 14 hours & 15 minutes, will be reduced considerably.

Cassiar Central. In our last issue, pg. 18, we gave from a Fort Wrangel, Alaska, paper a reputed interview with E. D. Self, who was spoken of as General Manager of this Co., in which it was stated as the purpose of the Co. to build a line from Glenora, B.C., to Dease Lake in the spring, & that surveys were being made for a continuation of the line from Dease to Teslin. The interviewer, no doubt, meant to speak of E. W. Self, who is the Co.'s Consulting Engineer, who has been in charge of the examination & exploration, & whose report thereon to the directors—London, Eng., has not been made public. C. P. Woolley, one of the directors, who spent a good deal of the past summer in the country to be traversed by the projected line is reported to have stated at Wrangel, recently, that the road would be built as soon as the directors were satisfied the country would justify them in building it & not before, & added that they were satisfied as far as they had gone. The B.C. Review, of London, Eng., says:—“H. Cohen, who purchased the Cassiar Ry. charter from Warburton Pike, the concessionaire, & transferred it to the African B.C., corporation, has postponed railway construction until satisfactory assurances are received of the existence of payable mineral. It is probable that without more definite assurances as to the advantages to be derived from a railway, the Corporation will hesitate before entering upon so expensive an undertaking. . . . The land grant & mineral rights are extensive, & should the concessionaires, by undue delay, forfeit their charter, there is little likelihood of the Government again granting such foolishly liberal terms.”

Great Northern (U.S.).—A rumor has been current in Vancouver, B.C., that this Co. wants to secure the site of the recently burned Hastings mill for station purposes. It is said the Co. has engineers at work at New Westminster & Vancouver. The G.N. now reaches the south bank of the Fraser River, opposite New Westminster, by the New Westminster Southern Ry., which runs thence 23 miles to the International Boundary at Douglas, B.C., where it connects with the G.N. branch to Seattle, 120 miles farther south. It is rumored the G.N.'s schemes include a bridge over the Fraser at New Westminster, & an extension to Vancouver.

A recent despatch from Tacoma, Wash., says the G.N. is preparing to build a 200 mile extension from the main line at Wenatchee, Wash., through the Okanogan mining district, into British Columbia, with a branch to the mining camp at Eureka, Wash. The proposed line would follow the Columbia River from Wenatchee north to Lake Chelan & thence along the Okanogan River to B.C.

Kootenay Ry. & Navigation Co.—Mention was made in our Nov. issue, pg. 238, of the letting of a contract to Foley Bros. & Guthrie, of St. Paul, Minn., for some 50 miles of line from Bonner's Ferry, Idaho, to Kootenay Lake, B.C. Work was started Nov. 26, & it is said the line is to be completed by July 1, 1899. As explained in our last issue, the line on the Canadian side will be built under the charter of the Nelson & Bedlington Ry. Co. In this connection the Nelson, B.C., Miner says: “The stakes of the proposed route of the Nelson & Bedlington Ry. are alongside the C.P.R.'s Crow's Nest Pass road from the eighth siding to Kuskanook siding. The N. & B. railway is anxious to be allowed running rights over the other line for that portion of the route, or at any rate to be allowed to lay its track in the C.N.P. right of way. This would mean that the new line would not only avoid an expensive piece of construction, but also that all the tracklaying it would have to do this side of the boundary would be from the boundary to the eighth siding, about 13 miles, & from Kuskanook siding to Kuskanook, 8 miles. It is doubtful whether, under the charter, the C.P.R. could grant these privileges, & permission will probably have to be obtained from the Railway Committee.” We venture the opinion that the privilege is not likely to be granted by the C.P.R.

A party under J. A. Gray has returned to Kaslo after being in the field some two months surveying for the proposed Lard-Duncan branch of the Kootenay Ry. It is said excellent grades have been secured.

The K. V. R. & N. Co. is an English organization working in connection with the Great Northern Ry (U.S.). Full particulars of its organization were given in our Aug. issue, pg. 181.

Lake Erie & Detroit River.—The bridge over the Thames river on the Erie & Huron division is to be replaced with a through girder, with 2 spans of 75 ft. each, with a draw span resting on a centre pier, each arm being 64 ft. in length. The total length of the bridge will be 278 ft. The base of the rail will be 74 ft. above low water level. The piers and abutments will be made of concrete masonry on pile foundation. The contract for the substructure has been let & plans for the superstructure are completed. The Co.'s engineer is Owen McKay, Windsor, Ont.

The slip dock at Sarnia is not expected to be ready until the opening of navigation next year.

Lake Manitoba Ry. & Canal Co.—Work for the season was closed early in December. Practically all the grading done this season has been laid with rails, 56 miles having been laid from Sifton Jct., carrying the line to the edge of the Swan Lake district.

The country between the Dauphin Valley & that of Swan River & the accompanying streams is said to be one vast muskeg threaded by the sandy ridge upon which the railway is constructed. This is nothing less than the old sandy beach of the glacial Lake Agassiz. The whole country is heavily wooded with tamarac, spruce & some Jack pine, & will be in the future a valuable source of wood supply. Fire has done great damage to the bush, but where the forests have escaped the ravages of fire the trees are of gigantic size.

Mr. Armstrong, C.E., who has been engaged in locating the line, has completed his work for 50 miles beyond Swan River, to the base of the Porcupine Hills. The line, after passing through the Swan River Valley, skirts the Porcupine Hills until it reaches the valley of the Red Deer River, one of very similar formation to that of the Swan River, only much greater in extent. It runs westward between the Pasqua Hills and the Porcupine Mountains, about 100 miles. Thirty miles beyond the Red Deer Valley the Carrot River Valley is reached. Between this river & the Saskatchewan is said to be a rich plateau. The valley of the Carrot River, near the western end of which Prince Albert is situated, contains, it is estimated, about 1,500,000 acres of land. The original location of the C.P.R. was through the Swan River country. The intention was to strike the rich valley of the Saskatchewan, in which Prince Albert, Battleford & Edmonton are situated, following it westward to the mountains.

It is the intention to continue the line to the Great Saskatchewan River, in the vicinity of the Pas Mission, next year, & the Co. expects to reach Fort Churchill, Hudson's Bay within 4 years.

Manitoba & Southwestern.—Track has been laid this season from St. Boniface southeast 46 miles. Temporary arrangements have been made with the C.P.R., under which the M. & S. E. Co. gets the use of the former's tracks from St. Boniface to Winnipeg, & of its Winnipeg passenger station & freight sheds. The M. & S. E. is running 2 trains a week from Winnipeg to the end of track, & the indications are that a good business will be done throughout the winter, & that it may be necessary to increase this temporary service. The line traverses a splendid farming district through Springfield, Tache & Labroquerie municipalities, from which there is a good deal of wheat to be brought out. In the Cypress Hills, near the end of track, there is a large amount of timber. It is expected to do a large wood trade with Winnipeg. These hills are only about 80 ft. above the surrounding country, & the road will run along them

AMHERST, NOVA SCOTIA.

for some 30 miles till it strikes the Roseau River.

Mention is made on another page of a rumor in Winnipeg that the C.P.R. has bought a large block of land, much nearer the centre of the city than its present station, for station purposes. Another rumor says this block, which lies east of Rorie Street, between Bannatyne & McDermott Streets, on the Winnipeg Transfer Railway, has not been bought by the C.P.R. but by the M. & S.E., & that it will be used by the latter for station purposes.

At the last session of the Manitoba Legislature the Government was authorized to aid the M. & S.E.R. Co. by guaranteeing the principal & interest of the Co.'s 1st mortgage bonds for \$8,000 a mile, the bonds bearing 4% interest & maturing in 30 years, & by exempting the Co. from taxation for the same period (see May issue, pg. 65). This aid is for the 1st link of the road from Winnipeg, southeasterly 80 miles to near Whitemouth Lake, thence to Lake of the Woods or to near the mouth of Rainy River. Whitemouth Lake was selected as a common point from which the line can run either across the narrows of the Lake of the Woods, entirely within Canadian territory, or go round the southwest corner of the lake, passing for some 35 or 40 miles through Minnesota, & entering Canadian territory again near the mouth of Rainy River. From Whitemouth Lake to Lake of the Woods is about 25 miles & to the mouth of Rainy River about 60 miles, making the distance from Winnipeg to the Lake of the Woods by the Canadian line 103 miles & by way of Minnesota 140 miles. The decision as to which route is to be adopted rests with the Manitoba Government & has to be given by Jan. 1 next. We have every reason to believe that the route through U.S. territory will be chosen. The Government has the power to similarly bonus the portion of the line in U.S. territory, taking as security a mortgage on the line within Manitoba. Surveys of both routes have been made by Mr. Bruce, C.E., & it is urged against the all-Canadian line that the bridging of the narrows of the Lake of the Woods would be too expensive & that a considerable distance of unproductive country on each side of the lake would be traversed. For the U.S. route it is contended that a better country would be passed through in the southeast corner of Manitoba & on entering Ontario, the Rainy River district being splendid farming land & already well-settled along the river front all the way from the mouth of the river to Fort Frances. There are numerous swamps on some portions of the route, but they are shallow & do not present any great difficulties in the way of construction.

Michigan Central.—It is rumored this Co. will ask the Dominion Government to deepen Kingsville harbor with a view to run coal boats from Sandusky, Ohio, to that town, the M.C.R. promising to extend its railway from Essex to Kingsville, some 15 miles.

Midland of Nova Scotia. Construction, on which good progress was made from the Windsor end during the summer, has been delayed owing to a disagreement as to the route from the crossing of the Shubenacadie River to Truro. The latter town voted a bonus of \$30,000, & the adjoining municipality voted \$6,000 additional on condition that the road be built via Clifton. On the other hand, the people of Windsor, New Glasgow & the Stewiacke district want it to go via Brookfield & the Stewiacke Valley. It is said that the Clifton route has been decided on & that M. J. O'Brien has received a sub-contract for the section between the Shubenacadie River & Truro. (Sep., pg. 184.)

Musquodoboit. At the last session of the Nova Scotia Legislature a charter was granted for a railway from the Musquodoboit Valley to some point on the I.C.R., it being pro-

posed for the road to run from Parker's Corner to Windsor, about 40 miles. A survey made during the summer by W. Yorston, C.E., did not prove satisfactory, as part of the line would be very expensive to build & unremunerative locally. Another survey will be made which will take the shore route, as it has been proved from an old survey that this line can be much more easily built than was expected, & there is a strong probability that this route will eventually be adopted. (June, pg. 99.)

The Northern Pacific has this year built the Souris River branch in Manitoba, starting from its Brandon branch, about midway between Belmont & Hilton stations, running southwesterly to the head of Pelican Lake, thence easterly on the centre line of sections from sec. 22, 1st sp. 5, r. 17 west to the west boundary of sec. 20, 1st sp. 5, r. 19 west, thence northwesterly to the s. w. corner of sec. 31, 1st sp. 5, r. 20 west, thence west on the line between 1st sps. 5 & 6 to the west boundary of range 22. The distance built this year is 46½ miles, but it will most likely be extended next year to a connection with the C.P.R. at Hartney or Lauder, for a point between them, the extension having been postponed this year on account of some difficulty in regard to right of way. The route traversed is through one of the best parts of Manitoba, well-settled by prosperous farmers. The work through Lang's Valley is exceptionally heavy for prairie work, in the way of cuts & fills, though bridging is light. The town sites are Dunrea, 14 miles from the junction; Minto, 27 miles out; & Elgin, 38½ miles out. The contractors were J. D. McArthur, of Birtle, Man., for the grading & tracklaying; C. Chamberlin, Winnipeg, for the buildings. The survey was commenced in the middle of April & construction at the beginning of June. (May, pg. 65.)

Norton Bay & Yukon Ry.—The Anglo-Alaskan Syndicate of London, Eng., whose U.S. officers are at Seattle, Wash., has completed arrangements for building the Northern Bay & Yukon Ry., & is inviting tenders for rail & rolling stock of U.S. builders. This line is to run from Norton Sound above Fort St. Michael, Alaska, east about 120 miles to Yukon River, cutting off some 400 miles of difficult river navigation.—Railroad Gazette.

Ontario & Rainy River.—E. F. Fauquier, who has the contract for the first 20 miles of this line, from its starting point at Stanley, on the P.A.D. & W., has completed the grading up to the heavy rock work which is now under construction. Ties will be taken out this winter all along the route & work will also be gone on with on the Kaministiquia bridge. Several survey parties are in the field between the end of the first contract & Rainy River. (Sep., pg. 184.)

Ottawa & New York.—An Ogdensburg, N.Y., despatch says: Engineers investigating the cause of the collapse of the pier which allowed 2 sections of the Cornwall bridge to fall into the St. Lawrence River, while in course of erection, report that the pier was built on hardpan of insufficient strength to stand the huge weight. A diamond drill operated in the bottom of the river at the base of the fallen pier bored through 2 ft. of hardpan, then struck into a muddy deposit of clay formation. Through this the drill sank 14 ft. without striking hard bottom. Further investigation is being made.

A Cornwall despatch of Dec. 2 says:—The anchor span of the north bridge on the north side of the channel, has been completed & cleaned up, & the false work removed. Nothing now remains to finish the bridge but to throw the cantilever span across a gap of 200 ft. or so to connect with the work already done on the south side. Mr. Hendershot, who has the contract for rip-rapping the piers of the Cornwall railway bridges, has

nearly completed his work on pier no. 8, in the north channel.

Air was pumped into some of the pontoons attached to the wrecked span in the south channel, & it moved down 300 or 400 ft. & stuck there. Capt. Leslie has been working at it since to get the rest of the pontoons filled, & expects to have the huge structure in a safe place in a day or two. It is said the south end of the span is badly smashed.

Pembroke Southern.—This line which runs from the C.P.R. at Pembroke, Ont., to Golden Lake, on the O. A. & P. S. R., 21 miles, has been completed & inspected by R. McCallum, Engineer of the Ontario Public Works Department. (Sep. pg. 184.)

The Quebec Central is erecting shops at Newington, 1 mile from Sherbrooke. The machine shop includes boiler shop, smithy, casting & pattern room, & has brick walls, granite windowsills, coping stones, etc., iron roof, steel trusses, each truss guaranteed to support 10 tons over & above weight of roof for crane work. One 10 ton trolley runs full length of machine shop. One 20 ton travelling crane runs transversely in boiler shop. Full length of shop, 198 ft. 8 in.; full width of shop, 86 ft. 2 in.; height of walls, 22½ ft.; height to ridge of roof, 44 ft. The heating & ventilating plant is the fan system of warm air. A 100 h.p. boiler is to be installed. All the works are now being run & lighted by electricity. The paint shop is just completed & will accommodate 4 passenger cars. Its length is 150 ft., width 36 ft. An oil & waste store house has been completed. Seven stalls of the round house have been built, all with patent wood smoke stack. Three of the old stalls will be rebuilt next year. The coal shed is completed. A carpenter's shop, 165 x 45 ft., will be built, probably by contract, next spring.

Rutland-Canadian.—Particulars of the incorporation of this Co. were given in our last issue, pgs. 231 & 232. The object is to extend the Rutland Ry., which now runs from Bellow's Falls to Burlington, Vt. The extension will run from Burlington north to Rouse's Point, N.Y., either by Grand Isle County or by way of St. Alban's & Swanton & will connect with the Canada Atlantic. It is said 2 engineering parties are already in the field. The construction of this line will give the Vanderbilts, in whose interest the purchase of the Rutland road was made recently, a line from New York to Canada & the great lakes.

Spokane Falls & Northern.—The management does not propose to repeat the experiences of last winter with slides if it is possible to prevent it. With that end in view it has had a large force of men at work on the road ballasting & putting the track in shape for the winter. Considerable work has been done at the Seven Devils, where there was so much trouble last winter. The river bank has been cribbed to prevent washouts & the overhanging bank has been cut down so that in case of slides the track will be too far removed to be damaged.

Thunder Bay, Nipigon & St. Joseph.—This proposed Co., which intends applying for a charter, has secured sufficient funds for a preliminary survey, which is to be made by Z. Malhiot.

Vancouver, Victoria & Eastern.—This line is projected to run from the Mainland coast at B. C. in the neighborhood of English Bluff, near Point Roberts, via Chilliwack, to Penetanguishene, approximately 200 miles, thence to Boundary Creek district, approximately 100 miles. The charter is controlled by McKenzie & Mann, & the B. C. Legislature last session granted a cash bonus of \$2,000 a mile for the whole distance from the coast to Boundary Creek, where it will connect with the Columbia & Western extension, with the

C.P.R. is building, & thence with the Crow's Nest, thus affording a second through line from the Pacific Coast to the Prairies. Very little survey work has been done west of Pentteton, but from Pentteton southeast towards Moxey engineers have been at work all summer locating. A little grading has been done from the Pentteton end, & it is said to be the intention to complete the line within 18 months, though, on the other hand, it is said this will depend on the obtaining of a Dominion subsidy, as the work is very heavy. It is also said that the point at which the C. P. R. shall cease building the Columbia & Western extension westward, & at which the V. V. & E. shall begin, has not yet been decided on.

C.P.R. Betterments, &c.

Napierville Junction Ry.—A rumor has been going the rounds of the Quebec Press to the effect that the C.P.R. has under consideration a proposition to complete this line. Enquiry of the C.P.R. general management elicits the reply that there is nothing to say on the subject at present. The N. J. Ry. & Quarry Co. was chartered in 1881 to build from St. Remi to Napierville, Que., with an extension to St. John's, & built about 8 miles. The Dominion & Quebec Parliament have each voted \$3,200 a mile subsidy; the municipality of St. Edward has voted a bonus of \$2,500, & the municipality of Napierville \$10,000.

Windsor St. Station Montreal.—We are officially informed that the plans for the proposed extension have not yet been approved, & that it has not yet been decided when the enlargement will be proceeded with.

Sault Ste. Marie Bridge.—Work on the piers & abutments of the new bridge across the canal is proceeding apace, & the mason work will shortly be completed. The superstructure will be erected when the canal is closed for the season. Meantime the operation of dismantling the pier in the centre of the canal is going on, so that upon the close of navigation its entire removal will be speedily accomplished. The new bridge will swing clear over the canal.

St. Clair Tunnel.—The Railway World, Philadelphia, says: "The Canadian Pacific proposes building a tunnel under the St. Clair River at Point Edward. The object is to offset the advantage the Grand Trunk gets from its tunnel at that point." It is not believed the C.P.R. has any intention of building a tunnel to accommodate its western states travel. Its crossing is from Windsor to Detroit by car ferry, & it has no line to Point Edward, which is 2 miles from Sarnia, on the G.T.R., or anywhere near it.

Winnipeg Station.—It was recently reported in Winnipeg that the Co. had purchased a large block of land in the centre of the city, fronting on Red River, upon which a union station will be erected next year, the present

station to be utilized as freight offices. The block is bounded by Rorie, Bannatyne & McDermott streets. The rumor lacks confirmation.

Stonewall Branch.—Neil Keith & Co. have finished this extension from Stonewall to Foxton, Man., 18 miles. (Nov., pg. 236.)

Pipestone Branch.—It was intended to complete 25 miles of the extension westward from Roston, Man., but on account of cold weather, work had to be stopped after the rails had been laid for 20 miles into the heart of a big French settlement, where farmers have needed railway facilities for some time. (Nov., pg. 236.)

Mountain Divisions.—In addition to the work mentioned in our last issue, pg. 236, a 5-stall stone round-house is to be built at Laggan.

Arrowhead to Kootenay Lake.—It is the impression at Revelstoke that the Co. will start work at an early date on an extension of the Revelstoke-Arrowhead branch from the latter place through the Lardeau to the head of Kootenay Lake. Manager Whyte, of the Western Lines, informs us he is not aware that it has been decided to make the extension referred to this winter.

Columbia & Western.—The standardizing of the line between Trail & Rossland is proceeding rapidly. The grading has been completed, & track is being laid with 70 lb. rails. A branch will be built across Centre Star gulch to the War Eagle & Centre Star mines & an extension will be built to the Columbia & Kootenay mine. Rossland City Council will build a bridge over the tracks on Washington St. (Nov., pg. 236.)

The final plan for Rossland Station has not yet been prepared. The Co. has acquired the necessary land in a choice situation, which permits of changing the plan first decided on, which owing to the circumscribed area of land available was not suitable for Rossland. (Nov., pg. 236.)

Boundary Creek Smelter.—On returning to Winnipeg on Dec. 6 from a consultation with the President & Vice-President in Montreal, Manager Whyte, of the Western Lines, announced that the Co. had decided to erect a 1,000-ton smelter in the Boundary Creek district of B.C., in advance of railway construction, thus meeting the wishes of many mine owners in that region. The point at which the smelter will be located has not yet been decided on. Work will be commenced in the early spring, & it is expected it will be completed in the autumn. It will cost upwards of \$60,000, & will no doubt be of great usefulness to the mine owners in that district. By its means the Canadian smelting industry will receive a decided impetus. The smelter at Trail will be ready this month to treat lead ores.

Hotel Vancouver.—The great increase in business necessitates another addition to this hotel, the second in a few years. Plans are

being prepared by E. Maxwell, Montreal. It is expected the addition will be on the west side, taking in a good part of the present grounds. The ground floor will be devoted to corridors & billiard rooms, & the floors above will contain about 150 bedrooms.

Minneapolis, St. Paul & Sault Ste. Marie.—The Bismarck extension has been completed from Kulm to Hebard, N.D., about 78 miles, & no work beyond the latter point will be done this year. The new stations opened are Lehr, Wishek, Beaver Lake, Napoleon, Braddock & Hebard, all of North Dakota. Next year the line is to be extended to Bismarck.—Railroad Gazette.

The Twenty-four Hour System.

H. W. D. Armstrong, C.E., writes us:—The 24-hour system of dividing the days of the month has been in use in some parts of Canada for some time, & it seems strange that its use has not become general, for wherever used it appears to have given satisfaction. I believe the C.P.R. lines west of Fort William & the Intercolonial at the other end of the Dominion find it an improvement over the a.m. & p.m. method of marking the hours, & people generally living in the districts traversed by the railways mentioned have found no difficulty in adopting the 24-hour system.

But, to my mind, in some cases at least, it is improperly used. I refer to specifying any time by naming the hours belonging to one day with the minutes belonging to the following date, viz., 24-05. For instance, a certain time bill is announced to come into effect at 24-01 on Jan. 15. This appears to me to leave an opening for a mistake of 24 hours. The coming 15 of Jan. will fall on Sunday, & this time bill is intended to take effect at midnight between Saturday & Sunday, plus one minute. Now, 23 o'clock on Sunday does not arrive until within 1 hour of Monday, therefore (saying 24-01 on 15th) makes it appear that 24 o'clock comes before 23 o'clock, which is obviously wrong. As I look at it in this case, the date of Saturday the 14th terminates at 24 o'clock (being midnight between Saturday & Sunday) & after that we have no hours on the 15th until one o'clock, & the time when this bill should be said to take effect is 0-01 on Sunday, Jan. 15.

The Great Falls & Canada Ry. is putting 3 sleeping cars on its line, which runs from Great Falls, Montana, to Lethbridge, Alta. They are, of course, narrow gauge & will have lower berths only.

Notice is hereby given that The British Yukon Mining, Trading & Transportation Company will apply to the Parliament of Canada, at the next session thereof, for an Act authorizing the said company to construct & operate a line of railway from a point at or near Fort Selkirk to a point at or near Dawson City; thence westerly to the one hundred & forty-first Meridian; also to construct & operate lines of railway from a point at or near Cariboo Crossing or from or near Tagish Houses to Teslin Lake or River & to Atlin, & with the consent of the Governor in Council, to construct & operate branch lines in the Yukon District not exceeding fifty miles in length; to change the name of the company to "The British Yukon Railway Company," & to divide the undertaking of the company into sections, & to borrow money separately upon each of said sections, or on any two or more of them combined; also to confirm the proceedings taken upon the organization of the company; & to further amend the Act incorporating the company.

CHRYSLER & BETHUNE.

OTTAWA, 10th November, 1898.

CANADA SOUTHERN RAILWAY CO.

Notice is hereby given that application will be made to the Parliament of Canada, at its next session, for an Act to extend the times limited for the commencement and completion of the unconstructed lines or branches of railway of the Canada Southern Railway Co.

Canada Atlantic Elevators.

The two elevators built by this line & its auxiliary, the O. A. & P. S. Ry. during this & last year, are illustrated in this issue. The illustration given below shows the elevator at Coteau Landing, Que., on the St. Lawrence

River, the other illustration, on pg. 267, shows the elevator on Depot Island, Parry Sound, Ont., the Georgian Bay terminus of the system. The Depot Island elevator was built last year to receive grain from boats for transfer to cars for shipment eastward. It is of the storage type, & is 80 ft. wide by 290 ft. long,

with bins 70 ft. deep. It has a capacity of 1,000,000 bus. It stands back from the face of the dock 100 ft., & on the wharf is a marine tower containing a marine leg of 15,000 bus. capacity per hour, & all grain for this elevator is received by it. The leg is supplied with a pusher & marine shovels. In

the tower is a receiving scale of 200 bus. capacity. The tower is connected with the elevator by means of a belt gallery containing a 30-in. belt conveyer.

A loftier leg of 16,000 bus. capacity in the elevator receives the grain from this conveyer, & by means of 2 belt conveyers over the bins will discharge it to any bin in the house. Underneath the bins, in the basement, are 2 systems of belt conveyers, which bring the grain from the bins to the working end of the elevator & discharge to 2 shipping legs, each having a capacity of 10,000 bus. an hour. The grain is weighed out in the cupola & spouted direct from the scales to the cars. The car spouts are metal & supplied with bifurcated loaders.

The power house is of brick & is located 100 ft. from the back end of the elevator. The power is transmitted to the elevator by a rope drive running up to & over the deep bins to a line shaft in the cupola, from which power is distributed to the different parts of the elevator & to the marine tower by means of ropes.

The Coteau Landing elevator was built this year. The main building is 143 ft. long by 90 ft. wide & 155 ft. high. It rests on a foundation of piles, heavy grillage & masonry, & is built out into the river so that barges can receive grain from either or both sides of the elevator. This arrangement gives also a wharf 8 ft. wide on either side of the elevator. The 1st story consists of heavy post & girder work, which supports the bins. The latter are 59 ft. deep, built of planking, & are surmounted by a cupola running the entire length of the building & 5 stories high. On east side of the elevator are 4 shipping bins, each of 5,700 bus. capacity. These, with the 74 others in the house, give a storage capacity of over 500,000 bus. The walls are covered with galvanized corrugated iron, & the roofs with tar-felt & gravel.

The engine & boiler house is of brick, 53x41 ft. in size, 23 ft. high, & stands close to the west end of the elevator. The smoke-stack is of steel plates lined with brick. It is 12 ft. in diameter at the base & 155 ft. high.

The elevator is equipped throughout with all of the modern conveniences & special machinery for handling grain with the least possible delay. It has 6 elevator legs, with 18x7x7-in. cups & 84-in. head pulleys. Three of these legs are for receiving, & are located between the 2 tracks, which run clear through the center of the building. Any one or all of the 6 legs may be used for shipping, & each has a capacity of 8,000 bus. an hour. Three pairs of Clark shovels are located between the tracks in the 1st story, and 3 30-in. belt conveyers are located in the basement to carry grain across the house & discharge it to the 3 elevators in the south end.

On the 1st floor is located a powerful friction-driven geared car-puller, with wire rope drum, arranged to handle cars on either of the 2 tracks. South of the middle of the house are 3 loading spouts, to discharge grain to cars standing on the house tracks.

The 1st story of the 5 story cupola is the distributing floor. It contains 12 distributing spouts, which take the grain from the scale hoppers to the different bins. The 3rd story contains six 1,200-bus. hopper scales, which receive grain from 6 large garnerers in the story above. The 4th story contains also the cupola line shaft, which extends the full length of the elevator. This shaft receives power from the engine shaft by means of a rope drive, & each of the 6 elevator heads is driven direct by rope transmission from this cupola shaft. The top story is occupied by the elevator heads & the spouting from them to the garnerers. Each elevator head is provided with a switch valve, so that the grain may be spouted to either of 2 garnerers. All power transmissions through the house are supplied with friction clutches, so that any

part of the machinery can be shut down or started at will.

On each side of the elevator are 4 dock spouts, which receive grain from the shipping bins, each spout being supplied with wire tackle & a hand winch for handling the spout. Each spout will discharge grain to the barges at the rate of 15,000 bus. an hour.

The power plant consists of an engine 18-in. diameter & 42-in. stroke, & 2 boilers 72-in. diameter by 16 ft. long. A complete electric light plant, with dynamo, operated by an engine, is included in the equipment. The fire-protection system consists of a powerful fire-pump, with complete system of standpipe & hose connections on each floor, & hose reels, with hose & nozzles at convenient points throughout the building. The outfit is deemed sufficient for any emergency. There is also a complete system of pneumatic sweepers throughout the house, arranged to discharge the dust to the furnaces under the boilers.

Both elevators were designed & erected by J. S. Metcalf & Co., of Chicago.

The C.P.R. Toronto-Sudbury Line.

The survey of this route commenced in Mar. last under H. D. Lumsden, C.E., was completed early in Oct. Four engineering parties were employed in making the preliminary & location surveys. The plans have been completed for filing with the Department of Railways at Ottawa.

The line, as located, starts from Kleinburg, on the Co's Owen Sound section, 21 miles from Toronto, & joins the main transcontinental line at a point between Romford & Sudbury Jct., about 3½ miles east of the latter point, the whole distance from Kleinburg to the main line being 226 miles, making a distance of 250 miles from Toronto to Sudbury, as against 306 by the G.T.R. route via North Bay.

From Kleinburg the line runs almost due north, passing about 1½ miles west of Lloyd-town, thence a little east of north to near Allandale, passing about ½ mile west of Bondhead, & about 2 miles east of Cookstown. At Allandale it crosses the G.T.'s Hamilton & Northwestern branch by an overhead bridge, & the Collingwood branch on the level. After passing through Barrie the line runs almost due north to Midhurst & Craighurst, then n.e., passing Coldwater, & continuing almost in a direct line to the crossing of the Severn River, 9 miles up stream from Port Severn. From this crossing it continues a little e. of n. to Bala, the outlet of Muskoka Lake, where it crosses the south branch below & the north branch above the falls. From Bala the course is a little w. of n. to Parry Sound, touching Lake Joseph at Hatherley's Bay, & crossing the O.A. & P.S. Ry. by an overhead bridge about 3 miles from that Co's Rose Point or Parry Sound Station, running through the town of Parry Sound, & crossing the Seguin River at the falls near the grist mill where the electric light plant is now located. From Parry Sound the line goes a little w. of n. passing through the townships of McDougall, Carling, Shownaga, Harrison, Wallbridge & Mowat, reaching the crossing of French River on an Indian reserve near Cantin's Island. The 2 branches of French River are crossed about 2 miles apart, & the line continues generally in a n. w. direction to the connecting point near Sudbury, crossing the Wahnapiatae River about 12 miles below Wahnapiatae Station on the main line.

An excellent line has been obtained with maximum grades ascending northerly of 1%. Coming south the maximum is ¾ of a foot per 100. The maximum curvature is 6 degrees, or a radius of 955.37, but these are only at a few exceptional places in the rocky country north of the Severn. There is no rock work be-

tween Kleinburg & the centre of the township of Matchedash. From there to the northern terminus a considerable amount is met with. For the length of the line the bridging is not heavy. The heaviest bridge will be just north of Kleinburg, where the Humber Valley, 1,200 ft. wide & 110 deep, has to be crossed. The only other streams of importance to be crossed are the Severn, with a span of 150 ft.; the Musquash at Bala, 1 span of 100 ft. & 1 of 150 ft.; the O.A. & P.S. Ry. & adjoining stream by 2 spans of 60 ft.; the Seguin River at Parry Sound, 2 spans of 100 ft.; Shownaga River, 1 span of 100 ft.; 2 branches of the Nosquetiwan River, spans of 100 ft. over each branch; Magnetawan River, 1 span of 100 ft.; Key River, 1 span 100 ft.; French River, 2 branches, 1 span of 150 ft., 1 of 250 ft.; Wahnapiatae River, 1 span of 100 ft.

The line goes through the heart of the Muskoka tourist district, tapping both Muskoka Lake & Lake Joseph, & it would shorten the time between Toronto & Lake Joseph by several hours. It is still impossible to speak with any degree of certainty as to the C.P.R.'s intentions as to the construction of the line, but in view of the recent settlement of the C.P.R.-G.T.R. difficulties, it is almost a foregone conclusion that the work will not be gone on with at present. We are inclined, however, to think that there has been no abandonment of the idea, but merely a postponement. Ten years ago the C.P.R. had a preliminary survey made of the route, which was referred to in the Co.'s annual report for 1888. At about the same time the G.T.R. acquired the Northern & the Northwestern Rys., & an arrangement was effected between the C.P.R. & G.T.R. in regard to the former's northwest traffic going over the G.T.R. between Toronto & North Bay. The C.P.R. has for years shown a direct line from Kleinburg to Sudbury on its maps, & no doubt intends to build it sooner or later. The new arrangement with the G.T.R., which no doubt is satisfactory as regards northwest traffic, gives the C.P.R. no share of local business. The tourist traffic to the Muskoka Lakes has been greatly developed by the G.T.R. in the last 2 or 3 years & may now be said to be only fairly started. With proper hotel facilities it is capable of almost indefinite expansion. It can hardly be doubted that the C.P.R. has its eye on this traffic, & that when the time is opportune it will reach after it by a line that will traverse the heart of the lake district. At present the C.P.R. has more important work on hand in strengthening its position in British Columbia, where, in addition to the western portion of the Crow's Nest line yet to be completed, it has the Robson-Midway line under construction, 105 miles of the heaviest work on the Co.'s system, which is being built without a dollar of subsidy & the financing of which alone is quite enough of an undertaking for one year.

The C.P.R. has no charter for a line from Toronto to Sudbury, but it would appear that it could be built under the powers conferred by the Co.'s original Act of 1881, which gave the Co. the right, from time to time, to lay out, equip, maintain & operate branch lines of railway from any point or points along its main line to any point or points within the Dominion. In 1895 W. Mackenzie, H. D. Lumsden, C.E.; G. A. Cox, F. Nichols & D. D. Mann obtained a Dominion charter for the James' Bay Ry. Co., with power to build a line from Parry Sound to Doke's Indian reserve, thence to the easterly line of Lake Wahnapiatae, & to the mouth of Moose River, James' Bay. In 1897 another act was passed, empowering the Co. to extend its line from Parry Sound to Toronto, it being provided that the railway from Parry Sound to James' Bay, & the extension from Parry Sound to Toronto should be commenced within 2 years therefrom, & 15% of the capital stock of \$1,000,000 expended thereon. This charter is con-

trolled by Mackenzie, Mann & Co., & might, no doubt, be utilized should the C.P.R. wish to build under it.

For the country north of the C.P.R. main line there is power to build under a charter granted in 1884 to W. Hendrie, W. Thomson, Jas. Walton, J. Macnabb, W. B. McMurrich, J. C. Bailey, P. A. Scott, A. Kirkwood & A. Nairn, who were incorporated as the Lake Nipissing & James' Bay Ry. Co., with power to build a line from at or near the junction of the Callender branch with the C.P.R., or from near Callender to Moose Factory, or some other point on James' Bay. In 1889 the name was changed to the Nipissing & James' Bay Ry. Co. In 1896 the acts relating to this Co. were consolidated, the proposed railway was declared to be a work for the general advantage of Canada, & it was provided that the line should be completed to Lake Temagami within 3 years, to Lake Temiscamingue within 5 years, & the balance within 7 years from the passing of the Act. It is said this charter is also controlled by Mackenzie, Mann & Co., or, at all events, it is in hands that are friendly to their interests.

At the 1st session of the Ontario Legislature this year the James' Bay Ry. was granted, to aid in the construction of 90 miles of its line from Parry Sound to, at or near Sudbury, \$3,000 a mile for a distance not exceeding 40 miles, & the unearned subsidy of \$3,000 a mile for a distance not exceeding 50 miles which was granted to the Nipissing & James' Bay Ry. in 1889, the unearned subsidy being transferred to the James' Bay Ry. This makes a total cash subsidy of \$270,000 for the 90 miles.

Early this year the City Council of Toronto appointed G. Gooderham, J. H. Mason, R. Davis, W. R. Brock, L. M. Jones & Mayor Shaw as the Toronto & Hudson's Bay Ry. Commission, W. T. Jennings, C.E., being appointed Secretary & Consulting Engineer to the Commission. At the last session of the Dominion Parliament the Commissioners secured incorporation as the Toronto & Hudson's Bay Ry. Co., with power to construct & operate a standard gauge line from Toronto to or near the mouth of Moose River, Albany River or Churchill River, on the west side of Hudson's Bay & James' Bay, with a branch to the Northern Pacific Jct. Ry. at or near Gravenhurst, a branch southward from the main line adjoining the watershed near Timagami Lake, thence to the Northern & Pacific Jct. Ry. at or near North Bay or Nipissing Jct. & a branch from near Parry Sound to or near Sudbury, thence to Wahnapiat Lake. In consequence of the opposition of the holders of the 2 charters above mentioned, it was provided that the operation of the Toronto & Hudson's Bay Ry. Act should be suspended for 2 years as far as power to lay out & con-

struct a line is concerned, & if at the end of that time the James' Bay Ry. Co. has commenced & substantially proceeded with the construction of its line from Toronto to Sudbury via Parry Sound, & if at the end of such time either the James' Bay Ry. Co. or the Nipissing & James' Bay Ry. Co. has commenced & substantially proceeded with the construction of a line northward from the present main line of the C.P.R., the Act shall be similarly suspended during such time as the substantial proceeding with the construction of the lines above mentioned continues, & upon the completion of those lines the Act shall cease.

Robson to Midway, B.C.

We are officially informed that about 5,000 men are at work on this line, which is being built by the C.P.R. under the Columbia & Western charter. About 70% of the grading, including rock work, has been done, & it is expected the line will be open by May next. (Nov., pg. 237.)

A recent despatch from Brooklyn, B.C.,

fact that the contract has had the personal supervision of the contractors themselves. Either Mr. Foley or Mr. Larson are almost always present at headquarters or out somewhere on the line of construction supervising the work. In addition to this, W. F. Tye, Chief Engineer of the C. & W., & his assistant, Mr. Sullivan, are also on the ground most of the time with their corps of some 125 assistant engineers & helpers.

The first month or two were largely occupied in preparations for future work, & in securing men. At first men were scarce, but latterly they have been more plentiful & the more than 5,000 now on the line from Robson to Glenwood are making the dirt & rock fly at an astonishing rate. Long stretches are completed, & the sub-contractors have moved on to secure more work. Yet in other places the work has scarcely been touched, & of course the bridges can not be put in place until the steel reaches them, & the timbers can thus be brought forward on the cars.

The long-looked for 14-drill air compressor plant, which was ordered some two months since for use on the 3,000 ft. tunnel, to be

driven about 4 miles out from Brooklyn, has arrived at the C.P.R. dock here, & the big job of hauling the heavy machinery to the scene of operations is now being undertaken. It is estimated that it will take about 3 weeks to get it installed & at work. Included in the plant are three 80 h.p. boilers & 2 large air receivers. The machinery will be installed on this side of the tunnel, but will be operated from both ends, the air for the work at the western end

CANADA ATLANTIC RAILWAY ELEVATOR AT DEPOT ISLAND, ONT.

says:—One of the marvels of modern railway building is the speed with which the present contract of the 105 miles of the Robson-Midway branch of the Columbia & Western Ry. has been pushed. The contract was signed by Mann, Foley Bros. & Larson & the representatives of the C.P.R. in St. Paul June 4, & inside of 5 days the contractors had a force of men & the first of the supplies on the ground.

This promptness in taking hold of this gigantic contract has been a characteristic one of the work all through up to this time. No stone has been left unturned by which the work could be in any way facilitated. With the ablest of superintendents & assistants, with almost unlimited capital to carry any undertaking of this character, coupled with an experience of many years in the business, the contractors were in a position to successfully attack the great obstacles in their path before the iron horse could be sent over the new steel highway that will connect one of the richest mineral belts in North America with the outside world.

Possibly one secret of the successful prosecution of the work to the present stage is the

being delivered in a 5-in. pipe nearly a mile long. At the west end a small boiler will be installed to operate a blower to drive the smoke from the tunnel, while a similar work will be performed at the eastern terminus by the main plant. Seven drills will be used on each end—6 on the heading & 1 on the bench. The machines are fitted with a 3½ in. piston & 2¼ in. bits, the drills being 5 ft. long. The cost of the outfit was about \$15,000, & it is being used by McLean Bros., who have the tunnel contract. It is complete in every respect, & will greatly assist in boring the 16 by 21 ft. hole through the mountain. While waiting for the plant to arrive, work has been commenced by hand, & on the eastern end the heading is into the mountain about 16 feet. Timbering has already commenced & may be necessary for 100 feet.

McLean Bros. have also received a patent steam scraper, the first one of the kind manufactured. Contractors are awaiting with interest the outcome of the trial. It is operated by a single 35 h.p. boiler, & it is claimed that the scraper will handle 3 cubic yards of gravel at one operation. The engine is of the donkey variety & can be made to proceed uphill

or down side by its own power, there being 1,700 ft. of $3\frac{1}{2}$ in. steel cable. The whole operation has been hauled to the second contract of McLean Bros., near the new town of Gladstone, where it will be set to work as soon as possible on some of the immense gravel fills & cuts. It will probably save a large amount of labor.

P. A. O'Farrell, writing to the Globe, says of this line: The Columbia & Western Ry. is being rushed with all speed to the Boundary Creek country. It will be completed to Midway. Between Arrow & Christina Lakes, a distance of about 50 miles, the new road will climb 3,000 ft. above the lakes, & the up & down grades will lead through a frightfully rough country. From Robson the road rises gradually till at Brooklyn it is fully 1,000 ft. above the lake, & then it cuts through a 3,000 ft. tunnel to reach Dog Creek. Western pioneers have an unhappy knack of inflicting inappropriate names on the mountains, creeks & rivers of this far northwest. Dog Creek is a noble torrent that rolls through a glen & valley of enchanting loveliness. One of its tributaries is Lup Creek, & the mountain at whose base it flows to a junction with Arrow Lake, is called Bull Dog Mountain.

From the summit of Bull Dog Mountain I recently beheld a vision of terrestrial scenic beauty, the peer of which my eyes had never yet seen.

Picture 10,000 rolling mountains lifting their heads proudly to the skies, hundreds hoary with everlasting snows, & thousands covered even to their crests with the great primeval forests of the land. Picture, too, a brilliant autumnal sun casting light & shade upon all that vast panorama of glen, & canyon, & torrent, & slope, & mountain. There, where the sun kissed mountain tops & shelving hillsides in the shadow & far below, in the midst of these glorious mountains stretched the waters of Arrow Lake, too unutterably beautiful to be portrayed by poet or painter, much less by this inartistic pen of mine. It were hard to tell whether forest, lake, glen, mountains, the light or the shade, the dark blue sky studded with fleecy clouds or the glorious autumnal sun added most to this magnificent scenery. It was the tout ensemble that made the picture so enchanting—a picture that must abide forever in the memory of him whom the Fates led thither to behold it. When the Columbia & Western Ry. is completed the traveller through the Kootenay will catch a glimpse of this magnificent scenery as he winds around the slope of Bull Dog Mountain. But the mountain-climbers only can behold it at its best. Were it not that nature had stored her richest treasures in these mountains of the Kootenay, these beautiful lakes & forest-clothed glens & glades & mountains must have for ever been given over to the empire of loveliness. Often for hundreds of miles there is not enough arable land to support a family, & yet in that same stretch there are mines of copper & gold, of lead & silver, sufficient to enrich an empire.

On the shelving sides of Bull Dog Mountain I examined a copper mine, called the Mountain Chief. I was amazed to find on this mountain side, $2\frac{1}{2}$ miles from the lake, the finest copper prospect that I have yet seen in B.C. The Columbia & Western Ry. was projected to give an outlet to the world's markets to the almost unlimited copper ores of the boundary country. That is the country west of Kootenay. Within a year Boundary can supply smelters with 1,000 tons of copper ore a day, & from what I have seen on Bull Dog Mountain I am convinced that rich copper ore will yet be developed on the way from Robson to Midway. A good copper mine is the most valuable of all business investments. The demand for copper is always greater than the supply, & the price of copper is as steady as Government bonds. The Anaconda mine clears \$5,000,000 profit yearly. The mining, smelting & refining of Kootenay & Boundary copper ores can be effected as cheaply there as at Anaconda as soon as the railway from Crow's Nest Pass to Midway is completed.

More smelters must of course be built, more steamboats on the lakes & rivers, more coke furnaces, more villages, camps & cities. Lead, copper, gold & silver mining must then become the greatest industry of the Dominion, provided Canadians continue the smelting, refining & handling of the product of their rich mines at home.

Coming down the lake, on the fine C.P.R. steamboat, the Rossland, I looked over the freight which loaded it down to the gunwale. There was a carload of California peaches, 2 carloads of Manitoba flour, 2 carloads of hay from Regina, dry goods from Montreal, preserves from Ontario & machinery from Quebec, & the pursers of the Rossland & the Kootenay told me that all the boats on the lakes are busy as can be conveying freight & passengers. Their carrying capacity is strained to the utmost. Since F. A. Heinze turned the Rossland-Robson road over to the C.P.R. the express business on that road has increased threefold. It is booming now, & this business must be enormously increased in the near future. The Crow's Nest Pass Ry. will be in fine running order by January, & when it is in full swing they will start out shipping into the Kootenay about 200 tons of coke a day & about 500 tons of coal. Moreover, farm & food products of all kinds will be speedily forwarded over that line from Manitoba & the Northwest Territory, & the supplies that now reach Kootenay from Washington will then come from Canadian farms. The developments of the coming year will be the most astonishing that B.C. has yet seen, & will attract the attention of the world.

Frenchwoman (travelling for some time on Metropolitan Railway, London, to fellow passenger)—My station do seem very long to arrive at. I have passed Bovreel, Asbestos, Liebig, Pears' & Bouillon Fleet, but I come not to the Adeeson Road.

The Crow's Nest Pass Ry.

The construction of this line has been pushed very rapidly. Construction commenced July 20th, 1897, & the last rail was laid Oct. 7, 1898, completing the line between Lethbridge, Alta., & Kuskanook, Kootenay Lake, about 290 miles. From Kuskanook the cars are taken on barges, each of which carries 15 cars, down Kootenay Lake, & down the Kootenay River to Nelson, where connection is made with the Co's Columbia & Kootenay branch, thus giving through traffic to Rossland without breaking bulk, besides effecting a considerable saving of time. The Co. has 2 years within which to complete the line to Nelson, & notwithstanding reports to the contrary, Vice-President Shaughnessy states that the terms will be carried out to the letter.

From Lethbridge the line runs via Macleod & Pincher Creek. After reaching the Crow's Nest Pass, which lies on the boundary line between Alberta & British Columbia, the line follows pretty closely the stream known as the Middle Fork, afterwards taking a southerly course along the Michel River to the region of the Elk River. Crossing the Kootenay River into the East Kootenay mining country, it goes up the west side of the river for 50 miles until it reaches Cranbrook. Thence it crosses the summit of the Purcell range of the Selkirks to the Moyie River, which it follows for 50 miles until it strikes the Goat River valley, & follows it to the head of Kootenay Lake, which is the temporary western terminus of the railway.

The coal mines, of which so much has been heard, lie in the Elk River district beyond the Crow's Nest Pass, & the great advantage of the road is that it establishes communication between the gold & the coke which is required for smelting it, all within the Dominion. Moreover, it opens up the East Kootenay mining country, which is most promising. Already several properties are working in the district. On the St. Mary's River, the North Star is in an advanced state of development, & the Sullivan group is also working. On the Moyie River the St. Eugene property is also being worked. Copper as well as gold is making a good showing in the country.

The country crossed by the railway is mountainous, but the valleys are wide & contain land good for agricultural purposes. Splendid grazing lands are to be found all along the route. Moreover, the lakes & waterways are navigable the year round. Owing to the Chinook winds they do not freeze in winter. Another advantage to East Kootenay & the Rossland district is the fact that the food products of the Edmonton district have direct access thereto. This is one of the chief boons of the railway.

From Fernie, 35 miles west of the summit of the Rockies, the junction of Coal Creek & Elk River, a branch line runs 5 miles up Coal Creek to the coal mines which are already working & where 300 coke ovens are building. The Coal Co. has also a reserve mine,

WILLIAM C. WILSON & CO., 24 Front Street East,
TORONTO.

north of the main line, near Michel Creek, about 10 miles west of the summit. From Morrissey Creek, about 41 miles west of the summit, it is intended to build a branch eastward up the creek about 4 or 5 miles to the coal deposit, the vein extending through the spur of the mountain from 5 miles up the creek from Fernie to Morrissey Creek, appearing again on Morrissey Creek. A branch from Cranbrook to Fort Steele is also talked of.

Mixed trains have been running between Lethbridge & Cranbrook for some time, & the service has now been extended to Kootenay Lake. A train runs from Lethbridge to Cranbrook, the division point, returning the next day, & there is a similar service between Cranbrook & Kootenay Lake. Not much passenger traffic is anticipated for the winter months, but there will be a very heavy freight traffic, principally in coal, timber & ore. On Nov. 15, Manager Whyte of the Western Lines took over the Crow's Nest line from the Manager of Construction, & as there is a good deal of work yet to be done west of the Rockies, especially west of the loop, he appointed as Superintendent M. H. Macleod, who since H. D. Lumsden, C. E., came east to make the Toronto-Sudbury survey, has been Chief Engineer of Construction. G. Erickson, heretofore Roadmaster of the Mountain Section at Field, B.C., has been appointed Trainmaster. The line has been attached to the Western Division. The portion between Macleod & Cranbrook has been designated the Elk River Section, & that between Cranbrook & Macleod as the Goat River Section. Mr. Whyte says the ballasting of the road will be pushed forward as rapidly as possible, in order that passenger traffic may be well accommodated in the spring. He expects that next season trains will be able to make as good time on the new road as on any other part of the system. There will be little snow to contend with, & it will not be necessary, therefore, to erect any snow sheds in either of the two mountain ranges.

Early in December, at the invitation of the C.P.R., a number of West Kootenay business men made a trip from Nelson to Kootenay Landing by boat, & thence over the Crow's Nest line to Fernie, the centre of the coal fields.

Rossland papers have been continually asserting that the Crow's Nest line would not be extended from Kuskanook up the west side of Kootenay Lake to Nelson, but that it would be built almost directly west via Salmo, Sayward & Trail. When Sir Wm. Van Horne was at Nelson recently he emphatically denied this, saying: "We don't want to go over

the tops of the mountains. It is too ridiculous to talk about; of course we are coming through Nelson."

The question of building a line into the Ymir & Salmo districts is another matter. It is said the C.P.R. has had a survey made & that the route is practical. Speaking of the matter, at Nelson, Sir Wm. said: "We are here for business, & wherever it is to be got we are after it. Ymir I have not visited, but if it be as great a camp as you say the C.P.R. will get into it. We are looking for trade & will do all we can to secure it."

Hydraulic Filling on the C.P.R.

E. J. Duschenay, C.E., Superintendent of the Selkirk & Shuswap sections of the Pacific Division of the C.P.R., has, in response to a request, kindly furnished us with the following particulars of the hydraulic filling of trestles:

The C.P.R. Co., anxious to replace all its wooden structures, built during first construction, by permanent works, such as steel bridges, masonry arch culverts and solid embankments, has had a large force of men,

with the latest improved plant, at work for the last 12 years over the whole system. The new embankments were mostly made up with steam shovels loading gravel on cars, hauled sometimes long distances. In 1892 the Co. was engaged in doing a very large amount of filling of trestles in British Columbia, especially along the canyons of the Fraser River. At various points mountain streams intersect the railway line, & one may even to-day see where the pioneer miners utilized these streams to wash the gravel benches along the river in their mining pursuits. The management, always on the alert to improve & cheapen its manner of works, struck on the idea of using this water power which nature was offering, & decided to discard the use of its excellent steam shovels, with improved ballast unloaders, even the most ingenious air dump-cars, for hydraulic wherever it could be done. The expectation was that the ultimate cost of filling these bridges by this method would be about half that of doing the same work as formerly. The results have fully proved this & have been most satisfactory.

Two large structures were replaced in this manner along the Fraser River, & the Co. is now completing a large embankment, across the wide ravine of Mountain Creek, near the summit of the Selkirk Range. This bridge has a total length of 1,071 ft., & is 155 ft. in depth, & is fully described & illustrated in the "Treatise on Wooden Trestle Bridges," by W. C. Foster. The cost of installation of this hydraulic plant has been very great. A flume 2 miles long had to be built along a very broken side hill, steep & rocky, & across the path of many snow slides. The stream of Mountain Creek is rapid, & in this distance of 2 miles from the railway track it rises over 380 ft. A dam was built across, so as to divert part of the stream into the flume at its head. The water is thus brought down in this flume, built 4 ft. wide, & on a gradient of 20 ft. per mile, so the flow of water is of uniform volume & speed throughout. It empties into a reservoir, or box, called "Penstock," which stands at a height of 180 ft. above the railway track. A line of steel pipes 14 inches in diameter is connected with this reservoir, & leads to the present pit on the east side, a distance of 2,200 ft. Although the cost of building the flume, laying the pressure pipe line, & all other installation expenses amounted to a very large sum, the ultimate cost of the

material retained in the embankment will prove a great saving to the Co. over other methods. It is expected this will be at least 50. A probability there will be favorable circumstances.

There are a dozen operations, viz: 1st. Washing the bank down, leading & delivering by the end of a series of sluice boxes to where the filling is to be made. 2nd. Retaining & impounding the material after it is deposited. 3rd. Extracting mines, the first operation only is done, since the tailings or gravel after the gold has been extracted are of no further use, therefore are deposited to the nearest dumping ground & allowed to go to waste.

The pipeline terminates with what is called a "Monitor" or "Giant" so constructed with ball joints, that the large volume of water, coming to under great pressure can be controlled & directed with greatest ease. There is a gate, a short distance behind the "Giant" which acts as a valve & closes the water when necessary. The piper & monitor men direct the jet of water at the foot of the bank of gravel, soon a cave-in of the bank takes place, & the water, gravel & boulders all run into the sluice boxes placed at the lowest point of the working pit. The sluice boxes, 33 in. wide by 2 ft. high are built of planks, with the bottom covered with pieces of old steel rails so to prevent the wear. When necessary to have the line of these sluices turn any small or large angle, the forward length of sluice boxes has to be built a few inches lower, so to prevent the gravel blocking the sluice, & forming bars at the turning point. They are on a steep or 8% grade, running down to the point of unloading, generally at the centre of the embankment to be made. Thus the gravel & all filling material is carried into the proposed filling. Now begins the difficulty of controlling, holding this material in its partly liquid state from wasting itself all over the country. Not only is it necessary to control it, but it must be held within the limits of the slope, usually $1\frac{1}{2}$ to 1, or angle of rest of an earth embankment. This is done by alternative rows of logs & brush, hand-laid along the outside face of the filling, each row receding the required distance to form the slope required. All the gravel, rocks, &c., are thus held back & the water only is allowed to fall over, & run down the face of the embankment already built. The filling at Mountain Creek began in Aug. 1897, & continued till Oct. 1897, when the winter weather stopped all possibility of work. It was resumed again last May & in all probability will be completed this fall. This was written Sep. 3. The volume of water used may be reckoned as 800 miners' inches, under a pressure of 180 feet.

The smaller of the two illustrations on page 270 shows the monitor at work, the larger illustration shows the hydraulic fill on the west side made to a height of 90 ft., also the sluice boxes fastened on the side of the trestle work.

F. S. Barnard, Resident Director in British Columbia of the B. C. Electric Ry. Co., is visiting England.

P. J. Myler, who has been Secretary & Asst. Treasurer of the Westinghouse Mfg. Co. since its establishment in Hamilton, Ont., & who has been Acting Manager since G. F. Evans went to St. Petersburg to establish the Co.'s Russian works, will, it is understood, be appointed Manager as well as Secretary at the next board meeting.

Grand Trunk Betterments, &c.

Portland Terminal Facilities.—Owing to the steady increase in the Co.'s business at Portland, Me., the officials have been greatly hampered in the narrow limits & small capacity of its yard. Various expedients were tried to extend the capacity of the freight yard, but it was not until the land near the East Deering stock yards was purchased & fitted up as a yard that the problem of handling the large business was solved in any satisfactory manner. Now the Co. has 2 yards, one near the passenger depot, extending out towards the bridge around the base of the Munjoy Hill & past Fish Point, & the other yard, the new one, about $1\frac{1}{2}$ mile from the passenger station & steamer docks.

The new yard begins just above Verandah street, where the Yarmouth road crosses the G.T. tracks. Its northerly end is at the stock yards, 2,500 ft. from the commencement of the yard. The yard contains $11\frac{1}{2}$ miles of tracks & holds 1,300 cars. The yard is 25 tracks across, the longest track being 2,400 ft. & the shortest about 1,300 ft. At the Verandah street entrance the yard branches out from the main line, which at this place is a double track, & this is the only entrance to the yard. It was the original intention to make the yard much longer than it now is, but this was prevented by the failure to secure a proper deed of the land near the northern terminus of the yard, & when the deed finally was secured it was too late to grade the land & lay the tracks for this season. This extension will probably be constructed as soon as it is required.

Grading for the yard was commenced July 22 & was done by contract. The big fields were smoothed down & the hollows filled in, making a perfectly level tract of land for the laying of the tracks. On Sep. 28 the work of putting in the tracks commenced. This required 23 miles of rails, 35,000 sleepers & hundreds of car loads of gravel for ballasting.

Victoria Jubilee Bridge.—The new superstructure is all completed, the removal of the old tube having been accomplished, with the exception of the centre span. As this will require a different method of handling, on account of its length, it will probably require more time than has the removal of the others. The laying of the floor is closely following the removal of the spans. The illustration on page 271 shows a cross section of the 11th pier, & of the 12th span. The old tubular bridge is shown inside the new span.

Crossing at St. Henri.—The application of the corporation of St. Henri (Montreal), for permission to open Gareau street across the G.T. tracks again came before the Railway Committee of the Privy Council Nov. 10. This application had been twice refused by the Committee on account of the danger to life of additional level crossings of the G.T. & also because there is already a crossing at Fort street, which is the next street to Gareau. The Mayor of St. Henri & Mr. Bruneau appeared for the City, & produced a quantity of new evidence to show that the municipality had the right of way before the building of the G.T., & that the right had never been surrendered. The necessity for the crossing was also urged, in view of the crossing being needed by the large population on the other side of the tracks. W. Wainwright, on behalf of the G.T., urged the

danger to life of permitting additional level crossings, & contended that there was already ample accommodation for the public in the existing crossings. Speaking of the danger of level crossings, Mr. Wainwright said it had been so great in Montreal & vicinity that the G.T. was seriously contemplating the raising of its tracks into the city, so as to do away entirely with level crossings. The case was adjourned.

The Contract.—McCormick & McLeod, of Bracebridge, have been awarded a 3 years' contract for ties for the Northern division & main line between Toronto & Montreal. During the past year they held the contract for the Northern division only. It is estimated that fully 450,000 ties will have to be supplied yearly under the contract.

Midland Elevators.—The management is said to be considering the advisability of erecting a third elevator at Midland, Ont., the present structures being overtaxed to accommodate the grain passing through that port.

Bridge Near Allandale.—At a meeting of the Railway Committee of the Privy Council Nov. 10, residents of Innisfil township, in the vicinity of Allandale, tendered an offer of \$500 towards the building of a bridge over the G.T. tracks. The Co. expressed its willingness to contribute half of the cost, but could not accept the offer of \$500. The Committee not being able to announce any unanimous finding, reserved judgment.

The Black Rock Yards.—On Dec. 6 a Buffalo, N.Y., paper published a Washington, D.C., despatch as follows: "The G.T.R. Co. has secured control of the Canadian section of the bridge to be built across the Niagara River at Grand Island, & the Co. has in view the removal of its yards at Black Rock to Grand Island, where unlimited space can be secured. The agitation to connect Grand Island with the mainland by a bridge has been carried on for years, but has been held up on account of the enormous expense attached to the construction of the 2 big spans, one on the U.S. side of the island, & the other on the Canadian side. It is stated now that the G.T. Co. has offered to build the Canadian section, & it is believed that the scheme will be carried out. The island affords splendid dockage facilities, which it is believed the G.T. Co. would make use of."

We are officially authorized to deny the statements, as there is no basis for them.

Grand Haven Harbor.—A second warehouse, 400 ft. long, & several hundred feet of additional dockage are being built by the Co. north of Krause & Co.'s elevator. The river in front of the Co.'s property is being dredged to a depth of $17\frac{1}{2}$ ft.

Jurisdiction in a Railway Case.—In a recent case in which the writ was issued out of the High Court of Justice for Ontario, to recover damages against the railway company for an accident which happened in British Columbia, & was served on the defendant's claims agent in Toronto. The head office of the railway was in the Province of Quebec, but the Co. did business in Ontario, where it had many hundreds of miles of railway, millions of capital invested, & where hundreds of its officers & employes resided. Mr. Justice Meredith held that the action was properly brought in Ontario.

ELECTRIC RAILWAYS.

The London Street Ry. Strike.

General Manager Carr writes us in reference to the article under this heading on pg. 241 of our last issue:—"I wish you would kindly correct the error in the last paragraph of the article, stating that the men secured a small increase in pay & recognition of the Union. The pay was increased as stated, but the Co. did not recognize the Union, as you will readily see from a copy of the agreement that was entered into between the Co. & its employees, each employee signing the enclosed agreement."

As the agreement is of considerable importance & interest we give its provisions in full as follows:

The wages for motormen and conductors employed by the Co. shall be on the following scale: For the first 6 months, 13c. an hour. For the second six months, 14c. After one year, 15½c. All men to be listed at once upon said scale according to length of previous service. All overtime to be paid for according to regular rate men are receiving. Nine hours to constitute a day's work for all regular men, with a leeway as near 2½ hours as time table will allow. Regular relief men to receive remaining hours, which will not be less than 8.

All employees of Co. shall have full liberty to affiliate with any lawful association or club, and shall not be required to sign any document abridging their full rights under this agreement.

All conductors & motormen in the employ of the Co. to be marked upon the blackboard in accordance with the time they were hired. The spare men to get all spare work, which, as far as practicable, shall be equally divided among them.

All conductors & motormen shall report at the carbarns 15 minutes before their run goes out, & anyone failing to do so, his place shall be filled by the first man on the spare list, & any motor man or conductor failing to report or send word within 4 hours after his run goes out shall lose the next day also, unless his services are required.

No motorman or conductor shall be required to pay for any breakages unless it is proven that the breakage was due to his own carelessness.

No conductor or motorman shall lose his own time to look up accident reports when he is requested to do so by Manager or Superintendent, but in such case his pay shall go on at the regular rates.

All employees in the employment of the Co. to have free transportation over all lines operated by the Co. No more than 4 employees to be on 1 car.

Any employee laying off with permission of the Co. shall have his place on the list when he returns to work.

The Co. to have the right to make such rules or regulations as may from time to time be deemed necessary, but not inconsistent with this agreement.

One week's notice to be given by employees before leaving the Co.'s service, or failing such notice, forfeiture of equivalent wages.

None of the employees who went out on strike on Oct. 27, 1898, to be refused reinstatement in their former position on account of having struck work as aforesaid, & no dismissal of such employees to be made except for other & good cause. Also that R. Westby, W. Crawford, W. Kerr, J. Fitzgerald, M. Delisle, & J. Pickell be reinstated to the runs they were on previous to their dismissal.

The Manager of the Co. to hear at any time any complaint or grievance of any employee, & that such employee, if dissatisfied, shall be heard again with any one or more employees who can substantiate or prove the justice of his complaint or grievance; & further, that in case such employee is still dissatisfied with the Manager's decision, an appeal shall lie to the President & directors, if made within 3 days of the Manager's decision; & in case where conductors or motormen are suspended or dismissed, & it is found that they are not at fault, they shall be reinstated on their former run, with full back pay.

The employees to be at liberty to purchase their uniform where they see fit, subject to the same meeting the approval of the Manager as to uniform material & style, not exceeding in quality those in present use.

This agreement to be in force for 6 months, or for such further period as the employees may continue in the service of the Co.

The petition presented by the men on Oct. 2 contained the following clause:

"None but residents of London shall be employed, & before they start to train they must deposit their initiation fee with the Secretary of our Division, & receive a permit card. After 30 days' experience, if satisfactory to the Co., they must become members of our Association."

This was not agreed to by the Co.

British Columbia Electric Railway Co.

This Co. recently issued 12,000 non-cumulative 5% preference shares of £10 each, ranking for additional dividend rateably with the ordinary shares after the latter have received 7%, at the price of £11 a share. The issue was explained in the Co.'s annual report (Oct., pg. 216), & is for the purpose of carrying out extensions & improvements at a cost of some £55,000, & to redeem, at a cost of £60,000, the non-cumulative 6% income bonds outstanding.

The Co. is now operating 41 miles of fully equipped line in Victoria & Vancouver, & between the latter place & New Westminster.

The earnings & expenses for Oct. were:

	GROSS EARNINGS	EXPENSES	NET PROFITS
Railway—Vancouver	\$1,000	\$8,775	\$7,775
Victoria	500	4,281	3,719
Westminster	7,833	10,364	2,531
Lighting—Vancouver	6,281	11,159	4,878
Victoria	1,000	5,085	4,085
Total gross earnings	\$7,775	\$28,564	\$20,789
Working expenses	\$18,280	\$11,000	\$7,280
Net profits	\$9,497	\$19,789	\$7,509
Aggregate Gross Earnings from April to Oct. 31	\$18,497	\$28,564	\$7,089
Aggregate Net Profit from April to Oct. 31	\$19,497	\$19,789	\$7,708

The aggregate gross earnings & net profit for 1896-7 are from April 15 only.

Maritime Province Lines.

Bedford Electric Co.—At the last session of the Nova Scotia Legislature M. Chisholm & others, of Halifax, were incorporated under this title, with power to build & operate an electric line in Halifax county, outside Halifax city, & with other powers. It was recently reported that the Co. had in contemplation the building of a line around Bedford Basin, through Dartmouth & down to Cow Bay.

Ontario Lines.

Brantford.—There has been a revival of the rumor respecting electric roads into Brantford, & it is possible something may be done next summer. The Brantford St. Ry., it is stated, would be willing to extend its Mohawk Park route to Cambridge for consideration. The residents of this village & Echo Place, many of whom are employed in the city & prefer living in the suburbs, are very anxious that the electric road should be extended out there, & it is said that they would be willing to pay a bonus. Manager Barron stated to a Courier reporter that he had been approached on the matter, but had replied that it would take a bonus of \$10,000 to extend the line out the Hamilton road. He went on to state that the Hamilton & Chedoke Ry. Co. is still very anxious to build its line to Brantford, & it was possible it might yet do so. There is now a road of only 10 miles between Brantford & Hamilton.

Brockville.—The Brockville Times says: "While we are not opposed to the town building an electric railway, we believe that the council would actively endeavor to interest capitalists in the matter, it would be possible to secure the construction of an electric line by a company with an agreement that would guarantee a good service & low fares. A Brockville electric railway might in course

of time be made the centre of a system of radial electric lines extending to a number of tributary towns & villages. For some reasons it might be better to have such a system owned & operated by private capitalists. The gas & electric light systems are used only by the people of Brockville. An electric railway could be used by many outsiders, & in case of extension to other towns might belong to them as much as to Brockville. Still some strong arguments might be advanced in favor of the ownership of an electric railway, & if the council should decide in favor of it we would not oppose it, although we believe a satisfactory arrangement could be made with a company if the council would go about it in a proper way.

Galt, Preston & Hespeler. The proposal to extend this line from Preston to Berlin & Waterloo appears to be dormant. The town of Waterloo voted a bonus of \$12,000 on June 10 last & \$28,000 was expected from Berlin, but it was thought inexpedient to submit a proposal.

Hamilton, Grimsby & Beamsville. When the case of Saltfleet Township Council against this Co. came up in Hamilton Dec. 1 Judge Street said he had read the pleadings & found the case was largely a question of engineering skill, concerning the operation, maintenance & repair of the road. In regard to the use of the red light in front of the cars, he observed that the clause in the by-law so ordered & it should be followed. Instead of hearing a mass of general evidence, he suggested that an independent engineer be engaged to inspect the road & report to him. He suggested the name of W. T. Jennings, but plaintiff's counsel objected & the Judge appointed R. McCallum, Inspector of Railways for the Ontario Department of Public Works, & aided by counsel, drew up a memorandum of the work which Mr. McCallum will be expected to do. When he has completed his report, it will be forwarded to Justice Street, who will then proceed with the trial in such a way as he finds expedient. The plaintiffs dropped the clause referring to the sale of tickets.

International Radial.—The directors of this Co., which was incorporated by the Dominion Parliament in 1895 to build from Hamilton to Guelph & other places, are negotiating with Hamilton City Council. The Mayor of Hamilton having recently stated that an attempt might be made to block the building of the road by the Hamilton St. Ry. Co. claiming the exclusive right to use the high level bridge & not entering into an agreement to give the new Co. running powers over its tracks, representatives of the H. S. R. Co. say that Co. will not take any such stand, but is willing to discuss terms with the International Co. for running powers over the lines inside the city.

London.—The gross revenue for Nov. was \$5,599.75, against \$7,380.31 for corresponding period, an increase of \$1,219.44.

The local Court of Revision has sustained the assessment of the Co.'s property at \$302,542. The Co. contended that instead of valuing the road & plant at an assumed cost of construction, the rails, poles, wires, etc., should be assessed on the basis of the price they would bring if removed & sold. No objection was taken to the assessment of \$73,725 on the power house, car barns & other realty, but to the following:—Rails, poles & wires, \$136,780; bridges, \$19,220; asphalt pavements, \$22,817; personal property (rolling stock), \$50,000. The rails, poles & wires last year were assessed at about \$80,000, & the bridges & asphalt pavement were not assessed at all. As the question is one of legality, the case will doubtless go to the Court of Appeal.

The Co. has given notice of application to the Ontario Legislature to confirm certain by-laws of the City of London, & of the townships of London & Westminster.

On account of threats non-union employees of the Co. asked permission to carry revolvers. The police refused.

Metropolitan.—A conference between the Railway Committee of the York County Council & President Warren & Manager Moyes of this Co. was held at Aurora recently to settle the alignment & location of the railway extension through the town, the Co. having taken objection to the route as laid out by the Council some time ago. After considerable discussion & an absolute refusal on the part of the railway to accept the conditions, the matter was finally settled by the town's consenting to the route & alignment suggested by the railway people. Now that this matter has been satisfactorily settled, it is understood the construction of the road north of Bond Lake through to Newmarket will be proceeded with at once.

The Co. has given notice of application to the Ontario Legislature for an Act to confirm by-laws of the Town of Newmarket, the villages of Aurora & Richmond Hill, & the townships of Whitchurch, King, Vaughan & Markham, under which the property of the Co. in the municipalities mentioned is exempted from taxation for 10 years, & also to confirm agreements made between the Company & the municipalities.

Niagara Falls Park & River.—A contemporary recently published the following:—"It is rumored that there is a possibility of the Niagara Falls Park & River Ry. being extended to Niagara-on-the-Lake on the north & to Fort Erie on the south. The present route of the road is between Chippewa & Queenston, Ont., along the bank of the Niagara River on the Canadian side. It has entrance to Niagara Falls, N.Y., over the upper steel arch bridge, & it is expected to enter Buffalo or to secure a connection with the

roads in that city over the International Bridge, which is soon to be rebuilt, when it will afford room for trolley as well as steam car tracks. The Co. controls the necessary franchises."

General Manager Phillips, in response to an enquiry, says:—"The press item referred to originated in the imagination of the correspondent, as we have no intention of making any extensions the coming year, but there is no doubt we shall extend the road to Fort Erie as soon as the international bridge is rebuilt, so as to admit of trolley travel, for we still hold the franchise from Chippewa to Fort Erie."

Ottawa.—The Railway Committee of the Privy Council has refused the application of the Co. for permission to cross the Canada Atlantic Ry. tracks at Elgin St., so as to continue the line to the exhibition grounds. (Nov., pg. 243.)

The cost of the proposed extension to Britannia, which is not likely to be taken up before next spring, is estimated at \$125,000. It is also suggested that the road be extended to Rockland, 22 miles.

J. Shepherd is suing the Co. for damages for wrongful ejection from a car. Several weeks ago, he alleges, he boarded a car, & at the time was smoking a cigar. He entered the car at the front vestibule, & merely held the cigar in his mouth while taking a car ticket from his pocket book. He further alleges that he was forcibly ejected by the conductor without remonstrance, & in attempting to board the car a second time at the rear entrance he was again pushed off, & in the fall sustained a severe sprain of the ankle, with which he has since been laid up.

Parry Sound to Depot Harbor.—The Parry Sound Board of Trade has appointed a committee to obtain information as to the cost

ENAMELED IRON SIGNS

For Railway, Street Car, Steamship, Express, Telegraph, Telephone and Advertising purposes.

Railway Station Names, Street Car Route Signs, Express, Telegraph and Telephone Office Signs, Semaphore Arms, Switch Targets and Advertising Signs of every description of size and color made to order.

Railway, Steamship and Ferry Signs

For doors, etc., 23 x 3 1/2 inches, blue letters and border on white ground, carried in stock with following lettering.

Waiting Room	Ladies' Toilet	Private Office	Dining Room
General Waiting Room	Men's Toilet	Freight Office	Lunch Room
Ladies' Waiting Room	Baggage Room	Ticket Office	Smoking Room
Men's Waiting Room	Agent's Office	Telegraph Office	No Admittance

The following are carried in stock, size 10 x 2 1/2:—

Men Women Exit Fire Escape

Railway numbers for bridges, mile posts, signal houses, etc.; single figures on plates 8 1/2 in. high.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

For Prices, Illustrated Catalogues, etc., address

THE ACTON BURROWS COMPANY,
Agents for the Imperial Enamel Co. of Birmingham,
29 Melinda Street, Toronto, Canada.

BRANCH OFFICES—107 Lombard Street, Winnipeg S. A. Erskine, Resident Agent;
28 Broad Street, Victoria, B.C., D. H. Macdowall, Resident Agent.

of building an electric railway between the points named.

Peterboro.—The rumors of extensions to neighboring villages have again been revived.

Port Arthur.—In our last issue, pg. 243, we mentioned the inspection that had been made of this line by Manager Phillips, of the Niagara F. P. & R.R., at the instance of the Ontario Government. We have since obtained some additional particulars. The construction of this road into Fort William in the first place was bitterly opposed by the business people & the authorities of that town, as it was viewed as an attempt to capture the trade of a new & growing place, & to keep the business centre in Port Arthur. In consequence, a sullen opposition has been maintained ever since to everything in connection with the road, ever accentuated by the rivalry existing between the two towns. While Fort William has had just cause of complaint in respect to the condition of the roadway & crossings throughout the town, as shown by Mr. Phillips' inspection, the successive councils were themselves to blame for the weak & irresolute manner in which they acted in the matter. The track was not in the first place put in the condition required by the Order-in-Council, but, in places, the ties were exposed & never covered between the rails at all. This & sundry violations of the agreement were allowed to continue, with feeble protests & complaints lodged from time to time. Port Arthur, on the other hand, has run the road at considerable loss, so far as making it revenue producing, & has given a very fair and regular service. While the object of the road was to bring grist to its own mill, it has, it is generally admitted, been quite accommodating to the people of both towns, in the way of special trains, etc., as should be expected, but there has been little effort made to keep their track and crossings in repair. The management claims that the Fort William people are unreasonable, & that they will not meet them or co-operate with them in the work of repair or maintenance, & thus wrangle & vituperation are continually in evidence.

Mr. Phillips has made a lengthy report on the condition of the line. He finds that on some portions of the line within the limits of Fort William there is no planking inside or outside the rails, & that on other portions the planking is in very bad condition, that the rails in places are about street grade, & the earth filling below the level of the rails, & that the ends of the ties are exposed. At some street intersections there are no crossing planks. Frogs at turnouts are not packed as required by law. The trolley wire, no. 4 copper, is too small, & it appears from the number of splices that there has been considerable trouble with the wire breaking. At places the wire is too low, being only 12 to 14 ft. above the rails, on account of the span being slack, the poles on the sides of the streets leaning towards the roadways owing to the soft nature of the soil, or imperfect setting. There is no guard wire over the trolley wire to protect telephone & telegraph wires from contact with the trolley wire. A great number of the insulators used in attaching the trolley wire to the span wire are in bad condition, & must allow the span wires to become charged with electricity in a number of places. An iron wire was noticed off the insulator & lying on the cross arm. The rails are being rebounded with copper bands. The cars are in good condition, being clean & well kept, & apparently run on schedule time. In conclusion, Mr. Phillips, under the authority vested in him by the Government, requires that the repairs, &c., pointed out as necessary be made forthwith, & it is said the Fort William authorities will insist on this being done.

Sandwich, Windsor & Amherstburg. This Co. has given a chattel mortgage of \$150,000 to G. Gooderham & T. G. Black-

stock, of Toronto. We are informed that this is merely a renewal & should not in any way affect the credit of the Co. any more than for the past 5 years. The mortgagees have held the Co.'s bonds since 1893, and are secured by chattel mortgage.

St. Catharines & Niagara Central.—Application will be made to the Dominion Parliament next session for an Act to incorporate the Niagara Falls, St. Catharines & Toronto Ry. Co. with power to assume the assets, privileges, etc., of the St. Catharines & Niagara Central Ry. Co., the name of which was changed in 1895 to the Niagara, Hamilton & Pacific Ry. Co., and to extend the line to Port Dalhousie & to Hamilton, with power to operate the line by steam or electricity, also to sell electric power & to operate steamboats, etc.

Toronto & Mimico.—The Toronto daily press recently stated that it had been definitely decided to extend this line to the Long Branch ranges, & possibly to Lorne Park. Manager Keating informs us that while he has been looking into the matter for some months, no decision has yet been reached, so that he is unable to say whether the extension will be made or not.

Toronto & Scarborough.—As mentioned in our last issue, the question of extending this line about 7 miles from its terminus near the Hunt Club to the west side of Highland Creek Hill, is under consideration, but Manager Keating advises us that no decision has yet been reached as to whether the extension will be made or not.

Toronto Ry.—The gross earnings of this Co. are as follows:—

	1898	1897	Increase.	Decrease
Jan.....	\$86,562.36	\$74,543.55	\$12,018.81
Feb.....	82,402.19	69,744.01	12,657.38
Mar.....	92,818.12	78,891.45	13,926.67
April.....	86,898.83	73,756.38	13,142.45
May.....	92,670.35	82,461.51	10,208.84
June.....	94,119.32	91,533.44	2,585.88
July.....	104,302.92	105,381.64	\$1,078.72
Aug.....	110,300.54	93,224.33	17,076.21
Sep.....	138,021.74	113,672.44	24,349.30
Oct.....	99,650.16	86,404.22	13,245.94
Nov.....	99,735.01	88,607.96	11,127.05

The percentages paid to the city in Nov. of the past 3 years have been as follows:—1896, \$6,091.65; 1897, \$7,155.79; 1898, \$8,016.40.

Province of Quebec Lines.

Hull Electric Co.—The cars of this Co. between Hull & Aylmer have been equipped with headlights, which have 5 lamps of 16 candle power each, placed together before a strong reflector. It is said the equipment will be altered so that the running speed may be increased to 40 miles an hour.

Montreal Island Belt Line.—The cars between Montreal & Bout de l'Isle have been fitted with an arc light reflector on the front vestibule, which acts as a powerful searchlight, small objects a quarter of a mile ahead being plainly visible to the motorman.

Montreal Park & Island.—The Town Council of St. Louis is urging the Co. to increase its service on Park avenue & has passed a by-law requiring the Co. to remove snow, etc., thrown to the sides of the streets by snow plows, etc.

Montreal Street.—The gross earnings are as follows:—

	1898	1897	Increase.
Oct.....	\$133,419.69	\$110,097.00	\$23,322.69
Nov.....	110,645.00	110,608.98	14,426.12

The road committee will ask the City Council to take steps to have all electric wires, except trolley wires, placed underground.

Quebec, Montmorency & Charlevoix.—In our last issue, pg. 241, we gave full particulars of the issue by this Co. of \$1,500,000 5% 1st mortgage gold bonds. On Dec. 6 we were advised that from \$700,000 to \$800,000 of the bonds had been sold & that the vendors felt

warranted in saying that it had been a most satisfactory and successful issue, as bonds were being sold every day.

The Co. gives notice of application to the Dominion Parliament for an act amending its act of incorporation, to change the name of the Co. to "The Quebec Ry. Light & Power Co." to confirm the purchase of the property & franchise of the Quebec District Ry. Co., the issues of bonds & stock made for the purpose of paying therefor, & to authorize the Co. to build railways or tramways in the counties of Levis, Bellechasse, Dorchester, Beauce & Lotbinière, to ratify the purchase by the Co. of the property of the Montmorency Electric Power Co., & the issues of bonds & stock made by the Q. M. & C. Ry. Co. in connection with that purchase, to empower the Co. to carry on the business carried on by the Montmorency Electric Power Co.; to acquire water powers & to construct & maintain dams, locks & other constructions necessary to improve the water powers; to expropriate for the purpose of placing poles & carrying wires; to authorize the purchase of gas & lighting companies, & for other purposes.

RAILWAY PROJECTS.

The Atlantic & Northwest Ry. Co. gives notice of application to the Dominion Parliament for an act extending the time within which it may complete its works. This line, originally chartered in 1879, is leased to the C.P.R.

Arthabaska.—Notice is given of application to the Dominion Parliament to incorporate the Arthabaska Ry. Co. to build a line from a point at Dudswell, on the Quebec Central Ry., to Maddington Falls, on the north side of the I.C.R., & with other powers.

The B.C. Southern Ry. Co. gives notice of application to the Dominion Parliament for an act authorizing it to proceed to construct its eastern section until Jan. 1, 1904, & to build a railway between a point on its line in the neighbourhood of Fort Steele to or near Golden on the C.P.R., by a route having the same general direction as the valleys of the Columbia & Kootenay Rivers, & also branch lines therefrom not exceeding in any one case 30 miles in length. The eastern section above referred to is defined by the Dominion Statutes of 1896-7 as commencing at the junction of Summit Creek with Michel Creek, thence by way of Michel Creek to Elk River & the Upper Kootenay River, with power to go to the 49th parallel & the Tobacco Plant.

B.C. Yukon Ry. Co.—Application will be made to the B. C. Legislature for an act to amend this Co.'s act passed in 1897, so as to empower the Co. to build a branch line from its main line in B.C. to the Taku Arm of Tagish Lake & thence to Atlin city.

Canadian Yukon.—F. B. Gregory, solicitor, Victoria, gives notice of application to the B. C. Legislature for an act to amend the C. Y. Ry. Co. Act, 1898, by striking out sec. 40, which provided that the Co. should within 6 months after the passing of the act deposit with the Government \$5,000, as security that it would expend not less than \$10,000 in surveys or construction before June 30, 1899. An alternative amendment is to substitute 18 months for 6, & June 30, 1900, for June 30, 1899. This is a Mackenzie & Mann charter.

Carp, Almonte & Lanark.—A statement which has been extensively published to the effect that work is to begin soon on this road is at least premature. The charter granted by the Ontario Legislature has lapsed without any work being done, & Andrew Bell, C.E., of Almonte, Ont., who is interested in the scheme, informs us that it has not yet been decided whether application to revive the charter will be made next session, though it is probable it will be if arrangements for

building the line are made by that time. The lapsed charter was for a line from the O.A. & P.S. Ry. at Carp, 20 miles west of Ottawa, through Almonte & Lanark to Bridgewater, Hastings Co., where connection was to be made with the since disused Madoc branch of the G.T.R. Mr. Bell says this would make the shortest possible line, with least work required, from Ottawa to Toronto, & adds that the country through which the line would pass is generally easy for railway building, especially as it was intended to utilize some 40 miles of the grading done by the intended Toronto & Ottawa Ry.

East Kootenay.—Notice is given of application to the B.C. Legislature to incorporate a company to build a railway from some point on the B. C. Southern Ry. between Wardner & Cranbrook, or at either of those places, to St. Mary's River; thence along the St. Mary's River to or near North Star mine; thence along the St. Mary's River to Kootenay Lake, with power to extend the line easterly to Fort Steele; & also from a point on the line of the railway so to be built to Upper Arrow Lake; & from a point on the last-mentioned line, via Windermere, to Golden, on the Columbia River, & with other powers.

Edmonton District.—Application will be made to the Dominion Parliament by this Co. next session for power to construct a railway from some point on the line which it is already authorized to construct, either to Yellow Head Pass, to Peace River Pass, or to a port in British Columbia, or to connect with a railway which the British Pacific Ry. is authorized to construct, with authority to construct a branch line to the navigable waters of the Yukon River, to change the name of the Co. to that of the Edmonton, Yukon & Pacific Ry. Co., to declare valid the organization of the Edmonton District Ry. Co., & for other powers.

Fort Simpson to Telegraph Creek.—Notice is given of application to the B.C. Legislature to incorporate a company to build a railway from or near Fort Simpson to or near Glenora or Telegraph Creek, & for other powers.

Haliburton, Whitney & Mattawa.—Gordon & Sampson, solicitors, Toronto, give notice of application to the Ontario Legislature to incorporate the H.W. & M. Ry., with power to build a railway from or near the present terminus of the G.T.R. at Haliburton, Ont., to the Ottawa, Arnprior & Parry Sound Ry. at or near Whitney, thence northerly to or near Mattawa, & with other powers.

Hamilton & Caledonia.—Nesbitt, Gauld & Dickson, solicitors, Toronto, give notice of application to the Ontario Legislature for the incorporation of the H. & C. Ry. Co., with power to build a railway from Hamilton to Caledonia, Ont., & to extend it to Cayuga, to Selkirk, & to the shore of Lake Erie, & with numerous other powers.

Kitamaat.—Notice is given of application to the B.C. Legislature for an act to amend the "Kitamaat Ry. Act, 1898," by conferring on the Co. power to construct the railway authorized by that act from the head or north end of Kitamaat Inlet north to Copper River, & east to the telegraph trail; thence south & east to the south end of Babine Lake; thence north & east to Germansen Creek at or near its confluence with Omenica River in latitude, approximately, 55.47 north, in lieu of the route originally prescribed, & branch lines in connection therewith, & with other powers.

Kootenay & Northwest.—McPhillips & Williams, solicitors, Vancouver, give notice of application to the B. C. Legislature to amend the Kootenay & Northwest Ry. Co.'s Act, 1898, by confirming & consolidating in that Co. all the powers granted by the East Kootenay Ry. Act, 1897, to the E.K.R. Co., & granted by the Southeast Kootenay Ry.

Act, 1898, to the S. E. K. Ry. Co., & purchased by the K. & N. W. R. Co., & to extend the times limited in the acts for the commencement & completion of the works, & extending the time of giving any security for 3 years, & for extended powers. The owners of the charters are L. Hirsch & others, of London, Eng.

Lake Winnipegosis to Edmonton.—J. H. Coburn, solicitor for applicants, gives notice of application to the Dominion Parliament for an act authorizing the building of a railway from Lake Winnipegosis to or near Edmonton, Alb.

Lindsay, Bobcaygeon & Pontypool.—Notice is given of application to the Dominion Parliament to revive & amend the act to incorporate the L. B. & P. Ry. Co., to extend the time for commencing & completing the railway, also to reduce the capital stock, & for other purposes.

Lytton to Quesnelle River.—Notice is given of application to the B. C. Legislature to incorporate a company to build a railway from the C.P.R., near Lytton up the Fraser River Valley, to or near the mouth of Quesnelle River, with other powers.

The North Star & Arrow Lake Ry. Co. gives notice of application to the B.C. Legislature for an act to amend its act of incorporation granted last session. This act empowers the Co. to build a railway from Cranbrook, B.C., or some convenient point where the Crow's Nest line crosses the Kootenay River, up the St. Mary's River to or near the North Star mine, thence along St. Mary's River to Kootenay Lake, with a branch to Upper Arrow Lake. Power is now sought to also build from or near Fort Steel to Golden. The act of 1898 provides that the Co. shall within 6 months of its passing deposit with the B.C. Government \$5,000 as security that it will expend not less than \$10,000 in surveys or construction before June 30, 1899. It is sought to extend both the periods above mentioned by one year. W. Mackenzie, Toronto, & D. D. Mann, Montreal, are the principal incorporators of the Co.

Ottawa to Meach's Lake, &c.—G. E. Kidd, solicitor for applicants, gives notice of application to the Dominion Parliament to incorporate a company to build a railway or tramway, operated by steam, electricity or other motive power, from Ottawa, Ont., through the Township of Nepean, by Kingsmere to Meach's Lake, Que.; with branches to Hog's Back & Graham's Bay, in the Township of Nepean, & the town of Aylmer & city of Hull; also to build a railway, foot passenger & vehicular bridge across the Ottawa River from the Township of Nepean to the Township of Hull, at or near the Remous Rapids.

Pacific Yukon Ry. & Navigation Co.—Notice is given of application to the Dominion Parliament to incorporate a company under this name, to build a railway from or near Pyramid Harbor, near the head of Lynn Canal, or from a point on the International Boundary, near Lynn Canal, through the Chilkat Pass to Dalton's Post on the Alsek River, thence to below Five Finger Rapids on Lewes River, & with other powers.

Quesnelle Forks to Hazelton.—Notice is given of application to the B.C. Legislature to incorporate a company to build a railway from or near Quesnelle Forks to or near Hazelton, near the junction of the Wat-sau-Kwa or Buckley & the Skeena Rivers.

Revelstoke to Atlin Lake.—Notice is given of application to the B.C. Legislature to incorporate a company to build a railway from or near Revelstoke, northerly through the valleys of the Columbia, Canoe, Fraser & Parsnip Rivers to the 56th parallel of latitude, thence to the northerly boundary of B.C. to a

point on or near the Liard River, or westerly to the northerly boundary at or near Atlin Lake.

Skagway to Dawson.—Col. Domville, M. P. for Kings, has, according to a cable despatch, recently stated in London, Eng., that the Dominion Government will propose a State-aided railway from Skagway, via the Dalton Trail, to Selkirk & Dawson. This lacks confirmation.

Spence's Bridge to Nicola.—Notice is given of application to the B.C. Legislature to incorporate a company to build a railway from or near Spence's Bridge, along the Nicola River, & south through the Nicola Valley to the lake sources of the Nicola River or thereabouts, & with other powers.

St. John, N.B., to Sydney, N.S.—A North Sydney paper gives currency to a rumor, said to have originated in the west, that the C.P. R., failing to acquire the Intercolonial or to obtain satisfactory running powers over it, has about decided to build a line from St. John, N.B., to North Sydney to connect with the Reid steamers. We have not thought it necessary to ask the C.P.R. management for a confirmation or denial of this rumor, which is about as unlikely to be true as any of the rest of the batch of sensational stories published from time to time.

Taku Inlet to Atlin Lake.—Notice is given of application to the B.C. Legislature to incorporate a company to build a railway from or near the International Boundary Line, on the headwaters of Taku Inlet, to Atlin City, or some other point on the shores of Atlin Lake, with branch lines to the south end of Taku Arm of Tagish Lake, or to the south end of Bennett Lake.

Trail to Salmon River.—In our Oct. issue, pg. 204, we gave particulars of an application to be made to the B.C. Legislature to incorporate a Co. to build a railway from or near Trail to Sayward, on the Columbia River, thence to Salmo, thence following the Salmon River to its junction with the Pen d'Oreille River. The preliminary organization of the Co. has been effected by the election of the following provisional officers: President, F. Fletcher; Vice-President, J. A. Gilker; Sec.-Treas., W. A. Galliher; Chief Engineer, F. Moberly, all of Nelson, B.C. Coast papers say the C.P.R. is behind the scheme.

Vancouver, Northern & Yukon.—As a result of a recent meeting of Vancouver citizens steps are to be taken to secure Dominion & Provincial charters for a railway from Vancouver to the Yukon. In 1891 a charter was obtained for the Vancouver, Northern Alaska & Peace River Ry., but was allowed to lapse. A charter for the Burrard Inlet Ry. & Ferry Co. suffered a similar fate. It is proposed to secure legislation embracing the principal powers of both these companies. A large & influential committee was appointed by the recent meeting to carry out its views, & subsequently the matter was placed in the hands of a sub-committee, with A. Williams as Solicitor, & W. Moberly, C.E., as Secretary. Notice has already been given of application to the B.C. Legislature to incorporate the V. N. & Y. R. Co. to build a railway from Vancouver or some other convenient point on Burrard Inlet; thence northerly by Seymour Creek, or the most feasible route, to Squamish Valley; through Pemberton Meadows to Lillooet; northerly to Quesnelle; north-westerly to Hazelton, or some other point on Skeena River; & northerly to the northern boundary of B.C., with a branch from or near Hazelton along the valley of Black River to the northern boundary of B.C.; with branch lines to Fort St. John; & east & west from the main line along the north shore of Burrard Inlet to Howe Sound, & the west shore of the North Arm of Burrard Inlet, & with other powers.

SHIPPING MATTERS.

The Allan Line & St. John.

On Dec. 2, to inaugurate the adoption by the Allan S.S. Line of St. John, N.B., as a winter port, the Company entertained a number of St. John's prominent citizens at luncheon on the S.S. Parisian. Hugh A. Allan, who presided, in proposing St. John & Maritime ports, made an important speech as follows:

It is a great pleasure to me to meet you here to-day, as it has been the wish of the Allans on both sides of the Atlantic, who are connected with the active management of the business, to have a closer connection with the Maritime Provinces for sometime past. It is a great surprise to me to see the wonderful development in the port of St. John during the last two years, & I feel sure that no one could help being struck with the amount of energy that is shown as a result of the work that has been done in that time. Your terminal facilities here reflect the greatest credit both on the municipal authorities of the city & the management of the C.P.R. The enlargement of the elevator, the dredging of the basins, the extension of the wharves, & the enlargement of the yards, not only at Carleton but also outside the city, & the increased accommodation in sidings along the route, make it possible to accommodate successfully a very much larger business than heretofore; & all these improvements, I feel sure, will enable the C.P.R. to accommodate all the traffic offering, even in such a prosperous season as this is likely to be.

Of course it will not do to stop content with what has already been achieved. In order to compete with other ports, improvements of every kind must be pushed to a completion, & amongst the most important of these are the lighting & buoying of the approach to the harbor, & the dredging of the harbor itself. Everything that the work of man, aided by the most modern improvements, can accomplish must be done in this connection in order to make this port not only equal to those south of us—for that I am sure is not what we wish to accomplish—but to make it better than any of them. No doubt your Board of Trade will see that the Government does its share.

Your railways have done a great deal, but they stand in the position of the philanthropist who builds an institution & who generally finds it necessary to endow it. Your railway companies have not only to invest their capital in building their road to, & terminals at this port, but they must endow it to the extent of carrying the traffic to & from the port at rates which will enable exporters & importers to compete at least on equal terms with those doing business at other cities on the Atlantic seaboard. For I need not tell you that steamers will go to the ports at which they can make the most advantageous arrangements, & if the railways to this port are not able to compete with their rivals at Portland, Boston, New York & Philadelphia, you will not be able to get satisfactory steamship connections to come here.

The line I represent was founded by Capt. Alex. Allan in 1825, & at that time consisted of the brig Favorite. In 1855 the Government made a contract with my uncle, the late Sir Hugh Allan, for a fortnightly line, the subsidy agreed upon being \$120,000, & the service was opened in April, 1856, the first steamer to carry the mails being the North American. In 1858 the service was increased to a weekly line, & the subsidy paid was advanced to \$208,000 a year, & subsequently further increased to \$416,000 a year. In 1872, the fleet having been considerably increased by such steamers as the North Britain, Nova Scotian, Bohemian, Hungarian, Norwegian, Hibernian, Peruvian & Moravian, a contract was entered into with the Newfoundland Government for the carriage

of the mails between Great Britain and St. John's, Nfld. This contract has been carried on ever since, & is still being maintained by us, the steamers employed in the trade having their terminal port on this side of the Atlantic at Philadelphia.

The contract for the carriage of the mails between Great Britain & Canada was altered from time to time, but remained always in our hands—latterly in conjunction with the Dominion Line—up to the close of navigation 1897. At that time the Government gave the tender to the Beaver Line, which has carried the mails for the last 12 months. The Dominion Line & ourselves have again taken up the mail contract for a period of 6 months, or until May 1 next, & this has given us the opportunity we have so long desired of establishing closer connections with the Maritime Provinces. As our line has grown we have been obliged to find outlets at U.S. ports from time to time. In 1880 we established an office in Boston, Mass. Later on the Philadelphia service was inaugurated, & finally an opening was found in the New York trade to Glasgow.

For 10 years or more the Canadian Government have been asking for an improved mail service, & during that time we have stood up in competition with the world & have retained the contract, except for the 12 months just past. During these 10 years we have put in tenders or have discussed the terms of contracts for vessels varying in speed from 15 to 20 knots, but none of our tenders or offers have been accepted. It seems to have been the desire of the different Governments to make contracts for lesser subsidies than we have been able to accept, & we think that on looking back the stand we have taken has been justified by the result. After years of waiting for a decision in this matter, we last year determined to make some additions to our fleet, which have been delayed so long pending the adoption of some decided policy with regard to the mail contract. Consequently we have given orders for 5 new steamers—one of 8,800 tons & 14 knots speed, two of 10,000 tons & 15 knots speed, to be used either in the Liverpool-Montreal passenger trade or on the New York service, & two cargo steamers of 8,000 tons & 12 knots speed for the St. Lawrence service. Of these, the Castilian is already launched; the Bavarian, 10,000 tons, is contracted for delivery in May. The Tunisian, 10,000 tons, is promised for Aug. & the Sicilian & Corinthian, the 2 cargo steamers, will probably be ready by the end of next St. Lawrence season. With these additions to our fleet we can, without at all encroaching on our other services, arrange for a permanent connection with the Maritime Provinces.

No one who has been in the trade during a period of years & has seen the ups & downs & the difficulties to be contended with in this trade will venture on a scheme of such magnitude & requiring such an investment of capital as a fast service to the St. Lawrence, without securing for himself & his associates adequate remuneration to enable him to carry the enterprise to a successful issue. The fact that all these years no one of substance has come forward to carry out such an undertaking, has, I maintain, proved that our judgment has been sound, & that our stipulation for an adequate subsidy, which has been considered excessive, is in reality not so.

I yield to no one in my opinion of the capabilities of the St. Lawrence. With the developments that are taking place in the deepening of the canals, in the improvement of the harbor at Montreal, & in the increased railway connections to that port, I see possibilities for its future which were not dreamt of even a few years ago. These canals, when complete, will enable vessels drawing nearly 14 ft. to bring cargoes from the west down to Montreal, & thus put that port in a position to compete on favorable terms with the ports of New York, Philadelphia & Newport News.

In addition to these, however, the opening up of the Parry Sound route has increased shipment from the port of Montreal enormously, & these can still further be increased if the Canada Atlantic Ry. secures an entry into the port of Montreal or a direct connection with the Intercolonial Ry. to that port. You may judge of the vast benefit of this route by the facts which I shall allude to later on.

The Canada Atlantic Ry. has brought to Montreal this season, the first year in which they have been doing business, between eight & ten million bushels of grain, & about 46,000 tons of package freight. Such a connection is invaluable, & there is no reason why the port of St. John in the winter should not, to a large extent at any rate, reap the benefit of this connection, if the facilities for getting into Montreal are accorded to Mr. Booth's railway. In addition to their large elevators at Depot Harbor & Coteau, they will undoubtedly erect a large elevator at Montreal, & these would all serve as storage for grain, which would be exported by the maritime ports in winter, & would thereby increase the traffic over these routes to an enormous extent.

Glancing at the map of Canada, we see that there are 3 main arteries for the carriage of western wheat to the east, viz.: the G.T.R., the C.P.R., & the Canada Atlantic. Turning to the two latter lines of railways referred to by me, viz., the C.P.R. & the C.A.R., the interest of these two roads lies in the development of the maritime ports. The C.P.R. has a direct connection with St. John & Halifax. The C.A.R. may also be given a direct connection with these ports by means of the I.C.R. The C.A.R. takes its enormous freight from the wheat fields of the western states, as also other products, which must necessarily find their way to the eastern markets in the winter months.

Via maritime ports navigation on the lakes is open at least for a month longer than the St. Lawrence route. Wheat & other freight can be landed at Parry Sound by water, for a month or more after navigation has closed at Montreal. This, with a proper elevator system would enable the C.A.R. to store at Parry Sound & other points along its lines, enormous quantities of grain, which, with proper connections to the lower provinces, would find their way to the markets of the east via maritime ports. This would be a trade in excess of what is now coming to the maritime ports via the C.P.R. The freight carried by the C.A.R. this summer was diverted from Buffalo & went to Montreal. What it has done in the last 12 months for Montreal may, in perhaps a lesser degree, easily be done for St. John & Halifax. It is for the people of the lower provinces to be alive to their own interests, & to encourage by every means possible, the building up of their ports. They should be able during the winter months to control the greater part of the Canadian freight & a large proportion of the freight originating in the western states carried by the Canadian lines.

At the same time, in considering the question of the fast mail service, it must be remembered that Montreal port is only open for 7 months of the year, & that a contractor undertaking a fast service must look for connections elsewhere for the other 5 months, & in getting these connections he must guard against the competition of all ports to the south of him in winter, just as he has to guard against them at Montreal in summer. It is, therefore, necessary that the railway connections to the Canadian winter port should be in a position to offer an intending contractor terms for the conveyance of both export & import cargo at rates equal to those obtainable at the other Atlantic seaboard ports. With such an arrangement in hand, I would be glad to go to the Government & ask for a tender for a service of 16-knot steamers, which I believe is the speed which Canada is

at present most in want of. With such vessels capable of making the passage from Moville to Rimouski via Belle Isle in 5 days & 23 hours, & via Cape Race in 6 days & 12 hours; & from Moville to Halifax by the short route in 5 days & 20 hours, & by the long route in 6 days & 9 hours, as against 6 days & 4 hours to 6 days & 12 hours by the New York routes, at an average speed of 19 knots, we would be able to secure a fair share of passenger traffic besides the higher classes of freight traffic. Such vessels would be capable of steaming 17 to 18 knots in fair weather, & would in summer make the passage in very much less time than I have indicated. No country in the world, as far as I know, has leapt in a bound to the highest acme of speed in its steamship service, & it seems to me both unlikely & undesirable that Canada should attempt to do so.

It should, however, be realized, that in order to secure a good mail service an adequate subsidy must be allowed, or failure will surely ensue. A great deal of money has been spent in the subsidizing of railways. Trains are being run from the Atlantic to the Pacific for the carriage of passengers not only from one point of Canada to another, but for the accommodation of trans-continental, Australian, Japanese & others who are attracted to Canada by the beauties of the scenery on the C.P.R. route. It seems, therefore, that the link is not complete without an improved service. The speed I suggest would give steamers that would be capable of making the passage in as fast time as the fastest vessels to New York, & would also be able to carry a considerable quantity of cargo, & thus accommodate the many high-class dairy industries of Canada which have sprung up of late years, & which are bound to increase & multiply as time goes on. The shipping of butter, poultry & eggs, as well as many other goods, in cold storage is only in its infancy, but we have had sufficient experience in the trade to know that they can be produced in this country of a quality to compete in the English market with the rest of the world, & it only requires time & the attention of our farmers to allow of the trade being developed to an enormous extent.

Facilities for the free & economical movement of traffic are a chief factor in the building up of a seaport. Montreal has the immense advantage of possessing interior water facilities during the season of navigation. Her railway facilities are also great & growing. Formerly she had but one railway, the G.T.R. Afterwards the C.P.R. was established, & simultaneously the G.T.R. found it necessary to double its tracks in order to accommodate its trade. And last season a new line, the Canada Atlantic, came into operation, bringing to Montreal some 8,000,000 bus. of grain, & 50,000 tons package freight for export to Europe; & this without apparent diminution of traffic by other lines. St. John might do worse than promote the extension of the Intercolonial to connect with the new road. But facilities are not everything. Without men to use them they are, indeed, comparatively valueless. The facilities of Montreal are in a great part used by the merchants of Montreal. Merchants of St. John, it is for you to do likewise. In this way you will hold the destinies of your port in your own hands & continue to be worthy sons of your own fair city.

I am a Canadian, born under the sunny skies of this fair Canadian climate. I know & realize that our national development for the last half century has been slow. To the student of history the reason has been plain. We have to the south of the line a vast country that has attracted, for many reasons, the tide of immigration. We have waited patiently, knowing that our time would come. It has, thank God, in the day and generation of us who sit around this board, come at last.

There are no longer on the other side or within the borders of our neighbors to the south, lands to be taken up by the surplus population of Europe. Where must they come? To Canada. We have in our boundless Northwest millions upon millions of acres that only require the hand of the agriculturist to turn them into a garden from which we can feed the multitudes of Europe. Canada to-day is the proudest jewel in the British crown. The progress & development which followed the events of 1775 in the U.S., will be repeated in Canada in future years, dating from the jubilee year of 1897.

We, in this country, occupying as we do the northern portion of the continent of America, inhabited as it is by a sturdy & loyal race, possessing as a national heritage millions upon millions of acres of rich virgin soil from which we can supply the food which the eastern hemisphere must necessarily draw from the west; our destiny is plain. The history of the Roman & Grecian empires has taught the world that a northern race must ultimately triumph over a people reared under a southern sun. I do not utter these words in disparagement of the valor & the commercial enterprises of our neighbors to the south, but I, as a Canadian, whose interests & future are identified in every possible way with Canada, know that history must repeat itself, & that as the northern race in a barbarian age overran the Roman & Grecian empires by the force of arms, so with the Canadian people, occupying as they do, the same position territorially as the Goths & the Vandals occupied to Rome, we will, in the near future, attain a dominant position in the world of commerce in this, the western hemisphere.

Mr. Blair, the Minister of Railways, in the course of a speech said he hoped soon to have the Canada Atlantic Ry. connected with the sea, & as a result he believed the maritime ports of St. John & Halifax would be benefited & the trade of Canada increased.

General Superintendent Timmerman, of the C.P.R., said that Co. was ready & willing to compete with the rates to New York, Boston & Portland, thus overcoming the physical disadvantages of the maritime port of St. John. The C.P.R. had made & was making every effort to make the St. John winter port business successful & every department of the road seemed to be working to that end. To do this great efforts were required & no small sacrifices, for it was no small undertaking to divert business which had long been established at nearer although foreign ports.

The Trade of the St. Lawrence.

The shipping of the St. Lawrence ports for 1898 has been extensive. In 1897 there entered the port of Montreal 479 vessels, with an aggregate tonnage of 1,054,225; this year there arrived 516 vessels, with the tonnage of 1,212,747. It will be readily seen that the gain in tonnage is proportionally much greater than the gain in the number of vessels entering the port.

The coastwise steamers in Montreal harbor also show a substantial increase, both in vessels & tonnage. In 1897 there arrived 300 vessels, while this season 330 arrived. The tonnage for 1897 was 317,000 tons, & this year 345,800, being an increase of 28,800.

Both imports & exports from Montreal show a marked increase. That of the former is indicated by the customs returns. The customs receipts at Montreal from May 1 to the close of navigation a year ago were \$3,708,345.46, while during the same period of 1898 they were \$4,842,695.35, an increase of over \$1,100,000 in less than 7 months. All the St. Lawrence ports, with the exception of Quebec, show an increase in the imports of coal, Montreal, Sorel, Three Rivers & Quebec taking 932,793 tons, as against 896,157 tons

the previous year. There was an extraordinary movement for export from Montreal, as is to be gathered from the following table:

	1898.	1897.
Wheat, bushels.....	8,933,393	7,027,058
Corn, bushels.....	19,115,891	6,778,866
Peas, bushels.....	1,640,406	1,805,533
Oats, bushels.....	6,801,239	2,631,785
Barley, bushels.....	320,297	247,148
Rye, bushels.....	909,943	301,627
Flour, barrels.....	856,314	774,124
Meal, barrels.....	34,171	40,014
Pork, barrels.....	2,757	585
Lard, barrels.....	44,675	85,043
Meats, packages.....	136,261	228,752
Eggs, cases.....	186,173	141,553
Hams, bacon, boxes.....	12,484	8,123
Apples, barrels.....	385,475	725,016
Cheese, boxes.....	1,888,785	2,102,985
Butter packages.....	278,922	225,268

The decreased movement of peas, meal, lard, meats, cheese & apples is more than made up in the increase in other Canadian staple products.—Monetary Times.

Sault Ste. Marie Canal Traffic.

The Marine Record gives the following figures of freight & passenger traffic to & from Lake Superior during Nov.:

EAST BOUND.

ITEMS.	U.S. CANAL	CANADIAN CANAL	TOTAL
Copper, net tons.....	16,068	553	16,621
Grain, bushels.....	2,338,842	524,673	2,863,515
Building stone net tons.....			
Flour, barrels.....	1,216,513	119,499	1,336,012
Iron ore, net tons.....	604,089	154,743	758,832
Iron, pig, net tons.....	3,716		3,716
Lumber, M. ft. B.M.....	84,771	133	84,904
Silver ore, net tons.....			
Wheat, bushels.....	13,758,421	2,217,820	15,976,241
Unclassed freight, net tons.....	12,222	836	13,058
Passengers, number.....	453	109	562

WEST BOUND.

ITEMS.	U.S. CANAL	CANADIAN CANAL	TOTAL
Coal, (hard) net tons.....	90,809	6,200	97,009
Coal, (soft) net tons.....	299,432	48,271	347,703
Flour, barrels.....	311		311

West bound freight, net tons..... 535,103

Total..... 2,158,285
Total craft, United States..... 1,394
Total craft, Canadian..... 281

Total..... 1,675
Total registered tonnage, U.S..... 1,545,524
Total registered tonnage, Canadian..... 270,018

Total..... 1,815,542

The returns to the Department of Railways & Canals gave the following figures for Nov.:

Year.	Vessels.	Vessel tonnage.	Freight tonnage.
1897.....	203	28,937	406,523
1898.....	280	270,749	306,044

For the entire period of navigation to Nov. 30 the figures are:

Year.	Vessels.	Vessel tonnage.	Freight tonnage.
1897.....	4,166	3,739,992	4,858,599
1898.....	3,043	2,745,216	2,965,301

Ontario & the Great Lakes.

The people of Whitby want the Government to take over the harbor & to deepen it to 14 ft.

The steamer North King has been put in dry dock at Kingston, to remain there till the spring.

A steam launch is being built at Kingston, Ont., for Dr. Evans, for use on the river Jordan, Palestine.

The schooner *Peruvian*, which sunk near Foresters' Park, while trying to make Deseronto harbor, with a cargo of iron ore, is a menace to navigation in that part of the bay, & will be raised.

The Government dredge & scows, which have just finished working on the improvements at Kingston, will winter at the Government dry dock. They will undergo repairs during the winter.

The car ferry *Shenango* is having considerable difficulty in making Port Stanley. The Captain says the water is shallow, but the L. E. & D. R. people say there is $1\frac{1}{2}$ ft. more than she draws.

The Hamilton Harbor Committee has forwarded to Ottawa petitions from lake captains, vessel-owners, & local yachtsmen, asking for a range light on the west end of the south pier on the bay side of the Beach canal.

The harbor improvement work at Port Burwell, for which provision has been made in the estimates, will, it is said, be immediately commenced under the supervision of Mr. Teel, engineer of the T. H. & B. Ry. construction work.

The str. *Edna Brydges*, plying on Lake of the Woods & Rainy River, between Rat Portage & Fort Frances, encountered thick ice in the Falcon Rapids on her last down trip of the season. A hole was made in her bow & she was beached just in time to prevent her sinking.

The barge *Toronto*, carrying 18,200 bus. of wheat, was cut through by ice in the Lachine Canal, Nov. 29, & about 4,000 bus. of her cargo damaged. She did not sink, & the balance of the cargo was unloaded in good condition. She was on her way from Fort William to Montreal.

The wreckers have abandoned the schooner *Hector*, ashore near Wellington. The schooner *Kildonan*, which went on at the same time, has been released & was towed to Kingston. The wreckers were driven away from the *Hector* by bad weather. She is valued at \$8,000 & is not insured.

The schooner *Sophie*, which has been tied up at Sarnia for the winter, carried 18 cargoes of lumber to Point Edward, & took up 2 cargoes of supplies from Sarnia to French River. This is a greater number of cargoes than any one sailing vessel has ever carried from Georgian Bay to Sarnia or Point Edward in the history of these places, & sailing both ways. The *Sophie* is owned by the Ontario Lumber Co.

About 3 years ago the steamer *Fairbank* was almost destroyed by fire at Port Colborne. Since then she has been idle, no material repairs having been made to her. She has been bought by Captain Strong, of the tow barge *Calhoun*, & towed to Tonawanda Creek. During the winter she will be rebuilt, & put into commission at the opening of navigation next season. It is estimated that it will cost about \$6,000 to make her fit for service again.

The handsome steam launch *Wanda*, the property of the T. Eaton Co., recently built by the Polson Iron Co., is being enlarged & remodelled, & 15 ft. added to her length. Her speed will be increased to 17 miles an hour. A number of apartments will also be added, & when finished she will be one of the prettiest yachts afloat on Muskoka Lakes. She is being repaired at her moorings in Gravenhurst, where she will winter.

At a meeting of the Executive Committee of the Lake Carriers' Association with a number of vessel owners not members of the organization, held in Cleveland, Ohio, Dec. 13, a resolution was adopted providing that navigation should not open before April 25 next year. In order to bring about what is desired, it was decided to solicit the aid of the grain

underwriters. The object is to prevent the usual early rush of boats for cargoes & the subsequent demoralization of rates.

A number of freight & passenger steamers doing business on the Lake of the Woods & up the Rainy River as far as Fort Frances, make their headquarters at Rat Portage & take considerable business to the town. This year has witnessed a great increase in the popularity of the run to Fort Frances as a pleasure trip, & the twin-screw steamer *Keenora*, which makes tri-weekly trips to that point, is said to have secured considerable revenue from this source.

The big steel propellers *Rosedale* & *Algonquin*, which generally winter at Toronto, have secured new berths at an outside port for the coming winter. Both vessels have been engaged in conveying grain & general merchandise between Fort William & Prescott during the past season. Both belong to Toronto, & would have wintered there had not the Cuba, Persia & Ocean of the Merchants' Line been tied up at Geddes Wharf. There is no other suitable place for shelter along the water front, so the owners decided to tie them up in Owen Sound Harbor, where they will undergo a renovating for next season's work.

As usual the last cargoes of the season carried westward were enormous. The large C. P. R. liner *Manitoba* cleared from Owen Sound for Port Arthur with a record cargo. She carried in all 1,548 tons of freight, equal to 118 car loads. In all 129 cars were awaiting shipment, but 11 of them had to go direct to their destination. The cargo included 22 straight cars of sugar, 3 cars of whiskey, 6 cars of iron pipe, 5 cars of salt & 82 cars of miscellaneous merchandise. The *Owen Sound Times* says: "When the steamer left the dock she was weighted down an inch or more below the water line, & was drawing 15 ft. of water aft & $12\frac{1}{2}$ ft. forward."

The Winnipeg Produce Exchange was anxious that the Minister of Public Works should keep Fort William harbor free of ice to the latest possible date this fall, owing to large quantities of wheat which were late in moving. Mr. Tarte did not give the grain men much encouragement. His reply was as follows:—"We cannot do anything to keep the Fort William harbor free of ice during the winter. Nature is stronger than man, & as we have no proper equipment either for Fort William or other harbors, we have to let things follow their natural course. We would like very much in Montreal to have a few days' more navigation, but we can't get them."

The storms that have swept over the lakes this season have been the most disastrous for shipping in the history of navigation. A cursory estimate places the total losses to underwriters & vessel-owners on the lakes for the season of 1898 at \$2,500,000, & gives it first place for losses in the history of lake navigation. The year 1895 had hitherto held the record with a total loss of \$2,097,000. It still stands as the closest rival with the memorable season just brought to a close. On an average the boats lost have been more important & larger than usual. There have been almost 100 accidents during the last 2 months. A great deal of freight has been recovered from some of the sunken vessels, while others are a complete loss. The storms of Oct. & Nov. made this an extraordinary year. Lake Superior has had a share of the wrecks, with the Straits of Mackinac & narrow passages of the north to increase the totals. Three steamers went down with a loss of \$375,000. Only one mishap occurred on Lake Ontario during the past season, but several vessels have been wrecked. The accident occurred to the schooner *St. Peter*, which, laden with a big cargo, bound for Duluth, went down with all on board, including the captain's wife.

Charting the Great Lakes.

The Hydrographic Survey in connection with the Marine Department has lately settled down in winter quarters at Ottawa, & the staff are busily engaged placing on charts the information gathered during the season. The survey this season was extended along the south shores of Cockburn & Grand Manitoulin Islands, from the southern entrance to False Detour Channel to near the entrance to Georgian Bay, a distance of 80 miles. Soundings were carried on in boats to an average distance of $1\frac{1}{2}$ miles off the shores at intervals of about 175 yards, or to a safe distance outside the shoal water. Outside of this soundings were taken in the deep water from the deck of the steamer *Bayfield* to an average distance of 11 miles from shore. For this work the 2 boats were rowed by 4 men in each, 1,180 miles, & the ship steamed 950 miles. A great deal of care was taken over the examination of the dangerous magnetic reefs lying $2\frac{1}{2}$ miles off the southeast point of Cockburn Island, & immediately in the entrance to Mississauga Strait. Much time & labor were also spent in carefully sounding out the various channels through the Duck Islands & the extensive area of shoal water projecting from the south end of the group. No doubt the correct marking of these dangers will prove a great boon to those compelled to navigate these hitherto unsurveyed waters. Really good harbors are scarce along the south side of the Grand Manitoulin Island, there being not one from the Ducks to South Bay, a distance of 50 miles. The latitude & longitude of a point on the Ducks, & also the magnetic variation of several places along the shore were carefully ascertained.

Before beginning the regular survey work on Lake Huron a careful inspection was made of the approach to Depot Harbor, Parry Sound, to ascertain if the channel were suitable for the deep-draught boats that were expected there. This channel is now so carefully buoyed & lighted by range lights & well-placed gas buoys that no accident occurred during the season. The steamer *Bayfield* was placed in commission April 23, & the crew was paid off on Oct. 25. During that time she had on board 3 surveying officers, a sailingmaster, 2 engineers & a crew of 17. The season was not a good one for surveying, there being fresh breezes nearly always on shore, making work in the boats & landing on a low flat shore, strewn with boulders, very dangerous. This last season has been the first for hydrographic work on Lake Huron, & it is hoped that before the opening of navigation in 1900 the first sheet chart will be issued, embracing all the shore line & water from the mouth of St. Mary's River to the Ducks. A second chart of the south shore of Grand Manitoulin Island will be issued later.

The hydrographic survey of the Canadian shore of Lake Erie was completed in 1897, & has been partially published by the British Admiralty, which lately issued two coast charts of the Canadian shore from Buffalo to Port Burwell, including Long Point & Port Dover. A new edition of the sailing directions for Georgian Bay is being prepared by the hydrographic staff, & will shortly be issued, embodying in it all the latest information.

Canada's Merchant Marine.

A supplement to the 13th annual report of the Department of Marine, just issued, shows that the total number of vessels remaining on the register books of the Dominion on Dec. 31, 1897, including old & new vessels, sailing vessels, steamers & barges, was 6,684, measuring 731,751 tons register tonnage, being a decrease of 595 vessels & a decrease of 57,545 tons register, as compared with 1896. The number of steamers on the registry

books on the same date was 1,785 with a gross tonnage of 213,804 tons. Assuming the average value to be \$30 a ton, the value of the registered tonnage of Canada, on Dec. 31 last, would be \$21,052,020.

The number of new vessels built & registered in the Dominion during the last year was 231, measuring 17,004 tons register tonnage. Estimating the value of the new tonnage at \$45 a ton gives a total value of \$765,230 for new vessels.

Following is a statement by provinces of the number of vessels & number of tons on the register books:

	No. of Sailing Ships and Steamers.	No. of Steamers.	Gross Tonnage of Steamers.	Total Net Tonnage of Sailing Ships and Steamers.
New Brunswick...	923	115	8,373	103,584
Nova Scotia	2,204	142	19,992	283,056
Quebec	1,481	311	54,059	158,077
Ontario	1,424	896	91,928	135,349
P. E. Island	174	21	4,041	15,812
British Columbia	394	226	29,042	28,604
Manitoba	115	74	6,427	7,272
Total	6,684	1,785	213,804	731,754

The new vessels built & registered during 1897 were as follows:

	No. of Sailing Ships and Steamers.	No. of Steamers.	Gross Tonnage of Steamers.	Total Net Tonnage of Sailing Ships and Steamers.
New Brunswick	33	11	1,459	1,738
Nova Scotia	54	6	211	4,259
Quebec	49	13	1,094	4,227
Ontario	30	43	2,101	3,850
P. E. Island	1	3	33	226
British Columbia	20	24	3,848	2,420
Manitoba	10	15	501	363
Total	231	113	9,247	17,094

In British Columbia Waters.

A small tug, the Troubadour, has been added to the fleet which makes its headquarters at Victoria.

The str. Myrtle B, Capt. Benjafield, is plying on Christina Lake, having been taken in from Arrow Lake.

H.M.S. Egeria recently came out of dry-dock at Esquimalt, & has resumed her work of surveying the coast waters.

A whaling fleet is to make Vancouver its headquarters. A Norway whaler is now on the coast making preliminary arrangements. The Pacific whale is not as valuable as the whale found in the Atlantic, but they are very numerous.

Notice has been given by the B.C. Marine Railways Co. of its intention to deposit with the Dominion Minister of Public Works the plans for, & to apply for leave to build a marine railway & wharf on Burrard Inlet, Vancouver.

The C.P.R. str. Minto was launched at Nakusp in the middle of November. She is a sister boat to the Moyle mentioned in our last issue, pg. 247, & will take the place of the Rossland on the Robson-Arrowhead route during the winter, the Rossland going on again in the spring.

It is announced in Revelstoke that provisional directors have been appointed for the purpose of forming a company to run steamers on the Columbia River from Revelstoke north to the Big Bend district. Letters of incorporation have been applied for. The bulk of the capital will be raised in Great Britain, where it is hoped to float the company.

The Ainsworth, a small steamer plying between Nelson & Bonner's Ferry, was wrecked Nov. 29 during a storm on Kootenay Lake, 6 of her crew & 3 passengers being drowned. She left Nelson on the evening of that day on

her regular trip, & when about 6 miles from shore, during a heavy sea, she was struck by a squall & commenced taking in water. The Captain headed her for shore, but she reeled over on her side, filling immediately. She was owned by Braden Bros. of the Pilot Bay Smelter.

Richelieu & Ontario Navigation Co.

Many of the daily papers spoke of a trip made by the Co.'s new steamboat Toronto last month as the trial trip. But it was only a preliminary trip, & the regular trial trip will take place next spring. President Forget informs us that he refused to have the trial trip made this fall, on account of the late date. On Nov. 30 the boat ran from Toronto to Oakville, covering the distance from light to light, 19½ miles, in an hour, under command of Capt. McGiffen, of the Niagara Navigation Co.'s steamer Chippewa. Wm. Black, of Belleville, will be Chief Engineer of the new steamer when she starts on her run between Toronto & Prescott next season.

All the Co.'s steamers, with the exception of the Hochelaga & Longueuil, are being wintered at Sorel. Heretofore a steamer or two has been stored away for the winter at Quebec, & the same was the case at Kingston.

A new electric light plant is to be put in the str. Richelieu, & her boilers and engines are to be overhauled.

Croil's Steam Navigation

Steam Navigation & its Relation to the Commerce of Canada & the U.S. By James Croil, Montreal, 381 pgs., illustrated. Toronto, W. Briggs. \$1.50.

The author treats of the dawn & early days of steam navigation, the Cunard S. S. Co., North Atlantic S. S. Co.'s, steam to India & the East, steam in the British navy, the St. Lawrence route, steam on the Great Lakes, steam commerce on the Great Lakes, steam navigation in all the provinces of the Dominion & in Newfoundland. As the author states in his preface, the pages are but a compilation of materials more or less intimately connected with steam navigation gathered from many sources during many years, & now woven into homely narrative. But they are very interesting, & contain a lot of information not easily available elsewhere.

TELEGRAPHS & CABLES.

Telegraph Line to Yukon.

The prospectus was issued in England recently of the Canadian, British Columbian & Dawson City Telegraph Co., Ltd., share capital £300,000, which is not offered for subscription. The Co. had made an issue at £95 of £225,000 5% 1st mortgage debenture stock. The lists closed Dec. 15, & a London cable of Dec. 19 says construction operations will commence at once. The directors are, Sir James Grant, Sir A. P. Caron, Ottawa; J. H. Turner, M.P.P., Victoria, B.C.; Alderman J. Hyde, Mayor of Banbury, W. P. J. Fawcus, M.I.C.E., M.I.E.E., Director Edison & Swann United Electric Light Co., London. The Consulting Engineer is Sir T. S. Tancred, Bart., C.E.; Resident Engineer, E. G. Woodford, C.E., late State Mining Engineer, Transvaal; Secretary W. Young, 64 Victoria St., London. The following is taken from the prospectus:—This Co. has been formed for the purpose of constructing & working the telegraph lines to be built by the Dawson City & Victoria Telegraph Co., incorporated by the Dominion Parliament in 1898. From Quesnelle (which is the present terminus of the telegraphic system in B.C. northward), where the telegraph line of this Co. will start, the route lies along an excellent trail to Hazelton on the Skeena

River. From Hazelton the line will go along the trail to Telegraph Creek, thence to Teslin Lake, & then across to Atlin City, where connection will be made with the Skagway-Dawson section. The distance traversed by the 2 sections of telegraph line will be about 1,400 miles. It is contemplated that working agreements with both the Canadian Government & the C.P.R. Telegraphs will be entered into. Particular attention is directed to the report of R. E. G. Woodford, C.E., late State Mining Engineer to the Transvaal Government, which accompanies prospectus. The route traversed by the line lies through important mining centres, including the Cariboo, Omenica & Cassiar districts. A number of large mining & trading companies are now operating there. Outside, therefore, of the very large revenue to be derived from the Klondyke district proper, there should always be an increasing revenue from the first-named district. It is intended to construct a line of telegraph from the vicinity of Skagway to Atlin City, connecting at the latter station with the section of the line from Quesnelle, so soon as the necessary powers have been obtained. From Atlin City the route covers very important trading posts, & the inhabitants of these should be large users of the telegraph line. Customs officers & a force of mounted police are stationed at various points along the line. Police stations are established at the junction of White & Dyea Passes, at Tagish Lake, at White Horse Rapids, at the mouth of the Hootalinqua River at Fort Selkirk, & other important points. The 3 largest companies operating in the North-West Territories are the North American Transportation Co., the Alaska Commercial Co. & the Hudson's Bay Co. The first is directed principally from Chicago, the second from San Francisco, & the last from Winnipeg. The telegraph business of these 3 companies alone should be considerable. It is difficult to estimate the large income which will be certain to be derived from messages to & from Dawson City, New York, Boston, Chicago, San Francisco & London. The directors are of opinion, especially having regard to the heavy investment of European & American capital in B.C. & Klondyke, that the following is a reasonable & fair estimate of net profits to be earned:

50 telegrams a day, averaging 10 words, between Dawson City, London, Paris, Berlin, Ottawa and Montreal at 5s. a word, taking 300 days to the year.....	= £37,500
50 telegrams a day, averaging 10 words, between Dawson City, New York, Philadelphia and Boston at 5s. a word, taking 300 days to the year.....	= 37,500
50 telegrams a day, averaging 10 words, between Dawson City, Chicago, San Francisco, Victoria, Vancouver, Seattle and Winnipeg at 5s. a word, taking 300 days to the year....	= 37,500
50 telegrams a day, averaging 10 words, between all other parts of the world, including America, British Columbia, Australia, Europe, etc., at 5s. a word, taking 300 days to the year.....	= 37,500
Local & intermediate traffic, as described on the other side, say.....	= 37,500
Total.....	£187,500

This gives a gross revenue over the Co.'s system of £625 a day. Allowing £36,500 for wages & maintenance, the net revenue would not be less than £151,000 a year, sufficient to cover the debenture interest 13 times over, or to repay the principal in full in 1½ years. It should be borne in mind that the weather in Klondyke during winter is dry & cold, with scarcely any wind, the snow falling in small crystals & not in large damp flakes, as in more southerly climates. The cost of maintenance should, therefore, be very small. The enormous development likely to take place in the goldfields of Klondyke & B.C. in 1899, should add largely to the revenue. In addition to the sources of revenue referred to above, there will be traffic from press telegrams, which will be transmitted at the usual rates. The line is expected to be in operation not later than April next.

The G. N. W.'s President.

The accompanying illustrations are made from photographs of H. P. Dwight, taken in 1861 & 1898 respectively. Mr. Dwight was born in Belleville, Jefferson county, N.Y., Dec. 23, 1828. He left home at the age of 14 with a capital of 50 cents & started life in a country store in Fulton. In 1847, the first year of its existence, Mr. Dwight secured a position as operator with the Montreal Telegraph Co., at Montreal, where he remained until 1850, occupying at the time of his departure the position of chief operator. While stationed at Montreal the great cholera plague of Quebec broke out & the telegraph office at that point was abandoned. Mr. Dwight volunteered his services & remained in charge of the office there during the whole of that disastrous epidemic. In 1850 he was removed to Toronto, where for the first year he was sole operator. Extensions throughout Western Ontario were planned & executed by him, until the lines of the Co. reached out in every direction. The business soon assumed very extensive proportions, & Mr. Dwight was in a few years appointed General Western Superintendent. On the amalgamation of the Montreal & Dominion companies, in 1881, under the charter of the Great North-Western Telegraph Co., Mr. Dwight was chosen General Manager of the combined systems, & in 1892 was elected President; since which he has occupied the dual office of President & General Manager.

Canada stands second to no country in the world in regard to the cheapness & efficiency of its telegraph system, & this fact is due in a great measure to the foresight & executive ability of Mr. Dwight, who inaugurated the present low rates of transmission which the country enjoys, and under which it is possible to send a message 1500 miles for 25 cents. Mr. Dwight rendered signal service to the country at the time of the Fenian Raid, & also during the Northwest Rebellion, & for the latter service was publicly thanked in the House of Commons by the Minister of Militia.

Aside from the telegraph business, Mr. Dwight has taken a very active part in a number of important enterprises. He was for a number of years a director of the Midland Ry., and is now President of the Birkbeck Investment Co.; Vice-President of the Canadian General Electric Co., & Director of the Toronto Electric Light Co. He is also Chairman of the Investigating Governors of the Royal Canadian Humane Association, & a member of the Ontario Fish & Game Commission. He is a keen sportsman, & a man of broad sympathies.

Telegraph Office Changes.

C.P.R. TELEGRAPH.

OPENED: Montford Jct., Que.; Thessalon Station, Ont.; Leduc, N.W.T.; Beresford, Man.; Turner, Maine; Irishman's Creek, B.C.; 111-Mile House, B.C.; Duck Lake, B.C.

CLOSED: Henryville, Que.; Mount Brydges, Ont.; Sebringville, Ont.; Ferrona, N.S.; McLeod Station, N.W.T.; Bridge Creek, B.C.; Vanceboro, Maine.

GREAT NORTH-WESTERN.

OPENED: Dunrae, Man.; Elgin, Man.; Minto, Man.; Ninette, Man.; Waupoos, Ont.; Aylwin, Que.; St. Lin, Que.

CLOSED: Selby, Ont.; Tobermora, Ont.

Notice is given of application to the B.C. Legislature to incorporate a company to build telegraph & telephone lines from the south end of Teslin Lake, to Victoria via Glenora & Telegraph Creek.

Telegraph & Cable Notes.

The G.N.W.'s chief office in Montreal has been considerably improved by new entrances, marble steps & interior changes.

Sir Sandford Fleming has addressed a letter to the Secretary of State for the Colonies advocating the adoption of a system of state-owned cables connecting every British possession & all Great Britain's naval coaling stations. Sir Sandford proposes 3 sections of

H. P. DWIGHT IN 1861.

H. P. DWIGHT IN 1898.

cables, in the Pacific, Indian & Atlantic oceans, & estimates their cost at £6,000,000. The first step he suggests is a state-owned Pacific cable. He contends that if his proposals were carried out the cost of cabling would be enormously cheapened.

The Morning Post has been urging Colonial Secretary Chamberlain to publish the report of the commission on the Pacific cable question. It would seem, however, that he has been forced to hold over the publication of the report till he knows definitely whether or not the colonies will join in paying their share of the expense of the cable service. Certain proposals are under consideration, & Canada's reply is waited for with the hope that she will see her way to take her part in the scheme—

& to make her decision quickly. The arrangement of the whole matter is said to depend on Canada.

The annual supply of telegraph poles for the British telegraph system, which is under the control of the British post office, amounts to about 100,000 poles, & come chiefly from Norway & Sweden. The specifications have recently been changed so as to include Canadian wood if otherwise meeting the requirements. Any person in Canada desiring to tender for supplying should direct inquiries for information to the Controller of Stores, Postoffice Telegraphs, General Postoffice, London, E.C., Eng., & also to the Engineer-in-chief, General Postoffice, London, E.C., Eng.; they require 25,000 poles immediately.

The C.P.R. Co. recently appealed against the assessment as really of the switchboard & instruments installed in the Toronto office for daily use. The judge dismissed the appeal, finding these things essential to the operation of the system. "The instruments themselves have no use or particular value detached from the connection with the telegraph wires, for they, too, become silent, & of no commercial value, but when united with the wires they form, with the poles & wires, one indivisible whole, a practical working telegraph line." The price & value of the instruments had been agreed upon between the parties, so that their assessability was the only question raised.

TELEPHONE MATTERS.

Bell Telephone Co.

The Co. has arranged an exclusive franchise for 5 years in London, Ont. The city is to receive \$1,000 a year & reduced telephone rates. Business telephones are to be \$40 instead of \$45 a year, residence 'phones \$20 instead of \$30, & doctor's & dentists' 'phones \$25 instead of \$35. The People's Co. has withdrawn from the field. The Bell Co. is erecting an exchange building in London.

After a squabble lasting since last June the Town Council of Windsor, Ont., has finally settled the telephone question, & the Bell Co. has won. Though the rival People's Co. dropped out some time ago, some members of the Council opposed to the Bell Co. continued to block the proceedings & to prevent the Co. from securing the franchise. The by-law has, however, been finally passed. The franchise given dates from June last & is for 5 years.

In St. Thomas, Ont., as elsewhere, the People's Telephone Co. did not materialize & the offer of the Bell Co. has been accepted as follows: To pay the city \$250 a year for 5 years; free 'phone at the hospital, reduced rate for 'phone at waterworks, 1 free 'phone at city hall, rates for residences \$20 a year, & when 3 are on a line, \$15 a year.

In the case of Bonn against the Bell Co. at Chatham, Ont., recently \$325 damages were awarded plaintiff, who claimed \$8,000 for injuries sustained in a runaway accident at Wallaceburg, when his buggy collided with one of the Co.'s poles.

The Bell Co. recently appealed to County Judges Macdougall, Dartnell & McGibbon against the assessment of its Toronto plant by the city. Last year the city lumped the assessment of the Co.'s property outside the land & buildings as "personal property, \$100,000." This year this was increased by over \$500,000. The judges reduced the assessment by over \$500,000, & the assessment is now fixed at \$102,550 instead of \$638,649. There were no legal points in dispute in the matter, the question at issue being simply one of values. The following table shows the details of the reduction made by the judges:

	Judges' figures.	City Assess.
Land & buildings	\$34,750	\$ 34,750
Poles, wires, conduits	53,000	377,992
Longdistance Street switchboard	12,000	177,174
Yorkville & Parkdale switchboards	3,900	59,733

Totals	\$102,550	\$638,649
		102,550

Total reduction	\$530,099
-----------------	-----------

There was no dispute as to the assessment on land & buildings.

Eastern Township Telephones.

Judgment was recently delivered at Sweetburg, Que., in the case of F. E. Harvey against Louis Pare, of Granby, for \$5,000 damages for false arrest. Harvey was formerly the proprietor of the Citizens' Telephone Exchange, with head office at Waterloo, & became insolvent. At the curator's sale of the effects the lines, poles & instruments of the Exchange were sold to Pare. Another lot which included the perpetual leases of a certain line of the Sherbrooke Telephone Association, running from Waterloo to Sherbrooke, was bought by H. B. Brown, Q.C., of Sherbrooke, acting in trust for other parties. Mr. Harvey was appointed by the trustees as manager of this line. On the other hand, Pare claimed that this particular line was part & parcel of the lot he had bought. Harvey, in his position as manager of the line, cut the wires connecting it with the wires of the former Citizens' Telephone Exchange. Pare caused Harvey to be arrested & brought before the District Magistrate, who dismissed the case. Harvey then took out the action for damages against Pare, alleging loss of reputation & time, injury to feelings & loss of money expended in defending himself before the District Magistrate. The court held that there was no loss of reputation, that the plaintiff had been paid by the trust for his loss of time, & also that it had been proved that the trust had paid the expenses of plaintiff's defence before the District Magistrate. The value of the injury to plaintiff's feelings he assessed at \$10, & held that defendant had acted with malice in causing plaintiff to be arrested. As to the real ownership of the disputed line the court was not called upon to adjudicate. Judgment for \$10 & costs.

Spokane & B.C. Telephone Co.

A Myers Falls despatch of Nov. 14 says: The management of the Spokane & British Columbia Telephone Co. has been a matter of litigation in the courts for some time past. On October 10 Messrs. Oakes & Aris, President & General Manager, respectively, sold a controlling interest in the stock of the Company to C. O. B. Reddin, of Rossland, B.C., & resigned upon condition that they should be retained, the former as a Director, & the latter as General Manager. The new management failed to accord them these positions, but voted them out. They refused to give up control of the lines & Reddin began suit to gain possession of the property of the Co., & secured a restraining order enjoining Oakes, Aris & all their agents & employes from interfering with the management of the business. This order did not oust them out, & Reddin sent N. R. Stone here this week to take possession, which was refused. Stone then tapped the main wires of the line for the purpose of cutting out the general office. Aris cut these wires, & with F. J. Lively, C. Chamberlain & S. Crager was arrested. Aris caused a warrant to issue for Stone, & he was held to answer under \$500 bonds. Yesterday evening Aris & his associates were released. Judge Richardson yesterday issued an order to Aris, Oakes & their associates to show cause why they should not be punished for contempt of court for violating the restrain-

ing order. The lines of the Co. cover a distance of 200 miles, & are estimated to be worth \$35,000.

British Columbia Telephones, Ltd.

In our last issue, pg. 252, we mentioned the registration of this Co. in England, with a capital of £100,000. Notice has since been given of application to the B. C. Legislature for an act to incorporate the B. C. Telephones, Ltd., for the purpose of enabling the Co. to acquire & take over all rights, assets, &c., held by the New Westminster & Burrard Inlet Telephone Co., & the Vernon & Nelson Telephone Co., & to assume the liabilities entered into by those companies & with other powers.

Within two months after the recent disastrous fire in New Westminster, the N. W. & B. I. Telephone Co. had established a new central office & thoroughly equipped its system throughout the town. The switchboard in the new central has capacity for 150 metallic subscribers. There is also a 10 point trunk line switchboard. At present there are 7 trunk lines, 2 from Vancouver, & 1 each from Ladner, South Westminster, Port Moody & Chilliwack, &, of course, intermediate points, & another from Blaine, Wash., where connection is made with the Sunset Telegraph & Telephone system. Apart from the loss sustained by the Telephone Co. by the fire, the cost of restoring the system has been considerable, & includes the erection of 100 new poles & the stringing of 150 miles of new wire, apart from 1,000 ft. of cable along Columbia Street, which contains 102 wires. The wire weighs 56 lbs. a mile, or over 40 tons in all.

Telephone Items.

A local telephone line is projected from Cannington, Ont., to Hartley, Victoria Road, & Kirkfield.

The Little Salmon River Telephone Co. has been granted the privilege of carrying its line into St. John, N.B.

The People's Telephone Co., of Sherbrooke, Que., is applying for confirmation & amendment to its letters patent, & for powers to increase its capital stock & issue bonds.

G. T. Baird, of Perth Centre, N.B., & others give notice of application for incorporation, under the N.B. Joint Stock Co.'s Act, as the Victoria Telephone Co., to build & operate lines within the counties of Victoria & Madawaska. Capital \$5,000.

Notice is given of application to the B. C. Legislature to incorporate a company for electric lighting the town sites at Teslin Lake, Glenora, Telegraph Creek, & Atlin City, with power to operate telegraph & telephone lines within & between the town sites.

The Metis Telephone Co. recently elected the following directors at a meeting at St. Octave de Metis, Que.: Hon. President, Dr. J. A. Ross, M.P.; Honorary Vice-President, L. F. Pinault, M.P.; Directors, Rev. Mr. Chouinard, L. M. Desrosiers, J. Gendron, A. C. Landry, L. M. Langlais, Dr. J. C. Demers, & D. Caron.

In Michigan farmers are fast taking advantage of the benefits offered by the telephone, & it will be but a short time when telephones will be as common in the country as they are now in the cities. In Allegan County the farmers have an exchange of their own, & maintain it by annual assessment. In Oceana County every township has telephone connection with Hart, the county seat, & this system is essentially a farmers' exchange, being owned & maintained chiefly by the farmers & fruit growers. Gratiot County has another farmers' exchange, which, with Ithaca as the center, has connections with every township & many farmers.—Electrical Engineering.

Express Companies' Items.

The Dominion Express Co. has established wagon routes between Beamsville & St. Catharines, Ont., & between Picton and Northport.

The Western Express Co. has opened offices at Napoleon, Withita & Braddock, N. D., on the extension of the M. St. P. & S. S. M. line from Kulm to Braddock.

The Canadian Express Co. handled very large shipments of deer from Muskoka this season. In 2 weeks the Co. carried 1,754 deer, weighing 182,618 lbs.

Owing to the increase in the express business at Toronto it is likely the quarters occupied by the Canadian & Dominion Express Cos. will have to be enlarged.

The Dominion Express Co. has opened offices at Pincher, Alta. (formerly Pincher Creek), Doris, Fernie, Cranbrook, Kootenay Landing, Moyie & Wardner, B.C., on the Crows' Nest Ry.

The Northern Pacific Express Co. has opened the following offices on its Souris River branch in Manitoba: Departure, Tiger Hills, Minette, Ontap, Dunrea, Margaret, Minto, Fairfax, Elgin.

W. M. Gordon, for a number of years running messenger for the Dominion Express at Winnipeg, has been appointed Route Agent, with headquarters at Winnipeg, succeeding H. F. Maley, assigned to other duties.

It is said that Stanley Metcalfe, a well-known clerk in the accounting office of the Canadian Express Co., is missing. He was also Secretary-Treasurer of the Co.'s Employees' Benefit Association, &, as such, handled the funds. That there is a shortage in his accounts with the Association has been ascertained, it is alleged, but the books are in such a condition that it is hard to determine just how matters stand.

The Pacific Express Co. announces the opening of the following offices in Canada, which are served by the Wabash trains on the southern division of the G.T.R.: Aylmer, Belle River, Cayuga, Chatham, Delhi, Glencoe, Jarvis, Lawrence, Middlemiss, Newbury, Niagara Falls, Port Robinson, St. Thomas, Simcoe, Thamesville, Tilsonburg, Welland, Windsor.

General Manager Stout announces the appointment of S. A. Davis, as Superintendent of the Western Express Co., with headquarters at St. Paul, Minn., vice R. Stewart resigned. The Express Gazette says Mr. Davis received his first express experience under P. R. Keim, then Superintendent of the American Express at St. Joseph, Mo. This was 10 years ago, and his duties were those of stenographer and over-and-short clerk. He was later promoted to chief clerk, and has latterly been filling that position at St. Paul, Minn., under General Superintendent Naylor. He combines all the elements of a successful expressman.

Ronald Stewart, who has been appointed Superintendent of the Great Northern Express Co., vice J. F. Lawless, resigned, entered the service in 1883 as driver for the American Express at St. Paul. A month later he was placed in charge of the "O. H." desk, & from that position promoted to Assistant Cashier, which he filled until 1885, when he was appointed Cashier at Minneapolis. Five years later he was given a similar desk at St. Paul. In 1891 he was appointed Agent of the National Express at Detroit, Mich. He returned again to St. Paul a year later as Superintendent's Chief Clerk, & upon the establishment of the Great Northern Express Co. became its St. Paul Agent, which position he filled until Jan., 1895, when he was placed in charge of the Western Express Co.'s lines as Superintendent. He resigns the latter office to assume his new duties. Express Gazette.

The I.C.R.'s General Superintendent.

James E. Price was born at Peticodiac, N.B., Oct. 18, 1854, & entered the railway service in July, 1867, working as a telegraph operator until 1873, from which date until 1876 he was train dispatcher at Moncton. In 1876 the late C. J. Brydges, then General Manager of the I.C.R., appointed him Assistant Superintendent from Moncton to Campbellton, 185 miles. At that time the line was under construction between Moncton & Ste. Flavie, under the supervision of Collingwood Schrieber, the present Deputy-Minister of Railways & Canals, who highly complimented Mr. Price for his energetic & faithful services in connection with the completion of the work. On the change of Government in 1879 a reorganization of the railway staff took place, Mr. Price being reduced to the position of train dispatcher at Campbellton. In 1881 another change in the staff was made, & Mr. Price was restored to his former position with the line from Campbellton to Ste. Flavie (105 miles) added. Sir Charles Tupper, then Minister of Railways, in reply to an address presented to him at Campbellton, said: "In Mr. Price, the District Superintendent, I have found a gentleman who has heartily sustained me in carrying out the policy of economy, although it bore severely against himself. He was assigned to a lower station & a reduction in his salary of one-third & went to his new duties without a murmur. I have had great pleasure in restoring him his former salary & giving him a higher position, as he is one of the most deserving & able officers on the road."

In 1892, Mr. Price was transferred to the Halifax & St. John district, the most important district of the I.C.R., as District Superintendent, & in Oct. last he was promoted to the General Superintendency of the whole line.

Service on a Railway Company.

In a recent suit, Beer vs. Guimond, C.P.R. Co. garnishee, a decision was given by Judge Forin, that service on the Co. at Nelson, B.C., is irregular. In a former case, Hewson vs. C.P.R. Co., judgment was rendered as follows: "That the plaintiffs were served on the Stationmaster at Donald, & by the judgment of the full Court the service was held bad."

The following is a copy of the Co's By-law, no. 70, covering such services: "By-law no. 51 shall not be in force on or after May 1, 1894, & is hereby repealed as to that date, on & after which day the head office of the Co., in Vancouver, B.C., is hereby appointed & fixed as the place where service of process may be made upon this Co. in respect to any cause of action arising within the said Province."

FINANCE, MEETINGS, &C.

White Pass & Yukon Railway.

The 1st ordinary general statutory meeting of this Co. was held in London, Eng., Dec. 5, Hon. S. Carr-Glyn, Chairman of the Co., presiding. After preliminary remarks by the Chairman, S. H. Graves, of Close Bros. & Co., London & Chicago, spoke at length. He said: "Having just arrived from the Pacific coast I am glad to comply with the suggestion that I should give you the latest news as to the prospects of our railway & of the Yukon country. It only takes a few words to tell you

money from us. I will not weary you with the details, but will simply say that all the laws of all the countries have been in every respect fully complied with, & that every attempt to stop or delay our work was successfully met & defeated, & that not one penny has been extorted from us on the other side of the Atlantic; nor has the work been delayed for one hour by all the numerous & ingenious schemes which were hatched to get money out of us, & which out west come under the generic title of "hold-up games." Thus our legal difficulties were in the end disposed of as satisfactorily in their way as the legislative ones.

Having secured the services of E. C. Hawkins, whom I had known for a number of years, & who was then chief engineer for a large enterprise in which my firm was associated with a number of leading men in New York, we reached Skagway on April 10 last. After a rapid preliminary reconnaissance, he reported that the line was entirely feasible, but that certain conditions were different from what he had been led to suppose in connection with the possession of the town site & of the wharf at Skagway, & that in consequence we should be obliged to materially modify our programme. The necessary arrangements have been made, Mr. Hawkins & his staff of engineers returned to Skagway about the middle of May, & proceeded to run alternative lines of survey in order to secure the best possible line to the summit of the pass. For this purpose no less than five different & complete lines to the summit were fully surveyed & worked out before the line was finally located. Of course, too much care cannot be taken in deciding exactly the best line before beginning to spend money on construction itself. All this unavoidably took up much valuable time, especially as the difficulties of surveying in that country are almost beyond description. The result was that it was well along in June before Mr. Hawkins & I were finally satisfied that we had exhausted all the possibilities, & had reached the best possible solution of all the problems involved in locating the line. Construction commenced in June, at first on a small scale, with only about 200 men, who were available at Skagway. These were supplemented as fast as possible by men obtained from the States & Canada, until in July we were working over 1,500 men, & had every prospect of increasing to 2,500 men as soon as the harvest on the Pacific coast was over. In August the news of the Atlin gold discoveries reached our camps, & a stampede ensued, which reduced our force in one day from about 1,700 to a little over 600. It remained at about the latter figure during Aug. & Sept., gradually increasing to about 1,000 in Oct., & in spite of all our efforts, since, we have been

JAMES E. PRICE.

about our legislative difficulties, now they have been disposed of; but if any of you have any knowledge of the difficulties of getting even a single bill through our British Parliament, you will appreciate that it is not an easy matter to attend to half-a-dozen bills in three different Legislatures, which are separated by distances greater than those that separate London, St. Petersburg, & Athens. The legal questions arising were of two kinds: Firstly, compliance with the various laws of the three different countries in which we were constructing our railway; & secondly, defence against organised attempts to prevent or delay our work, or to extort

NEXT ANNUAL MEETING at Winnipeg, Oct. 13, 1899.

unable to increase it materially above the
latter figure. The men who did remain were
all green hands & unskilled, & quite unable to
attempt the very difficult rock work then in
progress. The result was that instead of
reaching the summit of the Pass by the end
of Sept., as we should easily have done had
we been able to maintain the same rate of
progress as in July, we are only now about
reaching the summit, when we had hoped to
have long since reached the lakes. However

disappointing this may be for the moment, it
is a small price to pay for the discovery of
the Atlin gold fields within a few miles of our
line.

From salt water to the lakes the work done
is substantially all rock work, & the line has
had to be blasted out of the solid rock. The
difficulty & cost varied according to the ac-
cessibility of the work, & the amount of rock
to be blasted. Sometimes over 100,000 tons
of solid granite rock were dislodged by a
single battery blast, & this reached a maxi-
mum on Rocky Point & Tunnel Mountain. To
reach the latter from the camp, some 1,500 ft.
below, over 10 miles of trail had to be made,
& 4d. a pound had to be paid to get our dyna-
mite & powder carried up to the grade, from
which one could almost have dropped a stone
into the camp below. Of course, no horses
could be used on this work, & everything had
to be done by hand. The work on the U.S.
side of the summit was all practically complet-
ed early in Nov., with the exception of the
tunnel, some 300 ft. long, on Tunnel Moun-
tain, & a bridge beyond over a deep ravine
to which we could not convey the heavy bridge
material till the tunnel was finished. The
work on the tunnel, when I left, was being
pushed from both ends, but was delayed by
the necessity of removing all the debris by
hand. It was expected that the tunnel would
be finished by the end of Nov., & that within
a week of its completion trains would cross
the International boundary line at the summit.
Meanwhile work has been pushed ahead as
rapidly as our force of men would admit on
the Canadian side, and as fast as work is fin-
ished up on the U.S. side the men & camps
are being moved to the Canadian side. A
letter received to-day advises that about 1,000
men are now at work beyond the summit.
Several miles of comparatively easy work are
now ready for the track-layers on the Cana-
dian side; but there is some heavy rock work
just beyond the summit that must be done be-
fore any track can actually be laid. We hope
to be able to push work all through the winter;
but in any case there should be no difficulty
in reaching Lake Bennett long before naviga-
tion opens in the spring, & meantime it will
be easy to forward goods & passengers by sleigh
downhill over the snow from rail head to Lake
Bennett. The line we have built has nearly a
uniform gradient of under 4 ft. in 100 ft., &
has no curve exceeding 16 deg. These figures
excite universal surprise & admiration amongst
men familiar with American mountain railway
work. I will give you only one more illus-
tration of what I mean by saying that we have
preferred economy & safety of operation to
economy of construction. The line from Skag-
way to the summit is an uphill pull of 20 miles
long, with only a single track. If a train
that had started to climb from the bottom had
to be allowed to reach the top before another
train could start down, it is obvious that the
capacity of the line would be much reduced.
This could be obviated on a level line by sid-
ings; but sidings on an incline are a source of
great danger. By considerably increasing
the cost of construction, we have succeeded in
making several large level sidings, & thus
have in effect cut our hill up into a number of
smaller hills, separated by level places where
trains can pass. These are only instances of
what is apparent from the whole line, viz.,
that it was located & constructed to make a
profit for the company operating the line, in-
stead of for the contractors.

It is now certain that the capacity of the
line will be taxed to the utmost in order to
keep pace with the development of the Yukon
country, & that the rates of freight will be so
remunerative that the cheapest line in the
long run is the best possible line that money
can build. Our traffic manager (Mr. Gray) at
Seattle, in his report, states that he has seen
& had communication with some of the lar-
gest shipping agents on the Pacific Coast, &

that he has already arranged rates for a very
large amount of freight. He estimates that
for Jan., Feb., Mar. & April the railway will
have to carry over 12,000 tons at such rates
that the revenue to the summit only will
amount to over \$736,000, & the revenue will
be doubled as soon as the railway is open to
the lakes. I want also to explain that the
Klondike district is only a small corner in the
Yukon country, & Dawson city is only the
metropolis of the Klondike. Nor is it upon
the Klondike alone that the future of our rail-
way depends. Already gold discoveries have
been made in other parts of the country that
promise to eclipse the Klondike fields. This
is notably the case with the Atlin goldfields,
which already have been proved more exten-
sive & much more uniformly rich, though no
claims have yet been found so wonderfully
rich as the richest in the Klondike. The Atlin
goldfields are also more accessible, & the
gold is much more cheaply & easily produced.
There is no royalty payable on the Atlin gold,
& it is already apparent that this field is destined
to support a larger mining population than
the Klondike. It is also a good grass coun-
try, & will support during the summer months
a large number of cattle, & the summer, not
the winter, is the busy season at Atlin.
It is entirely dependent on our railway for
everything. Other districts in the Yukon
have been prospected and proved this season,
involving areas of thousands of miles in ex-
tent, & mention should be made of the won-
derful bench claims at Manook, where placer
gold has been found at heights up to 800 ft.
above the level of the river, thus proving that
the Yukon gold was deposited at a period of
the world's history when conditions were very
different from those at present, & that the
placer gold-bearing area is not confined to
narrow creek & river bottoms, but extends
throughout much greater areas. But it is a
mistake to suppose that the future of the
Yukon depends upon gold alone, however
widely scattered. It is now known to be re-
latively as rich in copper as in gold, & coal
has been discovered at several places, & good
indications of oil. It has become evident that
it is a country of extraordinary mineral rich-
ness extending throughout an area nearly as
large as Europe. It has also been proved
that the climate is healthy & pleasant during
the summer, & that with ordinary food &
clothing the winters are no more to be feared
than in Manitoba. Neither is the country a
barren desert; on the contrary, it is in many
places most fertile, & produces enormous
crops of grass, & has been proved well
adapted for all crops that can be grown any-
where in northern latitudes, especially oats &
potatoes. The White Pass & Yukon Ry. is
the key that is about to unlock the door to
this rich country, & the key is now upon the
point of being turned in the lock. To-day we
have the difficult part of our work done, our
railway organized for business, & the Govern-
ments of Canada, B.C. & the U.S. all most
friendly. Having the trunk line between salt
water & the river, we shall put in branch lines
as feeders as fast as they are warranted by
the condition of particular districts. Mean-
while the wonderful net-work of rivers & lakes
take the place of branch lines, & all act as
our natural feeders.

Vancouver's Phenomenal Growth is forc-
ibly illustrated by a handsome panoramic view
of the city, recently issued by the Vancouver
World, whose enterprising proprietor, J. C.
McLagan, is always to the fore in keeping
the actualities and possibilities of the city in
the public eye. The view, some 40 by 30 ins.,
conveys a much better idea of the city than
can be gathered from any map. The station,
workshops, etc., of the C.P.R. are shown in
very correct detail, as well as the various
wharves & other harbor accommodations.

Temiscouata Railway Matters.

Judge Curran, of the Quebec Court of Review, recently gave judgment in the case of A. R. Macdonald against E. D. Boswell, C. Riordan & J. J. Macdonald, reversing the judgment of the Superior Court unanimously. The case arose out of the construction of the Temiscouata Ry. The judgment of the Superior Court ordered defendants to hand over to plaintiff bonds, with interest coupons attached from April 8, 1890, & being a first lien on the railway for \$193,000, & in default to pay that sum to plaintiff, with interest & cost of suit. Plaintiff alleged in his declaration that he had entered into an agreement with defendants, for the building of 66 miles of railway from Fraserville to the boundary line of New Brunswick, with a capital stock of \$100,000, to be divided into 4 shares of 25% each, 1/4 of the whole to be held by plaintiff & the remainder by the 3 defendants. It was further agreed that plaintiff was not to be liable to calls, & that the capital should be supplied by defendants; the defendants were to build the road, & out of the bonds issued plaintiff's share should be as follows: 15% in addition to his interest in such bonds as one of the shareholders of the Co., the amounts of 15% were to be paid to plaintiff & in excess of the 25% as a shareholder in the said Co. Bonds were issued to the extent of \$1,600,000, & the road was built & finished in 1890. Plaintiff claimed he is entitled to receive \$240,000 of the Co.'s bonds, with a first charge for the payment of the same upon the railway. J. J. Macdonald died in March last, & appointed as his testamentary executors the three defendants, Dame Cecilia Macdonald, R. Ryan & G. P. Brophy, declaring that defendants had accepted to act as such, & that during the years that followed the formation of the Co. up to Jan. 1, 1890, defendants have paid to plaintiff on account of the \$240,000, & different accounts amounting together to \$400,000.

The chief plea of the defence was that plaintiff was the President & a director of the Temiscouata Ry. Co., & that these contracts were unlawful & corrupt agreements in violation of the Consolidated Railway Act, 1879, & of the laws in that behalf enacted; that the plaintiff, in consequence of his position, could not lawfully become a partner in the construction company for the building of the railway, nor could he validly stipulate for the payment & delivery to him of the bonds of the railway company. The Superior Court judgment was in favor of Mr. Macdonald, but the Judge of the Court of Review, in reversing this judgment, said the main question was whether agreements regarding the appropriation of part of the bond issue was legal or illegal. In the present instance, Parliament having declared the act done by the plaintiff to be a misdemeanor, it brought the act within the purview of the criminal law. That act is a criminal act in all the Provinces of the Dominion, & the pretensions of the plaintiff that it interferes with civil rights in the Province of Quebec cannot avail. It is impossible to say that the clauses referring to the 15% upon the bonds are independent of the rest of the contract. The payment of this 15% is an integral part of the document, a condition of the contract pure & simple, without which, presumably, plaintiff would not have contracted with defendants at all, but would have sought others willing to accede to his terms. No reason that he can give will make his action valid in having made such a stipulation, which is in direct contravention of the law. Finally, plaintiff put forward the following argument:—"Should the court be of opinion that plaintiff has a right to no more than \$60,000, being 15% upon the first issue of bonds, he has still a first claim of \$13,000, inasmuch as it has been proved that defendants paid to the promoters \$47,000, & no more." Here,

again, plaintiff met with the same fatal objection. Defendants contended that the 15% was to go to certain persons, who are described as promoters of the original charter of this company, & their assertions that the names of those persons were to be furnished, that they were furnished, & the amount of their claims (\$47,000) duly paid have been fully established.

On this point the Judge said:—"The balance is so much money that plaintiff, in contravention of the law, stipulated should be paid to himself. He has no right to this \$13,000 any more than to the full amount of the 15% on the entire emission of the bonds. We consider, therefore, that the judgment in favor of plaintiff should be reversed, & that is the unanimous judgment of this court."

THE PURSUED IN PURSUIT.

Shortly after the decision above mentioned had been given the Temiscouata Ry. Co. entered a suit against A. R. Macdonald, to compel him to render an account of the profits realized by him under contracts of May & Sept., 1886, for the construction of the railway, or, in default, to pay over to the Co. \$300,000. The action is for an accounting for all money, benefits & advantages derived by Mr. Macdonald under his agreement with the contractors. The Co. alleges that this agreement was illegal, corrupt & detrimental to the interests of the Co., & that, inasmuch as Macdonald received these benefits while acting in the fiduciary capacity of president & director of the railway Co., he is obliged to account for & deliver to the Co. any profits so derived by him. These profits & securities in cash, stock & bonds are estimated by plaintiffs of the value of \$300,000, & for this amount plaintiffs ask an alternative condemnation against defendant in case of his failure to account for & pay to the Co. the moneys, profits, benefits & advantages obtained by him under the agreements held to have been illegally entered into with the contractors for the building of the road.

CIRCULAR TO THE BONDHOLDERS.

Following is a copy of a circular recently issued to the bondholders: "The last interest coupon upon the main line bonds payable by the Quebec Government having now been cashed, & default on the bonds being therefore imminent, it will shortly be necessary for the committee to take steps to prepare to enforce the bondholders' security & rights. To this end it is essential that the main line bondholders should at once deposit their bonds with the committee, giving the latter full power to act in such a way as they may think fit, & to the same extent that each bondholder could himself. To facilitate the arrangements which the default on the main line bonds will necessitate, the committee has been advised that it is desirable to register itself as a limited company, under the name of the Temiscouata Railway Bondholders' Committee, Ltd. This has accordingly been done, & you are requested to send your bonds at once to the Trustees, Executors, & Securities Insurance Corporation, as agents for the committee, who will give a receipt for the bonds lodged, which will subsequently be exchangeable for the certificate of the Temiscouata Railway Bondholders' Committee, Ltd. In making this deposit you will incur no pecuniary liability, but without possession & control of the main line bonds it will be impossible for the committee to take action to safeguard the bondholders' interests in view of the default now imminent. In the case of bearer bonds that have been registered, it will be necessary to unregister the bonds before they are transferred to the committee or the latter issue their certificate. The committee will be prepared to effect this unregistration on behalf of any bondholder, merely charging him the nominal sum which has to be paid by the holder for this purpose. In due course after the deposit by any holder

of a registered bond, the document or documents required to unregister it will be sent to him for signature. As soon as sufficient bonds have been deposited, application will be made to the Stock Exchange for a quotation of the committee's certificates. The interest on the St. Francis Branch bonds, payable by the Quebec Government, having still some time to run, the committee do not yet require the deposit of those bonds."

Grand Trunk Earnings, Expenses, &c.

The following statement of earnings supplied from the Montreal office, includes the G.T. of Canada, the Chicago & G.T., & the Detroit, Grand Haven & Milwaukee Rys:

	1898	1897	Decrease	Increase
July.....	\$1,800,884	\$1,992,628	\$191,744	
August.....	1,992,802	2,001,235	8,433	
Sept.....	2,261,148	2,411,308	150,160	
Oct.....	2,200,873	2,338,493	137,620	
Nov.....	2,199,790	2,192,739	7,051	\$27,133
Dec.....	2,176,940	2,186,843	9,903	
	\$12,742,426	\$13,118,863	\$376,437	\$27,333

The following figures are issued from the London, Eng., office:

GRAND TRUNK RAILWAY.**Revenue Statement for Nov., 1898:**

	1898.	1897.	Increase.	Decrease.
Gross receipts....	£473,094	£470,574	2,520	
Working expenses....	241,773	243,558	1,785	2,085
Net profit.....	131,590	132,716	1,126	

Aggregate for 5 months to Nov. 30, 1898:

	1898.	1897.	Increase.	Decrease.
Gross receipts....	£1,781,224	£1,877,948	96,724	
Working expenses....	1,134,081	1,170,741	36,660	32,050
Net profit.....	647,133	691,207	44,072	

CHICAGO & GRAND TRUNK RAILWAY.**Revenue Statement for Nov., 1898:**

Velvet Lisingo. In a recent case in England, in the Queen's Bench Division, Lister & Co., Ltd., of Manningham, manufacturers of the pure mohair velvet "Lisingo," so largely used for upholstery, railway cuts & steamship saloons, &c., obtained judgment against Dix Bros. for an infringement of their patent of 1889 for the manufacture of Lisingo velvet.

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net profits & increases or decreases over 1897 from Jan. 1, 1898, are as under:

	Earnings.	Expenses.	Net Profits.	Increase or decrease.
Jan. 1, 1898	\$1,156,744.18	\$1,035,097.59	\$121,646.59	
Jan. 1, 1897	1,156,744.18	1,035,097.59	121,646.59	
Mar. 31, 1898	1,156,744.18	1,035,097.59	121,646.59	
Apr. 30, 1898	1,156,744.18	1,035,097.59	121,646.59	
May 31, 1898	1,156,744.18	1,035,097.59	121,646.59	
June 30, 1898	1,156,744.18	1,035,097.59	121,646.59	
July 31, 1898	1,156,744.18	1,035,097.59	121,646.59	
Aug. 31, 1898	1,156,744.18	1,035,097.59	121,646.59	
Sept. 30, 1898	1,156,744.18	1,035,097.59	121,646.59	
Oct. 31, 1898	1,156,744.18	1,035,097.59	121,646.59	
Nov. 30, 1898	1,156,744.18	1,035,097.59	121,646.59	

\$1,156,744.18 - \$1,035,097.59 = \$121,646.59 - Increase.

Approximate earnings for Dec., 1898, \$2,045,000, against \$2,320,000 in Dec., 1897, an increase of \$315,000.

SUBSIDIARY LINES.

DULUTH, SOUTH SHORE & ATLANTIC.—The approximate earnings for Dec. were \$158,745, as compared with \$128,408 for the corresponding period, an increase of \$30,337.

Net earnings for 10 months to the end of Oct., 1898, \$511,502 compared with \$471,292.

MINERAL RANGE, HANCOCK & CALUMET.—The approximate earnings for Dec. were \$31,034, as compared with \$30,045 for the corresponding period, an increase of \$989.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—The approximate earnings for Dec. were \$333,023, as compared with \$323,141 for the corresponding period, an increase of \$9,882.

Net earnings for 4 months to end of Oct., 1898, \$753,064, as against \$665,589.

Canadian Pacific Railway Land Sales.

	Acres.	Amount.
Jan. 1, 1898	22,044	\$72,924.00
Feb. 1, 1898	20,650	66,399.00
Mar. 1, 1898	33,421	109,010.00
Apr. 1, 1898	43,143	140,275.00
May 1, 1898	43,143	137,835.00
June 1, 1898	49,203	160,199.00
July 1, 1898	49,203	160,199.00
Aug. 1, 1898	49,203	160,199.00
Sept. 1, 1898	49,203	160,199.00
Oct. 1, 1898	49,203	160,199.00
Nov. 1, 1898	49,203	160,199.00
Dec. 1, 1898	49,203	160,199.00
Totals	318,527	\$1,123,696.00

The agents of the Canada Eastern recently presented Supt. Hoben with an address & a gold headed cane.

Canadian Government Railway System.

Following is a comparative statement of revenue & working expenses for the years ended June 30, 1897 & 1898:

INTERCOLONIAL RAILWAY.		
	1897.	1898.
REVENUE.		
Passenger traffic	979,005 57	\$1,053,864 64
Freight traffic	1,687,050 42	1,857,740 06
Mails and sundries	199,972 03	206,065 15
	\$2,866,028 02	\$3,117,669 85
WORKING EXPENSES.		
Locomotive power	995,247 29	\$1,031,630 81
Car expenses	708,513 01	733,366 18
Maintenance of way & works	624,454 43	861,727 62
Station expenses	384,082 77	400,164 67
General expenses	207,107 39	209,547 59
Car mileage	5,663 78	21,211 64
	\$2,925,968 67	\$3,257,648 51
Deficit	\$ 59,940 65	\$ 139,976 66

PRINCE EDWARD ISLAND RAILWAY.		
	1897.	1898.
REVENUE.		
Passenger traffic	62,695 07	\$ 63,734 61
Freight traffic	69,872 66	75,845 60
Mails and sundries	20,875 40	19,370 40
	\$153,443 13	\$158,950 61
WORKING EXPENSES.		
Locomotive power	55,991 60	\$ 56,520 66
Car expenses	41,967 07	38,827 84
Maintenance of way & works	84,965 58	79,273 33
Station expenses	28,858 47	29,076 53
General expenses	11,328 29	12,660 20
Renewals of permanent way	17,378 89	15,060 18
	\$240,489 90	\$231,418 74
Deficit	\$ 87,046 77	\$ 72,468 13

In the past 10 years the lowest deficit on the P.E.I.R. was \$63,732 in 1893, & the highest \$132,264 in 1892.

The total deficit in operating the Government System for the year ended June 30, 1898, was \$212,446.79.

Financial Notes, Meetings, &c.

The Alberta Ry. & Coal Co. has issued a writ in Toronto against Mackenzie & Mann for \$110,000 for alleged breach of contract. It is said this is in connection with the sale of narrow gauge rolling stock, rails, etc., for the Canadian Yukon Ry.

Calgary & Edmonton.—Net earnings for Nov., '98, were \$5,694.46, compared with \$15,517.13 for corresponding period. The Co. announces that the Dominion Government subsidy for the six months ended Dec. 31, 1898, together with the net earnings of the Co. to Oct. 31 last, permit of a distribu-

tion of 2% in respect of the interest due on Jan. 1 on the 1st mortgage bonds, & payment of such interest will be made on Jan. 2 by Morton, Chaplin & Co., London, Eng.

Canada Eastern.—At a meeting of shareholders at Fredericton, N.B., Jan. 7, it was unanimously resolved, under power conferred at last session of the Dominion Parliament, to sell the railway & branches, with all its property rights, &c., to the Alex. Gibson Ry. & Mfg. Co., which was incorporated by the N. B. Legislature last year.

Canadian Pacific.—Baring Brothers & Co., London, Eng., announce the payment on Jan. 2 of the coupons then due on the following issues:—Atlantic & Northwestern Ry. 5% sterling 1st mortgage bonds; C.P.R. 5% 1st mortgage bonds; Algoma branch 5% 1st mortgage bonds, & 3½% land grant bonds of 1888.

Central Ontario.—The Bank of Ottawa has issued a writ against this Co. claiming \$306,759. The plaintiff claims that this is the amount due from the defendant upon coupons to debenture bonds issued by the Co. When the Co. commenced business some years ago it issued debenture bonds which were purchased by the Bank of Ottawa. It is claimed the interest on the debentures has not been paid.

Central Vermont.—It is stated that the G.T.R. has accepted the terms of the Central Vermont Ry. bill as passed at the recent session of the Vermont Legislature. The new corporation, which has accepted this charter, is organized for the purpose of acquiring the title & to operate the property of the Central Vermont & its branch & leased lines, & the incorporators are to be:—E. C. Smith, D. D. Ranlett, C. M. Hays, C. Percy, J. G. McCullough, W. S. Webb, Ezra H. Baker, & S. E. Kilner, who organize as the Central Vermont Ry. Co. The charter provides that a majority of the directors of the reorganized road must be residents of Vermont, & the Clerk & Treasurer of the Co. must be residents of the U.S. The first meeting of the incorporators will be held in St. Alban's after the roads & leases of the Central Vermont system have been sold under the decree of the Circuit Court of the U.S. for the District of Vermont, when the incorporators will elect directors, a President, a Clerk & Treasurer, when the Co. will be fully organized.

Columbia & Western.—On returning to Rossland, B.C., lately from Montreal, D. J. Fitzgerald said he had gone east in the hope of securing payment from the C.P.R. for cer-

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

= = Best of All Non-Conductors = =

Mica Boiler Covering Co., Limited, 9 Jordan St., Toronto, Ont.

tain fuel & stores, the property of the B.C. Smelting & Refining Co., which the C.P.R. specifically agreed to purchase separately, & which he alleged were not included in the transfer of the smelter & railway when F. A. Heinze sold out his B.C. interests to the C.P.R. last spring. He said the two companies had failed to adjust their differences, & that as the C.P.R. had refused to treat with him & fulfil its alleged covenant, Mr. Heinze was forced to sue R. B. Angus & Thos. G. Shaughnessy, as representatives of the railway, to secure payment of his claim.

At the recent annual meeting of the C. & W. Ry. Co., the following directors were elected: T. G. Shaughnessy, R. B. Angus, W. S. Taylor, T. Tait, I. G. Ogden, Montreal; R. Marpole, G. McL. Brown, Vancouver; H. E. Beasley, F. W. Peters, Nelson. Mr. Shaughnessy was subsequently elected Vice-President, & H. Campbell Oswald, Secretary.

Dominion Atlantic.—Net earnings for 11 months, to end of Nov., 1898, \$505,033, compared with \$471,292.

Thirty-two years ago the Province of Nova Scotia incorporated the Windsor & Annapolis R. Co., & amongst other concessions granted it the right to a drawback of all customs duties paid upon materials & stores required for the construction & operation of the road. The Dominion Atlantic Ry. Co. succeeded to the property & rights of the W. & A. Co., & in the Federal Act of 1896, authorizing the transfer, provision was made for the extinguishment of the exemption from the payment of duty by commuting it at a lump sum. On Oct. 7 last an agreement was signed, by which the D.A. R. Co. gave up the privilege in consideration of the payment of \$100,000, which was handed over on Oct. 19. A proclamation has been issued repealing all Provincial & Federal legislation granting the right to the drawback. This settlement does not prejudice the right of the Co. to claim a refund of all duties paid up to Oct. 19.

Grand Trunk.—The Co. has filed with the New York State Court of Claims a claim against the State for \$31,529. The claim is based on the accommodation of the State in filling up a slip which formed a part of the Erie Canal in Buffalo, & called Palmer Slip, & in filling up what was known as Evan's Ship Canal, also in Buffalo. The waterways were filled up with material excavated from Erie Canal, & the Co. sues for the loss of their use. It asks \$15,000 damages for each, & \$1,529 for injuries to the wall of a freight house situated at the corner of River street & Peacock Slip.

Great Northern (U.S.)—Gross earnings for Dec. \$2,232,708, increase \$351,524. For the 6 months, \$14,486,664, increase \$1,498,573.

Irontdale, Bancroft & Ottawa.—An action was recently begun in Toronto by this Co., against the Bank of British North America, The Trusts Corporation of Ontario, & J. H. Plummer, A. D. Benjamin, H. S. Mara & Z. A. Lash, for a declaration that the bonds of the Co. have not been validly issued & are not binding upon the Co., & that the pledge of them to some of the defendants is invalid & that the defendants are not entitled to dispose of them. On Jan. 4 the Co. was ordered to put up \$5,000 as security for any loss that might be sustained by the loss of sales & an injunction was granted restraining the defendants from disposing of the bonds. On Jan. 24 plaintiff's counsel moved to continue the injunction until the trial, but after a long argument it was dissolved by the Chancellor. Bonds to the extent of \$450,000 have been issued & were pledged in Sep. 1897 under the agreement attacked in the action. The total amount of the indebtedness for which they are pledged is between \$200,000 & \$250,000. While the writ claimed a declaration that the bonds were not validly issued, plaintiff's counsel has not so far made any effort to prove the invalidity, but has attacked the manner in

which they were pledged. It is alleged the pledge was authorized at a meeting at which there were present 4 persons who purported to act as directors, & another person who purported to be a director was represented by proxy, proxies being under the special act allowed at directors' meetings. It is said that 1 of the 4 persons present was not a shareholder & therefore not qualified to be a director & therefore that as the act requires the attendance of at least 4 of the directors at any directors' meeting anything done at that meeting is not binding upon the Co.

Kingston & Pembroke.—It is said the 20,000 shares of 1st preference stock, aggregating \$1,000,000, full particulars of which were given in our last issue, pg. 255, have all been subscribed for.

Receiver J. Bawden, Kingston, Ont., is advertising for particulars of claims against the Co. After Jan. 31, he will distribute the Co.'s assets among the parties entitled thereto.

London & Port Stanley.—The following were elected in London, Ont., Jan 12: President, J. D. Wilson; Vice-President, R. A. Carruthers; Other directors, F. J. Rumball, P. McPhillips, W. H. Winnett, S. O'Mara, H. D'aneay, S. Stevely, H. M. Douglass, A. Greenlee. Secretary, C. A. Kingston; Treasurer, J. Pope; Engineer, A. O. Graydon. The line is leased to the Lake Erie & Detroit River Ry. Co.

Minneapolis, St. Paul & Sault Ste. Marie.—Coupons due Jan. 1 on the consolidated mortgage bonds endorsed by the C.P.R. Co. will be paid by the London office of the latter Company, Jan. 2.

Nakusp & Slocan.—Notice was recently given that the Bank of British Columbia, would pay in London, Eng., on and after Jan. 2, the interest then due on the 4% bonds of this Co.

Qu'Appelle, Long Lake & Saskatchewan.—Net earnings for Nov. '98 were \$3,475.75, compared with \$2,473.45 for corresponding period.

Northern Pacific.—The directors have declared a dividend of 1% on the common stock, payable Feb. 3. The dividend is declared from the earnings of the first 6 months of the current fiscal year.

Quebec Central.—Traffic receipts for Dec., \$30,826.75, compared with \$27,992.46. Aggregate traffic receipts for 1898, \$450,299.98, compared with \$457,643.84. Passenger traffic increased \$9,169.47. Freight decreased \$16,572.12. Mails & sundries increased \$58.79. Earnings per mile per month, \$176.17, a decrease of \$2.87.

Quebec & Lake St. John.—Gross earnings for 10 months to end of Oct., 1898 \$239,463, compared with \$203,630. Glyn, Mills, Currie & Co., London, Eng., recently announced they would pay the coupons due Jan. 1 on this Co.'s 1st mortgage 5% bonds.

Quebec Taxation.—The Court or Appeals has given judgment in favor of the city of Quebec vs. the C.P.R., & vs. the G.T.R. The former had sued the city for \$50,000 & the latter had sued for \$7,000 for taxes which they claimed the city had illegally collected. In the Superior Court the city lost both cases. But in appeals both were given in its favor. A cross appeal of the C.P.R. was dismissed.

Spokane Falls & Northern.—At the annual meeting in Spokane, Wash., Dec. 9, J. J. Hill was elected President, C. Shields, Vice-President & F. W. Bobbett, Secretary-Treasurer.

Wellington, Grey & Bruce.—The numbers are published of 21 bonds for £2,100 sterling which have been drawn for repayment at par on Jan. 2. The estimated earnings of the railway for the ½ year ended Dec., applicable to meet interest on bonds, will admit of the payment of £2 4s. 1d. per £100 bond, & this payment will be applied in respect of coupon no. 37, due Jan. 1, 1889, & will be made on Jan. 2.

RAILWAY APPOINTMENTS, &c.

Canadian Pacific.—The General Superintendency of the Western Division, with headquarters at Winnipeg, which has been vacant since the promotion of W. Whyte to the managership of the lines west of Fort William, about a year ago, will shortly be filled by the appointment of Jas. Osborne, at present Assistant to the Vice-president at Montreal. Mr. Osborne will leave for Winnipeg, Feb. 1, to remain 3 or 4 weeks on the Western Division & will assume his new duties shortly afterwards. He entered the railway service in 1874, the following being his record:—Oct. '74 to July, '83, in Mechanical Department, G.T.R.; July, '83, to July, '86, in Mechanical Department, C.P.R.; July, '86, to Sept., '87, Chief Clerk, Vice-President's office, C.P.R.; Sept., '87, to Oct., '90, Car Accountant, C.P.R.; Oct., '90, to June, '92, Superintendent Car Service, C.P.R.; June, '92, to April, '96, Superintendent Car & Fuel Service, C.P.R.; April, '96, to date, Assistant to Vice-President, C.P.R. In April, '95, he was elected President of the International Association of Car Accountants.

R. Corbett, who was stationed at Wrangell, Alaska, in the C.P.R. ticket office, last season, has been appointed to the Co's Vancouver ticket office.

H. Carter, recently C.P.R. Yukon agent, has returned to his old position on the Soo line.

J. Cardell, Locomotive Foreman & Trainmaster at Canmore, Alta., has been appointed Master Mechanic of the Crow's Nest Pass branch.

J. Coughlin, track foreman, has been Acting Roadmaster at Schrieber, Ont., since the death of T. Newman.

Grand Trunk.—The heavy steamship traffic requiring the constant attention of the Train Master at Portland, Me., & on the lines east of Richmond, Que., C. S. Cunningham has been relieved of the portion of the 2nd district, west of Richmond, & the jurisdiction of R. P. Dalton has been extended to Richmond.

Chas. Clarke, heretofore New York State Freight Agent, has been appointed Division Freight Agent in charge of freight traffic in connection with the following lines, with headquarters at Detroit, Mich.: Detroit, Grand Haven & Milwaukee Ry. (including the across lake traffic via Grand Haven); Toledo, Saginaw & Muskegon Ry.; Michigan Air Line Ry.; Chicago, Detroit & Canada Grand Trunk Jct. Ry. Agents at stations on the above lines will report to and receive instructions from Mr. Clarke. Agents at stations on the Chicago & Grand Trunk Ry.; Cincinnati, Saginaw & Mackinaw R.R. & Grand Trunk Junction Ry. will report as heretofore. Short & over reports at stations west of the Detroit & St. Clair Rivers are to be sent to E. Arnold, Lost Freight Agent, Battle Creek, Mich.

W. J. Hunter, heretofore General Travelling Freight Agent, has been appointed New York State Agent, with headquarters at 285 Main Street, Buffalo, vice C. Clarke, assigned to other duties, as above stated.

A. R. McIntyre having resigned, on account of ill health, the position of Assistant Superintendent of the Western Division has been abolished. A. H. Lander has been appointed Master of Transportation for the Western Division. He will have charge of the distribution of all passenger & freight equipment on the division & will make requisitions for equipment from connecting lines. G. T. equipment must not be delivered empty to connecting lines without his authority. Office at Port Huron, Mich. Local agents will send daily car reports to their trainmaster, & place orders with him for all cars required at their stations.

The office of Assistant Trainmaster, 1st District, is abolished. A. H. Lander having been assigned other duties, J. Munday has been appointed Chief Train Despatcher, Montreal Terminals, 4th & 5th Districts, & 2nd

District west of Richmond. Office: Bonaventure Station, Montreal.

R. Patterson, locomotive Master Mechanic at Battle Creek, Mich., has been appointed Master Mechanic at Stratford, Ont., succeeding J. D. Barnett, resigned. J. E. Muhlfeld, Master Mechanic of the Wabash at St. Thomas, Ont., succeeds Mr. Patterson at Battle Creek.

A. W. Davis has been appointed Locomotive Foreman of the G. T. R. & Wabash shops at St. Thomas, Ont., to succeed J. Armitage, transferred to Palmerston.

Minneapolis, St. Paul & Sault Ste. Marie.—F. D. Underwood, General Manager of the C. P. R.'s subsidiary line, has been appointed General Manager of the Baltimore & Ohio, which comprises 3,511 miles of line. It is said his salary is \$25,000 a year. There is no doubt he was selected by J. J. Hill, of the Great Northern, who has had ample opportunity of judging of his capability. Mr. Underwood was born in 1850, in Milwaukee, & at the age of 18 took a position as clerk on the Chicago, Milwaukee & St. Paul. He became successively baggageman, foreman of elevators, conductor & division superintendent on that line. In 1888 he was appointed General Manager of the Minneapolis & Pacific Ry., & later of the Soo line. His headquarters will be in Baltimore.

In accepting Mr. Underwood's resignation the M., St. P. & S. S. M. directors passed the following resolution: "This Co. parts with Mr. Underwood with great reluctance. His service with the Co. began in its infancy, & he leaves it with 1,260 miles of well constructed & thoroughly equipped railway, in successful operation, & with all promises for results on the business interests of the twin cities & the northwest practically fulfilled, & chiefly through the energy, ability & wisdom of his management. His generous nature, kind heart & keen sense of justice have so endeared him to everyone connected with the Co.'s service that, from the President & governing board to the humblest employe, his going

will be felt as a personal loss. On behalf of all who serve the Co., in whatever capacity, we heartily congratulate Mr. Underwood on the well-merited recognition of his abilities in his new field of operation. We feel sure that the same measure of success will reward his earnest devotion to duty in the future, as in the past."

Edmund Pennington, General Superintendent of the M. St. P. & S. Ste. M., has been promoted to the General Managership to succeed Mr. Underwood. Mr. Pennington was born at La Salle, Ill., in 1848. He entered the service of the Chicago, Milwaukee & St. Paul Ry. in 1869, serving consecutively as warehouseman, brakeman, conductor, roadmaster, Superintendent of Construction, General Roadmaster & Assistant Superintendent. In 1888 he resigned to accept the General Superintendency of the Soo line. It is said the position or General Superintendent will be abolished.

Ottawa & New York.—Arthur Rushton has been appointed Commercial Agent of this Co., also of the New York & Ottawa Ry. Office 432 Board of Trade Building, Montreal.

Personal Mention.

The late F. S. Rathbun, of Deseronto, Ont., left an estate valued at \$89,000.

Lord Mountstephen has been entertaining the Duke & Duchess of York at Brocket Hall, Hants, Eng.

Mrs. James, wife of the C. P. R. Superintendent at Winnipeg, is recovering from a serious & prolonged illness.

R. G. Tatlow, of Vancouver, who represents the Cariboo Omineca Chartered Co. in Canada, is visiting England.

W. W. Cory has been appointed Chief Clerk & Accountant of the Manitoba Railway Commissioner's Department.

F. C. Kenny, formerly G. T. R. Trainmaster at Port Huron, Mich., is now with the Wisconsin Central at Stevens Point, Wis.

"We'll have a faster service than has been" is evidently the determination of Sir William Van Horne.—Toronto Mail.

A. Branin has been appointed Assistant Superintendent of the Bellingham Bay & British Columbia, with headquarters at New Whatcom, Wash.

Purchasing Agent Wilson, of the White Pass & Yukon, had his leg broken recently at Skaguay, by his horse, which he was riding along the dock, falling.

General Manager Hays, of the G. T. R., has been presented with an illuminated address by the Brotherhood of Locomotive Firemen, in acknowledgment of courtesies received.

C. O. Figgins has been appointed General Agent of the White Pass & Yukon at Skaguay, Alaska, succeeding H. M. McCartney, General Freight & Passenger Agent, who resigned.

Hiram Walker, of Walkerville, Ont., the millionaire distiller, who died in Detroit, Mich., Jan. 12, was formerly largely interested in the Lake Erie & Detroit River Ry., now controlled by his sons.

Lord Strathcona has ordered a fine organ for St. Paul's Church, Montreal. Lady Strathcona & her daughter, Hon Mrs. Howard, have given \$100,000 to the Medical Faculty of McGill University, Montreal.

M. C. Coyle, Trainmaster of the Michigan Central at Jackson, Mich., has been appointed Superintendent of the Saginaw & Mackinaw divisions, with headquarters at Bay City, Mich., to succeed W. J. Martin, resigned.

F. F. Whitley, formerly round house foreman of the Illinois Central at Clinton, Ill., has been appointed master mechanic of the Wabash at St. Thomas, Ont., to succeed J. E.

QUALITY FIRST PRICE AFTERWARD.

The Page Fencing is composed of a high grade of steel wire made especially for the Page Co. and no one else. This wire is 60 to 100 per cent. stronger than that used in other fences. It is coiled, which makes it still more effective because of its elasticity. The common wire fence has no "life." It cannot recoil and "pull itself together" after the attack of an animal, or from the effects of a snowdrift freezing to it and settling. Page Fencing that was properly erected years ago is in perfect condition to-day. Others that have been in use only half as long present a sorry spectacle.

THE PAGE WIRE FENCE CO., LTD., Walkerville, Ont.

Muhlfield, who has gone to the G. T. R., at Battle Creek, Mich.

T. M. Jubb, General Superintendent's Assistant, Ontario & Quebec Division, C.P.R., died at Toronto, Jan. 18, of pleurisy, after a short illness. He was 39 years of age & had been in the service about 15 years. The office has been abolished.

Sir Charles & Lady Rivers Wilson leave London, Eng., at the end of March on an extended tour through California. The charming house in Pont street, which Sir Charles purchased three years ago from Mrs. Langtry, will be let during their absence.

P. F. Hodgson, heretofore G.T.R. Signal Engineer, sailed from Canada Jan. 8, to take the managership of Saxby & Farmer's railway signal & safety appliance works, Kilburn, London, Eng. As foreshadowed in our last issue, he has been succeeded at Toronto by W. H. Patton.

Traffic Manager Reeve, of the G.T.R., delighted many of his friends with a handsome "Compliments of the Season" card. In the centre are the British & U.S. flags, flanked on one side by a handsome passenger train, & on the other by an ocean steamer, Mr. Reeves' signature being appended in fac-simile.

Miss Mostyn, sister of Lady Rivers Wilson, was married recently in St. Peter's, Eaton Square, London, Eng., to John Home, younger son of Sir George Home Spiers, son of the late Sir George Home Spiers, ninth baronet, & brother of the present baronet, of Blackadder, Berwick. Sir Rivers Wilson was present.

C. R. Hosmer, Manager C.P.R. Telegraphs, & Mrs. Hosmer, who returned to Paris last month owing to the serious illness of their daughter, Olive, who they had left there at school, are now in the south of France, where she is improving very satisfactorily. They will probably return to Canada in February.

Leonard H. Young, ticket clerk of the Great Northern at the general office, has been appointed Travelling Passenger Agent, with headquarters at Seattle, Wash., to succeed Mr. Yerkes, who becomes General Agent at Seattle in place of H. C. McMicken, formerly of Winnipeg, who has gone into the service of an Alaska transportation company.

J. O'Leary, who has been railway constructing in the Kootenay district of B.C. for several years, was recently killed on the Robson-Midway, on which he had a sub-contract. While superintending the lowering of a large stone into place, one of the guy ropes of the derrick broke, & the mast of the derrick swung down, pinning him to the ground, injuring him so that he died 20 minutes later. He was a native of Maine.

Major Girouard, who is in command of the railway construction battalion in Egypt, is a son of Judge Girouard, of the Supreme Court of Canada. The Major was educated at the Royal Military College, Kingston. He served two years on the survey & construction staff of the C.P.R., then was given a lieutenancy in the Royal Engineers, & made traffic manager of the Royal Arsenal Railways, Woolwich. In 1896 he joined the force under Lord Kitchener.

Calvin S. Brice, President of the Lake Erie & Western, Cleveland, Akron & Columbus & Cincinnati Northern Rys., 1st Vice-President of the Duluth South Shore & Atlantic, & President of the Sault Ste. Marie Bridge Co., died in New York Dec. 15, of pneumonia. He was born at Denmark, Ohio, in 1845, & began his railway career in 1870 as general attorney of the Lake Erie & Louisville, which was subsequently sold & reorganized as the Lake Erie & Western. He was receiver of the road during the receivership, & after the reorganization was from 1877 to 1886 General Counsel of the Lake Erie & Western, being

THE UNION STATION, TORONTO.

chosen President in 1887. Mr. Brice served a term of six years as U.S. senator from Ohio.

General Manager Hays, of the G.T.R., & Mrs. Hays will leave at the end of this month on a visit to Europe. On reaching Liverpool they will proceed to London direct, but their stay there will only be short, for it is their intention to make a cruise through the Mediterranean, & a tour through southern Europe, after which they will return to London & make a longer stay there. Mr. Hays will have consultations with the President & Vice-President of the G.T.R., & expects to be present at the annual meeting of the Co., which will take place towards the end of March, when he will have an encouraging statement to present with regard to the progress of the Co. He will be absent from Montreal about two months.

Death of General Manager Campbell.

W. R. Campbell, General Manager of the Dominion Atlantic Ry., died in London, Eng., Jan. 8, after a brief illness. He was in the prime of life. When he visited Nova Scotia last summer he was in the best of health, a perfect picture of robust manhood. When Peter Innes resigned the management of the road he was succeeded by Mr. King, who acted as resident manager for a short time & was succeeded by Mr. Campbell. The latter has resided in London, but visited Nova Scotia at stated intervals. His connection with the D.A.R. has been notably co-incidental with the remarkable development of the road. Mr. Campbell's faith in Nova Scotia was boundless, & his enterprise & energy, backed up by that faith, have found expression in the rapid modernization of the railway in all its departments, & he did a good work not only for his railway but for the Province. One of the characteristics of the man was his interest in the employees of the Co. In the jubilee year he took advantage of the general rejoicing to emphasize the good will which existed between the management & the employees by entertaining them at an elaborate dinner at Kentville. The 150 that sat down to dinner that night will remember the occasion well, & the hearty good will that existed then between Mr. Campbell & the staff, & how it has always remained.—Halifax Chronicle.

The Toronto Union Station.

The illustration on this page shows the north & east sides of this building, & the extensions towards the lake, with a portion of the north train shed. Most of the views heretofore published have shown the north & west sides. We do not publish this illustration with any idea that it may serve as a model, for the general consensus of opinion is that the Toronto Union is one of the most inconvenient stations in America, expensive to run & unsatisfactory in very many other respects.

Time Service on the Grand Trunk.

C. H. McLeod, Superintendent of Time Service, has issued the following circular: On & after Feb. 1, the present method of sending time over the wires of the System will be discontinued & the time will be sent directly from McGill College Observatory, Montreal, or from the Standard Clock in the Co.'s office, Union Station, Toronto, as follows, in Eastern Standard time:

At 10 hr. 58 min. 0 sec. a.m. dashes (make or break) begin & are sent at each even second up to & including 10 hr. 58 min. 50 sec.

10 hr. 58 min. 50 sec. to 10 hr. 59 min. 0 sec., no signals.

At 10 hr. 59 min. 0 sec. dots (make or break) begin & are sent at every second up to & including 10 hr. 59 min. 50 sec.

10 hr. 59 min. 50 sec. to 11 hr. 0 min. 0 sec., no signals.

At 11 hr. 0 min. 0 sec. one dash (make or break) & circuit closed.

These signals are to be repeated automatically by means of special repeating sounders which have been placed at the necessary points. Operators at these points will see that the repeating instruments are kept in good order & adjustment, & that they are thrown into circuit not later than 10 hr. 57 min. 50 sec. a.m. each day & out of circuit promptly on the receipt of last signal. Any imperfection in adjustment to be corrected immediately the signals begin.

When circuit has closed at 11 o'clock, each station will acknowledge the receipt of time by "O.K." to the chief dispatcher of the district, who will enter operator's initial in the

proper space on Form no. 519, & return the completed form to this office every Saturday evening, as per instructions thereon. All operators in charge of ordinary clocks must set them to correct time immediately on the receipt of the signals; & dispatchers in charge of standard clocks must at once fill in a fresh copy of form 519 & post the same on or near the clock.

The Trade of the Orient.

D. E. Brown, General Agent for China & Japan, for the C.P.R., who left there in April last, going to England by way of the Suez Canal, & has recently spent some time in Canada, said in a recent interview:—

"Speaking roughly, I estimate that in the last five years trade between the eastern countries & the U.S. & Canada has more than quadrupled in volume. With China the foreign exports are principally silk, tea, matting, rice & curios. In return for this they import raw cotton, flour & other products from Canada & the U.S. With the advent of a more progressive policy, the foreign trade of China will increase enormously, and within a very few years."

In answer to a question as to how the action of the Nippon Yusen Kaisha, in inaugurating a service to Seattle had affected the C.P.R., he said:—"It certainly has not affected it injuriously. The volume of trade has been so large that we have been obliged to put on two extra cargo boats to handle it. The Japanese company started the service with the expectation of receiving a subsidy from their government, but in this they were disappointed. Another company, which started a service between Yokohama & San Francisco, were similarly disappointed."

Wire Fencing for Railways.

The increasing use of wire fencing for railways is shown by the rapid growth of the Page Wire Fence Co.'s business at Walkerville, Ont. During the past season this Co. has supplied large quantities to the Grand Trunk, Canadian Pacific, Michigan Central, Canada Atlantic, Erie & Huron, Intercolonial & Atlantic & Lake Superior railways, ship-

ping in car lots of 7 and 8 miles each. The Co. also supplied the fencing for the Pembroke Southern Ry., and finished up its contract for supplying the fence for the East Richelieu Valley Ry. Among other contracts were 8 miles of fence for the Niagara Cataract & Power Co., for its canal near Thorold, Ont., several miles of fencing for the Hull Electric Co. on its railway from Hull to Aylmer, several hundred rods for the Dominion Experimental Farm at Ottawa, & some for the Canadian Soo Canal. Besides the hundreds of miles shipped to local farmer agents in Ontario & Quebec, several carloads were shipped to Manitoba & also several to the Maritime Provinces.

The Canadian Roadmasters' Association.

W. Shanks, President of this Association, writes us from Carleton Place, Ont., as follows: "I noticed in your Nov. issue a letter signed 'Superintendent,' commenting on remarks made by me at the association's meeting in Ottawa, in Sept. last. Had the writer of the letter signed his name, I would have been pleased to reply to it, as considerable might be said in answer to his comments, but as I have always made it a point to take no notice of letters written by parties who withhold their signatures, I shall treat this in the same manner."

"I am very sorry this Superintendent did not use better judgment when selecting roadmasters under his supervision, & secure some that were somewhat more intelligent, as I notice he had a great deal of difficulty to instil into their minds any new methods in connection with the maintenance of roads. My experience has been that the ordinary roadmaster is only too anxious to adopt any new methods that will in any way be an improvement or reduce the expenses of maintenance of road."

Complete Sets of this Paper.

The publishers have on hand a few sets (12 in all only) of THE RAILWAY & SHIPPING WORLD from the first issue in Mar. up to Dec., 1898. These will be supplied at \$1 a set, postage prepaid, to Canada or the U.S., or at \$1.25 (5 shillings) a set to other countries.

Grand Trunk Telegraphers & Agents.

On Jan. 28 the arbitrators, B. B. Osler, Q.C., for the G.T.R. Co., F. P. Sargent, for the G.T.R. telegraphers & agents, & Sir W. R. Meredith, Chief Justice of Ontario, who was selected as the 3rd arbitrator by the other 2, handed out the following:—

"The arbitrators to whom have been submitted the matters in dispute between the G.T.R. Co. & its employees who are agents & telegraphers, having heard the parties & considered all special cases presented & the lists of salaries paid, do, having regard to conditions existing at the present time & the special features of the G.T.R. system, unanimously award & find as follows:—

"That rules 20, 21, 22 & 26, as altered, changed & amended, & as hereto annexed, shall be & become rules of the G.T.R. Co., & that the changed rates of salary & allowance for overtime & all other provisions of the said rules shall come into force & effect as of Jan. 1, 1899.

"By consent of parties the further rules hereto annexed initialed by the chairman are to become rules of the G.T.R. Co.

"The arbitrators decide that the matter of clause 10 of the agreement of reference is a proper matter for them to pass upon, but they have by the agreement & settlement of the parties been relieved from making an award with reference thereto.

"The arbitrators have considered the list of salaries paid at stations & have settled the same as per schedule hereto annexed.

"RULE 20.—At offices where only 1 telegrapher is employed, 12 consecutive hours, including meal hour, will constitute a day's work. At offices where only 2 telegraphers are employed, 12 consecutive hours, including meal hour, will constitute a day's work. At offices where more than 2 telegraphers are employed, 10 consecutive hours, including meal hour, will constitute a day's work. If telegraphers are required to remain on duty to exceed the above named hours, they will receive overtime under rule 21, except as hereinafter provided by rule 22.

"RULE 21.—Overtime will be computed pro rata on stated salary, but in no case less than 15c. an hour. In computing overtime less than 30 minutes will not be counted. Thirty minutes & less than 60 minutes will be

MANITOBA FARMS FOR SALE.

considered an hour. Emergency calls & up to one hour's service connected therewith, shall be paid at 35c. a call.

"RULE 22. This rule with its sub-sections applies to branch lines only:

"(1) Where 1 telegrapher only is employed, & the time of the regular scheduled passenger, mixed or way-freight trains is so arranged as to require the telegrapher in order to meet them to be on duty beyond 12 consecutive hours, he will receive the following sums per month, to be added to his salary: If required to meet such train after 3 and within 4 hours, \$4.50. If required to meet such train after 2 & within 3 hours, \$3.50. If required to meet such train after 1 & within 2 hours, \$2.50. If required to meet such train within 1 hour, \$1.50. Fractions of an hour to be computed as in rule 21.

"(2) An employe whose salary, including receipts from all sources during the preceding

Telegraphers 38 35
Relieving agents who are on the permanent staff & are telegraphers 30 30

"For the purposes of this rule, the following shall be deemed the main lines:—Portland to Sarnia, Suspension Bridge to Windsor, Komoka to Sarnia, Hamilton to Toronto, Fort Erie to Glencoe, Toronto to Gravenhurst.

"QUESTIONS OF OVERTIME. Telegraphers required to remain on duty outside of their regular hours will be given an official order as authority & excused in the same manner. Overtime will not be allowed unless overtime tickets are mailed to the proper official within 48 hours from time service is performed. If overtime is not allowed telegraphers will be notified within 10 days from the time such service is performed, setting forth the reasons why."

Grand Trunk Improvements, &c.

The illustration on this page shows the handsome structure which the G.T.R. will erect in Montreal. It will occupy the entire square bounded by McGill, St. Paul, William and Wainwright streets, covering an area exceeding 30,000 sq. ft. Its principal frontage—200 ft.—will be on McGill street, & will be very imposing in appearance. The splendid adaptability of McGill street for attractive buildings designed for financial & commercial purposes is well illustrated in the new G.T. offices. The width of the street will enable the structure to be seen to great advantage, & the florid nature of the sculpture work & the outside ornamentation will not be lost, as is the case with many of Montreal's stately structures.

The building will be one of the finest architectural productions in the Dominion, a re-

Ref'd to G.T.R. Genl. Mgr. Sept.

GRAND TRUNK RAILWAY COMPANY'S GENERAL OFFICE BUILDING IN MONTREAL.

year, exceeds \$50 a month, will not be entitled to the additional allowance provided for by this rule.

"(3) An employe will not be required, except for the purpose of an emergency call, to be on duty so as not to leave him 8 consecutive hours off duty in the 24.

"(4) The extra pay provided for by this rule is to compensate operators for the inconvenience of their 12 hours' duty not being consecutive, & is not otherwise to interfere with the allowance for overtime under rules 20 & 21.

"RULE 20. The minimum monthly salary will be as follows:—

	Man.	Boys.
Agent & telegrapher with dwelling, fuel & light	\$7.50	
Agent & telegrapher without dwelling, fuel & light	43	40

Railroad Trainmen. At the recent convention the following were elected officers:—J. Logan, Ottawa, President; J. Hogan, Ottawa, 1st Vice-President; J. W. Trickey, Sudbury, 2nd Vice-President; H. F. McKinney, Hintonburg, Recording Secretary; J. Hogan, Ottawa, Treasurer; W. Powell, Moncton, Chaplain; A. Hawkins, Fletcher, Guide; C. Noyes, Peterboro', Sentinel.

The Dominion Coal Co. is sending one of its most experienced engine drivers to South Africa to practically demonstrate that Cape Breton coal is excellent fuel for steam purposes. An experimental shipment was made there early last autumn. There is said to be a large market for steam coal in Cape Colony.

W. Stitt, Chief Clerk, Passenger Department, C.P.R., Winnipeg, who has been in poor health recently, is visiting California, accompanied by Mrs. Stitt.

marked sense of richness & beauty as well as dignified simplicity. The style of architecture is Neo-Grec, that is, a modern adaptation of Greek & Roman architecture—not a servile copy, but from the spring, from which marvellously simple & logical inspirations of the art of the Greeks is obtained. Architecture is required to modify its forms in accordance with the conditions of light, of temperature, of needs & purposes. The plans are calculated to give good light in a maximum of apartments combined with striking adaptations to the complex needs & purposes, as well as an effective appearance. There is an easily accessible basement, & 5 storeys above, with strongly accentuated corner treatment—one symbolic of the G.T.'s alliance with one-half of the globe, another, of strength, & a third of swiftness. Strength is represented by mythological griffins, & swiftness by the winged dragon.

The basement will be utilized for express storage & mail purposes. On the ground floor the Auditor's, Treasurer's & Paymaster's departments will be situated. The 1st floor will accommodate the General Purchasing Agent, Divisional Freight Agent, & Freight claims Agent. The executive departments will be situated on the 2nd floor. These will include the private & general offices of the General Manager, General Assistant, General Traffic Manager, General Passenger Agent & the Company's Solicitor.

The offices of the General Superintendent & the Chief Engineer & the car service, telegraph & telephone departments will be located on the 3rd floor. The upper or 4th floor will contain a large assembly room, where deputations may be received, & the superannuated, medical & stationery departments, as well as the offices of the Express Auditor & his staff. Waiting rooms & lavatories will be fitted up on each floor. There are 2 towers to the building, one of which will be surmounted by a dome & flag pole. The other will be flat & will be used for the purpose of showing visitors & railway officials the Victoria Bridge & the Point St. Charles property of the company. From this vantage point an excellent view of the city may also be obtained.

The material for the exterior walls has not yet been selected, but it is probable that a mixture of sandstone & granite will be decided upon. The interior furnishings will be of oak & marble.

The corridors will be wainscotted with marble, & above that the panels will be fitted in with ornamental plaster work. The wainscoting in the different offices will be of oak, richly panelled & carved. The offices will open out on gallery corridors, & the whole building will be well lighted & ventilated. The structure will be heated by steam & lighted by electricity. Its cost will amount to \$500,000. It is expected that it will be ready for occupancy in Jan., 1900.

It is the intention to bring all the structures between Montreal & Portland, Me., up to the requirements of the heaviest modern rolling stock & loads, but at present only those between Montreal & Island Pond are under renewal. The number of bridges on this latter section is 49, & their aggregate length is 4,674 ft. The most important one that—across the Richelieu River, a navigable stream—was finished early last year; its length is 1,107 ft. A large proportion of the bridges are small, & for these rivetted plate-girders are used. The large streams are crossed by pin-connected trusses, the spans varying in length

from, say, 100 to 156 ft. It is also intended to renew some bridges on the Southern Division between Windsor & Fort Erie, Ont.

Large sheds and warehouses are being erected at Collingwood docks to replace those burned last fall.

The Co. will replace Goderich station with a red brick structure this year. It will be similar to the Berlin station.

It is rumored that the Lakefield branch, which runs from Peterboro' to Lakefield, 9 miles, will be extended northeast about 35 miles to connect with a proposed extension of the Pembroke Southern at St. Olo, so as to materially shorten the distance between Toronto & Pembroke. It is rumored the Co. will build from Kingston, Ont., via Smith's Falls & Richmond to Ottawa. A rumor was recently sent out from Windsor, Ont., to the effect that the G.T.R. was about to construct a branch from Belle River through Essex to Kingsville, that on the strength of the rumor several pieces of property had recently changed hands in Essex, & that the Manager of the Cameron estate, which has large holdings in that neighborhood, admitted that he had consented to give the land for the station at Essex. The rumor was probably started to boom real estate, as we are authorized by the G.T.R. management to state that there is no truth in it.

Interlocking and derailing apparatus has been put in at the G.T.R. & C.P.R. crossings at St. Johns & St. Constant, Que., & the appliances have been inspected and approved for the Dept. of Railways.

THE VICTORIA JUBILEE BRIDGE.

The work of double tracking the new bridge was completed Dec. 13, & both tracks were at once put into use. Work on the driveways for wagons, &c., and the footways, is being gone on with. It is expected the official opening will take place May 24, & that Sir C. Rivers-Wilson will be present. A report that the Prince of Wales would open the bridge was industriously circulated, but there is not believed to have been any foundation for it, & it has been officially denied. The Prince opened the Victoria Bridge in 1860, & the gold rivet he drove into the centre of the span is now in the G.T.R. general offices. It is said it will be deposited in the Parliamentary Library at Ottawa.

Chief Engineer Hobson, who has been in charge of the reconstruction of the bridge, has received great praise for the eminent skill displayed in the manner in which the work was carried out under his direction.

The fact that during the progress of the work, including the removal of the great tube, there was no delay of the business of the Grand Trunk, & that the trains passed over the bridge as usual, the aggregate detention during the whole time not exceeding 24 hours, has been selected for special admiration, which has been expressed in the British engineering journals & elsewhere. Sir C. Rivers-Wilson has recently, in England, drawn attention to this splendid piece of work, at the same time indicating that English engineering was behind so far as similar work & problems were concerned.

The scrap iron representing the tubes of the old bridge made 477 carloads, & was sold to a Hamilton, Ont., firm.

At a recent meeting of the Canadian Society of Civil Engineers, a series of lantern views was given, illustrating the work of constructing the Jubilee Bridge. W. McNabb, Assistant Engineer of the G.T.R., gave short descriptive explanations of each view. The 1st showed the old bridge & opened the flood gates of memory for some of those present. Mr. McNabb praised the wisdom and foresight of the engineer who constructed it, & remarked that he had little dreamed that in 38 years from the day of its opening the railway traffic demands would have necessitated a double tracked structure. Weight of rolling stock, as well as traffic, had increased since then. The traffic of weights averaging 1 ton to the foot was thought in the old days to be the limit, & that only 3 locomotives could haul such weight. Things were changed to-day in hauling systems. When it was remembered that 80 to 100 trains passed over the bridge every 24 hours, & that the block system was used exclusively, the necessity of a double track was self-evident.

Views were then presented of the works on the new bridge. The lantern worked well, & the audience were practically transported to the actual works. The huge elevated cranes & tremendous iron beams, with the gangs of men busily working, passed vividly before the eyes, & Mr. McNabb made every scene interesting by excellent explanations. The unique work of closing the final span, was graphically described.

In proposing a vote of thanks, E. Keating spoke of the old bridge as among the seven wonders of the world, & some one in the audience suggested that the new bridge was the eighth. He was surprised that in a work of such magnitude no more than two fatalities had occurred, and every detail reflected the greatest credit upon the engineers.

THE BARRETT TRACK JACK.

Recommended as a standard by the

Road Masters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting capacity,
10 to 15 tons.

No. 1 Trip.

C. Baillarge, city engineer of Quebec, said that he thought the new bridge was magnificent & wonderful. There was nothing like it on the face of the globe. He mentioned the bridge on the Firth of Forth with two spans of 1,400 ft., & the wonderful Brooklyn bridge, but these were not to be compared in the matter of strength with this bridge. He was present at the inspection when a train passed over, & there was not so much as a tremor visible in the bridge.

Mr. McNabb remarked that Mr. Blackwell, father of the chairman, K. W. Blackwell, & then managing director of the G.T.R., was the first man who crossed the tubular Victoria bridge, & J. Duckworth, foreman of the bridge, had held that position since its inception. Those who visited the bridge in the afternoon saw Mr. Duckworth, who held the golden rivet which the Prince of Wales drove home in declaring the old bridge open.

Surveys, Construction & Betterment.

Atlantic & Lake Superior.—The extension from New Carlisle to Paspebiac, 3 miles, mentioned in our Nov. issue, pg. 237, has been completed. It is said to be probable that the line will be further extended east to Gaspe, 70 miles, this year, & that the portion of the western end between St. Francois du Lac & Levis, Que., will also be built. A wharf 1,600 ft. long, with an elbow 200 ft. wide at the end is being built at Paspebiac. It will accommodate vessels of the largest tonnage, & will have at low water a depth of 36 ft. (Nov. '98, pg. 237.)

Brandon & Southwestern.—Construction was not started on this line last season, the matter turning out as we predicted, though a survey was made. D. H. Purden, President of the Co., has given notice of application to the Dominion Parliament for power to extend the proposed line from some point in townships 1 & 2, westerly to the boundary of Manitoba & to change the head office from Winnipeg to Brandon. (Dec. '98, pg. 261.)

Canada Atlantic.—There is no later news about the proposed Union Station in Ottawa than we published last month (pg. 261) except a rumor that a scheme is on foot there for the formation of a company which proposes to buy up the rights of the Canada Atlantic, Parry Sound, Canadian Pacific & Ottawa & New York Rys. to the central facilities, & then operate the terminal, charging each railway according to the number of trains handled daily. It is proposed to erect a modern Union Station.

An iron bridge has been erected at Eastman's Springs, over a creek which for some years past has washed away the tracks during the spring floods. The bed of the stream here has been dredged out, & it is expected this will allow the volume of water to pass without damaging the road.

It is proposed for the C. A. Co. & the city of Ottawa to jointly build a bridge over the C. A. tracks at Maria St. & the Rideau Canal, Ottawa, at a cost of about \$40,000.

Cassier Central.—We have been unable to ascertain anything further as to the intentions of this Co. in regard to construction. The Consulting Engineer, E. D. Self, wrote us Dec. 23: "In regard to the work of the Co. I will say that plans are being formulated for its continuance." (Dec. '98, pg. 262.)

Cariboo.—As we have previously mentioned, the terms of the charter require that construction be commenced by May next. The Secretary recently wrote us from England that the starting point will be either Ashcroft or Kamloops, B.C., & the northern terminus will likely be Barkerville. He added that nothing had been decided as to inviting tenders. The point of departure, the gauge & in fact the whole scheme was then being con-

sidered & discussed & steps were being taken to put the matter in train, from a financial point of view. (Nov. '98, pg. 237.)

Detroit River Bridge.—A recent press telegram from Washington, D.C., said A. C. Raymond, Attorney for the C.P.R., had stated there that the Canadian Pacific, Grand Trunk, Michigan Central & Wabash lines had practically agreed on the construction of a bridge across the Detroit River, but that the question of location had to be determined, though it was thought the bridge would be built below 18th St. We are officially informed that as yet only the G.T.R., the M.C.R. & the Wabash are interested in the project, & not the C.P.R.

Attorney H. Russel, of the M.C.R., says the bill introduced at Washington by Senator McMillan & Congressman Corliss for a bridge across the Detroit River, is entirely new & has nothing to do with those that went before it. It is in the interest of the Detroit River Bridge Co., organized by M.C. people, but which is open as a corporation to all other Detroit roads that run ferries on the river or that may do so in the future. Otherwise it is the same as the G.T. & Wabash bills, except as to location. It provides for a location anywhere from the northeasterly city limits to a point not more than 2½ miles southwest from the southwesterly city limits. This Co. has filed articles of incorporation with the Secretary of State at Lansing, Mich., capital \$2,000,000, with a small amount paid in. The railways having agreed on the matter, there will be no division of forces in presenting the matter to Congress. The bill provides for crossing the river on 3 spans, with 2 piers in the navigable channel. The width of the river within the city limits varies from 1,950 to 2,400 ft. The estimated cost of the bridge is between \$4,000,000 & \$6,000,000.

East Richelieu Valley.—The line from Iberville to Noyan Jct. has been built under this name. The portion from Iberville to Henryville, 11.78 miles, was built in 1897, & from Henryville to Noyan Jct. about 10½ miles, in 1898. At Noyan Jct. connection is made with the Canada Atlantic. The line has been opened for traffic & is being operated by the United Counties Ry.

Great Northern of Canada.—The following press dispatch was sent out from Quebec Dec. 24:—"The G.N. Ry. has succeeded in completing arrangements to assure the construction at once of the remainder of its line in order to give Quebec district connection with the Canada Atlantic Ry. Understanding the importance of pushing the works to a finish without further delay, it appears that, as the result of an appeal to its stockholders, \$200,000 have been subscribed, while a U.S. syndicate, chiefly composed of Boston capitalists, has taken an interest in the undertaking to the extent of \$500,000. On the strength of this financial backing, a contract has been entered into with Mr. Macdonald for the construction of the last 88 miles of the line, & it is understood that on his return from England shortly preparations to go on with the work this winter will be immediately begun." We are officially informed that arrangements for construction have not yet been completed, but that prospects for continuing the work this year are promising.

The 88 miles referred to is no doubt the section between Shawenegan & Montcalm, near Joliette, 53 miles, on which some work has been done, & the link of 35 miles from St. Jerome to Grenville, on the Ottawa River, where a bridge for which a very favorable location has been surveyed, will have to be built to connect with the C.A. The G.N. is controlled by & operated in connection with the Quebec & Lake St. John Ry., & the through route from Quebec to Hawkesbury would be as follows:—From Quebec northwesterly for 58 miles by the Q. & L. St. J.

Ry. to Riviere a Pierre Jct. From the latter point westward to St. Tite, 33 miles, by the Lower Laurentian Ry., also operated by the Q. & L. St. J. From St. Tite to Shawenegan, 22 miles, by the G.N. line, already built. Then comes the 53 mile section from Shawenegan to Montcalm, referred to above as having had some work done on it. From Montcalm to St. Jerome for 28 miles the G.N. is already in operation. From Jerome to Grenville there is 35 miles to be built, as explained above. Further information about this line will be found on page 19 of this issue. (See Jne., '98, pgs. 86 & 98.)

Great Northern (U.S.A.)—When at New Westminster, B.C., recently President J. J. Hill said the G.N. would cross the Fraser River & get into Vancouver some day, but when he could not state, adding: "Not another mile of railroad building in the West until the country is developed & actually needs the construction, & until such extension will be a business investment."

The B.C. Weekly says: "The brusque equivocations & general reticence of President Hill, on the occasion of his recent visit to Nelson & other Kootenay points, have not deceived the Kootenay public. They are well aware he did not visit their country for nothing, but instead with big schemes in view. These probably include the taking up of Mr. Corbin's projects for securing further railroad access from the South into the Kootenay & Okanagan country."

It is said the G.N. has a survey party running a line from Jennings, Montana, north, following the meanderings of the Kootenay River, & that a second party is in the Stillwater valley trying to get a line on the north fork. The objective point of both parties is said to be Fort Steele, B.C.

A Rossland, B.C., paper says the G.N. is surveying a line from Trail, B.C., on the Columbia River west to Sayward, so as to tap the Salmon River & Ymir districts, & to carry any ores from there that may be consigned to the Trail smelter, thus competing directly with the C.P.R. It is said the G.N. will put a steamer on the Columbia river between Northport, Waneta, Sayward, Trail & Waterloo, the object of which will be to carry ores from any point upon the river to either of the two smelters. The impression in B.C. is that the G.N. is going to make a tremendous effort to secure a good share of the Kootenay traffic.

It is said surveys are being made for a cut off from Milan on the G.N.'s main line, 24 miles east of Spokane, to Loon Lake, on the Spokane & Northern, 39 miles north of Spokane, which would reduce the through distance from the east to Rossland, Nelson & other B.C. points about 40 miles.

Press reports say the advisability of working the section between Leavenworth & Skykomish, 66 miles, by electricity, is being considered. The Cascade tunnel, which will be completed in about 2 years, & will be 2½ miles long, is in this section. There is plenty of water power, & the grades are not severe.

Great Northwest Central.—A petition is being circulated along the projected route of this line, asking for Dominion Government pressure to be brought to bear on the Co., to compel it to extend the line, & 3,000 signatures are promised. It is contended among the settlers that if the fact that the 50 miles in Receiver Forest's hands are more than meeting working expenses, coupled with the close settlement contiguous to the line for the next 100 miles are not sufficient incentive for the Co. to construct more than 20 miles this year, the Co. should lose its charter.

Intercolonial. The improvements to the terminal facilities at St. John, N.B., include the erection of a pier & warehouse at Long Wharf, & a grain elevator a little north of the present passenger station, with a conveyor

The contract for the pier, Montreal, the figures being in the neighborhood of \$1,000,000. They have subcontracted the work to G. S. Mayes. This includes wharf-building of a length of 1,200 ft., 60 ft. deep, & 50 ft. on the bottom. About 12,000 tons of red pine, about 400 pieces of spruce spars, a quantity of southern pine timber & a large quantity of service flooring & stringers. Most of this timber has been contracted for on the upper waters of the St. John River. The material to be dredged is estimated at about 300,000 cubic yards. Connolly Bros. will use all the piers they have had on a large contract at Boston recently. For the building of the elevator \$57,000 was voted by the Dominion Parliament last session. The pier will have steamship berths on both sides.

Geo. Appleby, of Darling's Island, King's County, has been awarded a contract to remove the St. John Bridge & Ry. Extension railway track to such a point as may be deemed advisable. He will put down a temporary track for the trains, & then take up the present rails. The permanent track will be placed afterwards. The present trestle will be removed to the north of the Gibbon coal sheds.

To accommodate the heavy engines now being run, a number of bridges between Truro & Moncton are being replaced by steel structures.

Kootenay Ry. & Navigation Co.—The contract for some 50 miles of this line from Bonner's Ferry, Idaho, to Kootenay Lake, B.C., was let to Foley Bros., Larsen & Halverson,

& not to Foley Bros. & Guthrie, as stated in our last issue. Sub-contractor Murphy is at work on a 4-mile section from Bonner's Ferry north, & the Nelson Miner says work is well under way at both ends of the line north of International Boundary. (Dec. '98, pg. 262.)

A Revelstoke, B.C., paper states a contract has been let for the first 35 miles of the Lard-Duncan branch to the Trout Lake district of B.C., & that it is to be completed by Sep. 1. (Dec. '98, pg. 262.)

Lake Erie & Detroit River. We are officially informed that there is no change in the situation in connection with the proposed extension from Ridgeway to St. Thomas, Ont. From another source we learn it is probable an effort will be made to get Dominion aid next session. (Nov. '98, pg. 238.)

Lake Manitoba Ry. & Canal Co.—Practically all the grading done last season was laid with rails, the new work extending from Sifton Jct., about 2 miles north of Sifton, to Cowan, 51.8 miles from Sifton Jct. The line will be located to the Great Saskatchewan River during this winter, & it is the intention to build to there this year. It is likely the river will be crossed near the Pas Mission, just east of Pine Lake. It is expected another 100 miles or so will be built in 1900, & that 1901 will see it completed to Fort Churchill, Hudson's Bay. The engineers now in the field say the farther north they go, the better does the appearance of the country become, & the region through which the railway will go early next summer is said to be unequalled for beauty & extent of arable lands by any other part of the Northwest.

The present terminus is about 3 miles be-

yond Duck river, from which point the road turns westward around a corner of the Riding Mountains. Turning again northward after passing the Swan River valley the road goes between Lake Winnipegosis & Red Deer Lake. From the Pas Mission, the road will run north-easterly to the head waters of the Churchill, which it will follow to its mouth. The promoters evidently do not share the views of those who do not think Hudson's Bay & Straits navigable. The distance from the end of the present line to the Saskatchewan is 100 miles, from the Saskatchewan to Hudson's Bay 450 miles.

Besides the proposed Gilbert Plains branch from Dauphin, another branch is likely to be built from Swan River to Prince Albert, running the entire distance through a splendid farming & ranching country, the climate of which is even superior to that of the southern portions of Manitoba. There was no frost in the Swan River valley last fall until two weeks after it had touched Central Manitoba.

It is probable that the few people at Sifton will move to Sifton Jct., where there will be a townsite.

The Co. has put up a 3 stall roundhouse at Dauphin & a 1-stall one at Winnipegosis. At Portage la Prairie it has joint occupancy of the M. & N.W. terminals. A repair shop will be established at Dauphin. (Dec. '98, pg. 262.)

Manitoba & Northwestern.—During the past year the roundhouse at Portage la Prairie was enlarged by the addition of 2 stalls. The stations at Macdonald & Franklin were rebuilt & enlarged, a 2-stall brick addition was built to the Minnedosa engine house, the water tank at Russell was replaced & exten-

C.P.R. Lands

TERMS OF PAYMENT.

For the greater convenience of purchasers, the Company have adopted the following terms of payment:

The aggregate amount of principal and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

While the second instalment becomes due in two years from date of purchase, interest on the outstanding purchase money is payable in one year except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions.

160 acres at \$5.00 per acre, 1st instalment \$131.80, and nine equal instalments of \$80.
160 acres at \$6.00 per acre, 1st instalment \$131.80, and nine equal instalments of \$90.
160 acres at \$7.00 per acre, 1st instalment \$131.80, and nine equal instalments of \$100.
160 acres at \$8.00 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$9.00 per acre, 1st instalment \$131.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to 10 per cent. on the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

L. A. HAMILTON, Land Commissioner, WINNIPEG

ENAMELED IRON SIGNS

For Railway, Street Car, Steamship, Express, Telegraph, Telephone and Advertising purposes.

Railway Station Names, Street Car Route Signs, Express, Telegraph and Telephone Office Signs, Semaphore Arms, Switch Targets and Advertising signs of every description of size and color made to order.

Railway, Steamship and Ferry Signs

For doors, etc., 23 x 3½ inches, blue letters and border on white ground, carried in stock with following lettering.

Waiting Room	Ladies' Toilet	Private Office	Dining Room
General Waiting Room	Men's Toilet	Freight Office	Lunch Room
Ladies' Waiting Room	Baggage Room	Ticket Office	Smoking Room
Men's Waiting Room	Agent's Office	Telegraph Office	No Admittance

The following are carried in stock, size 10 x 2½:—

Men Women Exit Fire Escape

Railway numbers for bridges, mile posts, signal houses, etc.: single figures on plates 8½ in. high.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

For Prices, Illustrated Catalogues, etc., address

THE ACTON BURROWS COMPANY,

Agents for the Imperial Enamel Co. of Birmingham,

BRANCH OFFICES—107 Lombard Street, Winnipeg: S. A. Erskine, Resident Agent; 28 Broad Street, Victoria, B.C., D. H. Macdowall, Resident Agent.

sive additions & improvements made to the stockyards at Yorkton & Russell.

Manitoba & Southeastern.—The Manitoba Government Engineer recently inspected the 46 miles of this line from St. Boniface Jct. to La Broquerie, which were built last season. The Co. will probably carry this winter over 1,000 cars of cordwood & about 150 cars of wheat, the latter coming principally from the Menonite settlements south of the line, & the French settlements of St. Anne's & La Broquerie. The wood will come largely from the vicinity of La Broquerie. G. Strevel & other contractors have camps of men getting out ties for this year's construction.

As foreshadowed in our last issue, Premier Greenway has notified the Co. that the line is to pass round the southwest corner of Lake of the Woods, running for some distance through Minnesota & entering Canadian territory again near the mouth of Rainy River, to which point the line is to be completed this year. The surveys have been completed to that point.

As a result of the construction of this line, the Western Lumber Co., one of the largest milling concerns at Rat Portage, has decided to build a large mill in Winnipeg, & has bought a site near Louise Bridge. The logs will be shipped over the M. & S.E. direct from the boom at Rainy River to Winnipeg.

When at Winnipeg recently, the Minister of the Interior was waited on by a delegation regarding the St. Andrew's Rapids. Some one in the delegation referred to the M. & S.E.R. as a branch of the C.P.R. Mr. Sifton assured the delegation that such a statement was entirely unwarranted, & that when the road was completed to Lake Superior, as was designed by the construction of the Ontario & Rainy River link, the Northwest would have an independent outlet to the lake. The Government would take care that measures would be taken, as had been done with the Crow's Nest Pass Ry., to secure running powers from the Co., so that, if the G.T.R. wanted to get into Manitoba, the Government would grant it running powers over the new line, & it could put on its trains at Port Arthur & run them through to Winnipeg, there making connection with lake navigation. If this was not done, the Liberal Association was at liberty to call for his resignation from the Government, & they would get it.

Michigan Central.—In our last issue, pg. 263, we mentioned a rumor that this Co. would ask the Dominion Government to deepen Kingsville harbor, with a view to run boats from Sandusky to that town, the M.C.R. promising to extend its railway from Essex to Kingsville, 15 miles. We have been officially informed that the rumor has no foundation whatever, & that the M.C.R. has never had any intention of extending the Canada Southern to Kingsville or developing the harbor at that point. There are evidently some real estate boomers at work in this connection, as a similar unauthorized statement has been going the rounds of the daily press in regard to the G.T.R.

Midland of Nova Scotia.—As foreshadowed in our last issue, disagreement as to the route of this line from the crossing of the Shubenacadie River to Truro, has been settled. The town of Truro voted a bonus of \$30,000 & the adjoining municipality voted \$6,000 on condition that the road be built via Clifton. On the other hand, the people of Windsor, New Glasgow, & the Stewiacke district wanted it to go via Brookfield & the Stewiacke Valley. The Provincial Engineer informs us the Clifton route has been decided on. Grading between Windsor & the Shubenacadie was nearly completed last fall. It is said some preparatory work will be done on the Truro end during the winter by the sub-contractors O'Brien & Sutherland. The piling at the crossing of the St. Croix is nearly completed & will be finished &

the concrete work gone on with in the spring. A temporary wooden trestle will be put up for construction trains. It is expected the whole line from Windsor to Truro, 57½ miles, will be completed this year. (Dec. '98, pg. 263.)

Northern Pacific.—The opening of the Souris River branch in Manitoba, was celebrated Dec. 23 by the Co. giving a free excursion to Winnipeg for settlers along the branch. About 1,600 availed themselves of the privilege, & were conveyed to & fro in 2 special trains. It is said they spent about \$25,000 in Winnipeg in purchases, &c., a good proof of their prosperous condition. Trains are now running regularly between Belmont & Elgin, about 40 miles. A few miles more have been completed & it is expected the line will be extended to a connection with the C.P.R. Souris section this season. (Dec. '98, pg. 263.)

There have been a good many rumors about further extensions of the system in Manitoba this year, but nothing official has been announced. One very persistent rumor is that the Co. will build from Portage la Prairie westerly, keeping between the main line of the C.P.R. & the M. & N.W.R.

The C.P.R., at the request of the Manitoba Government, has agreed to a switch being put in near Methven to connect the Brandon branch of the N.P. with the C.P.R. south-western branch.

Ontario & Rainy River.—The grading on F. E. Fauquier's contract for the 1st 20 miles of this line from Stanley west, is expected to be finished early next spring. No track has been laid yet, & the Kaministiquia bridge has not yet been decided on. The line is located from Stanley for 30 miles up the Kaministiquia & Mattawin Rivers, crossing the Kaministiquia 5 miles above Stanley & following up the south side of the Kaministiquia & Mattawin. A trial line is being run up the Shebandowan River, & north of Lake Shebandowan, & a survey party is working from near the head waters of the Atikokan River towards the Shebandowan. Two other survey parties, which started back to back near Mine Centre, are working east towards the head waters of the Atikokan & west to the Rainy River district, & a third party is working from the present terminus of the Manitoba & South-Eastern Ry., easterly towards the Rainy River district. It is said the Co. will endeavor to get the Dominion Government aid increased to \$6,400 a mile next session.

Ottawa & New York.—In 1897 track was laid from from the Canada Atlantic Jct. (Hawthorne) to the G.T. Jct. near Cornwall, 50 6-10 miles, of which 12 were ballasted. The year 1898 ended with a mileage in Canada of 56 85-100 from the C.P.R. Jct. on its Montreal & Ottawa short line, to the International Boundary near Cornwall, all of which is complete in grading track & ballast, also all fences, telegraph line, sign boards, &c. The bridge over the north channel of the St. Lawrence river & the Cornwall canal has been completed. The New York & Ottawa Ry. in New York State, from the International Boundary to Moira, 15 15-100 miles, is all complete & under operation, except the wrecked portion of the bridge over the south channel of the St. Lawrence. The Collins Bay Rafting Co. succeeding in taking out part of one span from the bed of the river & moved the centre span down stream about 1,000 ft., where it swung round lengthwise with the stream, so that there is no danger of a flood being caused. (Dec. '98, pg. 263.)

Pembroke Southern.—The 21 miles of this line from Pembroke, Ont., on the C.P.R., to Golden Lake, on the O.A. & P.S. was opened for traffic Jan. 2. It is said the line will be extended about 50 miles through the counties of Renfrew & Hastings, crossing the Irondale, Bancroft & Ottawa, about 10 miles east of Bancroft & running to St. Ola, on

the Central Ontario Ry., 12 miles from that Co.'s terminus at Coe Hill, thus completing a direct line to Trenton on Lake Ontario. The P.S. Co. is said to expect that the G.T.R. will extend its Peterboro'-Lakefield branch to connect with it at St. Ola, thus considerably shortening the distance between Toronto & Pembroke. We are informed nothing is known of this by G.T. officers in Montreal. (Dec. '98, pg. 263.)

Prince Edward Island.—The 1,000 tons of 50 lbs. steel rails, for which tenders were invited some time since to be delivered at Charlottetown in June next, are to relay a section of 3 miles on the branch between Mount Stewart & Georgetown, & a section between Mount Stewart & Morell, both of which are now laid with 40 lbs. iron.

The Charlottetown Board of Trade at its recent annual meeting appointed a committee to memorialize the Government to replace the station there by a more modern structure.

Quebec Bridge.—The time for receiving tenders has been extended to Mar. 1 next. (Oct. '98, pg. 206.)

Restigouche & Western.—Ten miles of this line from Campbellton, N.B., to Glencoe, have been finished & have been inspected by the Dominion & N.B. government inspectors, but will not be operated this winter. The engineer, C. L. B. Miles, will continue surveys during the winter, & hopes to locate some 50 miles by May 1. Construction will be started again early next spring, & it is expected to build 40 to 50 miles this year, when the whole of it will be operated by contractors Malcolm & Ross. The line as projected will be about 120 miles long & after crossing the Edmundston section of the C.P.R. at St. Leonards, will connect with the Bangor & Aroostook. The present equipment is for construction purposes only & consists of an engine & 10 platform cars. (Nov. '98, pg. 238.)

There are some magnificent water powers in the country tributary to the new line. Grand Falls has 80,000 horse power, & is owned by Sir Wm. Van Horne, U.S. Secretary Alger, U.S. Senator Proctor & others. Aroostook Falls, about 25,000 h. p., is owned by Miller & Hunt, of St. John, N.B., & Halifax. The Tobique Narrows, about 17,000 h. p., when fully developed, has a tremendous amount of spruce near by. C. L. B. Miles, C.E., & others are applying for incorporation by the N. B. Legislature, as the Tobique Narrows Pulp & Mfg. Co.

Rutland Canadian.—The extension from Burlington, Vt., north to Rouse's Point, N.Y., mentioned in our last issue, is to be gone on with at once. J. W. Burke, C.E., Rutland, Vt., has called for tenders to be in by Jan. 31, for the grading, masonry & tracklaying on about 50 miles, including main line & sidings. The work includes 450,000 cubic yards of rubble stone embankment in Lake Champlain, 10,000 c. y. of solid rock excavation, 2,000 c. y. of bridge masonry & light quantities of earth excavation, embankment & masonry for about 50 miles. The Co. will furnish construction trains at a fixed price; also ties, rails, splices, ballast pits & spur track to quarry & will erect bridge superstructures. Work must begin within a week after the signing of the contract, & must be completed by Sep. 1 next. (Dec. '98, pg. 263.)

Spokane Falls & Northern.—The U.S. Senate has passed a bill authorizing the Kettle Valley Ry. Co. to build a branch of the S. F. & N. through the Colville Indian reservation to the International Boundary.

Toronto, Hamilton & Buffalo.—Hamilton City Council has agreed to give the Co. a rebate of \$1,000 a year on its taxes on condition that it build a spur line to the factories, &c., in the N. e. part of the city.

Thunder Bay, Nipigon & St. Joseph.—A charter has been applied for for this proposed

BALDWIN TEN-WHEEL TYPE LOCOMOTIVE FOR GRAND TRUNK RAILWAY.

line which is projected to run from Port Arthur, via Dog Lake, down the valley of Burke River to Black Sturgeon Lake & on to Lake Nepigon, going up the west side, crossing the height of land & going down through the spruce forests & lignite beds to Lake St. Joseph, near where the Albany River leaves the lake. The line can be extended from Port Arthur to Fort William by using the electric railway between those points for freight purposes. One of the projectors of the line writes us: "The line will pass through one of the best tracts of country in Canada. West & south of Lake Nepigon there are 3,000,000 acres of farming lands, a large proportion of which is equal to the Rainy River delta. Iron ore found on the route goes 67.20 metallic iron, & marble assays 55 lime & 45 magnesia & there are miles of both. Pine, tamarack & spruce measure from 2 to 4 ft. on the stump. The granite equals the Aberdeen for polish & is more easily worked. Among other resources, than those already mentioned, are ash, elm, kaolin asbestos, plumbago, salt, mineral paint, roofing mica, red sandstone, mineral springs & fish. Corn & tomatoes always ripen on the west shore of Lake Nepigon. The Ry. Co. intends to secure settlers from Quebec as specially suited to a wooded country. The Co. will endeavor to get the Ontario Government to form Lake Nepigon & its tributary waters into a Provincial fish reserve. It is expected that in a few years the islands in Lake Nepigon, which number nearly 500, will be largely taken up by tourists & fishing clubs. The freight

traffic will consist of cordwood, ties, timber, pulp wood, lime, limestone, building stone, marble, iron ore, iron shale for roads, walks & red-pressed brick, salt, granite & farm products."

Z. Malhiot, C.E., of Three Rivers, Que., has recently made a barometrical survey of two routes from Port Arthur to Lake Nepigon, covering some 300 miles, all told, on snow shoes in 3 weeks. The application for incorporation is being made to the Ontario Legislature & both Dominion & Provincial Governments will be asked for aid.

White Pass & Yukon.—Very full particulars in regard to the construction of this line will be found in the report of the annual meeting of the Co. on pg. 1 of this issue. The Co. is buying very large quantities of supplies in Vancouver. Its purchasing agent recently bought several hundred tons of provisions, etc., there, & it is expected these orders will be largely increased.

Major Walsh, ex-administrator of the Yukon, is reported to have said in Ottawa that the Co.'s charter on the Canadian side, which was granted under the name of the British Yukon Mining, Trading & Transportation Co., should be cancelled on the ground that the construction of the line would build up an ocean port city on U.S. territory. On the other hand, the Vancouver Board of Trade has passed a unanimous resolution expressing gratification with the energy displayed by British capitalists in connection with the work, & urging the Dominion & B.C. Governments to aid the construction of a branch to Atlin

by way of Log Cabin, so as to put B.C. merchants in a position to secure the trade of the north.

Speaking of the new line, the Victoria Colonist says:—"It makes very little difference what other routes shall be provided for reaching the Yukon, that by way of the White Pass will always be a great favorite. It is likely to be a great scenic route. Hitherto the tide of pleasure travel has turned back after visiting such points as could be reached by steamer. Hereafter it will be regarded as the correct thing to ascend the Pass by rail & probably take a run down the Yukon waters, visiting the Atlin district at least."

Baldwin Locomotives for Canada.

The illustrations on this page show locomotives recently built at the Baldwin Locomotive Works, Philadelphia, for Canadian lines. Following are the general dimensions of the 10-wheel type ones for the G.T.R.:

CYLINDERS.—Diameter.....	20 in.
" Stroke.....	26 in.
" Valve.....	Balanced.
BOILER.—Diameter.....	62 in.
" Thickness of sheets.....	21-32 in. and 3/4 in.
" Working Pressure.....	200 lbs.
" Fuel.....	Bituminous Coal.
FIRE-BOX.—Material.....	Steel.
" Length.....	120 in.
" Width.....	40 1-8 in.
" Depth, front.....	76 1/2 in.
" Depth, back.....	65 in.
" Thickness of sheets, sides.....	5-16 in.
" Thickness of sheets, back.....	3/8 in.
" Thickness of sheets, crown.....	3/8 in.
" Thickness of sheets, tube.....	1/2 in.

BALDWIN COMPOUND CONSOLIDATION LOCOMOTIVE FOR OTTAWA, ARNPRIOR AND PARRY SOUND RAILWAY.

TUBES.—Number.....	291
" Diameter.....	2 in.
" Length.....	15 ft.
HEATING SURFACE.—Fire-box.....	189.0 sq. ft.
" Tubes.....	2272.0 sq. ft.
" Total.....	2461.0 sq. ft.
" Grate area.....	33.43 sq. ft.
DRIVING WHEELS.—Diameter, outside.....	72 in.
" Diameter of centre.....	66 in.
" Journals.....	9½ x 12 in.
ENGINE TRUCK WHEELS.—Diameter.....	37 in.
" Journals.....	6½ x 10½ in.
WHEEL BASE.—Driving.....	15 ft. 8 in.
" Total engine.....	26 ft. 11 in.
" Total engine and tender.....	53 ft. 9 in.
WEIGHT.—On drivers.....	about 125,000 lbs.
" On truck.....	about 41,000 "
" Total engine.....	about 166,000 "
" Total engine and tender.....	about 268,000 "
TENDER.—Tender wheels, diameter.....	43 in.
" Journals.....	5 x 11 in.
" Tank capacity.....	4,500 gals.
" Weight empty.....	about 54,600 lbs.
SERVICE.—Passenger.....	

OTTAWA, ARNPRIOR & PARRY SOUND.—The general dimensions of the compound consolidation locomotives for this line are as follows:

CYLINDERS.—Diameter, high pressure.....	15½ in.
" Diameter, low pressure.....	26 in.
" Stroke.....	30 in.
" Valve.....	Balanced piston.
BOILER.—Diameter.....	68 in.
" Thickness of sheets.....	11-16 & ¾ in.
" Working pressure.....	180 lbs.
" Fuel.....	Soft coal.
FIRE-BOX.—Material.....	Steel.
" Length.....	120½ in.
" Width.....	42 in.
" Depth, front.....	72½ in.
" Depth, back.....	69½ in.
" Thickness of sheets, sides.....	¾ in.
" Thickness of sheets, back.....	¾ in.
" Thickness of sheets, crown.....	¾ in.
" Thickness of sheets, tube.....	½ in.
TUBES.—Number.....	321
" Diameter.....	2 in.
" Length.....	13 ft. 6 in.
HEATING SURFACE.—Fire-box.....	242 sq. ft.
" Tubes.....	2,253 "
" Total.....	2,455 "
" Grate area.....	35 "
DRIVING WHEELS.—Diameter, outside.....	56 in.
" Diameter of centre.....	50 in.
" Journals.....	8½ x 11 in.
ENGINE TRUCK WHEELS.—Diameter.....	30 in.
" Journals.....	6 x 10 in.
WHEEL BASE.—Driving.....	15 ft. 1 in.
" Total engine.....	23 ft. 9 in.
" Total engine and tender.....	51 ft. 9 in.
WEIGHT.—In working order, on drivers.....	165,000 lbs.
" on truck.....	19,500 "
" total engine.....	184,500 "
" total engine and tender.....	288,000 "
TENDER.—Tender wheels, diameter.....	33 in.
" Journals.....	5 x 9 in.
" Tank capacity.....	4,500 gals.
" Weight empty.....	40,500 lbs.
SERVICE.—Freight.....	

Guaranteed to haul a load of 1,150 to 1,200 tons (of 2,000 lbs.), cars and lading, on a grade of 1 per cent., combined with curves of 4½ degrees, track & cars being in good condition.

C.P.R. Western & Pacific Divisions.

General Superintendent Marpole, of the Pacific Division, has issued the following circular, with the approval of Manager Whyte, of the Western Lines:

"On Feb. 1 that section of the Western Division from Donald to Laggan will be operated as part of the Pacific Division, & together with the Selkirk section will form one operating section extending from Revelstoke to Laggan, & will be known & designated thereafter as the Mountain Section. The Selkirk section will lose its identity, & Donald be abolished as a divisional point by this arrangement.

"Supplementary Time Bill no. 1, affecting current Time Bill 13, so far as relates to that section of the Pacific Division between Donald & Revelstoke, will be issued before Feb. 1. This supplement will include the addition to the Pacific Division from Donald to Laggan, & all employees concerned are directed to immediately familiarize themselves with its contents, particularly noting that the Pacific Standard Time will apply on & after Feb. 1, throughout to Laggan.

"The jurisdiction of E. J. Duchesnay, as Superintendent, is extended to cover all the Mountain Section; the Despatching Office will continue to be at Revelstoke, with T. Downie as Chief Train Despatcher.

"T. Kilpatrick, as Bridge Inspector, will have jurisdiction over all the Superintendent's Division.

"The limits of the roadmaster's sections will be continued as at present, viz.: Revelstoke to Donald, with W. Newman in charge, with headquarters at Revelstoke, & from Donald to Laggan with H. C. Killeen as Roadmaster, with headquarters at Field."

In reference to the foregoing it may be added that Laggan station & yard will remain a portion of the Western Division. Field will become an important divisional point, & engines & crews will run through from Field to Revelstoke. The heavy consolidation engines working on the Kicking Horse grade will have their headquarters at Field, & will be used entirely to move the traffic between Field & Laggan, under the supervision of the Pacific Division officials. The dispatching on this portion of the line will be done from Revelstoke. Heretofore it has been done during slack seasons from Medicine Hat, & when traffic was particularly heavy by dispatchers stationed at Field. Another result of this change is the abolition of Gleichen & Canmore as divisional points on the Western Division, & the substitution of Calgary. Engines will run from Medicine Hat to Calgary, 180 miles, & from Calgary to Laggan, 116 miles. The new shops at Calgary are covered in, & the installing of machinery is commenced. The turntable is in place, & the running shed will go into immediate use. The shop will not be in operation till the end of Feb. A running shed with 6 stalls has been established at Laggan, for the Western Division engines, which turn around at that point. The building is solid stone, as is also the new 12-stall roundhouse at Field. Large additions have been made to the tracks at Field, Laggan & Calgary, for the accommodation of through business.

Miscellaneous Railway News.

Canadian Northern Railway.—Notice is given of application to the Dominion Parliament by this Co. for an act confirming the amalgamation of the Winnipeg Great Northern Ry. Co. & the Lake Manitoba Ry. & Canal Co., extending the time for the completion of the Co.'s lines, declaring the bonding powers, & authorizing the building of a line from Lake Winnipegosis to Edmonton.

Manitoba Lines.—Speaking at Boissevain recently, Premier Greenway said:—"Railroad competition is the best thing for this country. The wheat rate has been reduced 10c. per 100 lbs. since I first aided the Northern Pacific. I promised the people north of here a railroad years ago, & I have kept my promise as I have kept all my promises. The rate to Fort William a short time ago was 28c. It is now no more than 17½c. per 100 lbs. The cost of the Northern Pacific branch to the North of this was \$107,500; money well spent. I will not apologise for the Dauphin deal, as it does not cost the country one cent. Since I have been in power I have aided no less than 700 miles of railway, & the whole will not cost the people more than \$4,000,000, & now the cry is for the Hudson's Bay Ry., & you shall have it, & what is more, it is not going to cost the government anything."

Newfoundland, Northern & Western.—Last month the Governor of Newfoundland received a dispatch from Colonial Secretary Chamberlain, refusing to grant the petitions praying for the disallowance of R. G. Reid's contract, on the ground that he could not interfere with the legislative acts of a self-governing colony.

Particulars of the extension of the steamship service in connection with this line will be found on pg. 21 of this issue.

Petroleum has been discovered at Port-aupout, on the west side of Newfoundland, on land included in the grant to Mr. Reid. The

oil is said to be abundant & of good quality. Mr. Reid is said to be meeting with gratifying success in working his coal beds at Grand Lake, & has many other projects under way. The most extensive of these is pulp & paper manufacturing. He intends to begin next spring the erection of a giant pulp mill, the plant of which will ultimately cost \$2,000,000. Most of the output will be put into paper on the spot.

BEGINNING THE YEAR

With pure, rich, healthy blood, which may be had by taking Hood's Sarsaparilla, you will not need to fear attacks of pneumonia, bronchitis, fevers, colds or the grip. A few bottles of this great tonic and blood purifier, taken now, will be your best protection against spring humors, boils, eruptions, that tired feeling and serious illness, to which a weak and debilitated system is especially liable in early spring. Hood's Sarsaparilla eradicates from the blood all scrofula taints, tones and strengthens the stomach, cures dyspepsia, rheumatism, catarrh and every ailment caused or promoted by impure or depleted blood.

British Columbia Electric Railway Co.

The earnings and expenses for Nov., 1898, were:

GROSS EARNINGS.	1896-7.	1897-8.	INCREASE
Railway Vancouver.....	\$4,028	\$5,378	\$1,350
Victoria.....	5,505	7,168	1,663
Westminster.....	4,611	5,853	1,242
Lighting—Vancouver.....	8,578	12,238	3,660
Victoria.....	4,493	6,846	2,353
Total gross earnings.....	\$27,245	\$37,503	\$10,258
Working expenses.....	\$18,320	\$22,391	\$4,071
Net profits.....	\$8,925	\$15,112	\$6,187

Aggregate Gross Earnings from April 1 to Nov. 30.....\$185,741 \$266,187 \$80,446

Aggregate Net Profit from April 1 to Nov. 30.....\$57,622 \$108,834 \$51,212
The aggregate gross earnings and net profit for 1896-97 are from April 15 only.

We are officially informed that the whole of the issue of 12,000 non-cumulative 5% preference shares of £10 each have been allotted (Dec. '98, pg. 271).

Vancouver City Council has authorized the Co. to build a double track on Davie st, from Granville st. to English Bay, & has given an 11 years' lease.

The Co. has decided to establish a parcel service between Vancouver and New Westminster.

Montreal Street Railway.

The gross earnings are as follows:—

	1898.	1897.	Increase.
Oct.....	\$133,419.69	\$116,093.09	\$17,326.60
Nov.....	125,125.10	110,688.68	14,436.42
Dec.....	127,678.00	113,029.33	14,648.67

The Toronto Railway Company's Annual.

The report submitted at the 7th annual meeting Jan. 18 was as follows: The past year's business shows a net profit of \$404,738.80. From the profits of this year 4 quarterly dividends of 1% each have been declared, amounting to \$240,000, leaving, after deducting pavement charges, \$100,738.80 to be carried forward. The gross earnings for the year were \$1,210,618.24, an increase over the preceding year of \$133,005.71. It is gratifying to note that the monthly earnings have shown a steady increase throughout the year. It is also a matter of congratulation that the receipts from the operation of the Sunday car service have shown a steady & marked increase, the average receipts as compared with the period during which the service was in operation in 1897, showing an increase of \$367.24 per Sunday. The operating expenses for the year have been decreased from 48.8% of the earnings in 1897 to 47.4% in 1898.

The power plant, tracks, overhead structure & rolling stock of the Co. have received special attention & have been maintained in a high state of efficiency. The rolling stock

has been increased by the addition of 30 closed & 20 open motor cars, all of which were constructed at the Co.'s workshops, & in anticipation of increased business next summer, 40 additional open cars are being constructed. The Co.'s equipment has also been increased by the purchase of 70 electric motors & 30 improved steel trucks. The steadily increasing business necessitated the erection of additional feed wires in the Centre, Eastern & Western sections of the city. A car shed (capable of storing 60 cars) has been erected in the rear of the King Street car buildings, & a smaller shed for storage purposes was also erected on the Scollard Street lot. Considerable attention has been devoted to Munro Park, where a large pavilion was erected & the grounds much improved, & as a result, as shown by the increased earnings, the public appear to have appreciated the advantages of this park. The new general offices, which are very convenient & satisfactory, have been completed & are now occupied by the various officers of the Co.

The old board of directors was re-elected & organized as follows: President, W. MacKenzie; Vice-President, J. Ross; other directors, Hon. G. A. Cox, W. D. Matthews, C. E. L. Porteous, F. L. Wanklyn & J. Gunn.

The directors have accepted the resignation of Laidlaw, Kappelle & Bicknell, the Co.'s solicitors. J. Bicknell is acting solicitor pending an appointment.

There is no doubt the T.R. Co. & its affiliated companies will provide a trolley market freight service for Toronto, & that a system of radial electric railways will be in operation west, north & east within a very few years.

The result of the decision of the board of county judges in the assessment of the Co. for poles, rails & wires has been to reduce the assessment in wards 2 to 6 inclusive from \$511,520, as returned by the assessor, to \$66,060. The assessment for ward 1, which has been appealed to the Superior Court, if sustained will remain at \$84,860, but if the decision of the board of judges in the other wards is upheld it will be reduced to \$12,123. As a partial offset to these reductions the assessment on the Co.'s machinery & plant in the power house was increased by \$119,000. The Co. has 86.87 miles of rails, wires, &c., in the city, of which 13.47 are in ward 1.

In the Police Court case against the Co. for refusing to put rear vestibules on its motor cars the magistrate imposed a nominal fine of \$5 & costs & granted a reserve case, on the understanding that the matter would be proceeded with before the higher courts as soon as possible. Mr. Bicknell, for the Co., will appeal against the conviction before a County Judge, & if the conviction is sustained there he will take his reserve case to the Court of Appeal.

The notorious E. A. Macdonald has given notice of application to the Ontario Legislature for an act to amend and interpret the Co.'s act of incorporation in a number of ways.

Ottawa Electric Railway Company.

Following is the 5th Annual Report, for the year ended Dec. 31, 1898, submitted at a meeting of shareholders, Jan. 30.—The statement for the year shows a net profit of \$72,643.15. From the year's profits 4 quarterly dividends of 2% each have been declared, amounting to \$65,184.00, leaving after deducting all expenses, including mileage payment & interest on bonds, \$7,459.15 to be carried forward to the credit of profit & loss. The amount to credit of Profit & Loss Account is now \$74,984.44. The gross earnings for the year were \$231,802.06, an increase over the preceding year of \$8,000.39. The receipts showed a steady increase each month throughout the year. There was an increase in snow clearing expenses of \$8,000, the total snow expenses for the year having been \$12,867.16. The winter was an exceptionally severe one. The operating expenses for the year were 56% of the earnings.

The tracks, rolling stock, power plant & overhead structure have all been maintained in an efficient manner, & expenses in connection with their maintenance have been paid

out of the year's receipts. Special care has been given to the repair, painting & cleaning of the cars, & it is pleasing to note that their condition is subject to favorable comment by the Co.'s patrons. It has been the aim of the Co. to afford a high-class service, enexcelled by any other; & the favorable remarks made by the press & public of this & other cities, indicate that the Co.'s efforts have been appreciated. Particular attention has also, as in former years, been given to the appearance & conduct of the conductors & motormen. During the year 6 open & 6 closed cars have been added to the rolling stock. A loop has been put in at the C.P.R. station, & connections have been completed at the Chaudiere & Hull for handling freight cars. The outlook for large development in both passenger & freight traffic is very promising. On Jan. 2, 1899, a plebiscite was taken by the city on the question of Sunday cars, which resulted in a large majority in their favor, & the Co. is now taking steps to carry out the decision of the people. Legislation to this end will be applied for.

The Co. is prohibited from running its cars on Sundays by the Ontario statute, passed in 1897, which forbids the running of Sunday cars except it be to keep the track clear of snow & ice or for other acts of necessity or charity. The specific exceptions contained in this act in favor of companies that operated on Sundays prior to April 1, 1897, or that possessed the rights of Sunday operation, do not apply to the Ottawa Co. The Co. has given notice of application to the Dominion Parliament for authority to run cars on Sunday and for the repeal of the last 3 lines of sec. 6 of chap. 53 of the statutes of Canada, 1892. This chapter is the Co.'s act of incorporation which was obtained from the Dominion Parliament instead of the Ontario Legislature because the railway is interprovincial, the terminus of one of its lines being in Hull, on the Quebec side of the river. While Federal incorporation was obtained, and while the railway, though a purely local concern, was declared to be a work for the general advantage of Canada, care was taken to so frame the bill that the Co. would not be relieved of obedience to the laws of the Provinces in which it operated. The act provides that "the operation of so much of the Co.'s line as may be within Ontario by any new or additional powers conferred by this Act shall be subject to the statutes of Ontario in force from time to time in relation to street railways, & the operation of so much of the line as may be within Quebec by any new or additional powers conferred by this act shall be subject to the statutes of Quebec in force from time to time in relation to street railways." The Co. will ask to have these restrictions removed, & it is expected to succeed in doing so.

The Co. also gives notice of application to Parliament to authorize it or to confirm its power to extend its line to Bell's Corners & elsewhere in the Township of Nepean & in the Township of Gloucester.

SHIPPING MATTERS.

Sir Wm. Van Horne on the Atlantic Service.

Sir Wm. VanHorne was entertained at the Garrison Club, Quebec, Jan. 14, by about 75 of the leading public & business men of the city, & made a most important speech in reference to the Atlantic steamship service. He prefaced his remarks by reading two extracts from reports by the C.P.R. Co.'s Foreign Freight Agent, J. Corbett. The first was as follows:—

"It is to be regretted that the steamship companies at the port of Montreal are so short-sighted in failing to take advantage of controlling such enormous quantities of good paying traffic via the St. Lawrence route during the summer, & from a Canadian port during the winter. I have done all I could to get the steamship companies to reduce their rates to those current from Baltimore & Philadelphia, but their excuse is that the Baltimore & Philadelphia lines have not the same advantage as the lines running from this port for obtaining high-class traffic, which is so abundant here, & are, therefore, dependent on such traffic as you are in a position to give them for the loading of their steamers. I trust when you are abroad this winter you will be able to negotiate a satisfactory service for the handling of this traffic from this port, & certainly the officials of this Co. will do all they can to co-operate with you in every pos-

same manner, & further your interests in this direction.

The second extract was as follows: "In 1898, being a remedy for the disabilities under which the Canadian railway companies exist in the exportation of their traffic during the summer season, it seems to me we must have a controlling interest in the ocean transportation, either by traffic arrangement or otherwise, via Montreal, & if the facilities of this port will not permit of new steamers & lines, then we must look to Quebec, which affords certain strong inducements, viz.: The close interchange of all classes of traffic between rail & ocean carriers, saving in cartage, the continuous interchange of traffic at all seasons, & a lengthened season of navigation."

Sir William also read a letter from F. H. C. 2006, President of the Sault Ste Marie Pulp & Paper Co. as follows: "I enclose a copy of a letter received from Foreign Freight Agent Corbett, from which you will learn that on account of the impossibility of obtaining freight room for our pulp from Montreal we are obliged to fill our foreign orders by shipment from Baltimore, Philadelphia & New York. The output of our mill no. 1 is 1,000 tons daily. Mill no. 2, which will be ready to start up on Jan. 1, has an equal capacity. I need not point out to you the fact that this business, equal to 15 to 20 cars daily, is of too great magnitude to leave transportation subject to the chances of the present inadequate facilities offered by the Canadian trans-Atlantic lines. Canadian railways, in the proportion of their mileage to their traffic, are giving their patrons better facilities & lower rates than any other railways in the world. With such internal facilities & such magnificent & varied resources as the rest of the world are just discovering to exist here, the one essential thing lacking to promote progress in Canada in all lines of development is better means of international communication by sea from Canadian ports. Modern freight carriers of large capacity & economical operation should be provided in order that the ship owner may be able profitably to carry freight at the rates of United States ports. I beg of you to consider if anything can be done, either by exciting the livelier interest of the Government or otherwise to improve these conditions. Let us not delay. In the special industry in which I am engaged, several millions of dollars can be brought into Canada & several thousand operatives permanently employed if the product can be exported all the year round at the ocean rates prevailing at U. S. ports. At present the rate is $\frac{1}{4}$ to $\frac{1}{2}$ higher than that paid to reach the same market by the U. S. competitors who have without let or hindrance obtained their pulp wood from Canadian forests."

"What," asked Sir William, "was Canada doing about the grain trade. Last year Manitoba produced 30,000,000 bushels, but nearly all of this was going by U. S. ports. In 1897, for 1 bushel of Manitoba grain that went from Canadian ports, 5 went via Buffalo.

A great deal was being said about the deepening of canals & improving the interior arrangements for transportation. What Canada needed most of all, however, was better ocean facilities from its own ports. The means of exporting by our ports were altogether inadequate. We have increased the hopper without enlarging the spout."

He proceeded to point out that the ocean charges from Canadian ports are enormously high. He quoted figures, comparing the difference in the steamship charges from Boston in support of this. These figures, roughly speaking, showed in butter & cheese a difference of 50%. It was impossible to compete successfully for trade on this basis. Besides the added cost of transportation was a tax upon the producers of the country. "If the people of Canada knew what they are paying for ocean transportation they would rise up in rebellion," declared Sir William, most emphatically.

"The inadequate character of our ocean facilities is, continued the speaker, driving trade away from the country. Not long ago the C.P.R. was horrified to discover that it had 25,000 tons of freight between St. John & Minneapolis, without a vessel in sight to carry it abroad. The antiquated carriers were overdue several days & some," added Sir William, "had drifted ashore. What could be done in such a case? It became necessary to make immediate arrangements to ship the freight at U. S. ports at an immense loss. On that occasion some of the freight was being carried from Minneapolis to St. John & when the shippers found it could not be expeditiously handled they lost faith in the Canadian route. It is necessary for us to rehabilitate ourselves if we are to get a share of this trade & hold our own." The most profitable freight carriers to-day are enormous vessels. Not long ago, Sir William saw the Coptic, a White Star freight vessel, at New York, loading from barges, 10 deep all around. It seemed as if the produce of a continent were going into the great black hole. As a matter of curiosity he enquired the extent of the cargo. He found that it represented 16,500 tons. In the round trip, the vessel's profit was \$75,000, & in 14 months its cost was written off. That is the way Canada must do business to keep up with the times.

Sir William said: "There is nothing I desire more to see Canada have than the very best Atlantic passenger service that capital & science can give it. What Canada requires is a fast ocean passenger ferry service. The day has gone by for mixing trains, & it has also gone by for mixing the ocean passenger & freight services. Don't let anybody humbug you with 19 $\frac{1}{2}$ & 19 $\frac{3}{4}$ knot vessels. We must have the very best & the very fastest."

"From what ports?" asked one of the audience.

"From Quebec in summer & Halifax in winter. I have long realized that, while heavy freight will go on to Montreal in summer just as it will go on to St. John in winter,

because it is an advantage to get in further inland, that at the same time Quebec would be the summer port for passengers, and Halifax the winter port, because they will take the shortest route." Sir William said that it was necessary if the trade of Canada was to be preserved that all these ports should pull together. He well knew that in the past when Halifax was mentioned there were people in St. John ready to throw icebergs in the way, & that when St. John was spoken of there were those in Halifax to conjure up fogs. It was the same, he feared, with regard to Montreal & Quebec. But he believed that the interests of all were identical. Local feeling must be forgotten & a united effort made to restore & develop the trade of Canada.

"While it was perfectly true that the C.P.R. with its far-reaching connections, was probably the best fitted to provide the fast Atlantic service, it had no objections to offer to any other organization that was capable of doing so taking hold of it. Sir William said he had written to the Allans & the Dominion line encouraging them to go on with the project & offering to co-operate with them. But it seemed to him that they were never interested in the matter except when somebody, with a serious intention to provide the service, turned up at Ottawa. Then they became interested for a time. The mention of the C.P.R. in connection with any matter always led some people to oppose it on the ground that the C.P.R. has already got too much. He did not see on what ground they based that assumption. Every obligation, either moral or legal, of the C.P.R. to the country or to anybody in the world had been fulfilled to the letter. In fact it has always done better than it had agreed to do.

"I have sometimes been accused of building castles in the air," said Sir William. "Let me try now & build you some air ships. I would provide Canada with a better ocean service than exists anywhere else in the world. They would be," he added, "as much ahead of the present U. S. Atlantic lines as the vessels we have on the Pacific are better than the lines the U. S. have upon the Pacific. They would be the fastest, the most sumptuous, the most comfortable vessels afloat. The result of this policy in the Pacific, is that although there are 18 U. S. vessels there, the 3 C.P.R. vessels do more business than all the rest combined. This," he added, "would give Canada the most magnificent advertisement possible. For such a service the country could afford to pay a million dollars."

Proceeding to give further details of his plan, Sir William said: "The C.P.R. would put on a train from Euston Station, London, to Liverpool, that would astonish the world. At that station he would sell a ticket from London to Hong Kong or to Australia by the C.P.R. The passengers would be absolutely guaranteed connections right through. At Liverpool the C.P.R. would take them & bring them to Quebec. The Pacific vessel would wait until it made connections with the

express across the continent. The C.P.R. would double its service on the Pacific so that every week there would be a vessel either from China or from Australia. It is impossible to increase the service now, owing to the difficulty of booking passengers from the west through to Europe by U.S. ports. When this is provided Canada will be the highway of the world. Follow the line of through travel & you follow the line of great progress."

Sir William, continuing, said that any fast Atlantic project would have opposition from two sources. The G.T.R. is now largely interested in Portland, Me., & would regard with hostility an all-Canadian route. Its influence would certainly be felt against the proposition. He did not consider, however, that the true interests of that company were against a Canadian route. The present management, which he did not wish to criticise, was doing its best to lift the property out of a hole. He had nothing to say regarding its policy. He called attention, however, to a statement by Mr. Hays, in an interview with a Montreal reporter, published on Thanksgiving Day, in which he said that one of the things Canada had to be thankful for was that the company's new elevator at Portland was taxed to its fullest capacity (laughter). Another influence that would be against the project would be the existing companies.

"It was said by some that a line would not pay. 'If that is true,' replied Sir William, 'I would have it anyway, because it would be the best possible advertisement of the country. But it is not the case.' He pointed out that our five million Canadians equal in their travel abroad fifteen millions of people in the U.S. Besides this, Canada had the Western States to draw upon, & their trade would grow every year. Moreover, we would have through business. Each week the Pacific steamers of the C.P.R. would bring in from 50 to 80 passengers bound for Europe, & this would be the nucleus of the fast Atlantic passenger trade." In conclusion, Sir William said that perhaps he had been a little indiscreet, & had gone further than he intended to, & said the C.P.R. would be glad if any organization would take hold of the service in a business-like & efficient way, & would willingly co-operate to make it a credit to Canada.

Hon. R. R. Dobell, who followed Sir William, said he had lived in Quebec long enough to have shown that he was true to its best interests. In regard to the fast Atlantic project, he asked his friends to have patience with him & with the Government, & they would in the end give every satisfaction. Before Petersen, Tate & Company took the contract for the service, he had submitted the project to Sir Wm. Van Horne, & that gentleman had expressed his approval.

Sir William—Quite right.

Mr. Dobell was glad to hear this endorsement. Nobody regretted more than himself the failure of Petersen, Tate & Co. But it was due in part to the fact that Mr. Petersen had shown himself to be a weak man. When the failure was realized he (Mr. Dobell) had said to his colleagues: "It is no use crying over spilt milk. Let us get to work right off & endeavor to secure a still better service." He for one still had perfect confidence in the type of vessels he had favored. They had been approved by the British experts. While he did not consider it practicable for a fast passenger service to carry heavy freight, he held to the view that there should be accommodation for cold storage & express freight. He had just returned from England, where he had been endeavoring to secure such a service. He believed he was in a position now to absolutely declare that such a service would very soon be obtained, but further than that he could not go. Canada must not only have the very best vessels afloat as regards accommodation, but they must be unsinkable

ships. They must be so constructed as to absolutely guarantee that no such accident as occurred to the *Bourgogne* would happen to them. He believed the hulls should be constructed in 14 water-tight compartments. Mr. Dobell could not say whether the service should stop at Quebec in summer or not. The contractors, he thought, would have the opportunity of choosing Montreal or Quebec.

As to the natural advantages of this port he had no doubt. The time, he believed, was rapidly coming when there would be winter navigation at Quebec. To that end the Government was proceeding to put permanent light-houses in the Traverse in place of the movable lightships. In conclusion, Mr. Dobell said he was glad that the C.P.R. was ready to co-operate with any company that gave the fast service, for which he was now entering upon a new campaign.

Shipping Revival at Quebec.

It is stated in Quebec that arrangements have been completed for the establishment of a new line of ocean freight steamers which will make Quebec their terminus. The line will be inaugurated in 1900, & will be operated in conjunction with the Great Northern Ry., which is projected to connect with the Canada Atlantic. Steamers of immense capacity have been chartered to run between Duluth & Parry Sound. The belief is that the U.S. traffic in grain which lately congested the port of Buffalo will contribute enough to make an important addition to the trade of Quebec, & in part so revive the languishing business of the port as to make it once more an important Canadian outlet. The project is the outcome of the new activity which has developed in the old historic show town. Great changes are taking place daily, which go to show that Quebec is preparing to take its place in the struggle for commerce which is going on between the ports on this side as well as on the other side of the Atlantic.

Two factors have contributed to stimulate the ambition & arouse the hopes of Quebec. The more important of these is the enlargement of the ocean carriers. Twenty-five years ago, when the bulk of ocean freight was moved in sailing vessels, Quebec was a busy, thriving port. But the general application of steam carried the trade by its doors, & took it to Montreal. The tendency to-day to larger ships, which are unable to safely ascend the river so far as Montreal, threatens to transfer the trade of the St. Lawrence to U.S. ports unless vigorous efforts are made to secure a well-equipped deep-water terminus on the St. Lawrence. It is to meet that need that Quebec is to-day bestirring herself. The other factor in the situation—the deepening of the Canadian canals, which is to be completed next year to 14 ft.—promises to bring from the lakes to the seaboard a larger trade, in which Quebec expects to have a share. For these reasons a revival of the maritime importance of the place is confidently expected, & Quebec counts upon the trade which it has lost being returned with interest.

It is rather remarkable that the oldest part of the Dominion should have awaited so late in the day to be open for settlement. Yet at the back of Quebec, stretching north & west, there is a country that is new to the settler. This district, which until a few years ago was thought to be useless for agricultural purposes, now has some of the best farms in the province. Last year it attracted 1,300 new settlers. It has been opened up by the Quebec & Lake St. John Ry. It contains 6,500 square miles of agricultural land, or 4,000,000 acres. In this immense area are already scattered 40,000 persons, whose numbers are being largely augmented by immigration each season. On the railway which traverses the dis-

trict seven million dollars have been spent. Last year it carried 153,000 passengers, & 199,000 tons of freight, & this year there was an increase of about 20%. No company has a more complete system of looking after immigrants than the Q. & L. St. J. It sends literature & lecturers throughout the continent, & immigrants are carried by it free to their destination. In the past the overflow of population of older Quebec has gone in the direction of the U. S. To-day it is being diverted to the Lake St. John district, & the population is being swelled by the repatriation of exiled Canadians. There is, in fact, growing up in this hitherto neglected country a new province.

The pulp & paper industry have had a great deal to do with the opening of this New East. The clearing of a farm is no longer a loss of time & labor to the settler, but a source of remuneration. In fact, under present conditions the settler makes as much from his first harvest of wood as from any the soil may subsequently yield at his invitation. He has, moreover, a market at his doors for his product. At Chicoutimi there is a mill now shipping three cars of pulp a day. All along the line are mills turning out lumber & railway ties, which give employment in the woods & elsewhere to 6,000 men. There is to-day not one idle man in the Lake St. John district, & it is difficult to get the labor required there. North-east of Quebec, in the country opened up by the Great Northern railway, hamlets, villages, & towns are springing up rapidly around the industries that are being established. Every man in St. Raymond is busy cutting & hauling square timber for the Quebec harbor works, for which 200,000 sq. ft. have been ordered. That place is also turning out a similar quantity for the dam for the Jacques Cartier Electric Power Co. At Grandmère \$2,000,000 has been expended by Canadian & U.S. capitalists in the erection of great paper & pulp mills, employing 1,100 hands, which are shipping largely to the London market. A town of 2,500 has sprung up around the industry. A few miles further west, at Shewanigan, a Boston company is preparing to spend \$4,000,000 in paper & pulp mills. Some 70 to 80 miles of railway have yet to be completed, which, it is rumored, will be done next summer, & Quebec will have direct rail connection with the big paper & pulp establishment projected at Hawkesbury. It is predicted that when the new steamship service is in operation it will command a large traffic from these industries, as well as from the rapidly-growing Lake St. John district.

Quebec will always be handicapped as an ocean port until it has railway communication with the South shore. The fact that the port can be kept open much later in the season than Montreal would before now have made it the outlet for grain were it not for the fact that when the season ends, the grain in store would be tied up in Quebec for the winter. If it could be carried into St. John & Halifax this drawback would be obviated. Hence all parties in Quebec are united as to the necessity for the bridge. The undertaking will cost \$3,000,000. The Federal Government is pledged next session to put through a vote of \$1,000,000 for the bridge. The city is expected to give \$500,000, the province \$500,000, & the balance is to be raised by private subscription. When the bridge is completed Quebec expects to draw the trade of the large and growing district to the south of it, which at presents finds its outlet in U.S. ports. There are many practical men in Quebec who maintain that the port could be kept open all winter. It is altogether likely that an experiment will be made next year to test the practicability of the scheme. The St. Lawrence below the Isle of Orleans, about 30 miles from Quebec, is undoubtedly open the whole year, except a week or so in the spring, when the river is

discharging its ice into the gulf. Between the Isle of Orleans & Quebec is the doubtful locality, where there is during the winter a good deal of loose ice from the river above Quebec. It is believed, however, that this is not sufficient to render navigation impracticable, & that it would be a simple matter to keep the route open. At all events, the season of navigation could be extended very materially without encountering any ice in the river. The near prospect of these improvements, the early completion of a new trunk line to the west, with a special line of steamers, the opening of the district behind Quebec, with the development of the paper & pulp business, as well as agriculture, to sustain it, are causing this historic city of Quebec to strike a new gait, which promises to bring it well to the front in the march of progress.

The Routes to the Yukon.

In lecturing in Toronto recently, F. C. Wade, Crown Prosecutor for Yukon Territory, after referring to the hardships endured by those who had packed their outfits over the passes, said:—"But like the old Cariboo road, with its history of trials & hardships which we now gaze upon with wonder from the windows of a C. P. R. palace car, these trails with their rough & hair-breadth escapes, will soon be a memory only. An overhead trolley has been built across the Chilcoot Pass, from Sheep camp to Crater lake. A medical friend of mine last fall took a passage in one of the buckets. Seated in this novel conveyance, smoking a cigar, he was the very picture of comfort. The passenger who next season glides pleasantly up the Skaguay trail by the White Pass Ry. will fail to recognize the change which enterprise has made in the face of nature."

Bennett, which is 35 miles over the White Pass from Skaguay at tide water, Mr. Wade described as a great shipbuilding yard last spring, when at one time there were on the shore of the lake, 3,000 boats ready for launching; boats made of whip-sawed & mill-sawed spruce, to be propelled by heavy spruce oars & what sails could be had. In these the gold hunters navigated Lakes Bennett, Nores, Tagish marsh, & Labarge for a hundred miles; then 400 miles of river travel to Dawson. Now steam boats have superseded all this. Mr. Wade says last spring the experiment was tried of running a small steamer from Bennett to Dawson, over the lakes, through Miles canyon, down the White Horse rapids, & among the rocks of Thirty-mile river. It was an entire success. The horse tramway past the canyon, & around the White Horse was completed. Half a dozen steamers were at once put on the route, & through navigation, with a change of boats at White Horse, was speedily established. In the fall a large river steamer was placed on the lower end of the route, from White Horse to Dawson. Many of the steamers that came up from St. Michael to Dawson last summer will be placed on the upper river. The navigation of the Upper Yukon, from the passes to Dawson, is an established fact, & is destined to supersede in a large measure transportation on the lower river from St. Michael, & transportation by small craft as well. The removal of a large number of sunken rocks from Thirty-mile

river, the construction of a safe channel through White Horse rapids, & some minor improvements at Five Finger rapids, would bring navigation on the Upper Yukon to a state of perfection.

"This navigation established, the traveller need no longer contemplate weeks of the varied labor of tugging at a big spruce oar with blistered hands, continuous 'baling out' & a broken back, the daily launching of a spruce monster, & the nightly beaching of the same, with the everlasting loading & unloading of several tons of cargo. The gales rattling down on Bennett through the Chilcoot funnel, the hurricanes from Windy Arm on Tagish, & the huge swells of Labarge will be divested of their terrors. The White Horse, which already boasts 30 or 40 victims, & the Thirty-mile river need be feared no more. A few hours of railway travel over the White Pass & a three days' run by steamer over the bosom of a beautiful chain of lakes, among scenery Alpine in its grandeur, & down a swift running sinuous river, past mountains, through mountain chains, under lofty banks & sand hills, past thickly-wooded terraced flats, past headlands, cliffs, & escarpments of fantastic majesty & beauty, will bring the traveller to his destination, without hardship, without effort even. In the same journey months were formerly often occupied, and thousands were forced to return home without crossing the passes."

Danger to Great Lakes Levels.

J. McMullen, M.P. for North Wellington, recently spoke of the danger to the Canadian lake levels from the construction of the Chicago drainage canal, which will soon be completed, & pointed out that in any scheme for the deepening of the Georgian Bay harbors the influence of this work on lake levels must be considered. When the St. Clair flats were deepened a number of years ago, the increased flow of water reduced the lake levels in the upper waters by almost 3 ft. In the case of the drainage canal which would turn a large part of the outflow from Lake Michigan into the Mississippi, instead of the St. Lawrence system, the danger was very real. It would probably lower the water level on the Georgian Bay a foot or more.

From a report of the U.S. engineers it appears that the drainage canal was constructed under a State charter, & that the U.S. will have no jurisdiction until the canal becomes navigable water. The outflow by the canal will be very great. It was originally projected with a width of 250 ft. & a depth of 20 ft. The width as actually constructed is, in places where rock was met, 125 ft. The flow will be 10,000 cubic ft. per second. The Niagara flow is 260,000 cubic ft. per second. The taking away of this amount of water now reaching the ocean by the St. Lawrence will materially diminish the flow over Niagara & lower the lake levels, especially the level of Lake Huron. It is Mr. McMullen's belief that the Dominion Government should at the earliest moment serve notice upon the U.S. Government that a material lowering of lake levels following upon the opening of the drainage canal would be regarded as a cause for a claim for damages on the part of the Dominion.

Atlantic Transportation Co.'s Failure.

No marine failure of recent years has been so stupendous as that of the Atlantic Transportation Co., which went into receivers' hands recently. This Co. made contracts to transport coal from Newport News to New England ports at a very low figure. Lately it met with severe losses in the wrecking of several boats. The Co. was incorporated under New Jersey laws in 1897, with a capital stock of \$3,000,000 to transport merchandise & coal. It purchased a fleet of 27 vessels, consisting of 1 steamship, 3 tugs & 23 barges, & leased or chartered a fleet of 40 other vessels, which were on the inland lakes. All but 10 of these vessels were taken by way of the St. Lawrence River to Newport News. Owing to the lateness of the season, 10 of the vessels were left on the St. Lawrence River above the rapids. The Co. expended \$150,000 in securing the charters & transferring the vessels to the coast. The business of the Co. has of late consisted almost exclusively of transporting coal delivered to the Co. at Newport News by the Chesapeake & Ohio Ry. The liabilities are in the neighborhood of \$1,000,000. The assets consist of 24 purchased vessels, valued at \$900,000, and worth at forced sale \$613,500, interest in chartered vessels & office furniture, \$2,000. All the purchased vessels are encumbered.—Nautical Gazette.

Owners of lake vessels under charter to the A. T. Co. seem to feel no particular uneasiness over the announcement that receivers have been appointed. It has been the practice to make payments of charter rentals monthly in advance, & the owners have received the checks for Jan. The fact that these were signed by the Chesapeake & Ohio Coal Co., the principal company with which the A. T. Co. has contracted for the transportation of coal, indicates close relations between these two concerns & close relations also with the C. & O. Ry. Co. Officials of the Cleveland bank through which all checks are paid incline to the opinion that the application for receivers was made simply to facilitate certain difficulties in the administration of the property. W. A. Hawgood, a Cleveland vessel owner, has gone to New York to investigate. There is little doubt that if the lake vessels are not retained by the A. T. Co. other profitable occupation will be found for them, at least for the steamers & the better class of barges, as it is generally understood that vessels of this kind are wanted on the coast. The task of bringing all the barges back to the lakes would, of course, be a difficult & expensive one.—Marine Review.

A Kingston, Ont., wrecking company is said to have a claim of \$4,000 in connection with taking some of the steamers down the St. Lawrence. The 10 laid up at Coteau will be attached for the claim.

It is said the North German Lloyd Steamship Co. has arranged to run a Pacific line, with Seattle, Wash., as the American terminus.

The Laurauda has been sold at auction at Seattle, Wash., to S. G. Simpson for \$25,100, which was \$100 higher than the bid of Tacoma parties, represented by Hugh Wallace. This is the last of the ocean fleet of the Boston & Alaska S.S. Co.

Klondike M., T. & Transport Co.

Sir Chas. Tupper presided at the first annual general meeting in London, Eng., recently. In moving the adoption of the report, he expressed regret at the unfortunate circumstances which had led to their trading & transport operations being less successful than they had hoped. This was owing to the unusually open weather preventing the formation of ice on the Stikkeen River. It was only after much inquiry that the directors decided upon adopting the Teslin Lake route to the Klondike, & had the weather been anything like what it was in the previous seventeen winters, there was every reason to suppose that things would have gone on as they had anticipated. He might say that the Canadian Government adopted the same route for transport purposes as the directors of this Co. The board availed themselves of the earliest opportunity of making an arrangement for redressing the position of the Co., and they associated themselves with Mr. Rattenbury & other gentlemen in an enterprise for organizing a line of steamers between Bennett Lake & Dawson City. That undertaking had proved successful. They learned by cable from Victoria that the net profits amounted to \$92,000, of which \$30,000 would be re-invested in posts. It was found to be important to establish communications during the winter by means of posts, & it was believed that that would prove a lucrative business. The net profit of \$92,000, made by a company in which they possessed a very large interest, was equal to about 30% on the whole of the issued capital of that company.

Toronto Harbor Improvements.

The Commissioners are taking steps to secure such improvements to the harbor as are necessary to meet the requirements of the increased traffic consequent on the deepening of the St. Lawrence canals to 14 ft. of water, which is expected to be completed next year. K. Tully, Engineer to the Commission, & C. H. Rust, City Engineer of Toronto, have agreed on the following improvements as being necessary & that they should be commenced without delay:—

The southern portion of the piers of the eastern channel to be extended to 18 ft. of water below the datum gauge at the Queen's wharf, and the channel between the piers to be dredged to that depth, so that a vessel drawing 14 ft. of water can enter the harbor at all times.

The river Don to be diverted by the Commissioners' cut, across McNamee's cut into the deep water, or pond in Ashbridge's bay, & a dam constructed across the river Don west of the Commissioners' cut, to prevent any further deposit from the river Don injuring the harbor.

A trunk sewer to be constructed from Bathurst st., along the line of Front st., east of the river Don, into which all the main sewers of the city should discharge their contents, to be finally emptied into the deep water of the lake, or pumped on land to be treated by intermittent downward filtration, chemical precipitation, or the ferozone & polarite process.

A deputation from the City & the Commissioners will wait on the Dominion Minister of Public Works at an early date in reference to the matter.

Montreal will have a much better service with Germany next season. For some time the Hamburg-American Line has felt that it should put on more vessels, but it could not get them. A number of its new vessels will be in shape by the beginning of the season, & it will give a 10-days' service instead of two weeks. All the vessels will be the same size as the huge cargo carriers that it has had on the line in the past.

Port Stanley—Conneaut Ferry.

President F. H. Walker, of the Lake Erie & Detroit River Ry., issued the following circular Jan. 7: Commencing on Jan. 10, this Co. will take over by lease the property of the U.S. & Ontario Steam Navigation Co., & will thereafter operate the car ferry Shenango No. 1. The jurisdiction of the following officers of this Co. will be extended to include the above leased property:—E. C. Walker, Managing Director; J. H. Walker, Treasurer; W. Woollatt, Gen. Supt. & Traffic Manager; A. Leslie, Gen. Auditor & Accountant; S. Austin, Mechanical Supt. And until further advised, O. J. Hammon, Gen. Freight Agent; E. D. Comstock, Gen. Pass. Agent, will continue to act on behalf of the Car Ferry in their respective capacities, with offices in Carnegie Building, Pittsburg, Pa.

The Shenango No. 1, which was illustrated in our issue of Oct., '98, pg. 221, runs between Port Stanley, Ont., & Conneaut, Ohio.

The Maritime Provinces.

The str. Northumberland went off the Point du Chene-Summerside run in Dec. for the winter, after a capital season's business.

Nothing more has been heard of the English company which was said to be contemplating establishing steel shipbuilding works in N.S.

The str. St. Croix, of the International line, now makes but one trip a week between St. John, N.B., & Boston, the usual midwinter service.

The Dominion Government has had an examination made of Richibucto harbor, with a view to deepening the entrance to 19 or 20 ft. on the bar.

C. R. Burgess, Wolfville, N.S., & others, have been incorporated under the Dominion Companies Act as The Kambira Co., Ltd., capital \$28,800.

Tide tables for Halifax, Quebec & St. John, N.B., for 1899, have been issued in pamphlet form by the Tidal Survey Branch of the Department of Marine.

C. R. Burgess, Wolfville, N.S., & others, have been incorporated under the Dominion Companies Act as The Barquentine Skoda Co., Ltd., capital \$16,000.

S. C. & W. H. McCurdy, of Parrsboro, intend building a steamer at Spencer's Island, N.S., this winter. She will be 110 ft. over all, 23 ft. beam & 7½ ft. deep.

H. Elderkin & Co., Port Greville, N.S., are building a 300-ton schooner. Orders for schooners have also been placed with J. Smith & M. Young, of Lunenburg, N.S.

Digby Basin, N.S., saw more large square-rigged & three-masted vessels in 1898 than for some years past. Most of them loaded at Annapolis, but Digby got a good share. There appears to be a bright outlook in the South American lumber trade.

N. McNichol, naval architect, Glasgow, is acting as Inspector of the Department of Marine for the steamer which is being built at Dundee for the P.E.I. winter service. The last report received at the Department intimated that the frames would be all up by Dec. 30 last. No name has yet been selected for the steamer.

The Halifax Graving Dock Co. has let a contract to rebuild its no. 3 maritime railway. When this is done, together with completion of rebuilding of the large railway now nearing completion, the whole plant will consist of no. 1 railway of about 3,000 gross tons capacity, no. 2 of 1,000 tons, & nos. 3 & 4, each with 2 cradles for small vessels.

Some of North Sydney's enterprising citizens are endeavoring to form a company to fit out a fleet of fishing vessels next year.

The Herald says:—"The fishing grounds are at our very back door, & surely if Lunenburg & Gloucester vessels find it profitable to prosecute our fishery, Cape Breton, with her easy access & good shipping facilities, should & would certainly find it more so."

The I.C.R. ferry str. Mulgrave, which runs across the Strait of Canso, between Mulgrave & Point Tupper, has been fitted with an electric light plant, which includes a powerful search light, two incandescent arc lights & about 40 incandescent lights. When the steamer reaches the wharves at Mulgrave & Point Tupper respectively during the night connection is made by which the stations & freight sheds are lit by incandescent arc lights, the power for which is supplied from the steamer.

No seizures were made by the Canadian fisheries protection cruisers on the Atlantic coast last season. This leniency of the authorities, it transpires, was not owing to the absence of infractions, but was prompted by quite another motive. It was considered inadvisable, pending the deliberations of the International Commission, to prosecute a too rigorous enforcement of our rights, & the cruisers contented themselves with a patrol calculated to obviate the commission of any large abuses.

The Dominion Atlantic Ry.'s str. Prince Edward has taken the Prince Rupert's place on the St. John, N.B.-Digby run. The new str. Prince George, which has now been on the Yarmouth-Boston run for over a month, is doing well, & has reduced the time considerably, leaving Yarmouth at dark & reaching Boston by morning. Her sister boat, the Prince Arthur, also built at Hull, Eng., had her trial trip Dec. 21. On a run of 300 miles she developed the remarkable speed of 20½ knots, which is somewhat faster than the Prince George did.

Capt. W. H. Smith, R.N., Wreck Commissioner, has filed his decision in his investigation into the loss of the steamer Express of the Yarmouth Steamship Co., off Bon Portage Island, Shelburne, last Sept. The accident is found to have been caused by the neglect of the Master Capt. T. Harding to take soundings to ascertain the depth of water as the steamer approached the island in a dense fog. His certificate is suspended for 3 months. The certificate of mate U. H. Lyons is suspended for 1 month for not calling the attention of the Master to the danger the vessel was in by this neglect to use the lead. Capt. Harding is at present in command of the steamer City of St. John. The Commissioner recommends that during the time his master's certificate is suspended Capt. Harding be granted a mate's coasting certificate.

R. G. Reid, owner of the Newfoundland & Western Ry., has let a contract for the building in Glasgow of 7 steel-hull steel screw steamers. They will be built with a view to the future development of the services & not to the existing conditions. They are all to be finished exactly like the Bruce, both in their structure & main fittings. They will be specially fortified to resist ice; they will have the very latest devices in machinery, & their equipment will include electric search-lights. One will have a carrying capacity of 4,000 tons gross, & is intended for the Labrador service. She will be pretty nearly the same size as the Bruce, have accommodation for 50 first class & 100 second class passengers, & will make fortnightly round trips between St. John's, Nfld., & the Labrador coast. The 6 others will be of 2,000 tons gross, be intended for the coasting trade, and will run between St. John's, Nfld., Placentia, the west coast of the Gulf of St. Lawrence, & the south coast, from Placentia to Port aux Basques, the western terminus of the railway.

system. Some of these boats will run weekly & others bi-weekly.

The Manhattan Steamship Co. has begun a new service between New York City & St. John, N.B. Steamers will run at first every 10 days & afterwards the service will be increased to a weekly one. This Co. also expects to establish a regular line between New York & Yarmouth & Halifax. Speaking of the new service the Maritime Merchant says: "Quite a number of attempts have been made in the last 10 years to establish a line of steamers between New York & St. John. From one cause or another, the various lines attempting it gave up the business after a short trial. Once more the effort is being made, with steamers that call at some Maine ports en route. The Co. is a strong one, & confident that a permanent line can be established. In securing freight from New York to St. John, the steamers have to compete with schooners which go there with lumber & are sometimes very glad to get a return freight at low rates." The Co. has entered into a contract with the town of Digby, N.S., to build & equip an hotel there to accommodate at least 100 guests & to be ready for occupation by July 15 next. The town exempts the hotel & furnishings from taxation for 5 years, & gives free water for the same period.

Ontario & the Great Lakes.

The Government cruiser Petrel is wintering at Goderich.

An excursion steamer 110 ft. long is being built at Kingston for Lake Champlain.

C. W. McCoole, of Pembroke, Ont., is likely to have a passenger steamer built.

It is said Capt. Noonan, of Kingston, Ont., will have a steamer built at Westport, Ont.

H. Julian, tug owner, Port Dalhousie, was injured by being thrown from a vehicle recently.

Capt. Denisha is having a tug 60x14 ft., with a 40 h.p. engine, built at Kingston, for towing in connection with Dominion Government improvements.

J. G. Evans, a medical missionary, has had a steam launch built at Kingston, Ont., for use on the River Jordan, the Sea of Galilee & the Dead Sea. It is 30 ft. long.

Manager Foy has issued a very attractive calendar for the Niagara Navigation Co., containing excellent views of the steamers Chippewa, Corona & Chicora.

Lieut.-Col. Tisdale's project to connect Lakes St. Clair & Erie by a canal will again be before Parliament, notice of an application for legislation having been given.

Capt. Trowell of the steamer Ocean has issued a writ against the Wentworth Navigation Co. for \$5,000 damages. He was injured in an accident to the steamship.

Shipbuilding companies of the Great Lakes have under contract for next season 12 steel vessels, 8 of which are modern freight carriers, 2 passenger boats, 1 oil tank barge, & 1 large tug.

Kivas Tully, C.E., states that the indications of another winter season of low water is a very serious matter, as it will affect the canals. The depth is still 7 degrees below the zero line.

The Calvin Co., forwarders, etc., Garden Island, give notice of application to the Dominion Parliament for an amendment to their Act of Incorporation, so as to give them the exclusive right to the name of the Calvin Co.

The Collins Inlet Lumber Co., Toronto, is having a steel tug built there. Dimensions, keel 80 ft., beam 16 ft., depth 7 ft. Engines comp., dimensions of cylinders & stroke, 11, 20x14. One Scotch boiler. Approximate value, \$10,000.

Capt. Reynolds, Peterboro', Ont., is having a steel passenger steamer built at Toronto. Dimensions, keel 85 ft., beam 16 ft., depth 5½ ft. Engines comp., dimensions of cylinder & stroke, 9, 18x12. Fitzgerald boiler 54 in.x8 ft. Approximate value, \$8,000.

The General Passenger & Freight Departments of the Northern Steamship Co. will be consolidated Mar. 1, when I. M. Bortle, Gen-

eral Passenger Agent, will retire, S. Murray, now General Freight Agent, taking charge of both departments, with headquarters at Buffalo.

The Ottawa River Navigation Co. is having a screw passenger steamer built in Toronto. Dimensions, keel 100 ft., beam 21 ft., depth 7 ft. Engines comp., dimensions of cylinders & stroke, 10, 20x16. The boilers, 5½x8 ft., are being built at the Polson Engine Works. Approximate value, \$11,000.

The ferry Niagara was caught in an ice-floe between Buffalo & Fort Erie, Jan. 22. She was swept down under the International Bridge with 19 passengers on board & was in danger of going over the Falls, but managed to get into clear water below the bridge. All her upper works were torn off by contact with the bridge timbers.

Winnipeg Town Topics points out that the Great Lakes do not drain any portion of the prairie wheat belt, & that far from being the great drainage canal of North America, as they are popularly held to be in Ontario & Quebec, they only carry off the waters of 10% of the continent, while the Red River of the North & the Saskatchewan, with their tributaries, drain nearly 50%.

The U.S. Hydrographic office states that the water in the St. Lawrence continues to rise, & the prospects for better navigation this year improve. The U.S. Light House Board has decided to change the color of the lights at the St. Lawrence light station. That at Crossover Island, Sunken Rock & Rock Island will be changed from brown to white. That at Charlotte Harbor will be 1 fixed red range light in place of 3 lights, red, white & red.

The Royal Canadian Yacht Club, Toronto, has sent a letter to the other yachting organizations in the Dominion, in which it states that in order that the coming contest for the Canadian cup shall be truly international, & that Canada shall be well represented, the R.C.Y.C. proposes to offer in prize money not less than \$1,000 to the winners of the trial races. These races will be held some time in

Food Caused Pain

Catarrh of the Stomach Cured by
Hood's Sarsaparilla

"I was taken sick about a year ago with catarrh of the stomach. At times I would have a ravenous appetite and at other times could not eat. My food caused me excruciating pain. I was running down so fast I had to stop work. My friends urged me to take Hood's Sarsaparilla. I did so and soon began to feel better. The disagreeable symptoms of disease gradually passed away and flesh and strength returned. I owe it all to Hood's Sarsaparilla." MARY L. CUMMINGS, North Brookfield, Mass. Remember

Hood's Sarsaparilla

Is the best—in fact the One True Blood Purifier. Sold by all druggists. \$1; six for \$5.

Aug. & will number 5, & the yacht winning 3 out of the 5 will be selected as the cup defender to sail against all comers on Lake Michigan.

The boats laid up in Hamilton Bay this winter are the schooners L. D. Bullock & W. J. Suffer, at the Simcoe Street slip; schooner Singapore, Capt. Malcolmson, at Zealand's wharf; Government dredges Ontario & Nipissing, at McIlwraith's wharf; T. R. Merritt, steamer Lake Michigan & the Sir Leonard Tilley, at Mackay's wharf. The 3 boats of the Hamilton Steamboat Co. are at the James St. slip, & the schooner Ella Murton is at Murton's wharf. The propeller Myles is tied up in Duluth harbor, having broken a shoe while going up Lake Superior. The Arabian is at Kingston.

The establishment of Georgian Bay grain ports should give a great impulse to Canadian inland marine. Canadian bottoms should monopolize the trade from Fort William to the Georgian Bay, just as U.S. bottoms now monopolize the trade between Chicago & Duluth & Buffalo. No Canadian vessel can carry between those points. The position would be somewhat reversed if a Georgian Bay port were made the eastern end of the upper lake system. Canadian boats could then carry from Duluth & Chicago, besides having the exclusive right between Fort William & Georgian Bay.—Toronto Globe.

Marine insurance companies have decided to raise their rates on ocean & lake traffic. The heavy losses sustained last year have induced them to take this step. New systems have been adopted by which the steamers & vessels will hereafter be graded & classified, & the rates will depend on what line the merchandise is shipped by. The rates will vary from 20c. on 1st-class ocean steamers to 25c. on 3rd-rate vessels. The purpose of this is to induce shippers to select the best water routes, & thus reduce losses to a minimum. The exact amount of the increase on the old ocean grain rates has not been decided.

The Calvin Co.'s steamer India was launched at Garden Island, Jan. 4. She is 212 ft. long, 37 ft. beam, 15 ft. hold, & built of the best white oak. She is fitted with triple expansion engines with cylinders 18, 30, 48, & a uniform stroke of 30 ins. The engines were built by the Co. at Garden Island. Her propeller wheel is 10 ft., 7 ins. diameter, with a pitch of 12 ft. Her 2 boilers are of steel of the Scotch type, 11 ft. 5 ins. diameter & 12 ft. long, carrying 160 lbs. steam. She is also fitted with several auxiliary engines, for reversing the main engine, for steering, raising anchors, etc. She will probably be used in the carrying of timber.

In our Nov. issue, pg. 249, we gave particulars of the steamer which is being built at Picton by the Lake Ontario Navigation Co. & into which the engines of the Empress of India will be put. There is a good deal of speculation as to where the new boat will run. While it is understood that she will run out of Toronto, it seems to be taken for granted that she will not go on the Port Dalhousie route. The general impression is that she will run between Toronto & Prescott, in connection with the R. & O. N. Co., as a sister boat to the Toronto, until the latter can be duplicated. Other reports say she will run in connection with the American line.

W. Shanly, C.E., has been appointed sole arbitrator to determine the amount of compensation to which Ryan & Haney are entitled for extras on their Soo Canal contract. Work upon section 12 of the Soulanges Canal has been suspended for some time. This is the section under contract to Hogan & McDonald, being mostly rock-work. There is said to be no reason why it should not be proceeded with continuously throughout the winter. The

Minister of Railways & Canals has notified the contractors to the effect that unless work be resumed at once & carried on to the satisfaction of the department, the contract will be cancelled & the work re-let.

At the annual meeting of the Great Northern Transit Co., at Collingwood, Jan. 17, the following officers were elected:—J. J. Long, President; C. Cameron, Vice-President & General Manager; T. Long, Secretary-Treasurer. The annual report showed the Co. to be in a good condition, & it was decided to make special efforts during the coming season to make the service in every way satisfactory & complete. It was decided to build a modern steamer for the Sault Ste. Marie route to replace the Pacific, which was recently destroyed by fire, & to purchase a steamer for the North Shore route, to replace the Northern Belle, also destroyed during the past season.

The Marine Record, Cleveland, Ohio, says: "In writing or speaking of the shipbuilding industry of the lakes we are always alert to the fact that Canada has a large frontage on all of those waterways, except Lake Michigan. In making up statistics of lake shipbuilding, it is, therefore, hardly equitable, not to say generous, to swell the list of U.S. work by including the vessels under construction at Canadian shipyards, a feature which the Record always makes clear when dealing with the subject. It is frequently by such careless, or rather slovenly work, that wrong impressions are created & otherwise carefully gathered statistics made misleading, not unfrequently to the embarrassment of those who may cursorily glance them over."

A general description of the gunboat which is to replace the U.S.S. Michigan on the great lakes, & for which provision was made in the last naval appropriation bill, has been given out. She will be known as gunboat no. 16, & will be a practical duplicate of the Marietta. She will, of course, be constructed at one of the ship yards on the great lakes. She will be 174 ft. on the load water line, 34 ft. beam, 12 ft. mean draught, 1,000 tons displacement, 14 knots speed, 1,200 horse power & 200 tons coal bunker capacity. She will have twin screws, driven by 2 sets of triple expansion engines, making 200 revolutions a minute. Steam will be supplied by water tube boilers at a pressure of 200 lbs. The armament will consist of six 4-inch rapid-fire rifles, four 6-pounders, two 1-pounders & one Colt.—Marine Review.

The storms during the season of 1898 were unusually severe on lake vessels, the losses having been materially greater than during any other season. The losses from various causes have been estimated at from \$2,500,000 to \$3,000,000. In a list of 569 vessels, the causes assigned were as follows: Ashore, 123; aground, in protected channels, 126; fire, 40; collisions, 90; ice, 16; storm-beaten, 96; foundered, 8; miscellaneous, 116. Lake Michigan has been the scene of the greatest number of serious losses, with Lake Superior second. Lake Huron was remarkably free from disasters, & Lake Erie did not contribute its usual quota. Lake Ontario produced a larger number of serious losses than Lake Erie, notwithstanding the limited traffic on the former. The number of boats which have passed out of existence is 58, with an aggregate tonnage of 29,194.

The report of the freight & passenger traffic to & from Lake Superior for the season of 1898 has been issued. The U.S. canal was opened to commerce from Apr. 21 to Dec. 10, 1897 (234 days); in 1898 it was open from Apr. 18 to Dec. 14 (241 days). The Canadian canal was open to commerce from Apr. 21 to Dec. 14, 1897 (238 days); in 1898 it was open from Apr. 11 to Dec. 9 (243 days). Commerce passed through canals 248 days during 1897;

commerce passed through canals 248 days during 1898. The report for 1898 shows a large increase in traffic, as compared with 1897. The number of vessels passing through the Canadian & U.S. canals increased 3%, & the number of lockages increased 11%. The registered tonnage shows an increase of 6%, while the freight tonnage was 12% greater than in 1897. An increase of 8% in the number of passengers is noted.

The Suez Canal carries much of the commerce of a hemisphere, much, indeed, of the exchangeable products of the world. The Sault Ste. Marie canals carry so much of the business of the Northwest as does not go by rail. The Suez Canal is open the year round; the "Soo" canals about 8 months. The latter closed for the year 1898, Dec. 14, having been open 241 days, as against 365 for the Suez. The volume of commerce via the "Soo" was 21,234,664 tons; that of the Suez for the year about 9,000,000 tons. In carrying the business by the "Soo" route, 17,761 vessels were employed, an increase of 3%, to be improved on next year, according to the shipbuilding programme under contract at this time. The value of the commerce moved through the "Soo" the past season is placed at \$220,000,000. This business paid to shipowners about \$15,000,000. The value of the vessels engaged is placed at \$46,000,000.—Marine Record.

There has been expended on Canada's canal system from the Great Lakes to the Atlantic seaboard a total of \$60,000,000. On the Farran's Point Canal, to avoid the Farran's Point rapid, the enlargement consists in the building of entrance piers, a lift lock 800 ft. long by 40 ft. wide, & the straightening & enlarging of the prism. The Rapide Plat Canal has been enlarged at a cost of \$1,600,000. On the Iroquois section of the Galops Canal there have been provided new crib entrance piers, a new lock 800 ft. long by 45 ft. wide, the cutting of a new prism, & deepening & cutting at the west end, all of which will cost in the neighborhood of \$790,000. On the Cardinal section of the Galops Canal a new cut has been made through the Village of Cardinal. The deepening of the Lachine Canal between St. Gabriel & Lachine to a depth of 16 ft. is practically completed. In Lake St. Louis a channel has been cut 300 ft. wide & 27 ft. deep for a distance of 4 miles.

Province of Quebec.

The Quebec Chronicle contends that the St. Lawrence is navigable to that city all the year round.

L. Coste, Chief Engineer of Dominion Public Works, is visiting European ports, to gather ideas for the improvement of Montreal harbor.

It is proposed to organize a company at St. John's, to build a steamer of a speed of 15 miles an hour & a capacity for 450 passengers, as an excursion boat on the Richelieu river.

G. N. Ducharme, banker, St. Cunegonde, Montreal, & others, are applying for incorporation under the Dominion Companies Act as the Lake Labelle Navigation Co.; capital \$10,000; head office Montreal.

Capt. A. Bowie, the well-known Ottawa River captain, died Dec. 30, of pneumonia. He was a shareholder in the Ottawa River Navigation Co., & had been 40 years on the river as captain, having been placed in charge of the old Phoenix when he was but 22 years old.

Ships have been entered by The Turret Steamship Co., Newcastle-on-Tyne, against W. G. Jenks, Port Huron; M. Madden, Saginaw; W. E. Donnelly, Saginaw; Mrs. J. Schinon, New Baltimore; and the Manhattan Steamer.

There is no fake about this: send your address at once. Every person answering this ad will be put on a Hansemidee De-located Set, **absolutely free**—we mean it. There is no trick, no muzzing with words, nothing but what is honest. Our offer is in black & white, no misrepresentation of any sort; everyone who answers this ad gets a chance to win a De-located Set, no matter how many people we get. We wish to put our paper on top, & we do nothing to get in the lead quickly. It is one of the best & most interesting Fashion, News & Story Papers in existence. You can prove all we say, the **absolute truth**, if you will send us **10¢ Silver or 15¢ stamps** to cover the expense of postage. We will send you a De-located Set, **absolutely free**. The paper is for **no other use**. If you ever can have their choice of Breakfast, Dinner or Tea Set Free. Set, **absolutely boxed & packed** at our expense.

POPULAR FASHIONS

New York City, DEPT. 1005, P. O. BOX 2617.

CANADIAN-AUSTRALIAN STEAMSHIP LINE.

The Royal Mail service between Canada, Hawaii, Fiji & Australia is performed by the Canadian Australian line steamships: Aorangi, gross tons, 4,000; indicated horse-power, 4,700. Miowera, gross tons, 3,500; indicated horse-power, 4,500. Warrimoo, gross tons, 3,500; indicated horse-power, 4,500. These steamships are built to the requirements of the Board of Trade, & are classified 100 A1. They are fitted with a complete system of water ballast on the double bottom principle, giving great stability & safety, & the hulls being divided into a large number of watertight compartments, they are practically unsinkable. The size & speed of these steamers are such as to assure passengers of every comfort. The vessels of this line give a regular 4 weeks' service from B.C. ports to the Sub-tropics & Antipodes. Their trade has largely developed itself, a most common experience in shipping circles, & one which very truly exemplifies itself in this case as well as in that of the Empress line.

ATHENIAN AND TARTAR.

These two fine vessels, purchased by the C.P.R. last spring for the Northern trade, were a distinct acquisition to the shipping of B.C. At present they are on the China-Japan route—the amount of freight offering at this season, largely in new season's tea, & later in rice, being more than the capacity of the Empress line can handle, a striking proof of the saying that vessels being established on a run have the effect of bringing trade into that channel. It was many times predicted that the Empresses would never find sufficient trade. Today they cannot handle it! Lloyd's Register furnishes the following particulars of the two vessels:

Steamship Athenian, twin-screw steamer, 3 decks; registered A1. Built in 1881 by Aitkins & Mansell, Glasgow, for Union Steamship Co. of England, length, 365 ft.; beam, 45 ft.; depth, 29 ft.; engines 600 h.p., triple expansion; tonnage, 3,782.

Steamship Tartar, iron screw steamer, 3 decks; registered A1; built in 1883 by Aitkins & Mansell, Glasgow, for Union Steamship Co. of England; length, 376.5 ft.; beam, 47.2 ft.; depth, 30.3 ft.; engines, 762 h.p., triple expansion; tonnage, 4,246.

Each of the vessels is fitted with electric light throughout, & has ample & convenient passenger accommodation for all classes of passengers. An idea of their similarity in speed is given in the statement that the Tartar arrived on Apr. 1 from England, having steamed the distance in 51 days, 1 hour, 10 min., while the Athenian arrived Apr. 12, having steamed in 51 days, 5 hours, 56 min., a very close record on such a long voyage.

CANADIAN PACIFIC NAVIGATION CO.

This line commenced business in 1883 in connection with mail contracts between Victoria & inland ports, east & west coast ports of Vancouver Island, & northern coast ports. The fleet at the outset consisted of the steamers Otter, Princess Louise, Enterprise, R. P. Rithet, Western Slope, Yosemite, Wilson G. Hunt, Maud, Reliance, Wm. Irving & the Gertrude, to which was soon added the steamship Sardonyx. A number of steamers have since been built & purchased. The fleet now includes the steamers Yosemite (1050 tons), Princess Louise (544 tons), R. P. Rithet (686 tons), Maud (94 tons), Rainbow (140 tons), Islander (1495 tons), Charmer (496 tons), Danube (561 tons), Transfer (98 tons), Beaver (343 tons), Willapa (245 tons), Tees (330 tons), & Queen City (243 tons).

Steamers leave for Vancouver daily. For New Westminster tri-weekly, connecting there with steamers for upper Fraser River points each trip; for Naas River & intermediate British Columbia ports tri-weekly; for Alas-

kan ports weekly, & for west coast of Vancouver Island ports, four times per month. The Co. owns wharves in Victoria. Its steamers make close connection at Vancouver with the C.P.R. for the east.

ESQUIMALT AND NANAIMO RAILWAY CO.

The Company operates the steamer City of Nanaimo (517 tons), which maintains a passenger & freight service between Victoria & Comox, calling at all islands en route, & at Nanaimo. At Union wharf connection is made with the Union Colliery Co.'s railway to Cumberland, 11 miles distant. The route of the steamer has recently been extended to Texada Island, & if business justifies it, this will continue to be a permanent port of call. Victoria to Texada Island is 173 miles.

This Co. also operates the steamer Joan, (530 tons), plying daily between Nanaimo & Vancouver, furnishing passenger & freight service between these ports.

UNION STEAMSHIP CO. OF B.C.

This Co.'s fleet consists of the Cutch, in the Alaskan & northern B.C. trade, Coquitlam & Comox, in the northern coast trade, Capilano, now engaged with the New England Fish Co. in the halibut fishing of Queen Charlotte Islands; the Senator on the Moodyville & North Vancouver ferry; the Chehalis & Lenora, engaged in coast trade & towing. The success achieved by this Co., especially in developing trade with up-the-coast British Columbia points, is noteworthy, most especially in view of the fact that for a long time the business was irregular & not of large volume, while now it has grown to such proportions that the Coquitlam has been permanently placed on the run in addition to the Comox, which used to handle the business alone.

THE SEALING FLEET.

Victoria is the headquarters of the Canadian sealing fleet. Many of the fleet are now in port, though a number of vessels have already left for the sealing grounds. Sailing schooners are almost exclusively used for this service. They range in size from 50 to 100 tons. The fleet consists of about 50 schooners, & each vessel carries an average of 30 men & 12 canoes. In spring the sealing grounds are along the west coast of Vancouver Island, off the mouth of the Columbia River, & in Santa Barbara Channel, while some of the schooners extend their course to the Japan coast. In the fall the fleet proceeds to Behring Sea & Copper Island. In these waters the spring season is from Jan. 1 to May, & the fall season is from July 1 to Oct. For the Japanese coast the vessels usually leave Victoria in Jan., & return in Oct. The fall season extends from July to Oct. The average catch per season is 1,000 skins for each schooner, & the average value is \$8 a skin.

OTHER LINES.

The str. City of Seattle leaves the C.P.N. wharf in Victoria daily for Puget Sound ports, & the steamer Garland leaves Turner, Beeton & Co.'s wharf tri-weekly for Port Angeles, Port Townsend & Seattle.

The Alberni & Barclay Sound Steamboat Co.'s steamer Willie, sails daily from Alberni on the west coast of Vancouver Island, to Barclay Sound ports.

The steamers of the Pacific Coast Steamship Co., whose fleet includes the first-class passenger steamships Queen, Walla Walla & Umatilla, sail about every 5 days for San Francisco, connecting there with the Co.'s steamer for Southern Californian & Mexican coast ports.

The steamers of the Nippon Yusen Kaisha line, the Riojun Maru, the Kinshiu Maru, & the Yamaguchi Maru, sail monthly to Asiatic ports, this line running in connection with the Great Northern Ry.

The Northern Pacific Steamship Line, con-

sisting of the Tacoma, Victoria, Olympia & Glenogle, also sail monthly for the Orient.

The first-class steamship, Garonne, of the British-American Line, sails northerly for Hilo & Honolulu, Hawaiian Islands, while freight ships sail from Victoria to all parts of the world.

The str. Manauense, Captain Edwards, is a fine vessel brought round the Horn from England last spring, & engaged for some time in the Klondike trade. The owners are making a strong effort to establish a new line to run from B.C. ports to San Francisco direct, with some prospect of success.

The steamer Fastnet, owned in Halifax, is another vessel brought to this coast last spring for the Klondike rush. She was operated last summer in connection with a line of boats on the Yukon, but is now tied up at Victoria & there is some talk of the owners disposing of her.

While the intention in this article is not to go into particulars of the carrying trade, it would be an omission not to mention the extensive fleet engaged regularly in the lumber-carrying trade from British Columbia ports. The increased demand for lumber from many parts of the Orient has caused a big shipping trade to be done & many vessels have come & gone this year.

The str. North Pacific sails from Vancouver for Seattle & Tacoma thrice weekly.

The Washington & Alaska Steamship Co.'s str. City of Seattle sails every 12 days for Wrangel, Juneau, Skagway & Dyea. Speed, 15 knots, with accommodation for 600 passengers—200 1st-class & 400 2nd-class.

The Alaska Steamship Co.'s str. Rosalie & Dirigo, each with a capacity of 250 passengers, sail every week for Wrangel, Juneau, Skagway & Dyea.

The str. Robert Dunsmuir runs regularly from Vancouver to New Westminster & Fraser River points.

Many other small vessels also make regular coasting trips in freight-carrying trade. Among these may be mentioned McKenzie Bros. little fleet of coal & freight-carrying vessels. These are rather light draft & are in some respects unique of their class. Their ability has been amply demonstrated by the fact that they admirably suit the requirements they were built for & are a paying class of vessel.—British Columbia Weekly.

The Charmer has taken the Islander's place on the Victoria-Vancouver run.

Capt. Jno. Irving has retired from the management of the C. P. Navigation Co.

Capt. Mooney is negotiating in Victoria for the building of a steamer for the coast trade.

Capt. Ainsley, a well-known Fraser River captain, died recently, aged 74. He was born in the U.S. & came to New Westminster 41 years ago.

Advices from Australia are to the effect that it is doubtful if some of the Australian colonies will renew the subsidy for the Vancouver mail service which expires next spring.

Work is proceeding steadily on the tug Ymir which the C.P.R. Co. is building at Nelson to handle the barges between Nelson & Kootenay Landing. She will be the most powerful tug on the inland lakes.

The str. Tees has been overhauled at Victoria. A big house has been built on her deck & she has been built over forward, changing her appearance considerably. Her passenger accommodations have been much increased.

Owing to the difficulty experienced in suppressing the wholesale smuggling from Puget Sound, the Dominion Government has decided to establish patrol boats in B.C. waters, with a view of aiding in the checking of the traffic.

The question of U.S. bottoms carrying freight & passengers from Victoria & Nanaimo, destined to other Canadian ports, having been

considered by the Vancouver Board of Trade, the customs collectors at Vancouver & Victoria have been communicated with on the subject.

On Jan. 10 there were 13 big sailing ships, 11 British, 1 German & 1 Cuban, on the way to Victoria, 6 with cargo & 7 seeking. The on-bound ships have a total tonnage of 22,285 tons. At the same time last year the total tonnage on the way was 18,218, & in 1897 17,863 tons.

The Big Bend Transportation Co. has been incorporated under the B. C. Companies Act, capital, \$125,250, head office, Revelstoke. Among the objects are the operation of vessels on the Columbia River, carrying on a general transportation business, & the construction of telegraph & telephone lines.

The Vancouver Board of Trade has appointed a committee to secure direct steamship connection with northern ports, so as to get the trade of the Yukon & Altn Lake for Vancouver. The C.P.R. & other steamship owners in Vancouver are to be approached first & if they will do nothing R. Dunsmuir & Sons & the C. P. Navigation Co. of Victoria are to be applied to.

The committee of the Nelson Board of Trade, which investigated the loss of the str. Ainsworth, which resulted in the death of 9 men, at Crawford Bay, Nov. 29, reported that no blame could be attached to anyone connected with the steamer. They strongly recommended that an investigation into accidents of that character should be undertaken by the Government.

The str. Manauense was recently seized by the Admiralty Marshal at Victoria, at the instance of the mortgagees, R. Williamson & Co., of Workington, Eng., for a claim of \$40,000. The Albion Iron Works, Victoria, has a claim of \$45,000 for recent repairs, and the Esquimalt Marine Ry. claims \$5,000 in the same connection. The Manauense is said to have cost the Red Cross Co., for which she ran from Liverpool to the Brazils, \$375,000. Shortly before she was purchased by Capt. Edwards, who brought her around the Horn to engage in the Alaskan service, the Co. expended \$60,000 in the reconstruction of her engines. W. A. Ward, of Victoria, has been appointed by the court as Receiver for the str.

The Beaver Steamship Line.

Elder, Dempster & Co., of Liverpool, have acquired the Beaver line charter with the in-

tention of reorganizing the company. It will continue under the old name, but will be managed from Liverpool by them, & the Montreal office will continue under the management of D. Campbell. The two Montreal offices of Elder, Dempster & Co. & the Beaver line will be just as separate and distinct as hitherto. The steamers now owned by the Beaver line are the Lake Ontario, Lake Superior & Lake Huron. The Gallia & the Tongario, which have been run by the Beaver line, are the property of McIver Bros. & have only been chartered. Four steamers are in course of construction, & will have saloon accommodation for about 100 to 150 passengers, & good accommodation for intermediate & steerage passengers. These ships will not carry cattle, but will have a dead weight carrying capacity of 6,000 to 7,000 tons of cargo. The speed is to be 16 knots. They expect to have two of the new boats ready for the opening of navigation, & next season's shipping business, as far as the Liverpool trade is concerned, should be the greatest Montreal has ever seen. The probability is that there will be 5 or 6 ships sailing every week for Liverpool, representing a dead weight carrying capacity of 20,000 to 30,000 tons a week. A conservative estimate of what may be exported from Montreal next season is placed at about 350,000 tons a month, or over 10,000 tons a day.

Notices to Mariners.

The Dominion Department of Marine has issued the following notices:—

No. 78, Dec. 10, British Columbia.—Light house on Fiddle Reef.

No. 79, Dec. 12, Nova Scotia.—Buoys in Barrington Passage.

No. 80, Dec. 15, New Brunswick.—Improvement in Shediac North Channel range lights. Newfoundland.—Rocky patch off Peterel Island.

No. 81, Japan.—1. Harbor regulations for open ports. 2. Nindo-Saki light house. 3. Jizo-Saki light house.

No. 82, Dec. 17, British Columbia.—1. New buoy in Sidney Channel. 2. Change in color of east buoy in Sidney Channel. 3. Buoy removed from Shoal off D'Arcy Island.

No. 83, Dec. 21, British Columbia.—1. Buoy on Rosedale Rock. 2. Shoal in Mayor Channel. Japan, 3. Kyoga-mi-Saki light house.

No. 84, Dec. 29, British Columbia.—1. Light house on the Sisters Rocks. 2. Shoals

in Carrington Bay. 3. Disappearance of Maple Bank beacon.

No. 1, Jan. 14, New Brunswick.—Winter arrangements, Quaco buoys.

No. 2, Jan. 19, Nova Scotia.—Halifax pilots.

There Must Be No Modification.

A Washington despatch to a Detroit paper, says: "It can be stated on the highest authority that the Canadian members of the Joint High Commission are stubbornly resisting the efforts of the U. S. commissioners to bring about a modification of the agreement of 1817, concerning the construction of warships on the lakes. The argument has been advanced from the U. S. side that no possible menace to Canadian interests would result should lake ship-builders be permitted to construct light draft gunboats, torpedo boats, etc., with the distinct understanding that they should not receive their armament till they reached tidewater. The Canadian commissioners make no definite reply to these representations, but in a general way deplore any movement calculated to disturb what they style 'the present amicable condition of affairs.' This subject is now being thoroughly canvassed by the commission, and the U. S. members are making a very strong effort to secure the desired end."

Canadian Steamship Co.—A London, Eng., cable of Jan. 19, says:—The long expected issue of stock of the Canadian Steamship Co. is now being made in connection with the inauguration of the Milford Haven-Paspebiac service. The ordinary shares, amounting to £50,000, are not offered to the public, but the 5% debentures, amounting to £200,000, & £100,000 of 6% preference stock, are being offered to the public. The Atlantic & Lake Superior Ry. Co. guarantee the principal & interest, & undertake to provide a half dozen steamers between Milford Haven, Liverpool & Paspebiac.

The Oceanic, which was launched at Belfast, Jan. 14, will be the largest steamship in the world. Her dimensions are: Length, 704 ft.; breadth, 68 ft.; depth, 49½ ft.; gross registered tonnage, 17,040; displacement, 30,100; h. p., 28,000; speed, 21 knots. Her dead weight as she left the ways was 11,300 tons. Her funnels are of such immense diameter that two street cars could pass through them at once.

TORONTO.

Richelieu & Ontario Navigation Co.

The stories of the infusion of United States capital into this Co., started several months ago, have again been revived, & it is said Chicago & New York people want to secure control of the stock. The President, Senator Forget, denies any knowledge of the matter. The stock has risen several points within the past few weeks. The Co. wants another boat for Lake Ontario to match the forthcoming str. Toronto, and there is need of a new hotel at Murray Bay, & hotels at several other points to properly accommodate the tourist travel. In order to provide these needs additional capital will be necessary.

molded, 14 ft. Engines are of the triple expansion, inclined jet-condensing type, with cylinders 28, 44 & 74 ins. by 72-in. stroke. The feathering paddle wheels are 22 ft. outside diameter & 10 ft. 3 ins. face of bucket. Air & feed pumps are attached to & worked from main engine. Boilers, 4 in number, are of the return tubular type, 11 ft. diameter & 11 ft. 6 ins. long over heads. Each boiler has two 41½-in. outside diameter suspension furnaces. They are fitted with the hot draft, & are designed for a working pressure of 175 lbs.

Spacious & elegant passenger accommodations are provided. 140 state rooms, including 4 parlor rooms & large Pullman sleeping cabin, furnish sleeping accommodation for

The official trial trip has not yet been made, but there were a couple of preliminary trips on Nov. 28 & 29. The main object of the first one was to ascertain the coal consumption—that is how many pounds of coal were consumed per indicated horse power per hour. The engines were indicated during the progress of trial (3 hours 43 minutes) with the following results: Steam by gauge, mean during trial, 155 lbs.; vacuum, mean, 24½ ins.; revolutions, 34.2; mean draught of steamer during trial, 7 ft. 7¾ ins.; displacement corresponding to this draught, 1,160 net tons; coal burned entire trial, 12,747 lbs.; I. H. P., mean during trial, 1,878; coal per I. H. P. per hour, 1.82 lbs. The

THE STEAMER TORONTO, OF THE RICHELIEU AND ONTARIO NAVIGATION COMPANY'S FLEET.

The str. Saguenay will be renovated & lighted by electricity before the opening of navigation, another boat will be added to the Saguenay fleet, & a daily service, including Sunday, will be provided. It is said the Hamilton service will also be augmented.

The illustration on this page shows the Co.'s steamer Toronto, which on the opening of navigation will go into service on the Toronto-Prescott run. A description of the steamer was published in our issue of July '98, pg. 132, shortly after the launching of the hull, & a portion of it may be repeated here. The hull of the Toronto is of open hearth steel, & of the following dimensions:—Length over all, 278 ft.; length, keel, 270 ft.; beam, molded, 36 ft.; beam, over guards, 63 ft.; depth,

430 passengers. The dining-room, placed on an upper deck, has a seating capacity for over 100. The interior finish & decorations of the spacious halls and deck saloons are elaborately executed, the main & gallery saloons being finished in Francis I. Renaissance, with the dining-room in Louis XVI. The entrance hall is decorated in Neo-Grec with modern Renaissance details, with the smoking room in Oriental treatment. The refreshment & waiting rooms are in Elizabethan paneling of prima vera, natural wood finish. The main stair cases are in Honduras mahogany with wrought metal balustrades in hammered leaf work, finished antique bronze, the main newels carrying bronze figures supporting electric torches.

steamer was also run on a 19-mile course during this trial & the accurate time noted. The course was from Oakville light house to Gibraltar light, Toronto. This stretch of 19 miles was covered in just 60 minutes, or at the rate of exactly 19 miles an hour. The total of engine revolutions over the 19-mile course was 2,047.

The second trip was made for the purpose of ascertaining the greatest number of revolutions for which the boilers could continuously & comfortably furnish steam and also to record the speed with this number of revolutions. The steamer was run on the same course as the previous day, & a record of time, revolution, steam gauges, etc. carefully taken, the same as on the pre-

vicious day, but the engines were not indicated for power. The record of this trial is as follows: steam pressure by gauge, mean over course, 175 lbs.; vacuum, 23½ ins.; revolutions, mean over course, 36.87; mean draught of ship, 7 ft. 7 ins.; displacement corresponding to this draught, 1,148 net tons; time over course, 58¼ minutes; distance, 19 miles; speed, 10.6 miles an hour.

Railway & Canal Statistics.

The Dominion Public Accounts for the year ended June 30, 1898, just issued, show the following items among expenditure chargeable to capital:

Intercolonial Railway	\$ 452,750 80
Prince Edward Island Railway	17,541 88
Lachine Canal	216,717 44
Ottawa Works	82,663 37
St. Lawrence River & Canals	2,535,949 61
Sault Ste. Marie Canal	31,004 56
Trent Canal	351,273 31
Improvement of the St. Lawrence	198,914 36
Port Arthur Harbor (River Kamistiquia)	12,856 27
Canadian Pacific Railway Company	692 17

Railway subsidies were paid as follows:

Atlantic & Northwestern	\$ 186,600 00
Coast Railway of Nova Scotia	90,400 00
Gulf Shore	25,064 15
Ottawa, Arnprior & Parry Sound	327,232 00
St. Lawrence & Adirondack	84,480 00
Crow's Nest Pass	453,750 00
Montreal & Ottawa	40,000 00
Ottawa & New York	33,600 00
St. Stephen & Milltown	5,212 11
Montfort Colonization	35,840 00
United Counties	1,488 00
Grand Trunk	131,268 52

\$1,414,934 78

The payments on railway subsidies during the past 15 years have been as follows:

1884	\$ 208,000 00
1885	493,245 00
1886	2,701,249 00
1887	1,406,533 00
1888	1,027,041 92
1889	846,721 83
1890	1,678,195 72
1891	1,265,705 87
1892	1,248,215 93
1893	811,394 07
1894	1,229,885 10
1895	1,310,549 10
1896	3,228,745 49
1897	416,955 30
1898	1,414,934 78

\$19,197,372 11

The balance sheet contains the following items among the assets:

CANALS.	
Burlington Bay Canal	\$ 308,328 32
Chambly Canal & River Richelieu	436,152 83
Improvement of the Trent	559,067 70
Murray Canal	1,247,470 26
Lachine Canal	7,634,638 03
Lake St. Peter	1,164,235 08
Ottawa Works	6,794,951 33
Rideau Canal	10,720 50
St. Lawrence Canals	22,113,065 70
St. Peter's Canal	492,023 82
Sault Ste. Marie Canal	3,678,578 21
Tay River Navigation	476,128 73
Trent River Canal	2,066,696 17
Welland Canal	23,549,415 76

RAILWAYS.

Digby & Annapolis Railway	660,683 09

Prince Edward Island Railway	3,768,107 26

To the Land of Sunshine.

Take the Sunshine Route from Chicago to Los Angeles, San Francisco and other points in California, and escape the rigors of winter in the East and North.

Pullman Tourist Cars for first and second class passengers leave Chicago every Saturday at 2 o'clock p.m. via the Chicago, Milwaukee and St. Paul Railway to Kansas City, thence to California via the Atchison, Topeka and Santa Fe Railway—a real Sunshine Route.

This is the earliest afternoon train leaving Chicago for the West after arrival of morning trains from the East, thus avoiding tedious delay.

The Sunshine Route is essentially the best and most patronized through car-line for men, women and children. Every attention paid to the needs of passengers en route.

Send for a Sunshine Route time-table folder. It costs nothing.

Address A. J. Taylor, Canadian Passenger Agent, 8 King Street E., Toronto, Ont.

TELEGRAPHS & CABLES.

Canadian, British Columbian & Dawson City Telegraph Company.

In our last issue we published a very full summary of a prospectus issued by this Co., which only reached us just as we were going to press, & when there was no time for comment. We have since received a complete copy of the prospectus & of the memorandum of Association. The issue at £95 of £225,000 5% 1st mortgage debenture stock has been severely criticised by some of the English financial papers, & after thoroughly looking into the matter we are inclined to agree with them that the scheme is at least visionary, if nothing worse. The London Statist recommends the debentures to "old ladies in search of highly speculative debentures," & says:—"The dear innocent public will be very innocent indeed if it accepts off hand the idea that there is solid attraction in the enterprise." J. Morris Catton, who trades as J. Morris & Co., advertising agents, is apparently the promoter of the scheme, & we think it is to be regretted that he has been able to secure Sir Adolphe Caron & Sir Jas. Grant, of Ottawa, & ex-Premier Turner, of B.C., as directors. Our advice to them, in the vernacular, is to "jump the outfit" forthwith.

Strange to say the prospectus does not contain even an approximate estimate of the cost of building the line from Quesnelle to Dawson City & branches, & this very essential feature is also wanting in the report made by the Co.'s resident engineer, a copy of which we publish further on, though elaborate & detailed estimates of revenue are given. We have consulted a telegraph expert in whom we have every confidence, & who has a practical knowledge of the class of country through which the lines are projected. His estimate of the cost of construction does not exceed \$300 a mile, which for the 1,400 miles mentioned in the prospectus would aggregate \$420,000. By the sale of £225,000 debenture stock at £95, over \$1,000,000 would be realized. It would be interesting to know what the promoters intend to do with the difference. They appear to have asked more than double what is required.

The estimate of revenue would be laughable, were it not too serious, in view of the beguiling effect it may have had on investors. In addition to local and intermediate traffic estimated at £37,500 a year, it is estimated there will be 200 telegrams a day between Quesnelle & Dawson at 5s a word, producing a further revenue of £150,000 a year, or a total revenue of £187,500 a year. The rate of 5s a word (\$1.22) is rather startling in view of the facts that the Atlantic cable rate is only 25c a word, and that the day rate from Halifax, N.S., to Vancouver, B.C., the longest land line in Canada, 3,662 miles, is only \$1 for 10 words. We have no hesitation in saying that an estimate based on 5s a word is illu-

sionary and deceptive. Mr. Woodford refers to the rate of 9s a word from the Transvaal, which, however, is an entirely different proposition. The rates that prevailed in the Klondike last year are no criterion. Everything is cheapening there with marvellous rapidity, fancy prices will be at an end in the spring, & a most careful enquiry in the best informed quarters leads us to believe that a revenue of \$1,000 a day, or say \$300,000 a year of 300 days, is the very most that can be expected, instead of the prospectus estimate of \$911,250. Even \$300,000 is to some extent problematical, as the line will be a most difficult one to maintain & the wires will be down a great deal, Mr. Woodford to the contrary, notwithstanding. The revenue anticipated from the North American Transportation Co., the Alaska Commercial Co. & the Hudson's Bay Co.'s business is not likely to reach the considerable proportions foreshadowed in the prospectus.

London, Eng., advices say the C.B.C. & D.C.T. Co. has been registered with a capital of £300,000 to acquire the securities of the Dawson City & Victoria Telephone Co. It is also stated that the letters of allotment to applicants for the mortgage debenture stock have been mailed & that E. G. Woodford, the Resident Engineer, has sailed for Canada to superintend the construction of the line. Our advice to the subscribers is to take any steps they can to prevent the expenditure of the proceeds of the debenture stock until reliable estimates of the cost of construction & of the revenue to be obtained have been secured. If the three Canadian directors above named do not insist on these precautions we predict troublous times ahead for them. We are anxious to see telegraph communication with the Klondike established—we believe it is a pressing necessity—but we want to see it done on legitimate business principles & not to the loss of British investors in a way that would give a black eye to future legitimate projects.

RESIDENT ENGINEER'S REPORT.

Following is the report of E. G. Woodford, M.A.I.M.E., late State mining engineer, Transvaal, &c., made on Dec. 10 last & which accompanied the prospectus as mentioned above:—

"In compliance with your request for information re the construction & operation of a telegraph line between Quesnelle—the present terminus of the telegraph system of B.C.—and Dawson City, in the Klondike mining district, I submit the following, which is based upon my personal knowledge of the country from which I have just returned. The proposed route of the telegraph would follow a line surveyed many years since for the all-land route to Europe via Behring's Straits. By this route, which follows an old trail, the distance from Quesnelle to Telegraph Creek on the Stikine River is 570 miles, & from Telegraph Creek via Teslin Lake, Atlin Lake (the new gold rush), White Horse Rapids, & the Yukon River is 730 miles, or a total between

BURN

E. B. EDDY'S

MATCHES

Notice is hereby given that The British Yukon Mining, Trading & Transportation Company will apply to the Parliament of Canada, at the next session thereof, for an Act authorizing the said company to construct & operate a line of railway from a point at or near Fort Selkirk to a point at or near Dawson City; thence westerly to the one hundred & forty-first Meridian; also to construct & operate lines of railway from a point at or near Cariboo Crossing or from or near Tagish Houses to Teslin Lake or River & to Atlin, & with the consent of the Governor in Council, to construct & operate branch lines in the Yukon District not exceeding fifty miles in length: to change the name of the company to "The British Yukon Railway Company," & to divide the undertaking of the company into sections, & to borrow money separately upon each of said sections, or on any two or more of them combined; also to confirm the proceedings taken upon the organization of the company; & to further amend the Act incorporating the company.

CHRYSLER & BETHUNE.

OTTAWA, 19th November, 1898.

Quesnelle & Dawson City of 1,300 miles. I would recommend that a connection be made between the new port of Skagway at or near Atlin Lake, an additional length of about 100 miles. I consider that such a telegraph line can be quickly & substantially constructed without exceptional difficulties, provided that the work be commenced simultaneously at various points along the route by an adequate staff of skilled Canadian workmen. The peculiar geographical configuration of the country & the many streams which directly cross the line of operation will permit of the prompt delivery over the ice of the necessary materials & supplies for the construction parties. The upper portion of the line is also readily accessible by the many rivers & trails leading to the different mining camps of the thousands of miners at work this winter between Telegraph Creek & Dawson City. This latter fact is of importance in connection with transport & labour, as both men & transport animals will be obtainable at numerous points where most urgently required.

"The necessity of telegraphic communication between the Klondike & the Canadian system very naturally occurred to me during my recent expedition to that country. During my journey from Skagway via the White Pass & the Yukon River, I was satisfied from observation that a telegraph line could be rapidly constructed either in winter or summer, which could be cheaply maintained & readily repaired. The coast of B. C. & the Klondike district are noticeable for the entire absence of storms. Repairs & breakdowns should therefore be very infrequent. The route of this line of telegraph is unique in my experience, as its whole length of 1,300 miles is on the rich Western mineral belt that is now commencing to attract attention, & which promises to be as great a field for mining investment as the Transvaal or Western Australia. In addition, therefore, to the business which will arise by connecting Dawson City with the world's telegraph system, the discovery & development of numerous mining camps along the route will be a source of constantly increasing returns & profits to your Company. The population of Dawson & the immediate vicinity is now from 25,000 to 30,000. The population of the mining camps along the route of the proposed telegraph line is rapidly increasing. The entire route even far beyond Dawson City is covered with timber, consequently an inexhaustible supply of suitable poles is at hand, & I may here also mention that the difficulty of securing suitable operators & line men which so often occurs in remote countries need not be anticipated, as amongst the numerous miners who have flocked into the country there will be found many hundreds of experienced telegraph men.

"With regard to an estimate of possible business, or the amount of income that may be safely anticipated, it is evident that, as telegraphic communication is a necessity, almost any price might be asked & would be cheerfully paid, as, per example, the 9s a word from the Transvaal. During my stay in Dawson City last Aug., telephone messages to Eldorado City, a distance of 15 miles, cost 4s a minute, with a minimum charge of 20s! With a reasonable charge per word, of say 5s, I am confident that a large & immensely profitable business can be done. The permanent nature of the gold deposits of the Klondike & other districts has now been established from many reliable sources, not the least being the fact of an output of £3,000,000 for last season. Immense quantities of supplies have been forwarded into the country this year, & next year will see the employment of large quantities of machinery & large hydraulic operations. The heavy investments of European & American capital is ample security for the construction of a telegraph line, more especially in a country where the changes of seasons are sudden &

severe. I would therefore suggest that your Co. lose no time in commencing the building of the line, & if work is promptly commenced & vigorously carried on during the present winter, it should be in working operation by the end of April next. From my knowledge of B. C. & of Klondike & their wonderful mineral resources, I am convinced that a telegraph line will prove one of the most profitable industrial enterprises that have been proposed in connection with these new mining countries."

Government Line to the Yukon.

In our Nov. issue we gave currency to a rumor from Ottawa that at the next session of Parliament the Minister of Public Works will ask for an appropriation to build a telegraph line to the Yukon via the Ashcroft-Cariboo route. The Government now has a line from Ashcroft, on the C.P.R., to Barkerville, 276 miles. This line, which was built as far as Quesnelle in the Cariboo country in 1865, will be found fully described in our issue of Aug., '98, pg. 167. Early this month a Victoria, B.C., telegram stated that a telegraph line & wagon road from the end of the present Ashcroft-Cariboo line & road to the Yukon, had been decided on, & that the whole work would involve an expenditure of \$5,000,000. Since then the rumor as to the building of a Government telegraph line has been revived at Ottawa, & it is said the Government has obtained an estimate of the cost of construction, & it is said a rate of \$2 for a 10-word message is talked of. This is in marked contrast to the proposed rate of the Canadian British Columbian & Dawson City Telegraph Co., already referred to in this issue.

Suit Against the G.N.W.T. Co.

Proceedings have been commenced in the High Court of Justice of Ontario to set aside the agreement made in 1881 under which the lines of the Montreal Telegraph Co. were leased to the G.N.W. Telegraph Co., & to restrain the parties thereto, the Montreal, the G.N.W. & the Western Union Telegraph Companies & H. P. Dwight, the President of the G.N.W., from acting under the agreement. The plaintiffs are H. M. Morrow, accountant, & W. A. Clark, banker, of Boston. Morrow claims to be a holder of 750 shares of G.N.W. stock & Clark claims to hold 250 shares pledged to him by Morrow to secure indebtedness. In connection with this suit it may be interesting to look back for a few years. In 1879, the Dominion Telegraph Co. leased all its lines in Canada to the American Union Telegraph Co. for 99 years, & in 1880 the latter Co. assigned the lease to the Western Union. In 1881 the Montreal Co. leased its lines, &c., to the G.N.W.T. Co. for 97 years for \$16,000 a year, which provides a dividend of 8% on the Montreal Co.'s capital of \$2,000,000. The W.U. was a party to this agreement, guaranteeing the payment of the \$165,000 a year & also the performance by the G.N.W. of the other covenants. The W.U. then sublet the Dominion Co.'s lines in Ontario & Quebec to the G.N.W. Co. for \$60,000 a year. The capital of the G.N.W. is \$500,000. Plaintiffs allege that \$255,000 of this is owned by the W.U. Co., but that it stands in the name of H. P. Dwight, & that the W.U. Co. nominates the directors, &c., of the G.N.W. Co. & controls its operations, &c., that the W.U., having no power to give the guarantee above referred to, is at liberty to withdraw it at any time, that the operation of the Montreal and Dominion lines & lines built by the G.N.W. Co. has resulted in loss, which the W.U. has had to make up to maintain the payments to the Montreal Co., & that should the W.U. refuse to continue making up the deficits the Montreal Co. will terminate its

agreement, taking possession of its lines & of the additions & improvements made thereto by the G.N.W. Co. The plaintiffs claim that the agreement of Aug., 1881, is void because it is an attempt by a foreign corporation to exercise the powers, &c., of the G.N.W. Co. in the interests of the W.U., that the agreement was not made in the interest of the G.N.W. Co., that it was a surrender of the property of the G.N.W. Co. & is a delegation of that Co.'s franchises and powers to the Montreal Co. & a misuse of statutory powers, &c.

The motive for the action above referred to is in doubt. A Montreal telegram, stating that it is "an attempt by the W. U. to gobble up the G. N. W." is absurd. It looks very much like a stock jobbing operation. Before the papers were served on the defendants copies of them were in the hands of Montreal brokers & were undoubtedly used for the purpose of depressing the Montreal Co.'s stock. We are informed, on the highest authority, that there is no truth in the allegation that the W. U. Co. has had to come to the rescue of the G.N.W. Co. financially & that the latter Co. has done its own financing right along without calling on the W. U. for any payment under the latter's guarantee. At one time the G. N. W. Co. paid handsome dividends, but latterly, owing largely to competition, it has not been able to do more than pay its rentals.

Montreal Telegraph Company.

At the annual meeting in Montreal Jan. 12, the report showed assets \$2,268,143.52; liabilities \$2,041,974.74, an excess over shareholders' capital of \$151,823.85, leaving a contingent fund of \$74,371.93. During the year 4 quarterly dividends aggregating 8% were paid. The rental of 8% per year, amounting to \$160,000, had been paid quarterly by the G. N. W. Telegraph Co. The following were elected: President, A. Allan; other directors, H. Mackenzie, J. Joseph, W. Wainwright, H. Archibald, H. A. Allan, W. M. Marler.

In answer to a question the President said with reference to a suit undertaken by H. M. Morrow, & one Clark, to upset the lease, "the complaint of Morrow was in the hands of one or two stockholders & shown by them around the street & on the Stock Exchange, before any service was made upon the Co. So far as we know the copy served upon the Co. may have been served by a broker's clerk. Its contents are utter rubbish, & clearly got up for the purpose of affecting the price of the stock. We understand that Morrow is not a bona fide shareholder of the G. N. W. Co., against which the action is taken. He was Erastus Wiman's stenographer at the time Wiman was obliged to retire from the firm of R. G. Dun & Co. The action, if it can be termed such, is against the G. N. W. Co., & we are, with the Western Union, brought into the case incidentally. We do not know who Clark is, he may be a pawnbroker. Under the agreement the legal position of the Co. is unassailable. The guarantee of the W. U. is beyond question, & the security of the Co. is ample in every respect. In fact, the stock of this Co. should rank among the highest class in the market. As to the legality of the W. U. guarantee, the opinion of E. P. Wheeler, of New York, is on the table with the clauses in the agreement binding that Co.

"As to any deficit in the workings of the lines of the company by the G. N. W. T. Co., it must not be forgotten that the G. N. W. operates other lines of telegraph besides ours. The G. N. W. does not furnish us with the results of the operations of the lines, nor is it under any obligation to do so. Should there be any deficit, it does not concern this Co. or its shareholders. We are convinced, however, the working of the lines of this Co.

results in no loss to the G. N. W. Any loss in operating must be looked for in the workings of the lines of other companies. The official returns of the G. N. W. T. Co., which we had the privilege of seeing, showed extremely handsome profits paid to the shareholders.

"Nothing but good feeling prevails between the companies interested. No complaint has been made by the W. U. of the terms of agreement. Since 11 judges settled the legal questions raised 10 years ago by the G. N. W., that Co. has carried out, & is carrying out in good faith, the conditions of the agreement. There is no issue between the parties interested; nor has there been any of any importance during the past 10 years. The agreement was executed 18 years ago, & during all that period dividends at the rate of 8% have been paid our shareholders."

Vancouver Island Telegraph Service.

The residents of Clayoquot, Uclulet & other points in Alberni district, with a number of Victorians interested in shipping & mining on the West Coast, have petitioned the Legislative Assembly praying for the establishment of a government telegraph line from Alberni to Clayoquot & Uclulet, & along the coast. The petitioners claim that such a line would be of great advantage to the mining & shipping interests of the coast. The only communication at present is by steamer from Victoria, 3 times a month in winter & 4 in summer, & from the lack of immediate communication mining transactions are sometimes delayed. Then again, shipwrecks occur & many lives & much property are sacrificed which might be saved was there direct communication. The line to Cape Beale from Alberni has already been sanctioned by the government, & the small additional outlay for the continuance of the line would, in the opinion of the petitioners, be amply justified.

The present Dominion Government line along the coast from Victoria to Cape Beale, near the entrance of Juan de Fuca Strait, 118 miles, built in 1881, has proved so unreliable that it has been decided to adopt an alternative route from Alberni, at the head of the Alberni Canal almost due west of Nanaimo. In 1895 a branch line of 29½ miles was run over to Alberni from the Nanaimo-Comox line, built in 1893, so that the gap to be now spanned between Alberni & Cape Beale is only about 38 miles. The Department of Public Works invited tenders to be sent in by Jan. 10 for the supply of telegraph poles, & for the construction of the line from Alberni to Cape Beale. The poles are to be cedar, 23 ft. long, not less than 6 ins. diameter at top, straight & sound, barked 5 ft. from the butt. On the steep bluffs opposite Uchucklesit Bay, Hell Gate & Copper Mountain, 1½ miles in all, iron brackets bolted to the rock are to be used to support the wire. The poles are to be erected not more than 165 ft. apart, & the Government will supply the following material, &c., which is similar to what was used on the coast line, viz., no. 6 line wire, no. 9 tie wire, white porcelain insulators, & oak screw brackets, also pins, instruments & batteries.

Canadian Pacific Ry. Co.'s Telegraph.

The Crow's Nest Pass branch of the C.P.R. having been taken over by the Telegraph Department, the following new offices on that branch have been placed on the same basis as offices in the Kootenay district of B.C., thus reducing the rates from \$2 & \$2.25 to \$1 & \$1.25 from the East & a corresponding reduction from the West. This went into effect Jan. 1.

NEW OFFICES.—Blairmore, Pincher, Brocket, Pincher Creek, Coal Creek, Crow's

Nest, Elko, Fisher, Kitchener, Sirdar, Cranbrook, Fort Steele Jct., Fernie, Hosmer, Michel, Wardner.

OFFICES CLOSED.—6th Siding, 7th Siding, Alta.; Kuskanook, B.C., Irishman's Creek, B.C.

OFFICES CHANGED.—Bull Head, B.C., changed to Crow's Nest; Duck Lake, B.C., changed to Sirdar; Russell Creek, B.C., changed to Kitchener.

It is expected a branch telegraph line to Fort Steele, B.C., will be built at once; at present messages are sent to Fort Steele by telephone line from Cranbrook.

The new office at Winnipeg is about completed & ready for occupancy.

The Boundary Creek Telegraph & Telephone Co. has been incorporated under the B.C. Companies Act with \$50,000 capital. Head office, Greenwood, B.C.

Direct West India Cable Co.—At the recent annual meeting the report stated:—"The Co.'s cables were successfully completed & opened to the public January 31, 1898. The Jamaica Government has passed a law granting the Co. a subsidy of £2,000 a year for 5 years, & the Turk's Island Government has agreed to give £120 a year for a similar period. The revenue account shows a credit balance of £15,045, of which £10,490 has been applied to the discharge of all expenses incurred prior to the opening of the cable for traffic, including the discount at which the debentures were issued (£6,000), leaving available £4,554. It is proposed to pay a dividend for the ½ year to June 30, 1898, at the rate of 5% per annum, which will absorb £750, leaving £3,804 to be carried forward."

Royal Telegraph Co.—R. G. Code, A. F. May, A. Macfarlane, E. F. Burritt, & C. T. Moffatt, of Ottawa, 4 barristers & a clerk, give notice of application for incorporation under the Dominion Companies Act, under this title, with power to build & operate lines for the transmission of messages by telegraph or telephone through any place or places in the Dominion or elsewhere. To aid or advance money to build or work any such line to be used for telegraph or telephone purposes. To lease their lines or any portion thereof to any other company. To enter into working or other agreements with the owners of other telegraph or telephone lines for the transmission of messages to points on such other telegraph or telephone lines. To manufacture, operate, sell, let, hire, purchase or lease every description of electrical apparatus, telegraph or telephone instruments, material, plant, patents & things capable of being used in connection with any of the aforementioned objects. Ottawa is to be the chief place of business, & the capital stock \$100,000.

Yale & Kootenays.—Bodwell & Duff, solicitors, Victoria, B.C., give notice of application to the Dominion Parliament to incorporate a company to construct & operate telegraph lines in Yale & East & West Kootenay, B.C., & to make connection with any telegraph company in the U.S., or with any other telegraph or telephone company & with other powers. B.C. papers say the application is made on behalf of D. C. Corbin & A. Corbin, who retained control of the telegraph line along the Spokane Falls & Northern Ry., when that line was sold to the Great Northern. The chief object of the application is to secure the right to extend the system into the Boundary Creek country. It is also reported that Messrs. Corbin intend to connect their telegraph system with branch telephone lines to the different mining camps, & that they are behind an application recently made to the Greenwood town council, for the right to erect poles & string wires within the town limits.

TELEPHONE MATTERS.

The Bell Telephone Company.

The appeal of the Co. against an assessment of \$638,649 on its plant in Toronto, was argued before County Judges McDougall, Dartnell & McGibbon last month. Previously the plant had been assessed at \$100,000. This year the assessment was proportioned as follows: Land, \$8,750; buildings, \$24,000; poles, wires, conduits, etc., \$377,992; Temperance street switchboard, \$177,174; Yorkville & Parkdale switchboards, \$50,773. The decision of the Court of Appeal in the case of the assessment of the Co.'s plant at Hamilton stood as a precedent. This decision held that the poles, wires, etc., could not be assessed for their value as a part of a growing concern, but only on their value when detached, or as scrap iron.

A. L. Salt, Assistant Manager of the Western Electric Co., New York, gave his estimate of the value of the switchboards as follows: Temperance street, \$10,000; Yorkville ave., \$1,900; Parkdale, \$565.50.

W. C. Marshall, Inspector C.P.R. Telegraphs, said that the wires, poles, etc., of the Co. were of no value when detached. They would not realize, on sale, the cost of taking them down. The only articles which were of any value were the braces, which, when taken down, would realize about 5c. each, half of their original cost. The wire would cost about \$4 a mile to take down, which is more than they would sell for as scrap. J. J. Wright, Manager Toronto Electric Light Co., gave similar testimony.

E. F. Peck, Electric Light Superintendent at Brooklyn, N.Y., said that, as an outgrowth of his 18 years' experience, he considered the Bell poles could be removed, as they stood, for from 25c. to \$2.50 each. It was worth \$2 to erect a 25-ft. pole. There was no market for taken-down, galvanized iron wire. The aerial wire was valuable only as scrap iron.

H. C. Baker, Ontario Manager of the Bell Telephone Co., stated that the Co. had invested in the Dominion, in realty, \$4,171,432.91. This included everything except switchboard instruments & indoor plant. He believed the average life of poles in Toronto to be about 6 years; they had now lived half their life; the cables, underground, had been used about 4 years. Cables were worth from 5 to 11c. a foot; some had been sold at \$35 a ton. Wire was worth 9 or 10c. a pound when taken down. Poles taken down found little market, & would be worth from 25c. to \$2, according to size.

Expert evidence was also submitted by W. Bamfield, of Pittsburg, formerly Manager of the Pennsylvania Telephone Co., J. C. Reilly, General Superintendent of the New York & New Jersey Telephone Co., & others, the case occupying several days. The decision of the court was in favor of the Bell Co., the assessment being reduced to \$102,550, made up as follows: Poles, wires & conduits, \$53,900; Temperance street switchboard, \$12,000; Yorkville avenue & Parkdale switchboard, \$3,900; land & buildings, \$32,750. The court found as follows: "The wooden poles are valued at 25c. each; the rails & iron poles, considered as 'scrap,' what the market allows, including cost of removal, etc., are put at \$3.50 a ton net; the wire is rated as second-hand & is worth 9c. a pound, while the attachments are valued at 7c. a pound—all considered as scrap."—Canadian Electrical News.

The Co. has declared a dividend of 2% for the current quarter, payable Jan. 14.

In an appeal of the Bell Telephone Co. against its assessment in Woodstock, Ont., before Judge Finkle last month, counsel for the Co. urged that its property should only be assessed at what it was worth, apart from the uses of the Co. This view was upheld in Hamil-

ton & elsewhere. The Judge decided he would have to abide by the precedent.

The city of Montreal, as a result of arbitration, has to pay the Co. \$1,722.00 damages for the removal of conduits from Gosford St. & Jacques Cartier Square & to return the conduits to the Co.

Spokane & B.C. Telephone Co.

This Co. has about 225 miles of line connecting Spokane with Northport, Wash. & Rossland, B.C., & has branch lines from Meyers Falls to Republic, Wash., & from Bosburg to Grand Forks, B.C. It is said to be the Co.'s intention in the near future to build into Rossland, B.C., under a charter it recently purchased from the Columbia Telephone & Telegraph Co., which holds a Dominion franchise for B.C. The officers of the S. & B. C. Co. are: President, Treasurer & General Manager, C. O'Brien Reddin; Vice-President, S. M. Babcock; Secretary, W. T. Stoll. These with W. I. Reddin, constitute the Board of Directors. The head office of the Co. has been removed to Spokane, Wash. It has offices at all of the stations & towns between Spokane & Northport, also one at Republic.

It is expected extensive improvements will be made in the line in the spring, the principal of which will be the running of a double metallic circuit from Spokane to Rossland, & from Meyer's Falls or Bosburg to Republic. The Columbia Telephone & Telegraph Co. will probably string about 100 miles of wire, principally in stub lines, to connect with the S. & B. C. T. Co., the intention being to build into Rossland, Trail, Greenwood, Grand Forks & Cascade, to place exchanges there. A line to Camp McKinney is also proposed, & several stub lines to connect at the International Boundary with the S. & B. C. T. Co.'s wires.

In reference to a despatch from Myers' Falls, published in our last issue, pg. 280, we are informed that Messrs. Aris & Oakes applied to the courts for a receiver; the application was heard & denied. Mr. Oakes, the former President of the Co., testified that the lines were worth \$60,000, & were bonded

for \$20,000; that the indebtedness of the Co. was probably \$1,200 or \$1,400. On this showing the court held that there was no evidence to warrant the appointment of a receiver. From this it would appear that the Co. is in excellent financial condition, as the indebtedness is simply the ordinary one in regard to expenses which is paid on the regular pay-day, the 20th of each month.

The official inauguration of the new telephone line between Moscow & St. Petersburg, Russia, took place Jan. 13. In the exchanges at all stations, American telephone apparatus is used exclusively.

Strong complaints are made of the service given by the Nelson & Vernon Telephone Co., which operates a line into the Boundary Creek district of B.C. Supt. Hodge blames contractors on the Robson-Midway railway for breaking the wires during blasting operations.

EXPRESS MATTERS.

The Alaska Pacific Express Company.

General Manager Hall, of Portland, Ore., advises us as follows under date of Jan. 7: "We have service on all the regular steamers plying between Puget Sound ports & Alaska points. We are also operating the White Pass & Yukon route—a railway now under construction between Skagway & Lake Bennett. This line is now completed, & under operation as far as the summit, & will be completed through to Bennett by July 1. During navigation we also have service on the regular steamer lines between Lake Bennett & Dawson City; also between Lake Bennett & Lake Atlin. We now have agencies established at the following points: Portland, Ore.; Seattle, Port Townsend, Tacoma, Wash.; Victoria, Log Cabin, Lake Bennett, Atlin City, Lake Tagish, White Horse Rapids, B.C.; Wrangel, Juneau, Sitka, Skagway, Henev, Alaska; Dawson City, Yukon."

In reference to the foregoing we presume that as the White Pass & Yukon Ry. has organized an express company, it will be likely to do its own express business in future.

Express Companies Items.

It is said the Arctic Express Co. has gone out of business.

After a trial lasting a month Ex-Auditor Bechal, of the Pacific Co., charged with \$200,000 shortages, has been acquitted.

The Dominion Co. has established a route on the extension of the United Counties Ry. between Henriville & Noyan Jct., Que., 21 miles, with offices at Clarenceville & Noyan Jct.

The Dominion Co. has closed its St. Thomas & Aylmer, Ont., wagon route. This does not affect the Dominion office at Aylmer, which is now reached by a through arrangement with the Pacific Express Co., via St. Thomas.

Route Agents E. J. Salisbury & C. Bowen of the Dominion having been assigned to other duties in the audit department, the lines heretofore under their respective jurisdiction have been consolidated with remaining route agencies.

At the annual meeting at Omaha recently the following were elected officers of the Pacific Co.: J. Eggleston, President; H. G. Burt, Vice-President; W. R. Carter, Secretary & Treasurer; E. B. Pryor, F. G. Merriam, S. B. Schuyler, E. T. Clapp, St. Louis; E. Young, Omaha, directors.

The following changes have been made in the Canadian Co.: W. T. Anderson, formerly Auditor of the money department, is appointed Superintendent of that department, with charge of all detail matters pertaining to money order business. W. H. Bryce has been appointed Assistant Auditor money order department. D. B. Atkinson has been appointed Office Supply Clerk.

The White Pass & Yukon Express Co. has been established in connection with the White Pass & Yukon Ry. The rate from Skagway to Atlin Jct. is 7c. a lb., to Log Cabin 7c. & to Lake Bennett 9c. Animals securely boxed & diamonds & jewelry double rates. The officers are: C. E. Hawkins, General Superintendent; H. M. McCartney, Division Superintendent; L. H. Gray, General Manager.

ADVERTISING

ON THE

CANADIAN PACIFIC RAILWAY.

The exclusive privilege of advertising in the Stations, Ticket Agencies and Hotels of the CANADIAN PACIFIC RAILWAY, and on that Company's buildings, premises, telegraph poles and fences, is controlled by THE ACTON BURROWS COMPANY.

The franchise embraces the whole of the C. P. R. System, including all branches and leased lines, comprising 7,178 miles of railway, 690 stations, and a number of ticket agencies and hotels.

Advertising on the C. P. R. is like every department of that Company's service, modern, up-to-date and reliable.

A Western Railway Manager.

All railway men in Canada will cheerfully accord to William Whyte, Manager of the C. P.R. western lines, a foremost position in their ranks. Mr. Whyte is entitled to the dignity of being "a born railroader." For more than 30 years he has been connected with railways, & from the bottom of the ladder has climbed to pretty near the top rung.

Possessed of excellent administrative ability, shrewd, sharp & with sound judgment, he has all those characteristics which are considered necessary in the make-up of a successful railroader, & which are pre-eminently requisite for the proper fulfilment of the responsible position he occupies. His forte is railway management, which fact is easily seen by his rapid advancement from the ranks. Added to his other qualifications are a pleasing personal address, a courteous demeanor & affable manner, which have gained him a large measure of popularity, not only among his associates & subordinates on the railway, but among all classes of citizens. In Winnipeg, where he has lived in recent years, there is no man more popular or who enjoys to a greater degree public respect & esteem. His reputation for integrity & uprightness is so well established that his counsel is readily accepted by the public in any controversy.

The position which Mr. Whyte holds as Manager of the western portion of Canada's great transcontinental highway is no sinecure, indeed involves the greatest responsibilities. His duties are numerous & unceasing, the ordinary railway routine being the smallest portion of them. In the public affairs of Manitoba, British Columbia & the Canadian Northwest, in which the C.P.R. Co. is naturally very closely interested & connected, Mr. Whyte's tact & ability are frequently manifested. There have been difficulties between the great corporation & the public which few men would have been capable to deal with, & which fewer would have succeeded in overcoming. It has been in great & important matters that Mr. Whyte has displayed those qualities which only statesmen & diplomats are supposed to possess. There have been such intricate problems as strikes; there was, a few years ago, the famous anti-monopoly or "disallowance" agitation, which bordered dangerously close on civil war, & in all these stormy & exciting times the Company relied largely on Mr. Whyte's judgement, a reliance which was well placed. His manly & determined line of ac-

tion in times of trouble & agitation, firmly but courteously carried out, has gained for him the admiration & personal approval of even those who have been opposed to the policy which the C.P.R. considered itself justified in pursuing.

In another way, too, has Mr. Whyte earned the admiration of a large class of citizens—in his efforts to minimize Sunday labor on the railway. He conscientiously abstains from

& morality—indeed is an ideal citizen of the greatest value to any community.

Busy man though he is, Mr. Whyte realizes fully the force of the adage that declares against "all work and no play." In all the boundless west there is no more enthusiastic sportsman than he, no greater lover of shooting, & no more ardent admirer of a good dog. In the grouse and duck seasons Mr. Whyte invariably takes his vacation, & he is credited

with being one of the best shots in Manitoba. Mr. Whyte began railway work at the age of 18, having been equipped with a good education & naturally possessing a fondness for railroad duties. He is a native of Charleston, Fifeshire, Scotland, where he was born Sept. 15, 1843, being now just 55 years of age, though in personal appearance he would pass for a much younger man. He was educated in the schools of his native town, & in 1861 entered the employment of the North British Ry. Co. It was in 1863 that he determined to emigrate to Canada. For two years after arriving he did not find a suitable opening in railway work; but then he received the appointment of freight clerk on the G.T.R. at Cobourg, Ont. In the same year he was transferred to the Co.'s freight office in Toronto, occupying a similar position till the early part of 1867, when he became Freight Foreman of the sheds. Afterwards he occupied the position of Yardmaster at Toronto & in 1870 was appointed Night Station Agent at the same city.

A year later, in 1871, he was at Stratford, occupying the dual position of Freight & Station Agent. It was here that Mr. Whyte got his first opportunity in the making of the enviable reputation he now enjoys. The gauge of the G.T.R. was then being changed, & all way-freight & passenger traffic was transferred at Stratford. Owing to Mr. Whyte's excellent management, matters were so well arranged that little delay & no blockade was occasioned, though the ordinary work was immensely increased. From 1874 to 1881 he managed the G.T.R. business at

London, Ont., & in the latter year he took charge of the freight offices and sheds at Toronto. In Nov., 1881, the Co. acknowledged his services by promoting him to the assistant superintendency of the central division of the system from Kingston to Stratford.

In Sept., 1883, he severed his connection with the G.T.R., to become General Superintendent of the Toronto, Grey & Bruce, which had been leased to the Ontario & Que-

WILLIAM WHYTE.

labor on Sundays himself, & while, of course, in a concern of such magnitude as the Canadian transcontinental route, entire cessation from labor at any time would be utterly impossible, thanks to Mr. Whyte's efforts the least possible work, consistent with the perfect efficiency of the service, is required of the army of employes on Sundays. Mr. Whyte has also always been foremost in works of Christian charity, in promoting temperance

ADVANCE RATES furnished on application to the
publishers.

TORONTO, CANADA, FEBRUARY, 1899.

TO ADVERTISERS.

The steam & electric railways, the steam-
ship, express, telegraph & telephone com-
panies in Canada are large buyers.

Their purchasing agents and other offi-
cials throughout the Dominion, from the
Atlantic to the Pacific, are on THE RAIL-
WAY & SHIPPING WORLD'S subscription list.

It is the only one paper that reaches
them all.

If you want to do business with any of
the companies mentioned above, an adver-
tisement in these columns will prove a good
investment.

Canadian Freight Association.

PRESIDENT, C. J. Smith, Montreal; 1st VICE-PRES.,
J. W. Loud, Montreal; 2nd VICE-PRES., W. B. Bulling,
Jr., Montreal; SEC. TREAS., J. Earls, Toronto.

CLASSIFICATION COMMITTEE.—E. Tiffin, J. Pullen, W.
MacMillan, G. A. Browne, W. B. Bulling, Jr., F. J.
Watson, J. Hardwell, W. P. Hinton, W. Woollatt; J.
Earls, Chairman.

INSPECTION COMMITTEE.—J. H. Hanna, G. Collins, G.
Cassidy, F. Conway, J. N. Sutherland, F. F. Backus,
M. Burton; J. Earls, Chairman.

CAR SERVICE COMMITTEE.—J. B. Morford, A. White,
J. H. Walsh, E. H. Edwards, M. C. Sturtevant, G. S.
Cantlie, W. P. Hinton; J. Earls, Manager.

EXECUTIVE COMMITTEE.—G. M. Bosworth, J. W. Loud,
C. J. Smith.

OFFICIAL ORGAN.—THE RAILWAY & SHIPPING WORLD,
Toronto.

Canadian Roadmasters' Association.

PRESIDENT, W. Shanks, Carleton Jct., Ont.; VICE-
PRESIDENT, J. Leslie, Ottawa, Ont.; SECRETARY-TREAS-
URER, J. Drinkwater, Winchester, Ont.

EXECUTIVE COMMITTEE.—The above & J. Shanks,
Montreal; W. Wallace, Ottawa; M. Keefe, Ottawa; J.
R. Brennan, Ottawa.

OFFICIAL ORGAN.—THE RAILWAY & SHIPPING WORLD,
Toronto.

NEXT ANNUAL MEETING at Toronto, Sep. 20, 1899.

Canadian Ticket Agents' Association.

PRESIDENT, W. E. Rispin, Chatham, Ont.; 1st VICE-
PRESIDENT, S. O. Perry, St. Thomas, Ont.; 2nd VICE-
PRESIDENT, G. Duncan, Quebec; 3rd VICE-PRESIDENT,
W. H. C. McKay, St. John, N.B.; SEC. TREAS., E. de la
Hooke, London, Ont.; AUDITOR, S. H. Palmer, St.
Thomas, Ont.

EXECUTIVE COMMITTEE, J. A. Macdonald, Annprior,
Ont.; W. H. Harper, Chatham, Ont.; C. E. Morgan,
Hamilton, Ont.; T. Long, Port Hope, Ont.; A. Calder,
Winnipeg.

NEXT ANNUAL MEETING at Winnipeg, Oct. 13, 1899.

bec Ry. Co. before the completion of that
Co.'s line. On the completion of the O. & Q.
Ry. it, along with the Credit Valley & Toronto,
Grey & Bruce, became a part of the C.P.R. sys-
tem, & was designated the Ontario Division.
Mr. Whyte being appointed General Superin-
tendent of it in Aug., 1884. In May, 1885, he
was appointed General Superintendent of the
Eastern Division, in addition to the Ontario
Division, with headquarters at Montreal, cen-
tinue to control the two divisions until, in

1886, he was transferred to Winnipeg as Gen-
eral Superintendent of the Western Division,
in the administration of which he met with
such marked success that, in May, 1897,
he was appointed Manager of all the Co.'s
lines from Fort William on Lake Superior to
the Pacific Coast.

RAILWAY PROJECTS.

Algoma Central Ry.—H. C. Hamilton,
Sault Ste. Marie, Ont., gives notice of appli-
cation to Dominion Parliament, for power to
build from Sault Ste. Marie, Ont., to the
Michipicoton River, thence northerly to the
C.P.R. main line & southerly to Michipicoton
harbor.

Ashcroft to Yukon.—Blake, Lash & Cas-
sels, solicitors, Toronto, give notice of appli-
cation to Dominion Parliament for an act
authorizing the building of railway, telegraph
& telephone lines from or near Ashcroft, B.C.,
to Dawson City, Yukon, & thence to the In-
ternational boundary, & branch lines of tele-
graph & telephone from points on the main
line to other points in B. C. & Yukon.

Brandon & Southwestern Ry.—J. S. Ewart,
Winnipeg, gives notice of application to
Manitoba Legislature for an amendment to
this Co.'s act, authorizing it to construct a
line from its projected line in township one or
two, westerly to the western boundary of
Manitoba.

Bruce Mines & Algoma Ry.—Hearst &
McKay, Sault Ste. Marie, Ont., give notice of
application to Ontario Legislature for power
to build a line from Bruce Mines, northerly to
the Rock Lake copper mines, in Coffin town-
ship, thence northerly 30 miles, to be operat-
ed by steam or electricity, & to construct
branch lines not over 12 miles long.

Buffalo & Fort Erie Bridge Co.—F. W.
Hill, solicitor, gives notice that this Co. will
apply to Dominion Parliament to revive &
amend its act of incorporation, to extend the
times for the commencement & completion of
its undertakings, & also to extend the limits
within which the bridge or tunnel & connect-
ing line of railway may be built, & to change
certain of the incorporators.

C.P.R. Western Division Branches.—The
Co. will apply to Dominion Parliament for an
act authorizing it to build a line from the
north terminus of its Stonewall Branch, in
Manitoba, to the west shore of Lake Winni-
peg between Gimli & Arnes; and also a line
from a point on the one last named, to the
east shore of Lake Manitoba, between Marsh
Point & the north boundary of township 25; &
also a line from Reston, on the Souris
Branch, to the Moose Mountain District,
thence to or near Regina.

Central Counties Ry.—Chrysler & Bethune,
Ottawa, give notice of application to Domi-
nion Parliament for amendments to this Co.'s
acts, authorizing it to construct sec 2 of the
railway from Hawkesbury, Ont., to connect
with the Rockland branch of the Canada At-
lantic, in Cambridge township. The C.C.
Ry. Co., formerly the Prescott County Ry.
Co., is leased to the Canada Atlantic. The
proposed line from or near Casselman, in
Cambridge township, to Hawkesbury, is to
connect with the Great Northern Ry., now
partly built between Quebec & Hawkesbury,
(Jan., pg. 11).

Copper River & Yukon.—A bill has been
introduced in the U.S. Congress to grant this
Co. right-of-way & a subsidy of \$16,000 a
mile for a railway in Alaska, from Valdes In-
let through the pass & along the mountains to
the Copper River bottoms; thence up the
west bank of the river to Slahna River & Man-
tasta Lake; thence through Mantasta Pass to
the Little Tokio River, down the left branch
& up the right; thence to & up Copper Creek
as far as the mines extend. It is provided

that a branch line shall be built from east of
Mantasta Pass down some stream to the Yu-
kon River or the Canadian boundary. The
projectors are C. C. Gilman, of Marshall-
town, Iowa, & others.

Dawson City.—Eberts & Taylor, Victoria,
B.C., give notice of application to Dominion
Parliament to incorporate a company to build
a railway from Dawson City to the forks of
Eldorado & Bonanza Creeks, & from Dawson
City to the divide or head of Dominion &
Sulphur Creeks, with power to build branch
lines therefrom not exceeding in any one case
30 miles in length.

Edmonton Belt Line.—Lougheed & Ben-
nett, Calgary, give notice of application to
Dominion Parliament for power to build a
railway or tramway from Edmonton or South
Edmonton, Alberta, by way of Clover Bar &
Fort Saskatchewan to Victoria, thence by
Beaver Lake to South Edmonton.

Edmonton to Peace River.—G. E. Kidd,
solicitor, Ottawa, Ont., gives notice of appli-
cation to the Dominion Parliament for the in-
corporation of a company to build a railway
from or near Edmonton, Alta., via Athabasca
Landing & Lesser Slave Lake to Peace
River; also to own vessels & navigate the
Athabasca River from Athabasca Landing to
the mouth of Little Slave River & up the same
into & through Lesser Slave Lake, & for
other purposes.

G.T.R. & St. John, N.B.—A Calais, Me.,
paper recently stated that a movement was on
foot to build a connecting line between the
Washington County Ry. at Ellsworth & the
G.T.R. at Lewiston, Me., so as to give the
G.T. connection with St. John N.B. The
route talked of is via Buckport to Augusta,
thence to Lewiston, & would require the
building of about 100 miles of line. We are
officially informed that, while there has been
a good deal of newspaper talk about the mat-
ter, the G.T.R. management has taken no in-
terest in it.

G.T.R. & Ottawa.—There has been a good
deal of newspaper talk about the likelihood of
the G. T. R. building from Kingston, Ont.,
via Smith's Falls & Richmond to Ottawa.
We are officially informed there is no truth in
the rumor that the Co. is contemplating the
construction of such a line.

Hamilton & Caledonia Ry.—W. Anderson,
Hamilton, is secretary of this proposed Co.,
particulars of which were given in our Nov.
issue, pg. 274. If the charter is granted by
the Ontario Legislature it is said to be the in-
tention to build the line between Caledonia &
Hamilton, 14 miles first, and then 12 miles
further to Cayuga.

Klondike City Belt Line.—MacCracken,
Henderson & McGiverin, Ottawa, give notice
of application to Dominion Parliament for
power to build a railway or tramway from
Klondike City along Klondike River to Bon-
anza Creek, along Bonanza Creek to the
Divide, across the Divide to Dominion Creek,
along Dominion Creek to Indian River, along
Indian River to Yukon River, & along Yukon
River to Klondike City. Also to construct
branch lines on Hunker, Bear, Quartz, Sul-
phur Creek, Eldorado & other creeks.

**La Chute aux Iroquois to Lake Temis-
caminque.**—T. P. Foran, Hull, Que., gives
notice of application to Dominion Parliament
for power to build a line from La Chute aux
Iroquois, Labelle county, to Lake Temiscam-
nique, thence to Lake Temiscaminque.

The Lindsay, Haliburton & Mattawa Ry.
Co. will apply to Dominion Parliament for an
extension of the times limited for the com-
mencement & completion of its line.

Manitoba.—T. L. Metcalf gives notice of
application to Manitoba Legislature to incor-
porate a company to build a line from a point
between the Red River & the 1st Principal
Meridian in Manitoba, on the International

boundary line; northwesterly to or near Portage la Prairie, thence westerly to or near Rapid City, thence northwesterly & westerly to township 13, in range 25 or range 26 west, thence northerly to or near Birtle, thence northwesterly to the west boundary of the province, together with a branch from or near Carman easterly to Red River; also a branch from range 11 or 12 on the said line to or near Gladstone; and also a branch from between range 15 & Rapid City on the said line to a point in or near Brandon.

The Minneapolis Ry. Terminal Co. has been incorporated with \$100,000 capital to build terminals there, the incorporators being W. D. Washburn, J. S. Pillsbury, M. B. Koon, H. Pellit & W. D. Hale. It is said the Co. has bought a strip of land, half a block wide, fronting east on Second street north from the tracks, extending north to Tenth avenue.

Nepigon to Schreiber or Rosspoint.—A. Ferguson gives notice of application to Dominion Parliament to incorporate a company to build a line from mining location 30 T. northeast of Nepigon Bay, Lake Superior, southerly to Lake Superior, crossing the C.P.R. at or near Schreiber or Rosspoint or some point between them.

Nickel Range Ry. Co.—H. C. Hamilton, Sault Ste. Marie, gives notice of application to Ontario Legislature to incorporate a company under this name to build a line from the Sault Ste. Marie branch of the C.P.R., in the townships of Graham or Denison, northerly through the township of Creighton to the main line of the C. P. R.

North Lanark Ry.—Creig & Jamieson, Almonte, give notice of application to Ontario Legislature to incorporate a company to build a line from the K. & P. Ry. at or near Mile Lake, Renfrew County, passing through the townships of Darling and Pakenham, to the C.P.R., or O.A. & P.S. Ry., at or near Arnprior. The route has been surveyed by A. Bell, C.E., of Almonte, acting for a number of persons interested in iron mining. J. Bell, of Arnprior, one of the promoters, states the matter is about to take practical shape. It is proposed to build a tramway capable of running a light train, and, while passengers will be carried, the main object of the construction is the transportation of mineral products. The country through which the road will pass, particularly Darling township, is rich in iron ore & other minerals, & it is proposed to transport this ore to Arnprior to be smelted.

Pontiac Pacific Jet. Ry.—This Co. will apply to Dominion Parliament to extend the times for commencing & completing its extensions already authorized from its present terminus at Waltham to Sault Ste. Marie, via Pembroke, from Waltham northwesterly to a point in the county of Pontiac, & from its present terminus at Aylmer to Hull, & thence over the Ottawa River to Ottawa; & also for commencing & completing the bridges authorized to be constructed over the Ottawa River at Allumette Island.

Portage la Prairie Westerly & Northwesterly.—J. S. Ewart, solicitor, Winnipeg, gives notice of application to Manitoba Legislature to incorporate a company to build a line from Portage la Prairie, northwesterly & westerly between the lines of the C.P.R. on the south & the Manitoba & Northwestern & the Great Northwest Central on the north, to near Hamiota, thence northerly & northwesterly to or near Birtle, thence northerly to the north boundary of the Province; & a branch running from the main line, in range 18 or 19 west, to Brandon.

Portage du Fort & Bristol Branch Ry.—This Co. gives notice of application to Dominion Parliament for an act to declare it to be a work for the general advantage of Canada; also to authorize the extension of the line from or near Quyon, Pontiac County, through the

townships of Onslow, Eardley & South Hull, to Hull, & to any bridges connecting the cities or Ottawa & Hull, with power to make running arrangements over the bridges into the city or Ottawa; to acquire the rights, &c., of the Deschenes Bridge Co., to construct a line from or near Deschenes Rapids into Ottawa; to erect a railway & general traffic bridge across the Ottawa River at or near Portage du Fort; also to authorize the extension of the line of railway through the townships of Ross, Westmeath & Pembroke, to Pembroke.

The Red Deer Valley Ry. & Coal Co. will apply to Dominion Parliament to extend the line for commencement & completion of the railway.

Revelstoke to the 53rd Parallel.—Bradburn, Dumbleton & Innes, Victoria, give notice of application to B. C. Legislature to incorporate a company to build a line from or near Revelstoke, northerly, following the valleys of the Columbia & Canoe Rivers up stream to the 53rd parallel of latitude.

Russell, Dundas & Grenville Counties Ry.—Wallace, Leslie & Palmer, Winchester, Ont., give notice of application to Dominion Parliament to incorporate a company under this name to build a line from South Indian, through the townships of Cambridge, Russell, Winchester, Mountain, Matilda & Edwardsburg to Prescott.

St. Catharines & Niagara Central.—Blake, Lash & Cassels, solicitors, Toronto, give notice of application to the Dominion Parliament to incorporate a company having power to acquire from the purchasers thereof the railway heretofore owned by the St. C. & N.C. Ry. Co., & to extend the line to Hamilton, Toronto & the Niagara River, with a branch to Lake Ontario, & with the usual powers conferred upon railway companies.

The Saskatchewan Ry. & Mining Co. will apply to the Dominion Parliament for power to commence construction of branch lines prior to construction of the main line & at such junction or crossing of the main line by any other railway as may be approved by the Governor-in-Council; also for power to extend its line from Humboldt eastward to any point on the lines of the Canadian Pacific, the Great Northwest Central, or the Lake Manitoba Railway & Canal Co.'s railways, approved by the Governor-in-Council, and westward from Battleford to the Rocky Mountains.

The Sault Ste. Marie & Hudson's Bay Ry. Co. will apply to the Ontario Legislature for an act extending the time for commencement & completion of the Co.'s undertakings, empowering the Co. to run & operate a stage & waggon road from the C.P. Ry., near Misanable Station to navigable water on Moose River, changing the name of the Co., & enabling it to amalgamate with or make traffic & other arrangements with other companies having powers to operate railways, or navigation connections, with or beyond Hudson's Bay.

The Smith's Falls, Rideau & Ottawa Ry. Co. will apply to the Ontario Legislature for an act amending its act of incorporation, by extending the time for the commencement & completion of the railway; by authorizing the extension of its railway to Gananoque; by authorizing it to construct & operate a system of elevated railways in conjunction with the system of surface railways as authorized by its act of incorporation & its proposed extension; by authorizing it to operate its road by compressed air or steam, as well as by electricity.

Thessalon & Grand Portage Ry.—F. E. Williams, Thessalon, gives notice of application to Ontario Legislature to incorporate a company under this name to build a line from Thessalon, Algoma, northerly to the Grand Portage on the Mississauga River, thence northerly about 30 miles.

Toronto, Lindsay & Pembroke Ry.—J. G. Forgie, Pembroke, gives notice of application to Ontario Legislature for incorporation of a company to build a line from Golden Lake to some point on the Ironstone, Bancroft & Ottawa Ry., or the Central Ontario Ry., in the County of Hastings. The Pembroke Southern is already built from Pembroke to Golden Lake. From the other end of the proposed line the I. B. & O. Ry. or the C. O. Ry. will be used to connect with the Midland Division of the G.T.R., thus affording a short route to Toronto. P. E. Strickland, Manager of the Pembroke branch of the Quebec Bank, says the promoters of the scheme are practically the same as those who control the Pembroke Southern.

Trail to Salmon River.—A. Nelson, B.C., correspondent writes us: "The parties who are applying to the B.C. Legislature for a charter are all largely interested in mining properties in the Salmon River district. Many of these properties are in a forward state of development & many others, especially in the Southern part of this district, are lying idle owing to an entire lack of transportation facilities. The object of this railway will be to place all the mining camps of the Salmon River district in connection with the C.P.R. smelter at Trail by the most direct & feasible route. The main line, following the valleys of the Columbia, Beaver & Salmon Rivers, will encounter no difficulties. The branch lines up the different creeks will have heavier grades and more curvature, but these will not exceed those in use on the railway between Trail & Rossland. The C.P.R. is not at the back of the project, the company being composed of mining men anxious to develop their properties & to gain a connection with the C.P.R. smelter & track system at Trail."

White Pass to Tagish Lake, &c.—R. Cassidy, Victoria, gives notice of application to B. C. Legislature for an act to incorporate a company to build a line from Log Cabin, on the White Pass, in B. C., to the Taku Arm of Tagish Lake, thence to Atlin City, and thence to Telegraph Creek.

Worthington & Onaping Ry.—Hearst & McKay, Sault Ste. Marie, give notice of application to Ontario Legislature to incorporate a company under this name to build a line from Worthington, Algoma, northerly near the Inez mine, Drury township, thence north-easterly to the Sultana nickel mine in the Township of Trill, thence northerly & easterly about 50 miles, crossing the main line of the C.P.R. at or near Onaping.

Georgian Bay—Toronto Railway.

At a recent public meeting in Toronto the following resolution was adopted: "That this meeting is of opinion that the best way of transporting the agricultural products of the Canadian & American northwest will be by the construction of a railway from the Georgian Bay to Toronto, & that this meeting is further of opinion that such a railway should be constructed & operated by the Federal Government as an independent line in connection with our canal system, deepened & improved, & that it is therefore resolved that 6 gentlemen be named by this meeting to co-operate with the City Council committee & 6 members of the Board of Trade to take such action in connection with other organizations as they may deem fit to speedily realize the construction of such a national line."

This is the result of the agitation which has been going on for several months with a view to placing Toronto on the ocean bound grain route from the northwest. It is not likely that the movement will have the desired effect. The geographical position of Toronto is against it to begin with & it is not on the natural route for this traffic. In the next place, there are already several railway lines

the Georgian Bay to Toronto, owned by the C.P.R. & G.T.R., in which a large amount of capital has been invested. The Dominion Parliament would not be justified in building another line to take away the business from the lines of those companies & to ruin their properties, which would be the practical result of an air line such as is proposed. Another & a very important consideration is the fact that the people generally—outside of those having town & city interests to be directly benefited—are not in favor of the Government owning any more railways. The experience in the operation of the Intercolonial & Prince Edward Island Railways, with their actual loss in working, has shown conclusively that Government railways cannot be successfully operated in Canada. This is no reflection on the permanent officials in charge of them, but is owing to the fact that successive Governments—it makes no difference whether they are Liberal or Conservative—use these lines as a part of their political machinery & exploit them for the benefit of their respective parties without any regard to business principles.

Detroit River Bridge.

The bill introduced in the U.S. Senate by Senator McMillan provides that the Detroit River Bridge Co., which is incorporated under the laws of Michigan & of Canada, may build & maintain a bridge over the Detroit River at or near the city of Detroit. Following are the principal provisions of the bill:—The plan, location & elevation of the bridge, so far as the interests of navigation are concerned, shall be recommended by a board of 3 officers of the Corps of Engineers, which shall be selected by the U.S. Secretary of War, & the Secretary of War shall determine the plan, location & elevation of the bridge, which shall be constructed for the use of all connecting railroads on either side of the river on equal terms, & for other purposes. Any bridge built under the act shall be a lawful structure, & shall be recognized as a post route. The bridge shall be made with not more than 3 unbroken & continuous spans between the bulkhead line on the Detroit side of the river & the bulkhead line on the Canadian side. The length of the main channel span shall not be less than 1,200 ft. in clear width between the masonry piers, measured at a point 25 ft. below extreme low water, & shall be located by the Secretary of War. The height of the superstructure shall not be less than the height recommended by

the board of engineers above mentioned; & the bridge shall be at right angles to & its piers parallel with the current of the river. The bridge shall be located on the Detroit River between the northeasterly limits of the city of Detroit & a point not more than $2\frac{1}{2}$ miles southwesterly from the present southwesterly limits of the city. No bridge shall be erected or maintained which shall at any time substantially or materially obstruct navigation; & if any bridge when so erected shall, in the opinion of the Secretary of War, prove to be such an obstruction, he is authorized to cause such alteration to be made as will obviate such obstruction, & if necessary, may cause the bridge to be removed. Alterations to be made & bridge removed at expense of owners. All railway companies in the U.S. or Canada desiring the use of the bridge shall be entitled to equal rights & privileges relative to the passage of trains over it & its approaches, & the rates charged for the use of the bridge & approaches shall be the same for all companies alike. The bridge is to be commenced within 3 years from the going into effect of this act & to be completed within 6 years from the same date. Construction shall not be begun until the Dominion Government has authorized the construction & maintenance of that part of the bridge which will occupy the portion of the river which is under the jurisdiction of the Dominion.

RAILWAY APPOINTMENTS, &c.

Canadian Pacific.—S. Phipps, Acting Road Foreman, has been appointed Assistant Master Mechanic, with jurisdiction from Fort William to Swift Current. Headquarters, Winnipeg.

J. Cardell, Trainmaster & Locomotive Foreman at Canmore, has been appointed Assistant Master Mechanic, from Swift Current to Laggan, & to Kootenay Landing, B.C.

F. E. Hobbs has been appointed Assistant Master Mechanic of the Pacific Division, with headquarters for the present at Vancouver. Communications heretofore addressed to A. Stronach, Acting Master Mechanic, will be directed to Mr. Hobbs, as Mr. Stronach is returning to Winnipeg, where he formerly acted as General Foreman.

The Vancouver World recently gave currency to rumors that W. Whyte, manager of the Western Lines, would be transferred to Montreal to a more important position in connection with the general management, and that the jurisdiction of G. McL. Brown,

Executive Agent in B. C., would be extended over the Western Division. We do not think there is anything in either of these rumors. Mr. Whyte's present position is about the most important in the service, outside of those occupied by members of the board of directors, embracing, as it does, the control of the vast interests of the Company in Northwest Ontario, Manitoba, the Territories & British Columbia, & there is no position in sight in Montreal which is of more, or even equal importance. It is hardly likely that at this juncture the vast western interests of the Co. will be entrusted to other hands. Mr. Brown, as Executive Agent for B. C., has special duties necessitating his frequent presence in Victoria, & there does not appear to be any necessity for the extension of his jurisdiction east of the Pacific Division, the diplomatic matters of the Western Division being handled from the western headquarters at Winnipeg.

J. Osborne's removal to Winnipeg to take the General Superintendency of the Western Division, has been postponed until Vice-President Shaughnessy's return from Europe.

It is rumored that F. W. Jones, Assistant to the Manager at Winnipeg, will be transferred to an important position at Montreal, but we have been unable to obtain any information on the subject.

The office of the Superintendent of Bridge Construction on the C.P.R. Western Division, has been removed from Winnipeg to Moose Jaw.

Grand Trunk.—R. Patterson has been appointed Master Mechanic of shops at Stratford, Ont., vice J. D. Barnett, resigned, & J. E. Muhlfeld, Master Mechanic of Western Division, headquarters at Fort Gratiot, Mich., vice R. Patterson, transferred.

C. F. Neild having resigned, B. Stimson is appointed Locomotive Foreman at Stratford. J. R. Donnelly, of Palmerston, is appointed Foreman at York, in place of B. Stimson, transferred.

J. Hodgson is appointed Master Car Builder at Fort Gratiot, Mich.; F. Sutherland, Master Car Builder at Montreal, and S. King, Master Car Builder at London, Ont.

A. W. Davis has been appointed Locomotive Foreman of the G.T. & Wabash shops at St. Thomas, Ont., vice J. Armitage who goes to Palmerston, Ont.

The widow of C. Giles, a C.P.R. Roadmaster, who was killed in a collision in the Crow's Nest Pass last Aug., is suing the Co. for \$25,000.

MICA BOILER COVERING

For Locomotive, Marine and Stationary Boilers

Tested by Mechanical Experts of the C.P.Ry. Co., G.T.Ry. Co., M.C.Ry. Co., Boiler Inspection Insurance Co., and proved to be the

= = Best of All Non-Conductors = =

All Steam users should see the Mica Boiler and Pipe Covering—Flexible, Durable and Highest non-Conductor of Heat in the Market.

Full particulars, reports of trials, testimonials, prices, etc., from

Mica Boiler Covering Co., Limited, 9 Jordan St., Toronto, Ont.

Personal Mention.

General Traffic Manager Reeve, of the G.T.R., has had a severe attack of la grippe.

F. S. Forrest has been appointed Assistant Superintendent of the Spokane Falls & Northern system.

Land Commissioner Hamilton, of the C. P. R., & Mrs. Hamilton, have gone to Europe for an extended trip.

Vice-President Shaughnessy, of the C.P.R., left Feb. 6, on a trip to Europe, expecting to be absent about a month.

C. W. Graves has been appointed District Freight & Passenger Agent of the Great Northern Ry. (U.S.A.) at Toronto.

R. L. Middleton, of Brantford Railway fame, has been put in the dungeon at Kingston Penitentiary for mutinous conduct.

A. Onderdonk, the well-known railway contractor, who resides at Hamilton, Ont., is seriously ill at the Manhattan Club, New York.

During Lady Laurier's recent visit to Montreal luncheons were given in her honor by Lady Van Horne, Mrs. Jas. Ross & Mrs. D. D. Mann.

Miss May Belle, youngest daughter of President J. R. Booth, of the Canada Atlantic, died Jan. 23, aged 23, of lung trouble, after several years illness.

J. M. Hannaford, General Traffic Manager of the Northern Pacific, has been appointed 3rd Vice-President, & will continue in charge of traffic as heretofore.

J. H. McClure, an engineer on the Wabash, has been appointed Road Foreman of engines for the eastern division of that road from Detroit, Mich., to Buffalo, N.Y.

E. T. Galt, President of the Alberta Ry. & Coal Co. at Lethbridge, is staying with his mother, Lady Galt, in Montreal. He has been in poor health for some time past.

Lord Mount Stephen is seeking to rent the London residence of Lord Curzon, Viceroy of India, No. 1 Carlton House Terrace, which his father-in-law, Mr. Leiter, recently presented him.

The widow of G.T.R. Fireman Cleary, who was killed in the Murray Hill disaster, has settled her suit against the Co. for \$6,000, & costs amounting to \$400. The suit was for \$10,000.

W. Keating, formerly Toronto City Ticket Agent for the G.T.R., has been appointed Freight & Passenger Agent for the Canadian Steamship Co., the Paspebiac-Milford Haven line, with headquarters at Toronto.

The old rumor that Sir Wm. Van Horne would shortly resign the presidency of the C.P.R. was current in Montreal recently. When Sir William was asked about it he smiled & said, "There is nothing in it."

Dr. H. A. Beatty, son of H. Beatty, formerly of the C.P.R. Steamship Department, a graduate of the Toronto School of Medicine, has successfully passed the examinations for the M.R.C.S. & L.R.C.P. degrees in England.

The names of H. G. McMicken, European Agent of the Great Northern Ry., & Miss McMicken, appear among the list of guests at a Cinderella dance given by the Colonial Club at the Hotel Cecil, London, Eng., recently.

C. S. Cunningham, G.T.R. Trainmaster at Portland, Me., while on a visit recently to London, Ont., where he was stationed until lately, was presented by his former associates with an address & a Knight Templar & Shriner emblem, & with a silver service of 6 pieces for Mrs. Cunningham.

Robt. Johnston, who died in Toronto Jan. 30, aged 70, entered the G.T.R. service in 1857, & ran a train between Toronto & Strat-

ford. He was one of the first conductors to run a passenger train between Toronto & Detroit when the line was opened in 1859. He retired from the Co's. service about 15 years ago.

J. W. Kendrick, General Manager of the Northern Pacific, has been appointed 2nd Vice-President, & will continue in charge of the duties heretofore performed by him. He has been connected with the N. P. for 25 years, & has been General Manager since 1893, previous to which date he was for 5 years Chief Engineer.

E. G. McMicken, heretofore General Agent of the Great Northern Ry. at Seattle, has been appointed General Freight & Passenger Agent of the North American Trading & Transportation Co., with headquarters at Seattle, Wash., in place of F. P. Searle, General Freight Agent, & M. J. Bissel, General Passenger Agent, resigned.

S. Barker, of Hamilton, Ont., has been elected President of the St. Louis, Kansas & Southwestern Ry., & J. N. Young, formerly of the T.H. & B. Ry., Vice-President & Manager. The railway is 60 miles long, & was recently bought by Mr. Barker for \$150,000, he representing the Canadian holders of bonds to the value of \$800,000.

A contemporary says: Alex. Gibson, "King of the Nashwaak," is one of the largest commercial operators in Canada. He was born in St. Andrew's N. B., in 1819, a poor boy, & now he owns hundreds of square miles of valuable timber lands in the Nashwaak, & employs 1,000 men & 1,200 horses in the lumber trade alone. In the town of Marysville, N. B., all the citizens are in his employ. He controls the Canada Eastern Ry.

In retiring from the General Managership of the Soo line to take a similar position with the Baltimore & Ohio, F. D. Underwood issued a letter to all the employees, in which he said: "After having been a co-laborer with you for a period of more than 12 years, I am about to leave the service. For your constant support & loyalty to the Co. & myself I have not words to express gratitude. For my successor, who has been with the Co. from the first, I bespeak your most cordial co-operation."

C. R. Hosmer, Manager of the C. P. R. Telegraphs, & Mrs. Hosmer have been unfortunate of late. In December, a day or two after they returned from Paris, where they left Miss Hosmer in an educational establishment, they received a cable that she had typhoid fever, & at once went back. Fortunately the attack was mild, & Miss Hosmer is now recovering, but in the middle of Jan. Mrs. T. D. Bigelow, mother of Mrs. Hosmer, died at Mr. Hosmer's Montreal residence, of la grippe.

Sir C. Rivers-Wilson recently distributed the prizes at the Crystal Palace, Sydenham, Eng., to the students of the School of Engineering, & delivered an interesting address, in which he dwelt on the career of his old friend, the late M. Lesseps, who, he said, had overcome obstacles in the construction of the Suez canal which had seemed insuperable to every professional engineer, by dint of obstinacy and genius which was superior to all training. He spoke also of the reconstruction of the Victoria bridge at Montreal, & hoped to see some of the Crystal Palace students at its opening next spring.

A recent despatch from Ogdensburg, N. Y., stated that E. J. Chamberlin, General Manager of the Canada Atlantic, would be appointed General Manager of the Rutland & Ogdensburg & Lake Champlain Rys. Mr. Chamberlin informs us there is no truth whatever in the report, & that so far as he is concerned the matter has not even been under discussion. A few days later a Montreal des-

patch said C. W. Spencer, General Superintendent of the Eastern Division of the C.P.R., was to succeed Mr. Chamberlin on the Canada Atlantic. Mr. Chamberlain's denial, above referred to, disposes of this rumor also.

The Late W. R. Campbell.

There was interred in Highgate Cemetery, London, Eng., Jan. 10, W. R. Campbell, General Manager of the Dominion Atlantic Ry., who died Jan. 8, at the early age of 49. He was one of the brilliantly clever young men educated by the North British Ry. over 30 years ago, when it was not the system of to-day. That band of young men included the Hon. D. Hunter, General Manager of the South African Government Rys., & his brother, J. Hunter, Assistant General Manager of the same property; J. Thallon, Manager of the Queensland Government Rys., & now a commissioner of railways in Australia; more notable still, D. McNicholl, Passenger Traffic Superintendent of the vast C.P.R. system; & lastly, W. R. Campbell, who, from being secretary of a small line in the fruit-growing districts of Nova Scotia, became General Manager of the well-known Dominion Atlantic system of Canada, which links New England & the Maritime Provinces of the Dominion together by a Pullman car service, & the fastest twin-screw passenger fleet in the whole of North America. W. R. Campbell was born in Edinburgh Sep. 25, 1849. He was educated in Edinburgh, went through his apprenticeship in the North British Ry., joined the Brecon & Merthyr Ry., & then at the early age of 21, took up what proved to be his life work in connection with the Dominion Atlantic Ry. & its kindred institutions, with which he was connected for 28 years. A man of exquisite taste, a passionate lover of music, a railway lawyer who won one of the most difficult cases ever presented to the Privy Council, he was the esteemed friend of many Canadian & U.S. statesmen, & was as well known in London as in Canada. He was in some degree the cause of a friendly reciprocity between Canada & the U.S. He originated that vast stream of tourist business which now turns like a tide every summer from the Eastern States to the Maritime Provinces, & Nova Scotia & New Brunswick owe to him much of their present development & prosperity.—Canadian Gazette.

FINANCE, MEETINGS, &C.

Atlantic & Lake Superior.—The prospectus of the Canadian Steamship Co., which is to run vessels between the Atlantic terminus of this line at Paspebiac, Que., & Milford Haven, Wales, has been issued in London, Eng. The share capital of the Co. is fixed at £150,000, & it is divided into 100,000 6% cumulative preference shares, & 50,000 ordinary shares, all of £1 each. The ordinary shares credited as fully paid seem to be taken by the Atlantic & Lake Superior Ry. Co. as part payment of £300,000 (the balance is in cash) for "six suitable steamers." Of the preference shares it is stated 25,000 have been taken up. The interest & principal of the 75,000 preference shares left to be taken by the public are secured by the A. & L. S. Ry. Co.

The **Bedlington & Nelson Ry. Co.** gives notice of application to Dominion Parliament for an act to declare it to be a body corporate within the jurisdiction of the Parliament of Canada, & its railway to be a work for the general advantage of Canada, also to authorize the Co. to exercise running powers over other railways, & to make such arrangements for conveying or leasing the Co.'s railway & its rights, &c., as is usually given to railway companies in their acts of incorporation.

B.C. Railway Legislation.—In all railway bills going through the B.C. Legislature this session it is provided, at the instance of the Government, that the railways shall be bound to carry over their lines, without charge, all persons whose transportation would otherwise be a charge against the Provincial Government, also all members of the Legislature.

Calgary & Edmonton.—At last session of the Dominion Parliament this Co. was authorized to extend its line from its then terminus at West Macleod across the Old Man River to connect with the C.P.R. Crow's Nest Branch, & was empowered to issue bonds at the rate of \$18,500 a mile. A special meeting of shareholders was held Jan. 18 to authorize the issue of bonds for the distance built, which was slightly under a mile. The bonds have been placed privately.

Canada Eastern.—It is again rumored that the Dominion Minister of Railways will submit a measure next session to buy the Canada Eastern Ry. & make it a branch of the I.C.R. The line runs from Fredericton, N.B., to Loggieville, 125 miles, A. Gibson being the President. The shareholders recently decided to sell the road to the Alex. Gibson Ry. & Mfg. Co., & if this sale is carried out the Government will have to deal with the new company. The proposed purchase price by the Government is said to be in the neighborhood of \$1,000,000. The Moncton, N.B., Transcript, a Government organ, says:—"The absorption of the C.E. Ry. by the I.C.R. is rather pressing in its importance." (Jan., pg. 4.)

Canada Southern.—A New York despatch says that although technical denials are issued regarding what is known as the New York Central deal, the denials do not go so far as to dispute the correctness of the recent statements that the Canada Southern property is soon to be merged into the N. Y. C. along lines similar to those followed in the Lake Shore & Michigan Central consolidation.

The C.P.R. Aylmer Branch from Hull, Que., to Aylmer, 75 miles, which has been under lease to the Hull Electric Co. for several years, & has been electrified by it, has been sold to that Co. for \$100,000. Application will be made to the Dominion Parliament for an act ratifying the sale.

Central Ontario.—On Feb. 1 the Bank of Ottawa obtained judgment by default against this Co. for \$308,193.39, amount due on coupons on debenture bonds held by the bank. (Jan., pg. 4.)

Central Vermont.—In the U. S. Circuit Court at Brattleboro, Vt., Jan. 30, Judge Wheeler ordered the sale at foreclosure of this railway. E. L. Waterman, of Brattleboro, is appointed master to make the sale. This is an important step toward the control of the C.V. system by a new company, incorporated by the Vermont Legislature, with a capital of \$3,000,000, & to issue bonds to the amount of \$12,000,000 more to take up the debts of the present C.V. Co., according to the agreement of the creditors at a meeting held in Boston last September. (Jan., pg. 4.)

Cumberland Ry. & Coal Co.—At the recent annual meeting of this Co. in Montreal the following officers were elected: President, R. Cowans; Vice-President, Hon. G. A. Drummond; General Manager, J. R. Cowans; Sec.-Treas., H. R. Drummond; other directors, D. Morrice, E. S. Clouston, W. J. Morrice, E. McDougall, W. J. Crossen.

Dominion Atlantic.—Receipts for 1898 \$547,533, against \$512,955.

Eastern Extension.—The Government of Nova Scotia has applied to the Dominion Government for a refund of the Provincial subsidy towards the building of this line, which is now a part of the I.C.R.

Iroindale, Bancroft & Ottawa.—The Hudson Improvement Co., of Jersey City, has issued a notice dated New York City, stating that it is entitled to the whole or a large por-

portion of the bonds of the I., B. & O. Ry. Co., & a first lien thereon, & also upon the whole property of the Ry. Co., under contracts made between the two companies & cautioning people against negotiating the same. A letter from this office to the Hudson Improvement Co. remains undelivered, the New York Postmaster stating the Co. is not known there & is not mentioned in the directory. (Jan., pg. 5.)

Manitoba & Northwestern.—A. M. Nanton, Winnipeg, & R. A. Smith, Toronto, have been appointed trustees for the debenture holders, vice G. Hague & W. M. Ramsay, Montreal.

Ogdensburg & Lake Champlain.—The Rutland Ry. Co. took possession of the O. & L. C. Ry., Feb. 2. It is said the price paid for the road was over \$4,000,000. P. W. Clement has assumed charge of the O. & L. C. as President.

Qu'Appelle, Long Lake & Saskatchewan.—With reference to this Co.'s 1st mortgage sterling bonds, it was recently announced that the Dominion Government subsidy for the 6 months ended Dec. 31, 1898, together with the net earnings of the Co. for the 6 months ended Nov. 30 would permit of a distribution of 1% in respect of interest due Feb. 1, 1899, & that payment of such interest would be made on & after that date at the offices of Morton, Chaplin & Co., London, Eng.

Quebec & Lake St. John net earnings for Nov., \$2,842 more than for corresponding month.

Thousand Island Ry.—J. Bell, of Belleville, Ont., Trustee, gives notice that a mortgage dated Feb. 20, 1894, made by this Co., & by him as trustee, has been deposited in the office of the Secretary of State, Ottawa.

Toronto, Hamilton & Buffalo.—The original directors & shareholders of this Co. are still in litigation for the enforcing of the terms of the agreement under which the road was

QUALITY FIRST. PRICE AFTERWARD.

The Page Fencing is composed of a high grade of steel wire made especially for the Page Co. and no one else. This wire is 60 to 100 per cent. stronger than that used in other fences. It is coiled, which makes it still more effective because of its elasticity. The common wire fence has no "life." It cannot recoil and "pull itself together" after the attack of an animal, or from the effects of a snowdrift freezing to it and settling. Page Fencing that was properly erected years ago is in perfect condition to-day. Others that have been in use only half as long present a sorry spectacle.

THE PAGE WIRE FENCE CO., LTD., Walkerville, Ont.

taken over by the present company. A writ has been issued in the name of D. Maconachie, of Welland, one of the original directors, & A. Nelson, an original shareholder, for \$35,000 cash, & \$100,000 in stock, which, it is claimed, the agreement calls for. The present officers of the T., H. & B., J. H. Young & Co., of Chicago, brokers, & F. C. Helm, contractor, are the defendants, a concurrent writ being issued to cover those domiciled in the U.S. The original suit was instituted some 4 years ago, but owing to complications arising from abortive attempts at settlement, the prosecution was not waged sufficiently, & it was dismissed by the Master in Chambers.

Grand Trunk Earnings, Expenses, &c.

On Feb. 10 the directors announced a dividend at the rate of 4% per annum on the guaranteed stock & of 3% per annum on the 1st preference stock, with £4,000 carried forward. The statement showed an increase of over £10,000 in the traffic returns. The announcement was received buoyantly on the London Stock Exchange & the stock rose from $\frac{5}{8}$ to $1\frac{1}{2}$. This is the 1st dividend on the 1st preference stock since 1890.

The following statement of earnings supplied from the Montreal office, includes the G.T. of Canada, the Chicago & G.T., & the Detroit, Grand Haven & Milwaukee Rys:

	1899	1898	Decrease	Increase
Jan.	\$1,950,281	\$1,916,332	...	\$33,949

The following figures are issued from the London, Eng., office:

RECEIPTS OF THE SYSTEM.

From Jan. 1 to 31, the receipts were:

	1899.	1898.	Increase.	Decrease.
Grand Trunk	£315,423	£318,730	£3,307
Chicago & G.T.	71,993	60,618	11,375
D., G. H. & M.	14,550	14,418	132
Total	£401,976	£393,766	8,210

DETAILS OF GRAND TRUNK RECEIPTS.

Aggregate July 1 to Dec. 31:

	1898.	1897.
Passengers, number	3,823,823	3,584,715
amount	£580,999	£615,997
Immigrants, number	7,026	5,395
amount	£3,669	£3,542
Mails, express, &c.	£105,883	£112,100
Freight, tons	1,735,540	1,591,178
amount	£1,383,144	£1,186,775
Miscellaneous receipts	63,491	30,388
Total receipts	£2,137,477	£2,248,805
Decrease	£111,328

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net profits & increases or decreases over 1897 from Jan. 1, 1898, are as under:

	Earnings.	Expenses.	Net Profits.	Increase or decrease.
Jan. \$1,672,372.04	\$1,156,744.48	\$515,627.59	\$142,284.49	+
Feb. 1,494,596.98	1,070,929.62	423,667.36	38,844.28	+
Mar. 2,079,479.06	1,326,245.55	753,233.51	233,020.67	+
April 1,058,461.88	4,241,371.19	717,000.69	84,073.35	+
May 2,252,999.16	1,326,336.85	926,662.31	51,092.47	+
June 2,138,110.04	1,320,714.67	817,395.37	68,731.93	+
July 2,051,613.27	1,320,674.48	730,688.79	183,670.08	+
Aug. 2,210,805.20	1,327,838.41	883,026.88	121,380.23	+
Sep. 2,390,385.29	1,303,871.63	1,092,513.66	32,622.62	+
Oct. 2,688,730.39	1,432,883.90	1,255,845.49	158,092.79	+
Nov. 2,524,497.06	1,443,988.20	1,080,508.86	109,223.74	+
Dec. 2,071,116.67	1,392,003.36	1,279,111.11	225,610.62	+
Total	\$26,138,977.13	\$15,663,605.51	\$10,475,371.62	\$171,595.73 +
Increase. - Decrease.

At a meeting of directors Feb. 6, the following statement was submitted as the result of 1898 business:

Gross earnings	\$26,138,977
Working expenses	15,663,605
Net earnings	\$10,475,372
Income from other sources	423,367
Total net income	\$10,898,738
Fixed charges, including interest on land bonds	9,774,324
Net revenue available for dividends	\$1,124,414

Out of this a dividend of 2% on the preference, & 2% on the common stock for the June half year was paid in Oct. last. At the meeting on Feb. 6, a further dividend of 2% on the preference & 2% on the common stock was declared, making 4% for the past year. After payment of dividends now declared, the surplus for the year carried forward is \$1,051,708.

Approximate earnings for January, 1899, were \$1,864,000, against \$1,673,000 in January 1898, an increase of \$191,000.

SUBSIDIARY LINES.

DULUTH, SOUTH SHORE & ATLANTIC.—The approximate earnings for Jan. were \$152,056, as compared with \$114,128 for the corresponding period, an increase of \$37,928.

Net earnings for 11 months to the end of Nov., 1898, \$551,299 compared with \$483,812.

MINERAL RANGE, HANCOCK & CALUMET.—The approximate earnings for Jan. were \$27,264, as compared with \$23,509 for the corresponding period, an increase of \$3,755.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—The approximate earnings for Jan. were \$240,589, as compared with \$259,782 for the corresponding period, a decrease of \$19,193.

Canadian Pacific Railway Land Sales.

	Acres.	Amount.
	1899	1898
Jan.	147,718	220,944
	\$46,411.35	\$7,200,483

Land Commissioner Hamilton has had prepared a statement showing the number of land sales made to settlers from the U.S. during 1898. He regards the showing made as being very satisfactory evidence of the activity displayed by government immigration officials & by agents of the Co. The following list shows the States from which different purchasers, 201 in number, originally came: Arkansas, 2; California, 5; South Dakota, 15; North Dakota, 43; Illinois, 12; Indiana, 1; Iowa, 11; Idaho, 5; Kansas, 12; Michigan, 31; Massachusetts, 5; Minnesota, 15; Montana, 2; Missouri, 8; Maine, 5; New Hampshire, 1; Nebraska, 12; New York, 6; Oregon, 18; Virginia, 3; Washington, 7; Wisconsin, 12. Of all those who purchased land from the Co. last year, one was in the Province before 1870, 75 before 1880, 523 before 1890, 677 before 1898, & 230 went to Manitoba last year.

Western Elevator Capacity.

The grain elevator accommodation in Canada west of Thunder Bay on Jan. 1 last was as follows:—

	Bushels.
C. P. R. Main line	10,654,000
" Pembina branch	2,411,500
" Souris	1,250,000
" Pipestone	249,000
" Southwestern branch	1,272,000
" Emerson	237,000
" Other branches	641,000
Total	16,714,500
M. & N.W. Ry.	1,284,500
Northern Pacific Ry.	1,295,000
Lake Manitoba Ry. & Canal Co.	230,000
Great Northwest Central Ry.	434,000
Total	19,985,000

On Jan., 1898, the total elevator capacity was 18,378,500; the net gain during the year was, therefore, 1,579,500.

W. Whyte, Manager of the C.P.R. Western Lines, spent some time in Montreal at the end of Jan. & beginning of Feb. arranging with the President & Vice-President for the appropriations for this year's betterments, extensions, etc., on the Western & Pacific divisions.

Surveys, Construction, Betterment, &c.

Canada Atlantic & Ottawa. Arnprior & Parry Sound Rys.—President Booth recently said 1,600 ft. more dockage will be built at Depot Harbor this year for the accommodation of grain vessels. He added that the improvements are not yet nearly completed.

Cassiar Central.—We are officially informed that a survey has been made from Glenora, which is the highest point that can be conveniently reached by large river steamers on the Stikine River. Glenora is about 150 miles from Wrangle, Alaska, & during ordinary stages of the river, & in fact during most of the open season, there is no great difficulty in reaching it by steamers 150 ft. long. This size of stern wheel steamer should have powerful engines, & thus equipped can carry something over 100 tons of freight per trip up stream. The point selected for the railway terminals is on the lower town site owned by the C.C. Ry. Co. From this point a survey has been made up the valley of the Stikine & across to the head of Dease Lake. The first part of the route rises as rapidly as possible along the side of the Stikine valley, & considerable detours are required to cross the Tahltan & Tooya Rivers. These rivers enter the Stikine through deep canyons, & to cross them at more favorable points it is necessary to ascend each river some miles. Until both of these points are crossed there is a fair amount of heavy work to be done. From Cariboo camp to Dease Lake the country to be traversed is much easier, & advantage can be taken of several large valleys. The route proposed passes above the present site of Telegraph Creek & near the old town site of Glenora. In general the first part of the road may be said to involve the usual difficulties met in such construction work in the foot hills of the Rockies. The total height, however, to be ascended is here not great. Telegraph Creek & Glenora are probably about 500 ft. above sea level. Dease Lake is about 2,600 ft. In addition to surveys, construction of camps, offices, warehouses, etc., for the Co., a force of prospectors were in the field last season, & the map & geological notes of the district have been made. The entire work of prospecting, including the geological survey, was in charge of E. D. Self, recently a consulting mining engineer in Johannesburg. The general management of all the Co.'s business in the Cassiar district was also in Mr. Self's charge. In terms of the Co.'s concession a number of claims have already been staked, & 2 mineral blocks have been designated. Preparations are now being made to carry on the work of exploration & railway construction. (Jan., pg. 11.)

Central Ontario.—We are officially informed that it is the intention of this Co. to extend its present line next season from Ormsby, 5 miles from the northern terminus at Coe Hill, to Bancroft, & thence northerly to a connection with the O. A. & P. S. Ry. near Barry's Bay. If this intention is carried out it will probably considerably interfere with the line which is talked of as an extension of the Pembroke Southern from Golden Lake southerly, & which is referred to elsewhere in this issue.

Edmonton District.—Two of the engineers despatched by the Dominion Government last summer to make a reconnaissance survey for a railway from Edmonton towards the Yukon, are engaged in the Department of Railways at Ottawa, preparing their reports. Mr. Dwyer had charge of the western division, Mr. Dupont of the eastern, & Mr. Dibble of the central division. The latter is wintering in the country. His territory extended from the Parsnip River to a point west, at which he was to meet Mr. Dwyer's party coming from Telegraph Creek, on the Stikine, towards the Rockies. Mr. Dupont surveyed the line from Edmonton west to the Parsnip

River. Until their reports have been made public it will of course be impossible to say what the success of the survey has been, but from what has been reported it is probable a fairly easy line has been found between Edmonton & the Parsnip River, & even some distance beyond that point. (Nov. '98, pg. 248).

Intercolonial. Connolly Bros., of Montreal, who have the contract for the wharfs, &c. at St. John, N.B., have taken there from Philadelphia, a dipper dredge 120 ft. long, 30½ ft. wide, & 10½ ft. deep. In clay it is said it can lift 3,000 yards in 10 hours.* Work is to be started at once. (Jan., pg. 11).

The employment of heavier engines necessitates the laying of heavier rails, & it is said 90 lbs. steel is to be put on all curves & bridges, replacing the present 57 lbs. rails, & that as soon as they can be procured 90 lbs. rails will be laid all over the line where there is heavy traffic. The last tenders invited by the Department of Railways called for 80 lbs. rails.

Lake Manitoba Ry. & Canal Co.—It is proposed to merge this line into a new company, the Canadian Northern Ry. Co., under which name it will be extended to Hudson's Bay. Speaking at Carberry, Man., recently, the Manitoba Minister of Public Works said he hoped that in the near future there would be found an outlet by way of Hudson's Bay, & so long as they were extending in that direction, making a colonization road as well, they would be assisting in the construction of the Hudson's Bay road in the hope that the difficulties in regard to navigation would be overcome, & they were going to go right on in that direction. (Jan., pg. 12).

The settlers in the Gilbert Plains district of Manitoba are desirous of having a branch built westward from Dauphin to serve their settlement.

Manitoba & Southeastern. In consequence of the decision to build this line for some distance through Minnesota, it will be necessary to procure authority therefrom from that state. (Jan., pg. 13).

Michigan Central Hotel.—There is a rumor that this Co. will build an hotel on its property at Niagara Falls, on the Canadian side, in the near future.

Midland of Nova Scotia.—This Co. has purchased about 5,800 tons of steel rails for the 60 miles now being built between Windsor & Truro.

The Co. has invited tenders for the construction of the substructure of the Shubenacadie bridge, including the crib-work on the western side, all the foundations, abutments, pedestals, piers, & all other works necessary to the completion of the works, preparatory to placing the superstructure, including the building in or preparing for all anchor bolts between stations 337.34 & 349.75 (local chainage). (Jan., pg. 13).

Northern Pacific.—The Souris River branch was built last year from a point on the Brandon branch 3 miles from Belmont, to a point 46½ miles west, & it is now being operated with a regular service to Elgin, 38 miles west of the junction. There are 3 trains a week, & a train is run to the end of the track from Elgin, whenever business will justify it, the portion of line west of Elgin being operated as a spur at present. It has not been announced what the intention is as to the extension of this line this year. (Jan., pg. 13).

Kootenay Ry. & Navigation Co. B. C. papers think work will be started in the spring on the extension of the Kaslo & Slocan line from the present terminus at Sandon to Slocan Lake. It is also said that the right-of-way is being secured. As stated in our Jan. issue, pg. 12, this Co. is, through subsidiary companies, building from Bonner's Ferry, Idaho, to Kootenay Lake, B.C. South of the

international line the work is being done by the Kootenai Valley Ry. Co., & north of the line by the Bedlington & Nelson Ry. Co. The latter Co. has applied to the Railway Committee of the Privy Council for running power over about 15 miles of the C.P.R. Crow's Nest Pass branch from near Creston to Kootenay Landing. The application, which will be heard Feb. 22, is made under the Crow's Nest Pass Ry. Subsidy Act of 1897, which provides that the Railway Committee may grant running powers over that railway & all its branches & connections, or any portions thereof, & all lines of railway owned or leased by or operated on account of the C.P.R. Co. in B.C. south of the Co.'s main line of railway, & the necessary use of its tracks, stations & station grounds, to any other railway company applying for such grant upon such terms as the committee may fix & according to the provisions of the Railway Act & of such other general acts relating to railways as are from time to time passed by Parliament, but nothing herein shall be held to imply that such running powers might not be so granted without the special provision herein contained. (Jan., pg. 12.)

Ontario & Rainy River.—The contractor for the first 20 miles has had about 150 men engaged on rock work since the severe weather set in. The 5 surveying parties are nearing one another, & it is expected that before the end of this month there will be a connected survey line through to Rainy Lake. The bridge over the Kaministiquia is still under consideration. The work generally has been made very difficult by the exceptionally severe cold. W. Mackenzie recently stated that he expected 150 miles of the line would be built this year, if additional aid is secured from the Dominion Government. (Jan., pg. 13.)

Ottawa & Gatineau Valley.—Press dispatches from Ottawa recently stated that this line would be extended this year from its present terminus at Gracefield, 60 miles from Ottawa, to Maniwaki, 28 miles. The General Superintendent advises us that at present he is unable to say when the work is to be gone on with.

It is said that in the spring the Co. will commence work on the approach to the central depot from the new interprovincial bridge. The line, which will be double track, will be constructed on the strip of land between Major's Hill Park & the canal, & every precaution will be taken to prevent the disfigurement of the park. The Co. expects to run trains into the central station as soon as the interprovincial bridge is built, & will not wait for the construction of the union station.

About 75 men are now employed on the interprovincial bridge, & but one more pier remains to be put up. The stone work will easily be completed in the summer & the iron work will be put up early in the fall. There will be a double railway track, a roadway for the electric cars, one for general traffic & a walk for pedestrians.

Ottawa & New York.—A Cornwall dispatch says this Co. does not intend to take any more chances with the foundations of the bridges at Cornwall. It is understood on good authority that, as a result of the investigations carried on in the south channel of the St. Lawrence, last fall, pier no. 3, the only one left standing in deep water after the collapse of the bridge, will be torn down & rebuilt as soon as the river is clear of ice in the spring. The construction company is determined that the bridge will not be handed over for traffic until everything is perfectly substantial & satisfactory. Of course this will cause considerable delay. No contracts have been let for either masonry or superstructure. The Co., however, will prepare a lot of stone for the foundations, which it will turn over to the contractors, or use itself if the tenders for the

work do not prove satisfactory. There are a couple of sections of the O. & N.Y. built through a very wet swamp, which will be reconstructed next spring. These sections, which comprise in all about 3,000 yards, are near Newington and between the Post Road & Black River. They will be strengthened by corduroy, for which purpose the Co. is now getting out logs. These logs will be 25 ft. long & will be laid crossways in the embankment. (Jan., pg. 13.)

Ottawa Union Station.—President Booth, of the Canada Atlantic system, has notified the Dominion Government of his desire to obtain possession of the militia stores building at the earliest possible moment in order to begin the erection of the central depot. It is said the plan for the station has been practically decided upon, & that it will be built of stone. It will be 4 stories in height, & will extend back to Sapper's Bridge. The entrance will be from a level with the street or bridge. The 2nd floor of the station, which will be on the level of the street, will contain a large general waiting room, capable of accommodating 1,000 people, with ladies' parlors adjoining, also restaurant & ticket offices. The train sheds & baggage room will be on the ground floor, & elevators will carry passengers to & from them to the waiting rooms. Six tracks will enter the train sheds. The Booth Companies' offices will be in the 3rd & 4th floors. A library for the employees of the road will be located on the 3rd floor. Already \$2,000 has been subscribed for the procuring of books, etc. The station will be after the design of the Chateau Frontenac, Quebec, & will likely be constructed of Nepean sandstone, of which the Parliament buildings were built.

In connection with the foregoing, it may be mentioned that there is a proposition on foot for the formation of a terminal station company, the shareholders of which would be the City of Ottawa, to the extent of \$50,000, which it is to contribute towards the erection of a union station, & the various railway companies.

The various companies are at present using the Canada Atlantic premises under an order of the Railway Committee of the Privy Council. The expense of operating & maintaining the station property is divided between the companies using it on a wheelage basis, the rental has not yet been determined.

Pontiac Pacific Jet.—At present this line extends from Aylmer to Waltham, Que., 71 miles, & secures connection with the C.P.R. at Hull by the latter's Aylmer branch, which since being leased to the Hull Electric Co. a couple of years ago, has been electrified & has now been sold to the Hull Co. The P.P.J. Co. has decided to extend its line from Aylmer to Hull, about 9 miles, & will build between the Hull-Aylmer electric line & the Ottawa River on the Quebec side. The contract has been let to the President of the P.P. Jct. Ry., H. J. Beemer, of Montreal. All the ties, rails & other material are on the ground, & work will start as soon as winter is over.

Rutland.—In our Dec. issue, pg. 261, we stated that a survey party was at work on the Canada Atlantic right-of-way at Swanton, Vt., & that the new line would connect with the C.A. either there or at Alburg Springs, Vt. Now that the Rutland Co. has purchased the Ogdensburg & Lake Champlain Ry. it is probable the lake shore will be followed to Rouse's Point & that connection will be made with the C.A. at or near Lacolle. (Jan., pg. 13.)

Toronto, Hamilton & Buffalo.—We were officially informed on Feb. 6 that the building of a spur line to the factories, &c., in the northeast part of Hamilton had not then been decided on. The City Council has agreed to give the Co. a rebate of \$1,000 a year on its taxes if the spur is built. It is not very certain that the line will be built if there is much

opposition to it from the G.T.R., whose tracks would have to be crossed, & from property owners asking too high a price for their property. (Jan., pg. 13.)

Quebec Bridge.—An item which has been going the rounds of the daily press to the effect that the Dominion Government has invited tenders for a bridge over the St. Lawrence at Quebec is incorrect. The tenders have been asked for by the Quebec Bridge Co., the time for receiving them being extended to Mar. 1. We understand several large bridge builders are preparing designs, & will submit tenders. (Jan., pg. 13.)

Canadian Pacific Betterments, etc.

Mattawamkeag to Princeton.—A press dispatch from St. John, N.B., recently said: "It is reported that the C.P.R. has a surveying party at work on the route from Mattawamkeag, Me., to Princeton, Me., to connect with the Washington County Ry. The C.P.R. has a 91 years' lease of the portion of the Maine Central between Mattawamkeag & Vanceboro, & it is understood a survey will also be made from Tomak station, in Washington Co., to Princeton, a distance of 21 miles, while the former route is about 60 miles. The C.P.R. has a wide-open eye on the possibilities of the transportation business from the west in connection with the grain elevators to be built at Eastport." We are officially informed that the C.P.R. management has no knowledge of any line from Mattawamkeag to Princeton.

St. John Terminals.—Ex-Mayor Robertson, of St. John, N.B., visited Montreal last month to ascertain the C.P.R. management's intentions in regard to the port. In a report to the City Council on his return he said Mr. Shaughnessy admitted that further facilities are required at Sand Point if the trade at St. John is to develop. Mr. Robertson pointed out to Mr. Shaughnessy that the C.P.R. was by its agreement morally & legally bound to provide facilities & to encourage trade. The reply was that the C.P.R. had already made large expenditures to that end & would continue them. This referred to the track building, the elevator, the improvement of the Short Line, the fact that it carried freight in competition with Portland, & had done much other work to help St. John. Mr. Robertson said he urged the construction of wharves down the bar, & Mr. Shaughnessy said when they considered it advisable they would provide the wharves. He left the impression that the Co. intended to do something. Mr. Shaughnessy intimated to him the opinion that St. John might well ask federal aid to assist in the work of providing accommodation for the trans-continental trade. Mr. Robertson then pointed out that 3 berths could be provided on the opposite side of the Sand Point slip. He thought the government would do the dredging, & asked if the C.P.R. would give a grant to help in the wharf building. Mr. Shaughnessy emphatically declined, but said if the business warranted it, they would lease the wharves, & if another elevator was required they would provide it. He pointed out that to satisfactorily handle the business the Co. would soon have to undertake the lowering of the grade on the Short Line.

Windsor St. Station, Montreal.—The Co. is buying land on the south side of the tracks between this station & Atwater Avenue, & the intention is to extend the terminal facilities. The strip, which is being purchased, averages about 100 ft. in width. This will allow of laying more tracks, & will tend to greatly benefit the service. This property is not considered particularly valuable; in fact, is good for little else than the uses to which it will be put. The passage of trains so near has made the property undesirable for residential purposes.

Grand River Bridge at Galt, Ont.—This bridge was built by the Credit Valley Ry. Co.

some 20 years ago. It consisted originally of 5 spans pin-connected iron deck trusses, each 150 ft. long on masonry piers, & wooden trestle approaches, in all 1,120 ft. long, & about 70 ft. high. The wooden approaches & the deck on the iron spans were renewed in 1891 by the C.P.R. In the spring of 1898 it was deemed advisable to rebuild the bridge on account of the increased weight of the rolling stock. The new bridge will consist of 5 spans steel pin-connected deck trusses, resting on the old masonry piers, 2 span steel plate deck girders at the west end, & 1 span steel plate girder at the east end; each girder being about 93 ft. long, making a total length of new bridge of about 1,130 ft., or about 90 ft. shorter than the old bridge. In connection with the renewal of the bridge it was decided to improve the grade by raising the track over the bridge 5 ft. The old piers will be built 10 ft. higher, & 2 new masonry abutments & 1 new pier have been constructed, 1 of the new trusses has been erected & the work of placing the plate girders is now going on. The work was commenced late last summer, & it is expected that it will be completed next summer. The cost is estimated at about \$70,000. The total cost of the new bridge, new station building & improving the grade, will amount to \$100,000. The work is being carried out under the direction of A. L. Hertzberg, Division Engineer.

Galt Station.—The station being built at Galt to replace the original structure is 80 ft. long & 30 ft. wide, & contains on the ground floor, general waiting room 28 ft. square, ladies' waiting room 16x20 ft., ticket office 16x15 ft., & baggage & express room 16x20 ft. There are women's & men's lavatories, & stairs to the basement where the hot water boiler & fuel cellar is placed, the flue for the former being arranged to ventilate the 2 lavatories on the ground floor. The inside finish will be in clear pine varnished, & rough plaster above the wainscot. The waiting room will be provided with seats, & the building will be lighted with electric light. The construction will be of stone up to the ground floor sill level, & above that of pressed brick, & the roof will be of slate. The architect is E. Maxwell, Montreal. The same plans are to be used for the new stations at Arnprior & Almonte on the Eastern Division.

Sault Ste. Marie Canal Bridge.—The alterations in the crossings of the canal by the tracks of the "Soo" Branch, necessitated by the removal of the pier in the channel, which has been such a serious obstacle to navigation, are making satisfactory progress. The 2 abutments for the new railway bridge are built, & the iron work will be placed in position before spring.

Western Division.—West of Fort William a very large amount of work will be done this year, continuing the work of previous years in the way of improvements. On the Wabigoon section just east of Hawk Lake, about $\frac{1}{2}$ mile of track will be built to reduce curvature. At Keewatin a 70 ft. $\frac{1}{2}$ thro' steel girder bridge will be built over the Lake of the Woods Milling Co.'s race. Just west of Cross Lake a 10 ft. masonry arch will be put in over a creek. At Whitemouth River 2 spans of 80 ft. thro' steel truss will be put in on masonry abutments & pier. A thro' steel truss, 100 ft. span, on masonry abutments, will be built over Brokenhead River. Between Pasqua & Moose Jaw a 15 ft. masonry arch will be built. Just west of Bowell, a 93 ft. wooden bridge will be replaced by a 2 ft. iron pipe & permanent fill. Just east of Cluny, 2 large wooden bridges, respectively 201 & 232 ft. long, by 51 & 58 ft. high, will be replaced by two 3 ft. iron pipes in each case & permanent fills. The 2 steel bridges at the 2nd crossing of the Bow River, about 7 miles west of Calgary, now rest on wooden abutments which will be replaced by stone. Similar work will be done at the 3rd crossing just

west of Mitford. At the crossing of the Kananasais, 3 miles west of Morley, a steel deck truss span of about 150 ft. will be put in to replace a lighter one now in use. At Devil's Head, near Anthracite, a considerable amount of crib work will be put in to protect the embankment & the bridge abutments. In addition to the works specially enumerated above, on the prairie sections, both main line & branches, a large number of wooden bridges will be replaced by iron or vitrified earthenware pipes & filled in, not only improving the track, but also reducing danger from fire. On the southwestern branch, near Treherne, where there is a wooden trestle 633 ft. long & 61 $\frac{1}{2}$ ft. high, the grade will be cut down & the material used to fill up the structure. The reduction of the grade will permit the hauling of much heavier loads between Holland & Winnipeg, & will enable a 17x12 cylinder locomotive to haul 8 more cars than at present.

East of Winnipeg the policy of building a considerable number of long sidings will again be followed so as to facilitate the prompt handling of the heavy east-bound grain traffic. As in previous years they will be so located as to form part of the double track which will be necessary between Fort William & Winnipeg in the near future. A number of sidings will also be put in on the prairie lines west of Winnipeg at points where grain shipments have considerably increased & where there is now only one side track to accommodate local shipments & the crossing of trains. If satisfactory arrangement can be made with Rat Portage Town Council it is probable a handsome station will be built there & that a considerable sum will be spent in remodelling the divisional yard. At Winnipeg there is urgent need of more tracks, especially at the passenger station, & these are likely to be put in. The Calgary divisional yards will be completed & coal pockets will be put in at Eagle River, Moose Jaw, Bassano & Maple Creek. A station will be built at Virden to replace the one destroyed by fire.

Between Fort William & Winnipeg the line is now all laid with 72 or 73 lbs. steel rails, except the last 15 miles west of Gonor. This portion will be done this year. A considerable amount of ballasting will be done between Fort William & Winnipeg & some on the prairie.

A steam launch is to be placed on Devil's Lake near Banff, & considerable improvements will be made there in the way of roads, paths, &c.

A bridge 1,700 ft. long is being erected over the tracks in Winnipeg yard about 10 blocks west of Main St. It is supported on 20 sets of steel pillars.

The Stonewall Branch extension from Stonewall to Foxton, 18 miles, completed last season, has passed the Government inspection. As will be seen by reference to pg. 34 the Co. has given notice of application for power to extend this line to the west shore of Lake Winnipeg between Gimli & Arnes, some 20 or 30 miles from the present terminus, but it is not expected that the line will be gone on with this year. (Dec. '98, pg. 264.)

The Pipestone Branch extension west of Reston was graded for about 30 miles last season, & track laid on 3 miles. Track laying will be continued in the spring, & it is probable that a further 45 or 50 miles will be built to Moose Mountain on the way to Regina. (Dec., '98, pg. 264.)

Pacific Division.—The work of removing the wooden bridges & replacing them by masonry arches where practical, & by steel bridges, will be continued on a very extensive scale. There will also be a large amount of improvement work in increased protection to track by dressing slopes & cuttings, building retaining walls, riprapping & cribwork wharfing along the toes of embankments where they are subject to be affected by water. There

will be considerable ballasting over the whole main line on this division, & considerable extension of sidings. Among the principal works may be mentioned the replacing of the 5 wooden bridges over the Kicking Horse River between Fairbairn & Golden by steel on masonry abutments. In the Black Canyon, about 3,000 ft. of the track will be raised. At Emory Creek the trestle approaches to the bridge will be filled. Eight trestles will be filled between Wharnock & Kanaka Creek. A large amount of ballasting will be done on the main line. About 50 miles of track in the mountains, principally on grades & curves, are laid with 72 & 73 lbs. steel, & it is the intention to complete the main line on this division with these weights, on account of the heavy engines now being used.

At the Lakes in the Clouds, near Laggan, a number of shelter houses are to be erected for the accommodation of tourists who may be overtaken by storms, & numerous paths are to be cut, as well as at Glacier. Mountain guides have been engaged in Switzerland, & will come out in the spring.

On the Columbia & Kootenay branch, between Nelson & East Robson, a considerable sum will be spent in straightening & otherwise improving the alignment.

Wharves & passenger platforms are to be built at East Robson & Nelson, a barge dock at Kaslo & permanent ways for steamers at Nelson.

A handsome station is to be built at New Westminster at once, to replace the one destroyed by fire. The plans are being prepared by E. Maxwell, Montreal. The track in front of the station will be ripped up to protect it from the Fraser River. A station & hotel is to be built at Sicamous, to replace the station recently burned, & a small station is to be built at Savonas. A large addition containing some 150 bed-rooms is to be made to the Hotel Vancouver, but the details have not yet been determined.

Vancouver Terminals.—The Vancouver station, described & illustrated in Nov. issue, pp. 235, will be completed next summer. Under the agreement between the Co. & the city other important improvements are being carried out. The wharves have been extended 500 ft. easterly & additional warehouses erected. In the near future the wharves will be extended 1,000 ft. still farther to the east to join the Co.'s Abbot St. wharf. All the Co.'s wharves are to be made permanent by sea walls in front & earth filling behind, which will extend to the shore, thus giving the Co. an esplanade in front of

the town about $\frac{3}{4}$ mile long by 400 ft. wide, on which it is intended to lay a network of sidings with an engine-house, &c.; so that ordinary trains, either passenger or freight, will not need to cross the town to the False Creek yard. The Co. has also agreed to give a flag station at the east end of the town, near the sugar refinery. Under the agreement, which gives the Co. exemption from taxation for a considerable period, on property actually used for railway purposes, the Co. undertakes to expend \$700,000 on terminal buildings, wharfage, &c., by the end of 1906. The terminal buildings will be completed in 1899, but the wharves & water-front improvements will probably not be fully constructed for several years, the work being done gradually as increasing trade requires it.

Trail to Rossland.—In connection with the standardizing of this line, track has been laid between Trail & the smelter, & the whole work to Rossland is expected to be completed by May.

New Westminster to Vancouver.—The surveys for this new route for the main line have been completed. From Vancouver a line was run from south of the sugar refinery to the head of False Creek, thence under the trestle bridge & southeast to Central Park. From New Westminster another party ran a line from the station down the North Arm & thence north to Central Park. It is understood that a good grade has been found. The distance will be about 10 miles. There is nothing definite as to when the line will be built, & parliamentary authority may have to be obtained. (Nov. '98, pg. 236.)

Crow's Nest Railway.—The construction offices have been moved from Macleod, Alta., to Montreal, where the business in connection with the building of the line from Lethbridge, Alta., to Kootenay Landing, B.C., is to be closed up.

A tri-weekly passenger service, both ways, has been established between Dunmore Jct., Assa., & Kootenay Landing. A considerable force is at work ballasting between Cranbrook & Kootenay Landing.

A considerable amount of westbound freight is already being carried to Kootenay Landing, & thence by transfer barge to Nelson.

All the stations between Macleod & Kootenay Landing are to be equipped with The Acton Burrows Co.'s enamelled iron station names, white letters on blue ground.

The Nelson Miner recently announced that the construction of the western section of the line from Kootenay Landing to Nelson would be commenced at an early date. We have

been unable to verify this, & do not think any decision has yet been come to as to whether work will be proceeded with this year or not. The agreement with the Government does not require the completion of the line till the end of 1900. A plan & profile of the line as located from the western end at Nelson, 21.74 miles has been deposited in the registry office at Victoria. The work on this section will be very heavy, as there is a large amount of rock to be gone through.

Columbia & Western.—On the line now building from West Robson to Midway, track has been laid from West Robson westerly 11 $\frac{1}{2}$ miles. Grading is practically completed to Cascade, except the big tunnel at the 22nd mile, which will take 6 or 7 months yet. A temporary track, by means of switchbacks, will be used over the mountain. Between Cascade & Upper Grand Forks there are about 3 miles of light work yet to be done, which can be completed in a month after frost is out of the ground. Between Upper Grand Forks & Eholt Summit, the latter point being 80 $\frac{1}{2}$ miles from West Robson, grading is well advanced, except about 2 $\frac{1}{2}$ miles near Fisherman's Creek, or Niagara, where the work is exceptionally heavy, & will probably take till the beginning of June to complete. Between Eholt Summit & Midway grading has only just been commenced, but the work generally is not very heavy, & can be completed in 3 or 4 months. Owing to the exceptionally severe winter, & the fact that all material for bridges between the present end of track & the big tunnel has to be brought up by rail, it is not expected very rapid progress will be made with tracklaying until after the track gets over the switchbacks above referred to. The severe weather has delayed work considerably.

P. A. O'Farrell writes in the Globe: "In view of the advent of the C. & W. Ry. into the Boundary country, it will be instructive to briefly sketch that district. Boundary is a misnomer. The country is the country drained by the Kettle River. On its right bank Rock Creek & Curlew Creek are its principal tributaries. McKinney Creek flows into Rock Creek, & Curlew Creek comes north to join Kettle River from the Republic district. On the left bank Boundary Creek, Fourth of July Creek, & the North Fork are the principal tributaries. Boundary Creek is, therefore, but the name of a small district of a great country. Eholt Creek is a branch of Boundary Creek. The new railway passes over from Arrow Lake to Christina Lake, & thence up Kettle River to Grand Forks. Thence it

THE BARRETT TRACK JACK.

Recommended as a standard by the

Road Masters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting capacity,
10 to 15 tons.

Comfort," describing the Co.'s new tourist sleeping cars, 20 of which have recently been put in service. It states they are strongly constructed of the best material, & claims they are higher, wider & heavier than those in general use, & that the substantial structure reduces swinging to a medium. The special features of the new cars are wide vestibules (full width of car) latest car range,

TOURIST SLEEPER TOILET ROOM.

branches off by the North Fork to Ehol Creek, & thence to Greenwood City & down Boundary Creek to Midway, where it again strikes the Kettle River."

It is said that it has been decided to extend the line this year beyond Midway 15 miles, to Rock Creek, where some rich mines will be served, & that this work will also be done by Mann, Foley Bros. & Larsen.

Duluth, South Shore & Atlantic.—It is said surveys are being made for an extension of 25 miles between Baraga, Mich., & Rockland, on the C. M. & St. P. Ry.

commodation there. We are officially informed the report had no foundation.

Collingwood Dock.—The renewal of the sections of this dock destroyed by fire last fall is now in progress. The track piles have been driven, & work has been started on the freight shed, which will be 250x80 ft.—82 ft. longer than the one destroyed—with necessary offices, waiting & baggage rooms. The new dock will be 2 ft. lower than the old one, which will be found much more convenient for loading & unloading vessels.

Maitland River Bridge. The Railroad Gazette, New York, recently stated that the G.T.R. was taking tenders for erecting a superstructure of a steel bridge over a branch of the Maitland River, about 4 miles from Clinton, Ont., of seven spans, 23 ft. from bed of stream to floor, & 6 ft. roadway. The Chief Engineer, the Superintendent of the Middle Division, & the Master of Bridges & Buildings of the Middle Division, all inform us they have heard nothing of the matter, so it is evident the Railroad Gazette has been misinformed.

Sarnia & Port Huron Roundhouses. Work on the roundhouses at the tunnel is being pushed ahead with all possible vigor, & the indications are that the Sarnia structure will be completed in advance of the one building at the Port Huron tunnel station. At Sarnia 2,500 piles were driven in 100 days.

Canadian Pacific Tourist Cars.

The C. P. R. Passenger Department has issued an illustrated pamphlet "Travelling

TOURIST SLEEPER RANGE.

aisle is carpeted. In addition to steam heat from the engine, each car is equipped with a heater for emergency use. Detachable side leaf tables are provided for meals, &c. Each car is accompanied by a uniformed porter. Some of the illustrations from the pamphlet are reproduced on this page. The pamphlet, which is terse & forcible, was written by J.G. Brignall, of Assistant General Passenger Agent McPherson's Office, Toronto, & was printed most effectively by the Mail Job Printing Co., Toronto.

Cariboo-Omineca Chartered Co. The B. C. Legislature has passed a bill amending this Co.'s act of incorporation passed in 1897, by taking away the power to build & operate railways. This will not affect the Co.'s right to build the Cariboo Ry., of which it recently acquired the charter. (Jan., pg. 11.)

INTERIOR C.P.R. TOURIST SLEEPER.

Minneapolis, St. Paul & Sault Ste. Marie.—It is said surveys are being made with a view to an extension to Fargo, N.D.

Grand Trunk Betterments, etc.

Motive Power Offices.—The new offices on Congregation Street, Montreal, facing Wellington Street, are about completed & ready for occupation. They have been equipped with all the latest improvements, making them desirable for the clerks who have had to work in a very unsuitable building for some time past. The new building is built of red pressed brick, with light-colored sandstone trimmings.

Lakefield Branch.—Last month we published a rumor that this branch, which runs from Peterboro to Lakefield, 9 miles, will be extended n.e. about 35 miles to connect with a proposed extension of the Pembroke Southern at St. Ola, so as to materially shorten the distance between Toronto & Pembroke. General Manager Hays is absent from Montreal, & there is nothing known among the other officials there regarding this rumored extension.

Midland Elevator Accommodation. A recent press report stated that some of the G.T.R. officials had recently been at Midland in regard to increasing the grain elevator ac-

	Service—Freight	

As a sample of the railway news published by the daily press, we may quote a Toronto dispatch, recently published, stating that the C.P.R. authorities have decided that they could build freight cars more cheaply than they could repair old cars, & for that reason

\$5 men had been discharged from the car repairing shops at Toronto Junction. This is enough to make the old cars' sides sore with laughing. As a matter of fact, the men were simply laid off on account of slackness of work.

The Canmore, a combined sleeper & 1st class car, has been put on the Crow's Nest line between Dunmore Jct. & Kootenay Landing. It has 6 double berths, the remaining space being seated.

An item is going the rounds of the press to the effect that when the Co. recently imported 15 locomotives from the U.S., the officials omitted to present the invoice detailing the royalties on them, which are assessable for customs duties, to the Customs Department, & that the Department is endeavoring to collect from the Co. not only the regular amount of duty on the royalty but, in addition, a similar amount for the failure to comply with the laws.

Superintendent Leonard denies a rumor that the shops are to be moved from Toronto Jct. to North Toronto.

Intercolonial Railway Equipment.

Mechanical Superintendent Joughins recently issued a circular to locomotive foremen, showing the miles run by 10-wheel express engine no. 125 on the Northern Division, from May to Nov., 1898, in order to illustrate what may be done in the way of getting a large mileage out of engines. The mileage was as follows: May, 5416; June, 6172; July, 6711; August, 7365; Sept., 6900; Oct., 7316; Nov., 6998.

Most of the 20 heavy freight locomotives ordered from the Baldwin Locomotive Works have arrived, & are giving great satisfaction.

Rhodes, Curry & Co., Amherst, N.S., recently delivered 100 platform cars equipped with air brakes.

Equipment Notes.

The Kent Northern Ry. recently purchased a locomotive from the I.C.R.

The report that the Ottawa & New York Ry. is in the market for 500 freight cars, is, we are officially informed, erroneous.

E. & J. Stehelin, proprietors of the Weymouth & New France pole railway in Digby County, N.S., have ordered another locomotive.

It is said the Sydney & Louisburg Ry. is about to add to its equipment 2 freight & 1 passenger locomotives, 3 passenger cars & fifty 50-ton steel freight cars.

The Master Car Builders' Association will convene at Old Point Comfort, Va., June 14. The American Railway Master Mechanics' Association will meet at the same place June 19.

The General Manager of the Canada Atlantic Ry. recently informed us that the Co. was contemplating building 1,000 box cars, & was getting up plans for same, but that details had not been settled.

It was recently reported that the establishment of locomotive works in Ottawa, Ont., had been decided on, & that the money would be furnished from Ottawa & Toronto. So far the rumor lacks confirmation.

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd-numbered sections along the Main Line and Branches, and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$3 to \$4 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$3 per acre.

Lands in Northern Alberta and the Lake Dauphin District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.
160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.
160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.
160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.
160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.
160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

WINNIPEG.

ENAMELED IRON SIGNS

For Railway, Street Car, Steamship, Express, Telegraph, Telephone and Advertising purposes.

Railway Station Names, Street Car Route Signs, Express, Telegraph and Telephone Office Signs, Semaphore Arms, Switch Targets and Advertising Signs of every description of size and color made to order.

Railway, Steamship and Ferry Signs

For doors, etc., 23 x 3 1/2 inches, blue letters and border on white ground, carried in stock with following lettering:

Waiting Room	Ladies' Toilet	Private Office	Dining Room
General Waiting Room	Men's Toilet	Freight Office	Lunch Room
Ladies' Waiting Room	Baggage Room	Ticket Office	Smoking Room
Men's Waiting Room	Agent's Office	Telegraph Office	No Admittance

The following are carried in stock, size 10 x 2 1/2:—

Men Women Exit Fire Escape

Railway numbers for bridges, mile posts, signal houses, etc.; single figures on plates 8 1/2 in. high.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

For Prices, Illustrated Catalogues, etc., address

Agents for the Imperial Enamel Co. of Birmingham,

29 Melinda Street, Toronto, Canada.

BRANCH OFFICES—107 Lombard Street, Winnipeg S. A. Erskine, Resident Agent; 28 Broad Street, Victoria, B.C., D. H. Macdowall, Resident Agent.

The Pembroke Southern Ry., between Pembroke & Golden Lake, Ont., has been operated since Jan. 1 with equipment loaned by the Ottawa, Arnprior & Parry Sound Ry. It is said the P. S. Co. is having equipment built.

Early in Feb. an order was given for the construction of 500 box cars to be constructed at once at the G.T.R. Co.'s shops at Montreal. This will mean that there will have to be considerable additions to the already large staff of car builders in the employ of the Co. The new cars will have a capacity of 60,000 lbs. Work is progressing satisfactorily in the Montreal shops on the passenger & freight locomotives, of which 25 are under order.

The Great Falls & Canada Ry., & the Alberta Ry. & Coal Co. have added some sleeping cars to the equipment of their route from Great Falls, Mont., to Lethbridge, Alta. The cars, which are narrow gauge, were built some years ago by the Pullman Co., & have recently been remodelled at the Denver & Rio Grande shops at Denver, Col. The whole interior is finished in ash, with green plush upholstery. There are 10 sections in each car, with lower berths only, making them much more comfortable than the regular standard sleepers.

Grand Trunk Shop Kinks.

A very ingenious way to machine the flanges of a dome saddle—that is, the surface bearing on the boiler shell—& also the caulking edge of the vertical flange, has been devised & is in successful operation at the G.T.R. shops, Montreal. In fact, two separate & widely differing mechanical ideas are involved in reaching the results noted above. How this is done is clearly shown in the accompanying illustrations.

Fig. 1 represents the saddle on a planer, while being treated for the boiler fit, by means of a tool bar having a radial movement transversely of the planer. This radial action is obtained by means of an auxiliary crossrail which is bolted to the housings, & which has at its center a swiveling clamp whose function is to hold the tool bar. It is plain that the distance from the center *A* of this clamp to the end of the cutting tool determines the radius of the curve cut by the tool, & its use in other directions is apparent. The lower end of the bar passes free, but without shake, through a block that also swivels, but takes the place of the tool clamp on the regular saddle of the machine, & furnishes support to the tool bar. The tool is fed over the concave

FIG. 2. FACING EDGES OF FLANGE.

surface of the job by the feed screw through the lower crossrail.

The same dome saddle is shown on the face plate of a lathe, in figs. 2 & 3, during the operation of facing up the caulking edge of a flange, which is seen to be concentric with the face trued up in fig. 1. To face such a surface it is evident that the cutting tool must have a reciprocating movement equal to the distance from the highest to the lowest point on the surface to be trued. Fig. 2 shows the

operating side of the lathe & the crank mechanism to obtain the back & forth tool movement, & fig. 3 shows the rear side with the system of gearing to drive the crank & tool. These shop kinks, which give proof of a resourceful acquaintance with mechanical principles, were evolved & put into practice by J. Millington, Foreman of the Montreal machine shop. The G.T.R. has long been noted for clever schemes in labor saving devices & special tools for handling work, & the latest efforts in that line do not appear to be materially behind the former ones in reaching results. —Locomotive Engineering.

Canadian Freight Association.

At a general meeting of the Association at Montreal, Jan. 12, the following were elected active members:—G. W. Robins, Lotbiniere & Megantic Ry.; W. R. Russell, Quebec, Montmorency & Charlevoix Ry.; G. H. Pugh, Atlantic & Lake Superior Ry.; E. G. Evans, Central Ry. of N.B.; J. Brignell, Central Ry. of N.S.; W. K. Sanderson, Maine Central Ry. (vice M. Prescott, deceased).

Chairman Earls reported that the new classification no. 11, already adopted, had been

FIG. 1. PLANING DOME SADDLE.

submitted to the Governor-in-Council, but had not yet been approved. He also reported a number of additions & amendments to the new book, these amendments to be incorporated in the new classification if possible; if not, to be promulgated as a supplement by the Committee.

Reports were made by the Freight Inspection, Executive & Car Service committees.

The Sec.-Treas. reported having obtained from all the principal roads in the Association copies of their freight transportation forms, & found that they were not all uniform. The matter was referred to a special committee consisting of Messrs. Woollatt (convener), Bulling, Chittenden, Hardwell, Backus, Mcmillan, Collins & Cunningham, to report at next meeting.

The Sec.-Treas. stated he had written the roads which had been participating in the expenses of freight weighing, inspection, car service, etc., also to some other roads which had not yet participated, with a view to a more equitable assessment, & that with few exceptions they had concurred in the change. After discussion most of the objections were withdrawn, & the new plan was generally adopted. The opinion, however, was expressed that all roads in the Association, parties to the Canadian Joint Freight Classification, should contribute something to the general expenses, & the Sec. Treas. was instructed to

communicate with parties concerned with a view to bring that about if possible.

The President having explained that it was frequently impossible to get a fair majority of members of standing committees together when meetings were called, business being delayed thereby, G. H. Watson was appointed to the Freight Inspection Committee, vice M. Burton. W. Woollatt was appointed

FIG. 3. HOW THE TOOL IS DRIVEN.

to the Car Service Committee, vice E. H. Edwards.

A meeting of the Freight Committee was held at Toronto Jan. 26, when special rates & arrangements 1517 to 1535 were agreed to.

Miscellaneous Freight Matters.

The C.P.R. recently carried 10,000 lbs. of chickens from Montreal to Vancouver, en route for the Yukon.

About 1,000,000 bushels of grain were handled at the C.P.R. elevator at Owen Sound, Ont., last season.

C.P.R. Elevator B. at Fort William, Ont., has been set aside for the storage of damp grain after it is dried.

Lumber trade is very brisk on the Booth lines, about 1,000 logs being shipped daily from Madawaska to Ottawa.

Large quantities of smelts are being shipped over the Canada Eastern Ry. from Loggieville, N.B., en route to New York.

President Muir, of the Winnipeg Grain Exchange, calculates that in the near future the Canadian North-West will export a hundred million bushels of wheat annually.

The White Pass & Yukon Ry. Co. has temporarily suspended its freight classification & made a flat rate of \$2.75 per 100 lbs. for all classes of goods from Skagway to the summit of White Pass.

C.P.R. returns of cattle shipments show that 40,000 head were shipped in 1898 from the North-West to Eastern Canada, 2,000 less than in 1897. Forty thousand stockers were forwarded, one-half to the U.S.

The str. Bruce is doing a good freight traffic between North Sydney, N.S., & Port aux Basques, Nfld., taking from 8 to 10 carloads each trip. It is said R. G. Reid will put on a special freight boat in the spring.

The G.T.R. is said to have just closed an extensive contract in connection with the Lehigh Valley to carry Swift & Armour's provisions from Chicago to the seaboard. The contract is said to be for about 7,000 carloads, which is equal to about 182,000,000 lbs.

The rates in the C.P.R. special local tariff on general merchandise between Pembroke, Ont., & eastern division stations as designated in the tariff of May 9, '98, will not apply on shipments, ex connecting lines. Unless authorized to the contrary full mileage tariff rates will govern.

A Montreal dispatch of Feb. 20 says: "Private advices received here to-night from L."

Scull S. & Co.

tion state that the G.T. & C.P. railways are considering a joint arrangement for a general advance in rates. The authorities of the two companies, when seen to-night, said they knew nothing about any such arrangement.

Formerly the arrangement with the C.P.R. for stopping Manitoba grain at North Bay for orders was that demurrage of \$2 a car was charged when detained over 24 hours waiting orders. The time has been extended to 48 hours, & when this has expired demurrage at the rate of \$1 a car will be charged, instead of \$2.

The following figures show how alive the people of British Columbia are to the possibilities of the fruit trade in the Pacific Province. In 1897, the C.P.R. carried 5,700 packages, or 75 tons. In 1898 55,000 packages were carried, or 386 tons. This is only a beginning, & in the near future the development of this industry will no doubt assume more marked features.

The Customs Department is completing arrangements for the transit of goods to the Yukon over the White Pass Railway in bond. Trains are now running from Skagway to nearly the Canadian border, & as soon as the line reaches Canadian territory a sealed car will be placed on the route to carry Canadian bonded shipments from Skagway across the disputed strip.

The G.T.R. has defeated the plan of some of the eastern U.S. roads to increase the minimum weights of carloads of provisions. These lines made an agreement, to go into effect Feb. 1, whereby carload weights were to be 30,000 lbs. instead of 24,000. The G.T., however, notified these lines that it proposed to fix the weight for provisions at 26,000 &, in the face of this, the other lines were compelled to do the same.

H. Corby, M.P., recently interviewed the G.T.R. Traffic Manager, urging that the Co. build a large grain elevator at Belleville, so that grain could be taken there from Midland, & sent on to Montreal in barges. Mr. Reeve informed him it was the policy of the road to develop the all-rail route from Midland to Montreal & Portland. The Co. did not intend at present to encourage proposals to transship at Toronto or Belleville.

The G.T. & C.P. railways have decided that in future anyone ordering a palace horse car must deposit \$10 before the car will be supplied. The reason is that parties would often order a palace horse car, & when it had been sent to the place ordered they would change their minds & not accept it. Under the new rule, when the car is accepted the deposit will be included in the freight

charges; when the car is refused the deposit will become forfeited.

The G.T.R. & C.P.R. have issued a circular putting into effect a new tariff on alcohol, high wines, pure spirits & whiskey shipped from all points in Ontario to Kootenay points. The rate will be \$1.80 per 100 lbs., with the minimum weight of a car load at 24,000 lbs. The same rate will be put into force on the I.C.R. The first named roads have also announced a new rate on the above articles from all points in Ontario to all points on the Pacific Coast, making the rate \$1 per 100 lbs.

The Municipal Council of Petite Cote, near Montreal, has granted power to E. Lefebvre & a syndicate to establish a stockyard within the limit of the municipality, to be connected with the C.P.R. The syndicate, which is composed largely of western cattle dealers, is to acquire 200 acres & expend \$100,000 on the land & buildings within a stipulated period. It is stated work will be commenced at once, & that efforts will be made to make it a joint stockyard. At present there are cattle sold at St. Henri, Point Ste. Charles, Hochelaga, the civic abattoirs & Bonsecours Market, Montreal.

A reduction in the rate on corn from Detroit to Hamilton & Toronto is announced by the C.P.R. The new rate is 8c. per 100 lbs. A new rate has gone into effect on beans in car lots, minimum weight, 30,000 lbs., to New York, Philadelphia & Baltimore, for export only. The rate is 19½ cents per 100 lbs. from the following points: Appin Jct., Arkwood, Belle River, Caradoc, Chatham, Elmstead, Hyde Park, Haycroft, Komoka, Kent Bridge, Longwood, Melrose, North Glencoe, North Newbury, North Bothwell, North Thamesville, Ringold, St. Joachim, Tilbury, Walker-ville Jct.

The charter of the Manitoba South-eastern Ry. provides for a maximum rate on saw logs & cordwood. On pine & spruce saw logs, for 150 miles, or from the point where the railway touches Rainy River, to Winnipeg, the rate must not exceed \$2.50 per 1,000 feet b.m. The rate on cordwood is fixed at 2½c. per 100 lbs. for 25 miles, or less, 3c. for 50 miles, 3½c. for 75 miles, 4c. for 100 miles, 4½c. for 200 miles or less. It is this special rate on saw logs which will permit the establishment of saw mills at Winnipeg, the logs to be taken by rail from the Lake of the Woods.

A reduction in the freight charges on Manitoba wheat from points in Manitoba to Ontario has been made by the Northern Pacific. The new rates apply from all points in Manitoba touched by the N.P. to stations on the G.T.R. west of & including Montreal, Ottawa,

Valleyfield & intermediate stations on the Canada Atlantic. From Emerson, Winnipeg, Portage la Prairie & Miami the rate per 100 lbs. is 36 1-2c., & from Wawanesa & Brandon it is 37 1-2c. A rate of 20c. per 100 lbs. from Duluth to the same points in Ontario has also gone into effect, which is the same as the Fort William & North Bay rate to Montreal.

A reduction in the tariff on flour & grain to Newfoundland is announced by the G.T.R., from all points in Ontario, & in Quebec, west of Montreal, & including points on the Lake Erie & Detroit River Ry. To get the benefit of the reduction the freight must be routed by way of North Sydney, & the str. Bruce, which makes connection with the Newfoundland Ry. at Pointe aux Basques. The reduction is 2½c. per 100 lbs. from the previous tariff that was in effect. From Toronto the old rate was 30½c., now it is 28½c. The G.T.R. has also put in a new rate on beans from points west of London & St. Thomas to Newfoundland of 32c. per 100 lbs., in car lots, minimum weight 30,000 lbs., to be routed via North Sydney & str. Bruce.

Freight traffic on the Canada Atlantic system increased remarkably during 1898. There passed through Ottawa to Montreal 12,000,000 bush. of grain for export. The through freight traffic of the line, east & west, shows a good increase, 72,000 tons of freight having been carried east, & 65,000 west. The local freight traffic has increased at a good rate, especially in live stock, dairy, & cereals. The movement of lumber has been about the same as in previous years, & shows little increase. An Ottawa dispatch reports President Booth as saying, he would make "Montreal one of the chief grain centres of America." From various sources come the reports that in carrying out his plan he is building 2 large steamers to carry Manitoba wheat from Fort William to Parry Sound, the U.S. vessels he employed last year being prohibited by the coasting laws from engaging in this trade. Last year Mr. Booth's route carried only 500,000 bush. of Canadian wheat which came through in bond by way of Duluth. At a Toronto Board of Trade meeting recently, it was stated the C.A.R. had quoted a through rate from Chicago to Montreal of 3½c. a bush., which is about ¼c. lower than the lowest rate of last year, which was one of unprecedentedly low rates.

General Superintendent McGuigan, on returning from a recent inspection of the Western Division of the G.T.R. said: The volume of freight now being carried breaks all records since the new management took charge. "We have," he said, "been handling on an average over 700 cars daily at Niagara Falls,

both ways, & from 500 to 600 cars daily at Black Rock. About 80% at Black Rock is our own, & probably 65% at Niagara Falls, & the rest comes from the Wabash." He added that there was at present more stuff at some of the Atlantic ports than the steamers could handle. "We are handling," he continued, "from 25 to 40% more business at Niagara Falls than at any period since I have been connected with the G.T.R. For instance, at that point we handled 17,000 more cars during Nov. & Dec. than during the corresponding months of 1897, which fact shows most plainly that there is a general increase in trade." Mr. McGuigan also gave figures to prove that the export business at Portland is likewise very heavy this winter. At the present time, he says, the Co. has no less than 2,500 loaded cars at that port, awaiting shipment, & besides this there are from 1,200,000 to 1,400,000 bush. of grain in the Co.'s two elevators, & still stuff is constantly going forward. These exports consist of grain, merchandize of all kinds, & cotton."

Grades of Grain for Export.

The Trunk Line Association, New York, has given notice that only a certain number of grades of grain to be exported from Canada will be received at New York, Philadelphia, Baltimore or Boston, & that such grain will be received at the frontier junction point only when each car is accompanied by a proper certificate from a duly appointed inspector at the point of shipment or at the frontier, showing it to be one of the grades, specified below. The grades agreed upon by the railways, & the Boards of Trade of Winnipeg, Toronto, & Montreal are as follows:—

From Manitoba (7 grades), nos. 1 & 2 special Manitoba wheat, no. 1 hard wheat; no. 1 northern wheat, no. 2 northern wheat, no. 2 white oats, no. 2 mixed oats.

From Ontario & Quebec (8 grades), nos. 1 & 2 white winter wheat, nos. 1 & 2 red winter wheat, no. 2 spring wheat, no. 2 goose wheat, no. 2 white oats, no. 2 peas.

Passenger Traffic Matters.

The C.P.R. will have cinematograph exhibitions of Northwest views given in the British Isles this year by S. Coryn.

At a railway & steamship conference at Syracuse, N.Y., at the end of Jan., at which a number of Canadian representatives were present, very few alterations were made in the summer tourist rates, which remain practically the same as last season.

As a result of negotiations that have been in progress for several months, immigrant rates to Pacific coast points, from both Atlantic & St. Lawrence river ports, have been restored to tariff, & all disputes between the interested ones, both east & west, have been effectually settled.

The G. T. R. city ticket office in Toronto which has been at the southwest corner of King & Yonge streets for about 25 years will on March 1 be moved to the new Lawlor building on the northwest corner immediately opposite, where much better accommodation has been secured.

The Ottawa & New York railway, since the opening of its line from Ottawa to Cornwall, July 29 last to Dec 31, carried 25,391 passengers, a remarkably good showing considering that the road is a new one, & that the line is incomplete. The traffic has been almost wholly of a local nature, & is showing a gratifying increase.

A conference of railway & steamboat men was held in Ottawa, Jan. 24, to arrange rates for the current year. Representatives from all over the country were present. C. J.

Smith, of the Canada Atlantic, was appointed chairman, & J. Wells, of the C.P.R., secretary. It was decided to make the rates for the season the same as last year. The next meeting will be held in Hamilton.

The Wabash recently gave notice that it would withdraw from the Western Passenger Association, but would continue as a member of the Mileage Bureau & the Clergy Bureau, both of which are adjuncts of the Association. In referring to the action taken General Passenger Agent Crane, of the Wabash, stated that as the Chicago & Alton had not been a member of the Association for some months, the Association, as it now exists, is incomplete, & it should either be entirely reorganized or abandoned.

The trip across the continent by the C. P. R., which Miss Shaw, Colonial Editor of the London Times, took on her way to Dawson City from London, the whole journey being accomplished in the record time of 31 days, presents, to use her own words, "a dream of beauty which never can be forgotten. An incense of clover for 400 miles, then a labyrinth of lakes and woods, & noble waterways opening vistas of forests to right & left. A thousand miles of roses on the prairies, mellowing with their faint sweet scent the keen sweep of continental air, & afterwards the superb scenery of the Rockies, the Selkirks, the Gold & the Cascade ranges, through which the train leaps from pass to pass on its journey to the hop-gardens & orchards of the Pacific Coast." The Yukon River is by no means always to be associated with ice and snow. "When I passed down the river in July," said Miss Shaw, "pink willow herb was flowering in sheets upon the hillsides, & in combination with the frequent fir-woods recalled in general effect the scenery of the Scottish Highlands. The weather at mid-summer was much like that of England."

Although the tourist traffic to Muskoka was last year the largest the G. T. R. ever experienced, it seems probable that the travel next summer will be greater than ever. The Co. proposes to make the charms of Muskoka as well as other points along the system widely known through the large cities of the U. S., & with that idea in view, its special exhibition car, containing photographic views of leading places on the system, is being sent on a tour. The pictures, over two hundred in number, depict the scenic beauties of Georgian Bay, Lake of Bays, as well as the White Mountains & the Maine seaside resorts. There are a number of specimens also of stuffed brook trout & other trophies of rod & gun, so that altogether picturesque Canada will be well displayed. Handsome pamphlets will be distributed wherever the car visits. It is the intention to keep the car out till about the middle of June, & among the points to be touched at are Chicago, Memphis, New Orleans, Louisville, Indianapolis, Cincinnati, Columbus, Cleveland, Pittsburgh, Detroit, Buffalo, Rochester, Syracuse, Albany, New York, Philadelphia, Baltimore, Washington, Wilkesbarre & Scranton.

The C.P.R. will run the first of its spring settlers' excursions to the Northwest on March 7, and during March & April special excursions will be run out of Toronto every Tuesday, the special colonist cars leaving at 9 p.m. The fare from Sharbot Lake west to Winnipeg will be \$21. Most of those going west on the excursions have already taken up land there & are going out with their effects to settle on it. From the reports received by the Co. the western excursions this year will be heavier than ever. Enquiries are being daily received from all parts of Ontario from parties who are anxious to settle in the Northwest, the C.P.R. officials having received thousands of such enquiries. Up in the Huron & Bruce districts & in the northwest part of the province, the emigration to

the Northwest bids fair to be particularly heavy. Alberta & Saskatchewan are the districts in the west that seem to be particularly favored by the prospective settlers. There will be a settlers' train service to the west this year, inasmuch as all the business has to be routed over the northern division of the G.T.R., & all settlers' effects will go the same way. The U.S. lines this year, as a result of the settlement of the rate war, will not be in a position to compete for this western business at all. They cannot quote a \$21 rate into Winnipeg, so that the entire traffic will be divided between the C.P.R. & G.T.R.

C.P.R. Arrangements with I.C.R.

At the end of Jan. & beginning of Feb. a number of conferences were held in Montreal between the General Manager and other officials of the I.C.R., & the Vice-President of the C.P.R., in regard to the latter Co. running its trains over the I.C.R. between St. John, N.B., & Halifax. The Minister of Railways was present at one of the meetings. It is said the C.P.R. proposal is that it shall be allowed to run its engines & other rolling stock over the I.C.R. track between the two termini, as at present, but at an increased price for the privilege. This is more than the I.C.R. is willing to concede. Mr. Fetting's proposition is said to be that the C.P.R. engines & rolling stock shall no longer be allowed to run over the I.C.R. upon any terms whatever, in other words that the I.C.R. trains alone shall handle the traffic between Halifax and St. John. He, however, was willing that a C.P.R. sleeper should be attached to the Intercolonial trains from Halifax to St. John & vice versa. A settlement of the question has been deferred until after Mr. Shaughnessy's return from Europe.

Grand Trunk Telegraphers & Agents.

In our last issue, pg. 8, we gave the award of the arbitrators, but were then unable to give the order of reference under which the arbitration was held, & which is really necessary to a proper understanding of the award. It is as follows:—

ARTICLES OF AGREEMENT between the G. T. R. & Committee representing the telegraphers, covering arbitration of matters in dispute between them:—

1. Mr. Hays, for the G.T.R., & Mr. Powell, for the telegraphers, will name each to the other, within 10 days from this date, their respective arbitrator; the two so chosen to select a third.

2. Each party will pay the expense of its own arbitrator, & the expense of the third arbitrator shall be borne jointly between the two parties—each paying one-half.

3. That the arbitrators shall convene at Toronto Jan. 6, 1899, & proceed to the selection of a third arbitrator; the sessions to be daily & continuous, until such arbitrator is chosen.

4. That after the third arbitrator is chosen, the course of procedure shall be determined by the arbitrators, & that the sessions of the arbitrators shall be daily, until the matter is definitely settled.

5. That the decision of the arbitrators shall be binding on both sides commencing at a date to be fixed by the arbitrators, & continuing for a period of one year & thereafter from that date, subject to change upon a notice of 30 days from either party to the other desiring a change in the same.

6. That the present members of the Committee be allowed to return to the stations left by them before coming to Montreal, without prejudice, & resume their work at once, if desired.

7. That any reasonable number of witnesses desired by the telegraphers, who are employed

of the C.T.R. shall be relieved without unnecessary delay for such purpose, on request to the General Manager, & furnished transportation to the point of arbitration & return, provided that the cost incurred by such employees shall not be borne by the G.T.R.

8. That the past actions of the men, in what they believed to be the proper support of their Committee, will not militate against them in any way in the future.

9. That the following clause (no. 10) shall be submitted to the arbitrators for their decision, as to whether it is a proper matter for them to pass upon.

10. That in the event of the Committee being unable to agree with the Co., as to the reinstatement of E. O'Malley, Mechanic Falls; J. Leveson, Dorval; D. L. Shaw, London East; E. Ball, Newbury; D. Ray, Toronto, who have been discharged, as is now believed by the telegraphers, without sufficient cause or justification, that these, too, shall become a matter for arbitration, & the award of the arbitrators shall be final.

11. The matters in dispute between the parties hereto are rules nos. 20, 21, 22 & 26 of the schedule presented by the telegraphers, with the list of salaries paid at stations.

It will be remembered that in reference to clause 10 above the arbitrators decided that it was a proper matter for them to pass on, but that by agreement & settlement of the parties they had been relieved from doing so.

In referring to the award the official organ of the Order of Telegraphers says: "The officials have expressed themselves as satisfied to live up to the award in every way and the telegraphers will do the same. Men discharged on account of over staying leave of absence, etc., were reinstated in their positions. Thanks are due to Bro. Sargent for his efficient & faithful work on behalf of the telegraphers, and the fairness & liberality exhibited by Sir Wm. Meredith & B. B. Osler will be appreciated by telegraphers everywhere. Space forbids publishing the full text, as it is a lengthy document, suffice it to say that salaries were raised appreciably, a minimum salary agreed upon, over time allowed, extra pay for tending switch & semaphore lamps allowed, & many other things that go to make the life of a telegrapher more endurable. The G.T.R. should be recognized as fair & friendly to organized labor and our members should see that it gets its fair share of business."

In a paper read before the Royal Colonial Institute in London, Eng., recently, Miss Shaw, Colonial Editor of the Times, speaking of the Yukon, said she did not think the new Eldorado would speedily fizzle out, calling for note in years to come only as a region of unfulfilled expectations. Far from it, in Miss Shaw's view. For, as she proceeded to show, the transport problem, which is the key to the whole situation, is in a rapid process of solution.

MISCELLANEOUS RAILWAY NOTES.

The Brandon & Southwestern Ry. Co. has applied to the Railway Committee of the Privy Council for permission to cross with its proposed line the C.P.R. Southwestern Branch near Carrol, Man., & the C.P.R. Pembina Mountain Branch near Deloraine. The application will come up at Ottawa, Feb. 22. There is no news as to the prospects of construction of this line. (Jan., pg. 11.)

B.C. Railways.—That usually well informed paper, the Canadian Gazette, of London, Eng., says in a recent issue:—"The accounts of the British Columbia Government railway system for last year show a deficit of \$212,466." Will it surprise the Canadian Gazette to learn that the B.C. Government has no railway system?

Calgary & Edmonton net earnings for Dec., \$13,345.40, compared with \$23,013.89.

Canada Atlantic Ry. & Rutland Ry.—In a recent interview, President Booth speaking of the rumor that the Rutland was to be managed by the C. A. R. Co., said such was not the case. The C. A. R. Co. will have nothing to do with the road further than the handling of its freight for ten miles. About 2 years ago the Rutland R. R. Co. purchased the line between Rouse's Point & Ogdensburg. The terminus of the Rutland line was at the lower end of Lake Champlain, & the Co., wishing to get control of the trade between New York & Ogdensburg, decided to connect the lines by building a road across the Islands Grand & Hero in Lake Champlain & connecting the two roads at Alburgh. The C. A. R. Co. had a year previous to this move extended its line across the Richelieu River to Alburgh. Now, what the managers of the Rutland road propose doing is to run their line up the C. A. tracks as far as Lacolle Jct., 10 miles, & from there to St. John on the East Richelieu Valley road. From St. John they will run into Montreal on either the C. A. or the G. T. R. Mr. Booth thinks the line, by being a shorter route by some 15 miles from Montreal to New York, will affect the Canadian produce & lumber trade.

Green Lights for All-Clear.—At the last meeting of the American Railway Association, an officer of the New York, New Haven & Hartford stated that, in consequence of the accident at Whittenton Junction, a few months ago, in which the lantern on a gate was mistaken for a white semaphore light, the road would change its semaphore lamps so that the color indication for all-clear at night shall be green. We understand active preparations have been begun to carry out this change. —Railroad Gazette.

Intercolonial Business.—In a recent interview in Montreal, General Manager Pottinger said:—Business on the I.C.R. is booming. In fact I can not recall a period in the history of the road when it has been so good. We re-

cently received 20 freight locomotives from the Baldwin Locomotive works, Philadelphia, & orders for several hundred box & freight cars are being rapidly executed at Amherst, N.S., & elsewhere. The outlook is exceedingly bright for the coming season. A new feature in recent years is the large number of tourists attracted by the scenic beauty of our route. The I.C.R. is on a paying basis, & I have every reason to believe that it will show a surplus at the end of the fiscal year in June next.

International Traffic.—A Washington, D.C., dispatch says a statement has been prepared at the Treasury Department which shows that during 1898 the number of cars loaded with goods shipped through the U.S. from one point in Canada to another was 10,966, the contents of which weighed approximately 209,000 tons. The records of the department show that during 1897 (the figures for 1898 not being available), the number of cars loaded with U.S. goods shipped through to Canada from one point in the U.S. to another was 460,269, the contents of which weighed 5,637,173 tons. According to this statement the quantity of U.S. goods hauled by Canadian roads was about 27 times greater than the quantity of Canadian goods hauled by U.S. roads. We presume, however, that in this statement is included the traffic of lines in Canada like the Canada Southern, which is entirely owned in the U.S.

Just What We Propose To Do.—W. McWood, Superintendent Car Department, G.T.R., Montreal, in remitting his subscription for THE RAILWAY & SHIPPING WORLD, says: "I find your paper abounds in railway news & if you keep on improving as you have been doing since the commencement, you will, in my opinion, be quite equal to the best railway papers in the United States."

Lang's Valley, Man., Westerly.—J. A. Mather gives notice of application to Manitoba Legislature to incorporate a company to build a railway & telegraph line, commencing west of Lang's Valley, thence southwesterly to or near Deloraine, thence southwesterly to Township 1, Range 24, west of 1st Principal Meridian, thence to Waskada & western boundary of Manitoba.

Newfoundland, Northern & Western.—R. G. Reid has issued notice that lands along the line of railway will be granted for agricultural purposes free of cost, under the conditions, as to cultivation, prescribed in the Crown Lands Act. Formerly these lands were sold to settlers at 30c. an acre on the same terms as are granted Crown lands. Now Mr. Reid offers them free to bona fide settlers, so that any one can obtain 160 acres free of all charges. The settler may also avail himself of an act passed last year, which offers a bonus of \$20 an acre, payable to the extent of 3 acres, for clearing land, which then belongs to the settler. Mr. Reid has contracted with the New-

Spokane Falls & Northern System. Nelson and Ft. Sheppard R'y Co. Red Mountain R'y Co.

Quickest Working and Most Popular
Device for Rerailing Cars.

Prominent R. R. Officials say: "Best device on the market for work intended."

Used on 200 Electric and 100 Steam Roads.

Send for list of Roads and Official Reports.

F. E. Came, 17 Place d'Armes Hill, Montreal

foundland Government to build & run 7 steamers, one to ply direct between St. John's & Labrador, the others on the large bays, to connect with the railway at various points. By this coastwise steam service every fishing village & town will participate in the benefits of the railway, & all will be connected with St. John's.

Northern Pacific & Manitoba Ry. Co.—Notice is given of application to Dominion Parliament for an act to amend chap. 58 of 52 Victoria respecting the incorporation of the Co.; to extend the time for completing the lines & extensions authorized by that act, & by the acts therein recited & confirmed, with the right to construct the same in sections, & for other purposes.

Northern Pacific, Winnipeg Terminal.—This building which comprised the Manitoba Hotel, the station & the divisional offices of the railway, was totally destroyed by fire on the night of Feb. 7. The building was erected in 1891. The hotel portion, 7 stories high, had a frontage of 216 ft. on Main st., & 212 ft. on Water st., & had accommodation for over 300 guests. The divisional offices extended along Water st. south of the hotel & there was a large train shed in rear of the hotel. The building, furniture, etc., was valued at about \$600,000, & it is said the Co. did not carry any insurance. Guests lost effects valued at nearly \$100,000. Nothing definite can be learned of the intention of the Co. as to rebuilding the hotel. The station & offices are likely to be rebuilt on the old plan.

Ottawa and New York.—H. W. Gays has been appointed General Manager of this Co., & of the New York & Ottawa R.R. Co., with headquarters at Ottawa. Mr. Gays has left the General Managership of the Chicago, Peoria & St. Louis Ry., with headquarters at St. Louis, Mo., to accept the Ottawa position. C. B. Hibbard will confine himself to the duties of President in future, handing over the General Managership to Mr. Gays.

Portage la Prairie Westerly.—M. B. Jackson gives notice of application to Manitoba Legislature to incorporate a company to build a line from or near Portage la Prairie westerly north of the main line of the C.P.R. to the western boundary of Manitoba, with branch lines to or near Neepawa or Gladstone, & to or near Brandon or Carberry, & northwesterly or southwesterly to the western boundary of Manitoba.

Qu'Appelle, Long Lake & Saskatchewan net earnings for Dec., \$1,482.75, compared with \$2,094.37.

Quebec Central traffic receipts for Jan., \$27,129.61, compared with \$24,303.82 for Jan., 1898.

Richmond, Nicholasville, Irvine & Beattyville Ry.—The sale of this line to G. P. Magann, of Toronto, & others, on Oct. 6 last for \$160,000, has been set aside, Judge Barr's decision to that effect having been upheld by the U. S. Circuit Court of Appeals.

Rockland, Ont., to Prescott.—Press reports say J. S. Ross & others, of Winchester, are promoting a scheme for the construction of a line from Rockland, Ont., south about 42 miles via Winchester & Moorewood, to Prescott.

The Shelden Forwarding Co., Ltd.—R. Mackay, J. Beattie, H. Paton, D. Macmaster, Montreal, & C. MacKenzie, Toronto, have given notice of application under the Dominion Companies Act for incorporation under this title, with a capital of \$700,000.

Yukon Routes.—L. Coste, Chief Engineer, Dominion Public Works Department, who is now in Europe, was recently interviewed for the Canadian Gazette in London, which says: "Mr. Coste went out to the Yukon country last March by the Stikine-Teslin route. His mission was to inquire more particularly into

the navigability of the rivers which for some time yet must necessarily form the principal means of access to the Yukon owing to the non-construction of the railway from Stikine River to Teslin Lake. Mr. Coste does not, however, hold that the route he took is the best. 'The best available route,' he believes, 'is via Skagway & the White Pass to Lake Bennett, & thence by the Lewes & Yukon rivers to Dawson City.'"

General Manager Hays, of the G.T.R., & Mrs. Hays, arrived at Nice Feb. 12. They will visit London at an early date.

The Electric Lighting of Trains.

By Robert A. Ross, E. E.

Electric train-lighting is occupying the attention of the larger railway companies on this continent at present to a large extent, & in a number of cases has been adopted for the better class of train service. In Europe the development has been much more rapid & on many lines it has or is in process of displacing the oil & gas formerly in universal use. The reason for the change is not far to seek. The public demands the utmost luxury when traveling, & having been educated to the advantages of electric lighting at home is quick to appreciate the same advantages on the railways where at the present time it is counted a luxury, but will soon become a necessity. The public recognizes the fact that as the electric lamp is free from flame there is no risk of fire & no vitiated atmosphere to breathe & it has an illuminant & not a mere gloom disperser as with oil & gas. Its ready adaptability to being placed where wanted makes possible the use of reading lights in the seats & in other positions where any other form of illuminant would be impossible.

The railway companies are not slow to appreciate these advantages, but naturally wish to be assured that electrical illumination will not be more costly & less reliable than other methods. As regards the cost, from recent experiences of different companies it appears that it is at least as cheap as gas & more expensive than oil. That this inferiority in point of cost as compared with oil will not hinder its introduction is evident, for oil has superseded candles although more costly, & even if electric lighting were more expensive than gas its acknowledged superiority would render its use advisable. As regards reliability, which is certainly equally important with cost, the apparatus used in all systems of electric lighting is practically identical with that used for the illumination of buildings & should be as reliable in operation.

Storage batteries at the present time are thoroughly commercial, as are the dynamos & generating apparatus. In the case of axle driving some complication in the regulating apparatus may exist, & it is particularly at this point that a careful selection of apparatus is

NORTHERN PACIFIC HOTEL AND STATION, WINNIPEG, BURNED FEB. 7, 1899.

essential. The several systems in practical operation may be divided into two general classes, the first where each car on the system is independent & capable of taking care of itself, & the second where each car is dependent upon some method of charging located either upon the train or at certain points along the line. The first class necessitates the use of an axle-driven dynamo under each car with sufficient storage battery capacity to carry the lights over the periods when the train is not in motion or running too slowly to enable the dynamo to light the car. Generally speaking the operation of this equipment is as follows: When the train is at rest or running under 15 to 20 miles an hour the battery operates the lights, when the speed mentioned is reached the dynamo having attained the proper voltage is automatically connected to the lights & battery through the operation of a governor or electro magnetic mechanism, & the battery is charged & the lights operated from the dynamo. To regulate the voltage which would increase in proportion to the increase of speed of the train if not controlled, two general methods are adopted, either by keeping the speed of the dynamo constant or by regulating its field strength. The first is attained where the machine is belt-driven by allowing the belt to slip, the amount of slip being governed by some form of belt-tightening arrangement. This, while apparently unmechanical at first sight, works well in practice & has the merit of extreme simplicity. Where the dynamo is rigidly geared to the axle the system of the regulation of the field strength to vary in inverse proportion to the speed is adopted, which may be done either by an automatically controlled resistance in the shunt field, by changing the resistance of the magnetic circuit of the field magnet, or by a system of differential field winding. By the above system each car is a separate & self-contained unit & may be attached to any train on any line. Under the second class, where each car is not a separate unit but is dependent upon outside assistance, there are two general systems, the first where the car equipment consists of storage batteries alone, which are charged at suitable stations along the line, & second, where either an engine & dynamo unit driven by steam from the locomotive boiler or a separate boiler in the baggage car, or an axle driven unit for the entire train is located in the baggage car. Where the simple storage system is used each car is dependent upon obtaining charged batteries at regu-

at intervals, & its travel is limited by this consideration. Where the baggage car equipment is used, the train is a unit, & except for short intervals determined by the capacity of the battery installed on each car the unit must be maintained intact, & the entire train must be wired, at least for the main conductors for through connection to the last coach. In the case of through trains, where the amount of disconnection is small during long runs, the batteries might be dispensed with & dependence placed upon the generating unit in the baggage car, or a single set of cells used in the baggage car or last car of the train to carry the lighting over the periods of disconnection of the engine or baggage car.

As regards the initial cost of these several systems the writer, after a careful investigation of what has actually been done and what can be done at prevailing prices, has come to the conclusion that the order of cost is about as follows, beginning with the cheapest: 1. Engine & dynamo unit in baggage car without batteries. 2. Engine & dynamo unit in baggage car with batteries under each car. 3. Single axle unit in baggage car with cells under each car. 4. Battery equipments under each car with charging stations at intervals. 5. Separate axle units & batteries under each car.

The last two are not far apart in initial cost per car. It may be pointed out, however, that allowance has been made for charging stations on the understanding that they are not used for other work, but in many cases the companies have lighting plants already established which are available for charging, which would diminish the cost of the charging station plan considerably. As regards reliability any of these systems to be commercially successful must be capable of being placed in the hands of the train crew, the supervision of experts being only available at large terminal points, & the expert supervision necessary should not be great even when available, & this will be secured by the use of the system which requires the least apparatus on the cars. This condition is best met by the charging station system, where the batteries are inspected after each run, & the charging apparatus is under competent supervision. The chances of failure are greatest on the systems employing the axle units for charging, but even in this case, from the reports of several companies, the failures are few. Regarding the comparative cost of operation of the various systems, it is impossible to speak generally, as each is dependent upon the local conditions on the particular railway system under consideration. It may, however, be pointed out that the interest & depreciation accounts, if properly allowed for, will be the largest item in the cost, & the investment in the original installation will to a large extent govern the annual cost per car for its operation. This

acts against the charging station scheme because of the large number of batteries used, & on them the depreciation is larger than on the rest of the apparatus.

The voltage employed where batteries are used should be kept as low as possible with due regard to the wiring losses, to take advantage of high efficiency lamps, & to reduce the weight & cost of the batteries as much as possible. In practice the voltages range from 24 to 60, & in many cases 2.5 watt lamps are adopted; the decreased life of these being compensated for by the smaller size of battery & charging apparatus. Where axle units are used the problem to be met approximates in a small way to that of street railway motors, which are operating under the floor of a moving car, & subject to the shock & disturbance of the motion, but the amount of attention which they will receive while operating is less than in the case of the motor.

To sum up the relative advantages of the several systems in a general way, we may say that the system employing a steam unit in the baggage car without batteries is the cheapest, & is very simple in operation, but when the locomotive is uncoupled the lights are extinguished, for which reason batteries under each car are a necessity unless the train is never broken. The batteries need, however, be but small. A single axle unit in the baggage car is in a good position for operation without chance of failure, but requires somewhat larger batteries on each car than the steam unit system to carry the lights while the train is stopped or running slowly. Each of the above systems requires that the train be wired throughout from car to car. The advantage of the separate axle unit under each car is that each is independent & no through wiring is necessary, but the initial cost is higher, & the necessary supervision greater than those previously mentioned. The charging station plan is simpler in operation, but its initial cost is high, & its operating costs probably higher than any of the others for the same conditions. It may be pointed out that where any road is contemplating the use of electric light, the natural course is to proceed cautiously & invest as little as possible until success has been demonstrated, & for this reason the separate axle unit has an advantage, as only those cars upon which the system is to be tried need be fitted up, while with the other systems expense has to be incurred for wiring all cars or establishing charging stations.

These are merely general views, & should not be applied indiscriminately to all cases, as the local conditions of each road will modify the above conclusions profoundly, each case requiring a careful study of existing conditions to ensure that the best system is adopted to meet the requirements. Under the varied conditions of traffic each of the above systems has its place, & with the possible condi-

tions met by such varied systems it is not too much to hope that the train of the immediate future will be the electrically lighted. — Canadian Engineer.

The Late Hugh Ryan.

Hugh Ryan, who died in Toronto Feb. 13, was born in County Limerick, Ireland, in 1832, & came to Canada with his parents in 1841. In 1850 he began railway work on the St. Lawrence & Atlantic Ry., which subsequently became the first link in the G. T. Ry. Ever since the construction of the St. L. & A. R. Mr. Ryan was engaged, with the exception of about three years, in the construction of public works. In 1856 H. & J. Ryan took the contract for a portion of the Brockville & Ottawa line, from Smith's Falls to Perth. They also took part of the same road from Arnprior to Bonnechere, which is now part of the main line of the C.P.R. Contracts in Michigan followed; then for a time Mr. Ryan was carrying out contracts in Illinois on a road which now forms part of the Chicago & Alton system. Afterwards he pursued his railway building in Kentucky. He went to Nova Scotia in 1867, & with Mr. Brooks built the heaviest portion of the Pictou Railway along the Salmon River. The same firm built a large part of the European & North American line through part of New Brunswick, & the Pope line, from Lennoxville, Que., towards the boundary, now a part of the C.P.R. short line. Next Mr. Ryan was engaged in building section 20 of the I.C.R., including the heavy bridges across the Michichi River. In 1876 Purcell & Ryan took the contract for the C.P.R. from Fort William west to Eagle River, 227 miles. After this Mr. Ryan had the management of the building of the line from Toronto to Perth for the Ontario & Quebec Ry. syndicate. Next, in company with M. J. Haney, he started to build the Red River Valley Ry. from Winnipeg, which was completed by the Northern Pacific. Then Hugh Ryan & Co. took the contract for the building of the Sault Ste. Marie Canal, & six years were spent on that.

CANADA LIFE ASSURANCE COMPANY.

The Record of Another Successful Year.

There was a large number of shareholders present at the annual meeting of the Canada Life in Hamilton, Feb. 14. At the close of the Company's 52nd year, the directors have to submit their annual report along with the usual statements of the year's receipts & payments, & the assets & liabilities, as at the 31st Dec. last.

During 1898 the applications for assurances were 2,989 in number for the sum of \$6,152,764.75. Of these 181 were declined, for \$368,600, the lives not being deemed desirable for the Company's acceptance, & 159 for \$310,845 not being completed, the actual issue of the year was 2,649 policies for \$5,473,319.75. This amount is an advance upon the business of the past 2 years, & as it is doubtless an indication of the increased prosperity of the country, it may also be mentioned that the new assurances of the current year at this date are in excess of those of recent years.

The total business in force at the 31st Dec. last, was \$75,256,241.35 of assurances under 34,733 policies, upon 25,464 lives. The amount paid to policyholders, or their representatives, for policies which became claims by death during the year was \$881,808.88, & for endowment policies which had matured, \$120,693.67. In addition to these sums there were paid on policies by way of profits \$194,353.53, & for surrendered policies, \$107,376.59, making the total payment to policyholders \$1,304,232.67.

The reserve necessary on account of all the Company's policy risks, & all other liabilities & capital stock, as shown by the general abstract, with the addition of \$225,000, set aside as a special voluntary provision towards the higher reserve basis to which the lower rates of interest now obtainable makes it prudent to look forward, & adding \$30,000 to the contingent account, there is left a surplus over all liabilities, amounting to \$1,818,747.89.

During the past year the Company sustained a very great loss by the death of Col. Sir Casimir S. Gzowski, K.C.M.G., who had been on the Board of Directors for 25 years. His wise counsel & earnest readiness to at all times promote the best interests of the Company were invaluable to it, & his courteous & gracious bearing towards his colleagues, warmly endeared him to them.

FINANCIAL ABSTRACT FOR YEAR 1898.

(On basis of Government Returns.)

*Exclusive of \$88,960 received for Reassurances.

The President, Mr. A. G. Ramsay, in moving the adoption of the report, said:

"The annual report by the Directors & the accompanying statements tell the story of the

Company's fifty-second year. It is the twenty-fourth year in which I have had the honor as President of submitting a report to you, & it is with the same satisfaction & confidence as I have happily had upon all these occasions, & indeed during all the forty years of my connection with the Company, that I am able to point to the success & the sound position which the Company occupies. In again congratulating you, I would call your attention to some of the figures to which the report alludes. The new business during the year was in excess of that of the previous year, & looking to the increased number of companies, all eagerly competing for business, some of them purchasing it at a greater cost than we have thought prudent or safe, or beneficial to the true interests of those already assured, such a result speaks well for the public confidence which the Company enjoys. Our new business having been obtained without undue expense, & with a scrupulous care not to mislead applicants, will prove of a more enduring character, & of more real profit & advantage, than would a larger business otherwise secured, upon systems which our Company has not thought desirable.

"In speaking about new business, I would like to give you a few remarks from a very excellent paper read the other day before the Actuarial Society of Glasgow. The author says that while all know that the health of a man will be impaired by too much food, especially if it be rich & costly, there are few who understand that it is possible to injure a life office by giving it too much new business, no matter at what cost it may have been obtained. He pointed out that it is not by any means surprising that a big new business is so highly prized, & its advantages so greatly exaggerated, for it is the big new business that raises the fees of Directors, that raises the salaries of the Presidents, Managers, & Officials, & causes the annual rejoicing on the day of the annual meeting. Reserves may be inadequate, funds badly invested, expenses of management may be ruinous, & bonuses may be infinitesimal, but, if there is a large new business to report, everybody is congratulated on being connected with such a highly-prosperous concern. The big new business is like charity in covering a multitude of sins, but a big new business is not so much a matter of merit as a matter of price.

"There are already indications that companies which have been unduly expanded & differently conducted from the Canada Life, not following the conservative & economical principles by which it has been guided, are suffering the effects of their different course, & can only avoid its consequences by not holding that full reserve which we do for the protection & safety of our policyholders; & while I am alluding to these effects of undue expansion & undue expenditure, I may point you to the fact that the great companies whose business is of the largest amount, & whose enormous growth makes them apparently of the most progressive & prosperous character, are just those who have been the most conspicuous in the decline of the profits or surplus which they have been able to give their policyholders. During the past ten years the profits of these very progressive companies have been so reduced that the greatest & largest of them is now paying its policyholders, by way of profits, less than one-half the percentage to premiums they were paying ten years ago.

"The ratio of our Company's expenses to its income is of a moderate amount. It was last year 13.61 per cent., & I would, without alluding to any other company in particular, invite those who are interested in doing so to compare that with the corresponding ratio of any other company doing business in Canada. Mere magnitude of business without regard to its cost is a distinct & direct injury & injustice to our older policyholders, whose advantage

& security should be our first care. As the report states, our assurances in force, which were ten years ago forty-seven million dollars, are now seventy-five million dollars. The payments for profits, claims by deaths, & for endowments maturing last year, were, it will be seen, \$1,196,856.08, & as an evidence of the Directors' care & sagacity in the selection of the lives assured, I may mention that the year's mortality was largely under what was anticipated & provided for. The sum added to the assets of the Company during the year was larger than had ever before resulted from any year's operations. The new premiums of the year's new business were \$200,919.42, & I may explain that the total year's premiums would have exceeded the large amount shown by the accounts, but that so many of our policyholders having very prudently in past years taken their policies on the system of premiums ceasing after a limited number of years, they have now completed their payments, & their policies are free from future premiums to the Company. The Directors have each year for some time back called your attention to the decline in the rate of interest obtainable upon satisfactory investments, & I am sorry to have to repeat that that decline still continues to be experienced by this & all other investing companies & it has to be added that, in our opinion, & in that of every one who has given consideration to the question, there is no prospect of any permanent improvement in that respect, but rather the reverse. Under such circumstances and looking to the fact that a Life Assurance Company's obligations are based upon an assumption of interest to be obtained during very long periods, extending up to, say, fifty years in the future, it is a matter of prudent regard for the solidity & safety of the Company & its policyholders that we should prepare to still further strengthen our reserves upon policies. With that view, it will be observed by the accounts, that a sum of \$225,000 has been set aside as a special fund towards a higher valuation standard. The wisdom & prudence of this course will, I am sure, commend itself to you & all interested in the Company."

Mr. F. W. Gates, Vice-President, seconded the adoption of the report, which was unanimously carried.

Messrs. Campbell Ferrie, J. H. Plummer, & W. F. Findlay were appointed scrutineers of the meeting.

On motion, a vote of thanks to the President & Directors for their attention to the interests of the Company during the year was unanimously carried, & briefly responded to by President Ramsay. Mr. Adam Brown moved the thanks of the shareholders be tendered to the agents, officers, medical & legal advisers of the Company, to whose exertions in the interests of the Company its remarkable success is in a great measure due. This was unanimously carried.

A full discussion took place upon the proposed removal of the Head Office of the Company to Toronto, & it was moved by Hon. Geo. A. Cox, seconded by Z. A. Lash, Q.C., that in the opinion of this meeting it would be in the interests of the Canada Life Assurance Company that its chief place of business should hereafter be in the city of Toronto, & that the Board of Directors be & are hereby requested to take such action as may be deemed necessary to carry out the object of this resolution. An amendment to this resolution having been defeated by a vote of 1,353 shares against, & 954 for, the original motion of Messrs. Cox and Lash was carried upon the same vote. At an earlier stage of the meeting a deputation of citizens was heard, Mr. Samuel Barker stating their reasons against the proposed removal of the Company.

The following Directors were elected to fill the places of those retiring:—Messrs. A. G. Ramsay, Adam Brown, William Gibson, M.P.,

J. W. Flavell, John Hoskin, Q.C., Z. A. Lusk, Q.C.

At a subsequent meeting of the Directors, Mr. A. G. Ramsay & Mr. F. W. Gates were unanimously re-elected President & Vice-President, respectively.

C.P.R. Operating Notes.

On the Crow's Nest Pass Ry. the change from mountain to Pacific standard time will be made at Cranbrook, B.C.

Now that regular mixed trains have been established on the Rat Portage & Wabigoon sections of the Western Division for the handling of local business, the practice of carrying passengers on freight trains will be discontinued unless on special orders from the Manager or his Assistant.

The Assistant to the Manager of the Western lines has issued the following circular: "This Co.'s expenditure for the purchase of temporary & repairs of permanent grain doors still continues abnormally large. The attention of agents is called to the fact that they are required to exercise great care to prevent the removal of temporary grain doors or damage to permanent ones, & to report all cases where cars which have been equipped with permanent grain doors have any portion of the equipment missing or broken. Conductors of freight trains will report any missing side, end, or ice box doors on cars in their trains to their Superintendent by first mail, stating number of train, date, car number, initials, & where car lifted from. Agents will make same report about all cars set out at their stations. Missing doors must be sent to the nearest car repairing point so that they may be reapplied to cars as opportunity offers. Sectionmen must see that all doors found lying along the track between stations are picked up & taken into stations for shipment to car repairing points."

The Manager of the Eastern lines has issued the following circular: "The use of cold water to cool hot boxes undoubtedly has an injurious effect on axles, & therefore this practice, now very generally followed, must be discontinued except when necessary to avoid delay to an important passenger train, & then the conductor must report the fact to the car inspector at the next terminal so that

the axle may be either removed or marked for scrap to be removed at first opportunity."

The Manager of the Eastern lines has issued the following circular: "If on account of severe weather or other unavoidable cause, it is found impossible to keep the rear car or cars on a passenger train at the proper temperature by steam heat from the locomotive, Baker heaters should then at once be started & kept going while necessary to maintain the proper temperature in such car or cars, the steam heat during such time being shut off from them. It will be the duty of the train conductors to see that this is done & that proper temperature is always maintained in passenger cars."

There have been many rumors about faster transcontinental service, but nothing appears to be settled, & it is likely the matter will remain in abeyance until Vice-President Shaughnessy makes his annual trip to the Pacific Coast in April. One proposal is to run a special train, to be called "The Imperial Limited," twice a week each way, making the run between Montreal & Vancouver in about 90 hours. Another idea is to relieve the Pacific & Atlantic expresses west of Winnipeg of all local traffic between Winnipeg & Medicine Hat, & to serve that territory by a second daily train each way, which would also run over the Crow's Nest Line between Dunmore Jct. & Kootenay Landing.

It is reported that trouble is brewing between the Co. & its locomotive engineers in consequence of the expected criticisms from headquarters about their methods of utilizing fuel, but not even an echo of this coming trouble has yet reached headquarters. From a railway point of view it is difficult to see what ground the engineers have for complaint. It is no doubt true that for some time past circulars have been issued from headquarters in Montreal explaining to the engineers the steps they ought to take to get the best results from coal. They were frankly told that they were not getting as good results from the use of their coal as they might, but there was no intention on the part of the management that the inference should be drawn that they were not treating the Co. fairly. They have been called upon to make explanations where it was believed that they had been extravagant in the use of coal, but it is explain-

ed by the management that it is necessary that the most rigid economy should be exercised in the use of fuel, which is the greatest single item of expenditure that the railways have to meet. It is said that a committee of engineers will be appointed to interview the management on this question, & it is exceedingly probable that the management will be glad to have the opportunity of meeting the men & placing the position clearly before them.

The Canadian Ex. Co. has extended its service over the Ottawa & New York, the Tilsonburg, Lake Erie & Pacific, the Detroit & River St. Clair, & the Pembroke Southern railways.

W. Stitt, Chief Clerk of the C.P.R. Passenger Department at Winnipeg, who is at Los Angeles, Cal., at present, is improving very much in health, & it is hoped he will be able to resume his duties towards spring.

SHIPPING MATTERS.

Notices to Mariners.

The Dominion Department of Marine has issued the following notices:

No. 3, Jan. 24, Ontario.—1. Weller's Bay range lights. 2. Removal of the wreck of the Monitor in St. Mary's River.

No. 4, Jan. 26, Nova Scotia.—Change in position of Brooklyn pier light.

No. 5, Feb. 10, Nova Scotia.—Louisburg buoys adrift.

No. 6, Feb. 18, British Columbia.—Change in character of Fiddle Reef light.

No. 7, Feb. 20, Ontario.—1. No light at Port Bruce. 2. Michipicoten Island fog bell discontinued.

General Shipping Notes.

Goderich, Kincardine, & other ports on the south-east shore of Lake Huron are trying to secure a steamship line for that route. Since the wreck of the Cambria and the withdrawal of the Carmona the Windsor-Soo route is vacant.

W. H. Moore, solicitor, Toronto, gives notice of application to Dominion Parliament for an Act incorporating a company to con-

struct & operate steam & other vessels between Canadian or other ports, & with other powers.

The Quebec Board of Trade has petitioned the Dominion Government to carry out Sir Wm. Van Horne's proposal for a first-class trans-Atlantic steamship service, urging that it will pay the country even if it should cost \$1,000,000 a year.

A significant circumstance in connection with the question of shipping from Canadian ports is that the Allan S.S. Co. has placed orders for 5 steamers—one of 8,800 tons & 14 knots, two of 10,000 tons & 15 knots, & two cargo steamers of 8,000 tons & 12 knots.

The shipping season of 1899 at Montreal promises to be a record-breaker. R. Reford & Co., who have for many years controlled some of the leading freight steamship agencies there, have added the Lord line of steamers which will trade with Cardiff. There is a probability of Reford & Co. establishing a Dublin service, but as yet it is indefinite.

Up to the middle of Feb. steamers had this season carried away from St. John, N.B., cargoes to the aggregate value of about \$3,500,000. The quantity of grain is not as large as was expected, but nearly 1,500,000 bushels have been shipped. The importation of wheat has been larger than last winter to this date. The total value of shipments is much greater than for the same period last season.

Great interest has been manifested in England in Sir Wm. Van Horne's Quebec speech on the fast steamship service. The papers commenting on it emphasize the strategic importance to the Empire of the C.P.R. route to the far East. If the Atlantic journey be reduced by a 22-knot service to, say 6 days, & the Quebec-Vancouver journey to, say 3 days, & the Vancouver-Hong Kong journey to 18 days, or 12 days, leaving out stoppages, it would be possible to go from Euston to Hong Kong in 22 days, & most of the way through British possessions; whereas the journey via the Suez canal, which is liable to be blocked in time of war, now takes about 40 days.

British Columbia Shipping Matters.

A. L. Brownlee's 100-ft. stern wheeler on Dog Lake has been burned.

The Union S.S. Co.'s str. Comox is being overhauled at Victoria, after which she will again go on the Vancouver-Shoal Bay run.

The Canadian-Australian line is carrying large cargoes from Vancouver, Canadian agricultural implements being the heaviest shipments.

The Big Bend Transportation Co., Ltd., has been incorporated under the B.C. Companies Act, capital \$125,250; headquarters, Revelstoke.

The Northern Lakes & Rivers Navigation Co., Ltd., has been incorporated, under the B.C. Companies Act, with headquarters at Victoria. Capital \$50,000.

There are rumors that both the Peninsular & Oriental S.S. Co. & the North German Lloyd will put on steamships between the Pacific coast & Japan & China.

The B. C. Marine Ry. Co. has installed an electric light plant on its ways at Esquimalt. A similar plant will be installed on the Vancouver ways, on which work is being pushed.

The str. Mananeuse, which has been the cause of a lot of litigation recently, is to be run under the agency of R. Ward & Co.; she will probably make the northern trip from Victoria about every 10 days.

The C.P.R. Co. is about to build at Nelson a 3rd transfer barge, with 15 cars capacity, to be used between Kootenay Landing & Nelson. Another is to be built at Nakusp for use between East & West Robson.

It is said Cap. McPhaiden, one of the directors of the Union S.S. Co., & Manager Darling have gone to Portland & San Francisco to purchase another steamer to run between Vancouver & Shoal Bay. The new vessel will, it is expected, cost from \$50,000 to \$60,000.

It is said an order for 160,000,000 ft. of lumber has been placed with mills at Vancouver for the Chinese railway. Additional mills will be erected to increase the output. Australia has also ordered more lumber than B.C. can supply. This means great activity in shipping.

The C.P.R. Co.'s str. Athenian has been overhauled at Hong Kong, being made into a large freight carrier. The forward part of her passenger accommodation has been taken out & that part of the ship given over to increase the room for freight. The Tartar will probably be treated in the same way.

The Yukon trade very favorably affected the shipbuilding industry of Victoria during the past year. Of the 22 steamers built in

1898 in B.C. 12 with a tonnage of 4,944 tons were built in Victoria. The majority of these were river steamers for the Northern rivers. In repairing the Mananeuse, \$34,000 were expended. The Islander, Tees, Charmer, & a number of other vessels had very extensive alterations made in them. During 1898 5,458 vessels entered & cleared from the port of Victoria against 5,023 in 1897.

The C.P.N. Co.'s str. Tees, hitherto used almost entirely for freight, has been repaired & largely altered, so as to fit her for passenger traffic also. A new deck has been put on, & cabins have been constructed on this & below, which will provide accommodation for 70 1st & 60 2nd-class passengers without encroaching on the space hitherto reserved for freight. Previously only 28 passengers could be carried, & the accommodation for these was indifferent, owing to there being no thorough system of heating the vessel. This has been overcome by the installation of a donkey engine & of steam-heaters throughout the vessel. The kitchens have been removed below. Another feature is the clear deck amidships, a promenade deck being provided aft & another on the bridge. Among other improvements is a thorough overhauling of the boiler-room, the complete repair of the ship's bottom in dry dock, & the accommodation provided for the carriage of horses, either between decks or in the lower hold.

The narrows between Upper and Lower Arrow Lakes are being improved by the Dominion Department of Public Works. This is one of the most important waterways of the Kootenay district, providing a stretch of navigation, 125 miles long, on which the C.P.R. steamers ply at the rate of 18 miles an hour. These narrows are the only point at which navigation is at all obstructed, & a force is engaged building wing dams, so as to confine the water to one main channel. This work was begun a year ago, & the result was that, during the last period of low water, steamboat traffic was not once delayed, as it had always been before. Work is also being done on the Upper Duncan River, where snags, rocks & other obstructions extend for 18 miles. When this channel is improved, navigation will be opened into the Lardo-Duncan country, which is one of the most promising of the Upper Country mining districts. At present, prospectors & miners have great difficulty in passing the accumulations of driftwood, even with small

boats, but very soon there will be a clear stretch of navigable water for 40 miles from Kaslo. Work has been commenced improving the channel of Kootenay River, between Fort Steele & Wardner, where the river is crossed by the Crow's Nest Pass Ry. When this work is completed there will be easy access, by water, to the railway for the people in & about Fort Steele. On the Columbia River, above Revelstoke, obstructions are being removed from the canyons between Revelstoke & La Porte, to facilitate the navigation of the stretch of the Columbia, leading into the Big Bend Country, this being the only present means of communication.

Maritime Provinces Shipping.

C. R. Burgess, Wolfville, N.S., & others have been incorporated as The Ship Kings County Co., Ltd.; capital, \$32,000.

C. F. Libby has been appointed Manager of the International Steamship Co. at Portland, Me., vice J. B. Coyle, deceased.

The government str. Stanley arrived at Georgetown, Feb. 18, after being delayed 16 days in ice between there & Pictou, N.S.

The Dominion Coal Co. has chartered a number of steamers to carry coal from Louisbourg to Halifax & Boston during the winter.

At the recent annual meeting of the Yarmouth Marine Ry. Co. the business of the year was reported satisfactory, a dividend was declared, & the directors were re-elected.

It is said the business done by the Yarmouth Steamship Co. in 1898 exceeded that of the previous year, & that the management is perfectly satisfied with what has been accomplished.

About the middle of Jan. the SS. Yarmouth, of the Yarmouth Steamship Co.'s fleet, was chartered by the Plant Steamship Co. for 3 months, & is now on that Co.'s route between Tampa & Havana.

The repairs being put upon the D.A.R. str. Prince Rupert will, it is expected, be completed by Mar. 1. She will then proceed to Halifax to go into dry dock. As soon as she goes on the Digby route again the Prince Edward will be overhauled.

Another steamship has been ordered by the Plant line, to run between Boston & Halifax. She is to be a twin-screw ship, 400 ft. long & with a contract speed of 18 knots. It is expected her passenger accommodations will be the most complete of any steamer ever built on this side, with the exception of the St. Paul & St. Louis.

A company is being formed in North Sydney to purchase a large steamer for freight and passengers to run between there & Montreal during summer. If the Co. succeed in raising the necessary amount a steamer will be immediately purchased to run between North Sydney & Montreal during summer, and South in winter.

Some time ago a news item went the rounds of the press to the effect that owners of Nova Scotia schooners engaged in the Porto Rican trade had decided to transfer their register to the U.S. as a means of competing on equal footing with U.S. craft. A recent Treasury ruling at Washington says that a U.S. register cannot be obtained by Canadian craft except under special legislation by Congress, & that the owning of the vessels by U.S. citizens does not alter the case. U.S. register will be given to no vessel which has not been built in U.S. waters.

A committee of the Fredericton Board of Trade has had a conference with President Baird of the Star Line Co. on the up-river steamboat service, about which there has been much complaint. Mr. Baird said the irregular service was due to the str. Aberdeen being unable to make more trips between Fredericton & Woodstock because of shallow water. If the Provincial Government will give a small additional subsidy the Co. will next season put on a steel steamer of light draft that will be able to maintain a continuous service throughout the summer. The Board of Trade will back the Co. in petitioning the legislature for an increase on the present subsidy, which is \$900.

The winter str. Stanley, owned by the Dominion Government, which runs between Pictou, N.S., & Georgetown, P.E.I., was built in 1888. Her gross tonnage is 914 tons. In the 10 years she has been running the highest no. of trips made in a season was 89—in 1891-2, & the lowest 47—in 1897-8. The greatest no. of packages of freight carried was 94,519—in 1893-4, & the lowest 21,620—in 1891-2. The greatest no. of passengers was 2,317—in 1890-1, & the lowest 1,240—in 1897-8. The earliest date of starting running was Dec. 1, in 4 different years—'91, '92, '94 & '95; & the latest Dec. 25—in '97. The earliest date of ending was Apr. 9, '89, & the latest May 9, '94. The highest gross earnings were \$15,339.04—in 1890-1, & the lowest \$6,476.60—in 1891-2. The greatest no. of days stuck in ice was 85—in '88, & the lowest 10 days—in '89.

Ontario & the Great Lakes.

Capt. Trowell, of the str. Ocean, is again able to move round without crutches.

On Feb. 14, the Niagara River was frozen over from Lewiston to Youngstown, the first time in 20 years.

The Donnelly Salvage & Wrecking Co. has purchased the str. Eurydice for wrecking work. She was formerly the str. Hastings.

Mr. Lumas, of Cincinnati, Ohio, is having a 50 ft. steam yacht built at Kingston, Ont., for use on Muskoka Lake, where he has an island.

It is said F. A. Knapp, of Prescott, the inventor of the roller boat, has found financial backing in Chicago, & that a large roller boat will be built from his design.

Two large steamers, Canadian bottoms, will be built for the Canada Atlantic Ry. system, to carry grain from Duluth & Fort William to Depot Harbor, Ont.

W. G. Denesha, of Morrisburg, is having built at Kingston, for use on canal contracts, a tug 60 ft. long, engine high pressure 14x16 with return flue marine boiler. Cost \$3,500.

The str. Flora is being rebuilt and refitted at Sandwich for the Cleveland-Rondeau route. About \$25,000 is being spent on her by the L. E. & D. R. Ry. Co. The engines of the revenue cutter Andrew Johnson will be placed in the Flora.

The L. E. & D. R. Ry.'s car ferry Shenango no. 1 stuck in the ice near Clear Creek, Lake Erie, early in Feb. Up to Feb. 23 she was still there, but no danger to her is anticipated. Efforts to release her by dynamiting the ice proved unsuccessful.

The Great Northern Transit Co.'s steamer to replace the burned Pacific, is to be built at Collingwood. She will be 190 ft. long, 32 ft. beam & 11 ft. deep, & will cost between \$60,000 & \$70,000. The Co. will buy a steamer to replace the burned Northern Belle on the North Shore route.

The steamers of the American line, consisting of the New York, Empire State & America, are undergoing a general overhauling, & improvements & alterations are being made to the boilers & wheels, which is expected to materially increase their speed. More state-rooms are being added to the New York & Empire State.

At the recent annual meeting of the Niagara Navigation Co., the General Manager's report, which was very satisfactory, was unanimously adopted. The following board was elected: President, Sir Frank Smith; General Manager, John Foy; other directors, W. Hendrie, E. B. Osler, J. J. Foy, R. H. McBride, B. Cumberland.

The steamer being built at Pictou, & in which the engines & boilers of the str. Empress of India are being placed, is to be called the Argyle. There has been a great deal of speculation as to her route. The latest report is that she is to run between Toronto & the Thousand Islands as a Western connection for the American Line.

Hamilton City Council has decided to petition for these improvements: The dredging of the channel at the piers from 20 ft. at the lake end, to 15 ft. at the bay end; the piers extended easterly into Lake Ontario until 20 ft. of water is reached; the south pier extended 300 ft. in a southwest direction, & a good distinguishing range light at or near the west end of the south pier.

The str. Empress of India having gone off the Toronto-Port Dalhousie run, the Lakeside Navigation Co. will put on the str. Greyhound in addition to the str. Lakeside. Both boats are being overhauled at St. Catharines. It is said the Lakeside Co. will put another boat

on the Toronto-Oakville run. Capt. J. Tow-ers, formerly captain of the str. Ocean, will have charge of the Greyhound.

At the annual meeting of the Canadian Marine Engineers' Association, the following officers were elected: Hon. President, O. P. St. John; President, H. Parker; 1st Vice-President, A. J. Woodward; Secretary, S. A. Mills; Treasurer, H. Brownley; Inside Guard, H. Bowler; Auditors, D. L. Foley & E. J. O'Dell; Council, T. Good, W. Horwood, R. Binch, P. J. Carr & J. E. Kane.

The Polson Iron Works, Toronto, is building a composite steam cutter for G. Gooderham, of that city, to act as tender to his yacht Oriole. She will be 36 ft. long, 9 ft. beam, 3 ft. deep, with verticle engine 6"x7" & Clyde boiler 45"x66" long & 150 lbs. pressure. She will have steel frame & be planked with clear B.C. pine. She will be powerful enough to tow the Oriole if necessary. She was designed & is being built under the superintendence of W. E. Redway, naval architect, Toronto, & will cost about \$1,500.

The Polson Iron Works, Toronto, is building a handsome steel passenger steamer for the Richelieu River Navigation Co. of St. John's, Que., to be called the Majestic. She is 112 ft. long, 22½ ft. beam & 6 ft. deep, having vertical compound jet condensing engines, 14"x28", with 18" stroke, large Fitzgibbon boiler containing 1,400 ft. heating surface, with 150 lbs. pressure. She will be fitted with electric light throughout, including a powerful search light, & is to be finished by June 21 next. The guaranteed speed is to be 15 knots. The cost is in the neighborhood of \$20,000.

Province of Quebec Shipping.

The Canada Atlantic Transit Co. is organizing a barge line in connection with the Coteau Landing elevator, & is building floating elevators to transfer the grain at Montreal.

The widening & deepening of the ship channel between Montreal & Quebec, the increase of pilots, & the abolition of the contract system of buoys is being urged on the Dominion Government by the Montreal Board of Trade.

Notice is given of application to Dominion Parliament for an act amending the act incorporating the Quebec Steamship Co. by granting power to the Co. to buy & sell fruit & other goods & merchandise, & to carry on the business of general merchants, & for other purposes.

In response to a request of the Montreal Board of Trade for the establishment of an Admiralty Court in that city, the Minister of Justice proposes to establish a deputy registrar there whose emoluments will be derived from the fees in the cases, & Judge Routhier will attend to the actions themselves.

D. M. Robertson has been appointed captain of the Ottawa River Navigation Co.'s str. Empress, to succeed the late Capt. Bowie. Capt. Robertson was for several seasons purser of the str. Empress, & in 1897 was purser of the str. Sovereign. During the years he served as purser for the Co. he studied medicine at McGill University, & in 1898 obtained the degree of M.D., passing with honors. At present he is attached to the staff of the Royal Victoria Hospital, Montreal.

The Ottawa River Navigation Co. is having a wooden propeller built at Toronto by M. Simpson, to ply on the Ottawa River. Her dimensions are: Length, 100 ft.; beam, 21 ft.; depth, 7 ft. She will be fitted with fore and aft jet-condensing engines, cylinders 10x20 in., with 16 in. stroke; usual feed donkey-engine pumps; boilers, 120 in. long, 66 in. diameter; steam pressure, 160 to the sq. in. The contract speed is to be 14 knots. The machinery is being built by the Polson

Engine Works. The boat is to be completed by May 1, & will run between Ottawa & Thurso daily. Her passenger capacity will be 300.

Yukon & Northern Navigation Matters.

Capt. J. Irving, of Victoria, B.C., is about to build a steamer on Lake Bennett.

Capt. R. A. Talbot is building 3 steamers at Seattle for the Alaska trade, to cost about \$20,000 each. They are to be flat bottomed, 120 ft. long, 23 ft. beam, 12 in. draft light and 3½ ft. loaded, each to accommodate 400 passengers and 200 tons freight.

The Gold Mining Steamship Co., with headquarters at Victoria, B.C., is going to have built there 2 stern wheel steamers, 130 ft. long, 28 feet wide and 4 ft. deep. One is to be ready by May 1 and is to be sent to St. Michaels for service on the Yukon, the other will be sent north in sections and is to be ready to leave Lake Bennett when navigation opens.

It is reported that marine insurance underwriters have become alarmed over the plans of steamship companies to cut down the time on the run to Alaskan points and are seriously considering the question of calling a halt. The rates on vessels in that service during the last two years have been from 2 to 5 higher than on other coastwise vessels. Last year, when the great rush to the north was on and boats of all descriptions were pressed into the service, the premiums paid in some instances were fabulously high. Even the Pacific Coast S. S. Co., which has been running steamships to Alaska for 40 years and whose vessels have been constructed with full knowledge on the part of the owners of the necessities for ships in that service, had to pay largely increased rate.

At a meeting in Seattle, Jan. 16, of representatives of all companies operating steamers between British Columbia & Puget Sound ports & southwestern Alaskan ports the following rates were fixed:

Passengers.	1st Class.	2nd Class.
To Wrangel & points south	\$17	\$10
To Juneau	20	12
To Skaguay and Dyce	25	15
Wrangel to Skaguay.	10	

General merchandise—to Wrangel, \$8; to Juneau, \$9; to Skaguay and Dyce, \$10.

Horses & cattle, in lots of less than 3, to all Alaskan points, \$22.50 each; in lots of more than 3, \$20 each. Dogs, to all points, \$5.

Dressed meat, 2½ times the rate on merchandise. Live hogs, 4 times the merchandise rate. Sheep, merchandise rate, estimated at 500 lbs. each.

Lumber, per thousand ft., to Skaguay & Dyce, \$9; to Juneau, \$8; to Wrangel, \$7.

Hay, per ton—to Skaguay & Dyce, \$15; to Juneau, \$11.50; to Wrangel, \$10. The last rate may be slightly varied.

All the foregoing rates are now in force.

A budget of news from the frozen-in Yukon river steamers has been received from the lower river. Parts of the Sovereign's machinery became broken & others were worn out. Some of the parts could not be replaced, but could be repaired provided they were taken to a foundry. Mate Tritton was allotted the task of bringing out the heavy pieces, & lately reached Skaguay. He started from Circle City, with a dog team, in a blizzard, for the perilous trip to Skaguay. For 18 days he struggled over the frozen surface of the lower Yukon to reach Dawson. The river below Dawson is entirely different from the river above. The upper Yukon is frozen smoothly & makes a good sledding track. The lower river congealed in bunches and is as rough as the top of a miniature mountain range. Over this ice Tritton struggled with his heavy load. The fact that he was but 2 days longer on the trip from Dawson to Skag-

way than from Circle to Dawson shows what he had to contend with. The Sovereign has been pulled up on the bank at Circle City & the Victoria is between her and the river. The Tacoma, of the Empire line fleet, is almost as good as wrecked. She is in a very open position in the middle of the Yukon, 12 miles below Circle. The ice is piled up high around her. The Seattle, of the same fleet, has very little chance of getting free. She is some distance above Circle and to a certain extent protected by an island. The impression is that, at least, 20 steamers will be broken up when the ice moves.

The Canadian Development Co., with headquarters at Victoria, B.C., commenced operations last year & constructed 3 large steamers, the Victorian, Canadian & Columbian, which are now in winter quarters on the upper Yukon river. These steamers are 150 ft. long by 33 ft. beam, & have a speed of 15 miles an hour, & each is fitted with 14 water-tight compartments. Electric lights are fitted throughout. Each steamer has berths for 250 passengers, & a freight capacity of 200 tons weight. After arrival at Dawson in Aug., 1898, the Columbian & Canadian were placed upon the route between Dawson City & the White Horse rapids, & made several trips. The Co. is reconstructing & fitting with powerful boilers & machinery the Anglian, a somewhat smaller steamer, which will be placed in condition for the carriage of passengers and freight. In course of completion at Dawson City are 2 fast & powerful steel steamers of medium size & modern design, which were constructed in England, & will be used in connection with the larger steamers. To handle the through traffic from the temporary terminus of the White Pass Ry. at the head of Lake Bennett to the White Horse rapids, where connection is made with the steamers to & from Dawson City, the Co. has under construction in the East a fast packet steamer for the lake work. This boat is being built of steel, with a length of 115 ft. & 24 ft. beam. She will have 3 fore-and-aft and 7 transverse water-tight compartments. The boiler is of the Yarrow water-tube type, & the engines are of great power, giving the boat an ordinary working speed of 15 miles an hour. She will be fitted with electric lights, including search-lights, & will be equipped for the accommodation of passengers. She will be completed at an early date, & put into service immediately upon the opening of navigation. The Co. has made arrangements for warehouse & wharfage facilities at Dawson City & other important Yukon points, & has secured fuel for the entire season. A New York despatch says the Canadian Development Co. has bought the steamships Werra & Fulda, & will put them on the Alaska route. Sometime since it was stated these vessels had been sold to the Canadian Steamship Co., to run between Milford Haven and Paspébiac, Que.

Richelieu & Ontario Navigation Co.

The following report was submitted at the annual meeting, Feb. 11: Your Directors submit herewith a statement of the Co.'s business for 1898:

	1898.	1897.
The gross receipts were	\$7,814.77	\$688,000.00
Operating expenses	590,459.44	577,185.44
Fixed charges	25,176.81	20,415.77
Net profit	\$1,178.52	\$90,398.79

Two semi-annual dividends of 3%, each amounting together to \$104,400, were paid, leaving \$7,627.55 to be carried to surplus. The earnings show a continued increase, notwithstanding that the 2 large railway companies made a reduction of 50% in their passenger rates throughout the entire season, & that owing to the Spanish-American war, the tourist traffic was very light up to the

end of July, & that there were greater delays in usual navigation in the canals. The increase in operating expenses is mainly due to the large extra improvements made in a number of the steamers. The business of the hotel at Tadousac has been very satisfactory. The hotel has been operated on a liberal scale with a view to increase travel. In consequence of its continued inability to accommodate the guests offering, another enlargement of the building was made in Oct. & Nov. last, the grounds about the hotel improved, & golf links added to the other amusements. A complete electric light plant will be added. The directors regret that the new steamer Toronto was not ready for service on the Western route in Aug. last, as expected. She will be in commission on the opening of next season. It is the intention to equip the entire service between Toronto & Montreal with new steamers of the largest size practicable, & to enlarge the steamers on the other principal routes, as the increasing business requires. Parliament will be asked, at its next session, for power to increase the Co.'s capital for that purpose. It is also the intention to place 2 steamers on the Hamilton route during the ensuing season, & a daily service on the Saguenay route. In conformity with the deed of trust securing the Co.'s Bonds, issued in 1895, 40 bonds of £100 each, amounting to \$19,466.66, have been withdrawn & cancelled, making a total to date of \$55,479.98 out of the original issue of \$571,883.33. The Co.'s steamers & the property have been kept in a first-class & improving condition. The directors are pleased to report that their relations with the railways, on both sides of their line of navigation, are of the most cordial character.

FINANCIAL STATEMENT YEAR ENDED DEC. 31, 1898.

ASSETS.	
Steamers, real estate, buildings, wharves, etc.	\$2,369,842.99
Coal, stores, provisions, etc.	96,683.61

Carried to surplus Dec. 31, 1898.....	7,627.55
Net income over & above expenses, fixed charges & interest, for year ended Dec. 31, 1898.....	\$112,027.55

After the adoption of a by-law regarding the issuance of stock certificates, President Forget asked the approval of the action of the directors as regards the application to the Legislature to amend the charter & give the right to issue additional stock & also to give power to take up the management of hotels. This was granted.

The following directors were elected: Senator Forget, W. Wainwright, R. Forget, Col. F. C. Henshaw, W. Hanson, J. K. Osborne, H. McKenzie, C. O. Paradis, E. B. Garneau,

J. Lewis & Major Pellatt, the latter replacing J. Swift, of Kingston.

I. McL. Spackman wished to know the basis of cost of the Co.'s vessels. Was the cost as shown in the statement based on the original cost of the fleet? Was it based on the price the vessels would bring to-day? or was there a present estimated value placed upon the fleet? These were questions which in his mind had much to do with the present price of the stock in comparison with other stocks in the market. It was often said on the Street that the Co.'s steamers were placed at altogether too high a valuation, & this story, which had persistently gone around for years, had done much toward preventing the stock from climbing upward at a rate which the shareholders thought was warranted by the earnings.

Senator Forget said that some years ago when he took hold of the Co. a board of experts was appointed, & it was their estimate which had been followed in making out the valuations of the different steamers of the line.

Lt.-Col. Henshaw said he was well aware that this had been a source of annoyance for years. At the time that Senator Forget became the President of the Co., J. Cantin, of Montreal, & G. Davis, of Quebec, & one other disinterested man were appointed a board of experts to give a proper valuation to the steamers, & he considered that the present valuation was very low indeed.

The General Manager said the str. Quebec was valued on the books at \$175,000, & the str. Montreal was valued at \$130,000. The contract price of the new str. Toronto was \$240,000, & the extras would amount to another \$30,000. The earning power of the old steamers, combined with their first-class condition, placed them in a very enviable position as compared with the new steamer.

W. McNally asked what the prospects were for the American Line this year. W. Wainwright said that the Richelieu was on the best of terms with the New York Central, but as regarded the American Line he could give no information.

Senator Forget was re-elected President, & W. Wainwright, Vice-President.

"Investor" writes from Montreal to the Monetary Times as follows:—"At the annual meeting of the R. & O. N. Co., held here this week, the President of the Co. is reported to have stated, in answer to an inquiry from a shareholder, as to the value of the Co.'s property, that the Co.'s vessels were worth more than they cost; that a good steel hull would last for 100 years; that the steamers of the R. & O. Co. increased in value every year; he was certain that most of them were worth one-third more than their estimated value, & at any rate could not be replaced for what they had cost. Lieut.-Col. Henshaw is said to have stated that the steamers were worth twice what they had cost; he thought the President undervalued them. General Manager Gildersleeve gave the cost of the 3 most expensive of the Co.'s boats, concluding with the new Toronto, just being completed, at a cost of \$270,000. 'That will show you what steamers cost,' said Lieut.-Col. Henshaw, in the published reports of the meeting, 'and we have 25 of them.'

"Now, on behalf of the investing public, I would like to ask, are these numbers to be understood as showing that the directors of the

R. & O. N. Co. are writing the words of a new comic opera to take the place of H.M.S. Pinafore, or do they thus place themselves on record as responsible men in control of the finances of a great company? Can Senator Forget repeat his statements with a straight face, & assure us that the Algerian for instance, so often re-built, is worth what she cost the Co. And if steel hulls have a life of 100 years, why has the Cunarder Adriatic, built in 1871, been condemned to the scrap heap during the past few days. As to replacing those boats at cost price, I agree with the President that it is impossible, because any board of directors, letting contracts for such boats at such prices would be immediately subject to examination, de lunatico inquirendo by their next of kin. The evidence offered in the dialogue between Mr. Gildersleeve & Mr. Henshaw is rather conclusive. To reduce the matter to a more concise statement, if the 3 best boats are worth \$575,000, what is the value of the worst one? The answer may be any amount the reader feels competent to decide upon. What a Klondyke the ark would have been, if it had only been registered in the R. & O. fleet, & kept in commission."

It is said the str. Toronto will commence running between Toronto & Prescott June 1. The running of the Co.'s lake steamers will differ somewhat from last season. Stops will not be made at Bowmanville, Port Hope & Cobourg, & a U.S. city of large size will be touched at instead. With the present business revival & the abundance of money, together with the new steamer, the directors state they expect the gross receipts to turn the million mark in the season of 1899.

ELECTRIC RAILWAYS.

Halifax Electric Tramway Company.

At the third annual meeting, Feb. 13, the following report was presented:—The business of the Company for the year ended Dec. 31, 1898, shows a net profit, after the payment of all fixed charges, of \$54,784.54 as against \$49,808.77 of 1897. From the profits of this year 4 quarterly dividends of 1½% have been paid, leaving \$6,784.54 to be carried forward to profit & loss account. The gross earnings were \$197,830.46, an increase over 1897 of \$4,450.78. There was an increase in operating expenses of 5.35% for the first 6 months of 1898 over that of the corresponding 6 months of 1897, & a decrease in operating expenses for the last 6 months of 1.45%. The increase in the operating expenses for the first 6 months of 1898 was due to the cost of removal of unusually large quantities of snow. The power & electric light plants have received careful attention, & are in a condition of high efficiency. The rolling stock has been increased by the addition of 2 open & 2 box cars. The construction work in the power house commenced in 1897 has been completed during the past year, & in addition a rotary transformer has been added to increase the available power for railroad purposes. Double track & turnouts have been laid on Barrington, South Park, Pleasant & Hollis Sts., in consequence of which the Co. has been enabled to operate 18,591 more car miles, & thus render better service. The property adjoining the power house, containing 21,420 sq. ft. of land,

Sectional Pipe and Boiler Coverings

of every description.

Engine Packings, Oils and Grease.

Belting, Cotton Waste, &c. ❀ ❀

ASBESTOS in all its forms ❀ ❀

EUREKA MINERAL WOOL & ASBESTOS CO., 136 BAY ST., TORONTO.

has been acquired, & a substantial car house, with a capacity for storing 20 cars, has been erected thereon, the basement of which has been fitted up & furnishes accommodations for store house & stables. In order to meet public demand, workmen's tickets, 10 for 25c. between 6 & 8 a.m. were issued during May, & although this did not have the effect of increasing our revenue, yet the increased traffic counterbalanced the reduction in tariff. After careful consideration to further popularize the service & to increase the business the directors decided to issue tickets at a reduced rate of 6 for 25c., & 25 for \$1 from Dec. 1. Experience has demonstrated the wisdom of this decision, as there were 23,042 more passengers carried in Dec., 1898 than during Dec., 1897, & the returns for Jan., 1899, show an increase of 29,468 passengers over Jan., 1898. The total number of passengers carried during 1898 was 2,419,268, showing an increase of 84,308 over 1897. Convenient & suitable offices have been erected adjoining the power house, & now the entire staff of the Co. is accommodated at the works.

STATISTICAL STATEMENT.

Toronto Railway Litigation.

Interesting questions have recently been litigated between the City of Toronto & the Toronto Ry. Co., in the efforts to compel the Co. to equip its cars with rear end vestibules. The Ontario Act of 1894 authorizes municipal councils to require proper & sufficient vestibules to be placed upon the cars of electric railway companies during Nov., Dec.,

Jan., Feb. & Mar. to protect the motorman & persons in charge of the cars from exposure to the cold, rain, snow & sleet while engaged in operating the cars. The Toronto Ry. system is operated by single motor cars, which have but one vestibule, at the end occupied by the motorman. In Nov. last the City of Toronto laid an information before the Police Magistrate, charging the Ry. Co. with a breach of by-law in not having a rear end vestibule. Proceedings before police magistrates against corporations had not been common, & it was held in the case of indictable offences that the Magistrate had no power to summon corporations. The Toronto Ry. Co. endeavored to prohibit the Magistrate from hearing the complaint against it, & the case dragged its way through the courts until Jan. 24, when it was heard before Police Magistrate Denison. J. S. Fullerton, Q.C., & W. C. Chisholm, appeared for the City, & J. Bicknell for the Ry. Co. The principal questions involved are: (1) Is a conductor a person intended to be protected by the Act? (2) Is the conductor engaged in operating the car? (3) Is it necessary that a vestibule should be placed upon the cars to protect conductors? (4) Is the Toronto Ry. Co. subject to the jurisdiction of the Provincial Legislature or the Dominion Parliament as to vestibules? Several conductors were called, & their evidence showed that vestibules were unnecessary. The Police Magistrate expressed the opinion that the Act did not require vestibules to protect the conductors, but thought it safer to allow the case to go to a higher court. This could only be done by inflicting a nominal fine upon the Co., & he therefore fined it nominally \$5. Notice of appeal has been served for the General Sessions, which commence Mar. 7.

The appeal by the Toronto Ry. Co. to the Court of Appeal, to be allowed to put in new evidence to reduce the assessment of its plant in Ward 1, as in the other wards in the city, has been disallowed. Since the completion of Ward 1 assessment, & before those of the other wards, decisions were made by courts in Toronto & in Hamilton, adjudging that street railway plants should not be assessed as belonging to a going concern, but simply on the basis of the market value of the material intrinsically. On this basis the rest of the assessment of the Toronto Ry. was made, & great reductions resulted. Ward 1, however, still remained at the old figure, & the Co. has been endeavoring for some time to put it on the same footing for 1898. The Court of Appeal, in its judgment, says that no case has been made out, & that the new evidence should have been put in to the court below when the assessment appeal was first made. In Wards 2, 3, 4, 5 & 6 the Co.'s assessment was reduced to \$900 a mile, which made a total reduction of \$450,000.

Methods of Increasing Traffic.

By W. Banks, of the Toronto Railway Co.

Electric railways, like the steam roads, have found that traffic will not come by merely opening the road, so it has been found necessary to have a staff to cater for traffic. At present the Toronto Ry. Co., with more than 80 miles of tracks, has only one park under its absolute control, but the beauty of that one park, its fine location on the prettiest and healthiest part of Lake Ontario, makes it one of the most attractive & pleasant of summer resorts. It is known as Munro Park, & is a very short distance outside the eastern city limits. By arrangements with the owners, the Co. has access to Victoria Park, Long Branch, & other pleasure resorts, while the whole of the many extensive & beautiful city parks are all located on the routes of the company.

The summer traffic is limited to May, June,

July, Aug. & Sep., but fully five-sixths of it to June, July & Aug. Owing to the necessary improvements in Munro Park not being quite finished, the T. Ry. Co. was compelled to confine its entertainments last summer to band concerts & minor attractions. All of these, however, were very profitable, & the Co. is preparing for a busy season this year. This city has an extensive water front & beautiful island summer resort within the city limits, & it is anticipated that at no distant date boat trolleys will be placed in operation along the water front by our Co. to carry passengers to & from & around the island.

Admission to our park & pavilions being free, we have to look to the passenger traffic for a return of our expenditure on entertainments in the park & in the grounds to which we have access. Our attractions will be of a very high class, & there will not be a single performance to which the most refined cannot come. We also endeavor to avoid entertainments deserving close attention for any length of time, our desire being to amuse the groups of picnickers, none of whom care to sit for even half an hour closely watching a performance. We propose also trying the experiment of giving financial aid to any first-class entertainment to be given on grounds close to our car routes, & to issue round trip tickets to include admission to such entertainments. Where we give financial backing our own staff will sell tickets & control the finances. We have, of course, absolutely no control over the city parks, but we reap some benefit from traffic caused by a series of band concerts in these parks, for which the city council pays. The municipality is not always the best caterer for the public, so we are anxious to see a higher class of concerts, & the convenience of the public better provided for by the erection of more pavilions & greater facilities for obtaining necessary refreshments, cooling drinks, etc. All these details may appear commonplace to many managers, but on them a very great deal of our traffic depends.

The private car & moonlight excursion traffic grows in popularity, & we have done a good deal to foster and encourage it; our circulars have been sent to every clergyman, Sunday-school superintendent, secretary of church society, & to all the secret, fraternal, national & labor organizations in the city & within an area of 10 miles around. Our charter compels us to carry passengers from any part of the city to any other part at a single fare; fixes the fare at 5c., & also fixes the prices of tickets bought in quantities, & requires us to give workmen's tickets at the rate of 8 for 25c., available during certain hours in the morning & evening. We have not, therefore, much room for special cheap excursion rates, yet we have devised means for this description of traffic, & small or large parties can have a percentage on a certain class of tickets, while we ourselves run three nights per week cheap excursions to Long Branch.

Many of our storekeepers give street car tickets as bonuses to their customers, & find it a most successful plan for securing business. When a customer knows that car fare from & to any part of the city can be had at a store, the distance from such store is no drawback, but, especially in fine weather, is an added inducement to patronizing that place. The storekeepers get no discount on the tickets they buy for this purpose.

Almost all plans for increasing traffic successfully tried by other managers are now, or shortly will be, in vogue on the T. R. Co.'s lines, except reduced prices for lunch, & we are endeavoring to perfect plans for sharing in the steam railway & steamboat traffic. We have all around our city, villages, towns & cities, from which we propose to arrange for excursions by boat or rail, as the case may be. The tickets for such excursions will, of course, include our charges for special cars to meet

parties at the wharves or depots, convey them to our park & back in the evening, including a trip around the city. There are immense possibilities in this traffic, which will, of course, require a good deal of hard work & attention to make it a success. We also propose arranging with those railways in the U.S. which have through booking rates to Toronto to keep us posted on all excursions announced for this city, so that we can arrange for special trips. Many of these excursionists are often in the city for only a few hours, & would gladly avail themselves of our cheap, pleasant & speedy mode of seeing the sights. We are putting ourselves in communication with excursion agents everywhere, with a view to developing this traffic.

Many star singers, actors, lecturers & public entertainers visit Toronto, & the railways frequently run excursions from neighboring towns on the occasion of such visits. The traffic thus brought in, we also desire to handle, & make arrangements for special cars, & for the attaching of our passenger coupons to entertainment tickets, railway tickets, entitling the holder to ride on our cars to & from the depots or steamers. We are always prepared to deal liberally with good circuses & big shows of any kind.

One of the drawbacks supposed to exist in Canada to electric railway excursion traffic is the alleged long & severe winter, popularly associated in the U.S. & Great Britain with this Dominion. No greater mistake ever existed than that about the Canadian winter. Of course, if a person go north as far as the Hudson's Bay regions he will enjoy a long, bracing winter, but here we seldom see snow until Dec., & scarcely ever have a heavy fall until after Christmas, & by the middle of Mar. there is very little of the snow left. The "oldest inhabitant" has stories of long winters, but these have evidently disappeared since the introduction of railways. It is a rare event for the street car traffic of this city to be seriously interfered with for more than an hour or two any winter. To us, however, the winter brings no cessation in our work of catering for traffic. Theatrical performances, concerts, skating carnivals, hockey matches, ice-

boat racing, curling, sleighing, snow-shoe racing, & all other winter sports, are utilized for our benefit. A series of matches for valuable prizes has been arranged for this winter, always on grounds or in rinks on our routes. We contemplate giving some winter in our park realistic plays, showing Nansen's famous journey in search of the pole, the Peary expedition, and from England we may bring some genuine Franklin relics, to be shown in a series of performances illustrating the last voyage of that famous explorer. We also hope to secure the presence in the city of the most noted skaters and snow-shoe racers of the world, & intend to give in our grounds "The Bells," the play made famous by Irving, making the sleigh ride a great feature. Then there are the possibilities of the ice palace, with the many attendant attractions it would give opportunities to present.

The intense love of everything British, which characterizes our people here, is a valuable asset of the electric railway, for in the winter it will enable us to present to the present generation realistic exhibitions of the Crimean campaign, securing for the purpose the co-operation of the three volunteer regiments of the city as well as that of the permanent force. This will insure an interest in the performance of more than 2,500 men, & the same rule applies to all performances of a military nature. The British spirit of our people induced us to try & get Piper Findlater, of Dargai fame, to visit Canada under our direction. Should he come here with several of his comrades of the famous Gordon Highlanders we can put the show in enclosed grounds, & give a round-trip ticket from any part of the city, including a reserved seat on the grand stand, for 25c., & we have no fear that the numbers attending will be less than 25,000 daily. We can sell round-trip tickets with numbered reserve seat coupons attached at our offices throughout the city until 2½ hours before each performance, after that a special man on each car on the main routes will sell the tickets. This will leave our regular staff free to deal with the ordinary traffic. A similar plan can be pursued in other cases where large crowds may be expected.

This is an outline of the leading features of the plans adopted or in contemplation for the encouragement of traffic on this road. There are many other ideas constantly cropping up, but from this it will be seen that we do not propose laying out expensive racing grounds or bicycle tracks. My opinion is that we should bend our own energies to securing each first-class attraction as soon as it is in evidence, leaving private parties to speculate in grounds for sports. Of course, wherever such grounds are convenient for our cars we are always ready to assist in making such sports successful.

We may give our U.S. visitors a treat on an early date by showing on the lake in front of our park exactly how Santiago was captured. We will have the work done under the direction of a naval officer of known ability. This reminds me that the location of Munro Park enables us to present land and water fêtes with equal success. We are able to turn the water front into a fine amphitheater, from which 10,000 to 20,000 people can witness "Pinafore," "Billie Taylor," or other performances of a naval character, and the stage will be a floating pontoon. We can reverse that order, & place our audiences on the pontoon, with our stage at the water's edge.

Of course, all descriptions of canoe, boat & yacht racing has our attention, with water polo, etc. With a first-class shore for bathing purposes, we will derive revenue by providing the best accommodation for bathers at nominal charges.

I have left myself little space to speak of plans for carrying into the city farm, dairy & garden produce to storage warehouses under our own control. All this, however, is receiving attention. I am not at all afraid of the horseless carriage—auto-car, or by whatever name the much-discussed vehicle may be known. It seems to me that the vehicle can only be a success when used in connection with electric cars. There are in all large cities streets on which tracks will never be laid, although the routes thereon would be profitable, & there are others on which it will not pay to lay tracks, but from which a good deal of traffic can be obtained. If the auto-

Canadian Pacific Railway Company.

Dividends for the half year ended December 31st, 1898, have been declared as follows:

On the Preference Stock two per cent.

On the Common Stock two per cent.

Warrants for the Common Stock dividend will be mailed on or about April 1st to Shareholders of record at the closing of the books in New York and London respectively.

The Preference Stock dividend will be paid on Saturday, April 1st, to Shareholders of record at the closing of the books at the Company's London Office, 1 Queen Victoria Street, London, E.C.

The Common Stock transfer books will close in London at 3 p.m. on Tuesday, February 28th, and in Montreal and New York on Friday, March 10th. The Preference Stock books will close at 3 p.m. on Friday, March 10th.

All books will be re-opened on Thursday, 6th April.

By order of the Board,

CHARLES DRINKWATER,

Montreal, February 6th, 1899.

Secretary.

Notice to Shareholders.

The Eighteenth Annual Meeting of the Shareholders of this Company for the election of Directors and the transaction of business generally, will be held on Wednesday the fifth day of April next at the principal office of the Company at Montreal, at twelve o'clock noon.

The Common Stock transfer books will close in London at 3 p.m. on Tuesday, February 28th, and in Montreal and New York on Friday, March 10th. The Preference Stock books will close at 3 p.m. on Friday, March 10th.

All books will be reopened on Thursday, April 6th.

By order of the Board,

CHARLES DRINKWATER,

Secretary.

Montreal, 6th February, 1899.

car can be cheaply & neatly constructed & easily managed, I would use it on such routes as those referred to as traffic feeders for the cars, & I would be prepared to convey one or more persons by these vehicles to church or weddings, or any other place or service, more speedily, cleanly & promptly than the liverymen now do such work.

In concluding, I am satisfied that the possibilities of electric railway traffic are practically inexhaustible, & that when the traffic & entertainment managers of these roads hold their next convention it will be the convention of men standing at the beginning of a great & successful movement, such as few other undertakings can expect to attain.—Street Railway Journal.

The Lewiston Suspension Bridge.

The suspension bridge which is being built across the Niagara River just above Queenston, Ont., & Lewiston, N.Y., is on the site of the old suspension bridge built in 1851 & 1852, which was destroyed by a gale in Feb., 1864. Many will remember having seen the cables swinging from the towers any time in the last 35 years. The new bridge is building for the Queenston Heights Bridge Co. of Canada & the Lewiston Connecting Bridge Co. of New York state. It is being built primarily to carry an electric railway, which will make it possible to complete a belt line around the Gorge. The principal dimensions of the new bridge are: Span from tower to tower, 1,040 ft.; span of stiffening truss, 800 ft.; width, center to center of trusses, 28 ft.; width of roadway, 25 ft. The bridge will carry a single track for electric cars, with a roadway on either side. No footwalks are provided, inasmuch as there will be very little travel of that sort over the bridge. The flanking span on the New York side will be 34 ft. 6 in. long, & that on the Canadian side 19 ft. 6 in. The towers on the New York side are 26 ft. high, & those on the Canadian side 18 ft. On the New York side the towers were placed 28 ft. back from the edge of the bluff, & on the Canadian side 15 ft. Much of the tone of the old towers was used in the foundations of the new ones. The inscription stones in those towers were saved & placed in the new towers.

There will be 4 cables, each made of 14 2½ in. steel wire ropes. These ropes are from the cables of the upper suspension bridge at Niagara Falls. These cables were so long that it has been possible to cut them in two & use them for the new bridge, but to get sufficient length about 75 ft. at each end of each cable will be made up of eye-bars. The versed sine of the cables will be 87 ft., & they will be anchored in the solid rock about 150 ft. back from the edge of the bluff.

From the dimensions given it will be seen that the truss stops 120 ft. short of the tower at either end, & here the traffic will pass from the fixed flanking spans on to the suspended structure. At each of these points a rocker bent is introduced, supported on a shoe below & going up to the cables above. This bent is hinged at the shoe, the end of the truss & the cables.

The clear height of the bridge above high water will be 65 ft. The cables will weigh 200 tons, & about 800 tons of metal will be used in the superstructure. The bridge will be designed to handle the heaviest trolley cars & to carry a uniformly distributed load of 40 lbs. to the sq. ft.

There will be considerable incidental masonry in connection with the work. Face walls have been built along the approaches to save the shale from weathering. On the New York side the face wall is about 19 ft. high at the highest point & runs down to 2 ft. Its length is 800 ft. Other walls will be built on the east end of the New York approach for a distance of 150 ft. & over all these a growth of vines will be encouraged. Railroad Gazette.

British Columbia Electric Railway Co.

Earnings and expenses for December:

GROSS EARNINGS.	1897.	1897-8.	INCREASE.
Railway—Vancouver	\$4,375	\$5,806	\$1,431
Victoria	6,068	7,419	1,351
Westminster	1,814	3,824	2,010
Lighting—Vancouver	6,068	13,265	7,197
Victoria	5,559	7,268	1,709
Total gross earnings	\$20,875	\$41,042	\$20,167
Working expenses	\$20,615	\$23,980	\$3,365
Net profits	\$2,260	\$17,062	\$14,802
Aggregate Gross Earnings from April 1 to Dec. 31	\$200,316	\$307,829	\$107,513
Aggregate Net Profit from April 1 to Dec. 31	\$27,382	\$126,487	\$99,105

The aggregate gross earnings and net profit for 1896-97 are from April 15 only.

Maritime Province Lines.

Dartmouth.—The town council is asking power from the Nova Scotia Legislature to issue \$150,000 of bonds for the purpose of operating an electric street railway in the town & vicinity. A bill will also be submitted empowering the issuing of bonds for \$50,000 to establish an electric light plant for lighting the streets and public buildings.

The Halifax Electric Tramway Co. has increased its capacity to a large extent. It has increased its track & overhead equipment by completing single track loops, double tracking sections & putting in several new turnouts. It has increased its rolling stock by adding 2 box cars, with all latest improvements, such as electric heaters, electric headlights, etc.; 2 open bulkhead cars, 2 box trailers & 1 snow sweeper. These cars were all built by Rhodes, Curry & Co., at Amherst, N.S. During the year just closed the Co. purchased adjoining property & erected an additional brick car shed, 60 by 100 ft., in the basement of which are the Co.'s stables. The offices have been enlarged by a brick addition, & in the station a large quantity of new machinery has been put in, including the latest alternating machines, rotary transformers & tandem compound engines. Mechanical stokers are being installed. During the past year alternating incandescent arc lights have been introduced throughout the city. The Co. has over 14,000 incandescent lamps installed, over 300 arc lamps & 100 alternating arc lamps. There are also a great many motors for manufacturing & elevator purposes. The number of regular employees is about 150, although this number is largely increased from time to time as the work demands.

Moncton St. Ry.—B. F. Pearson, a director, & F. Huntress, Manager of the Halifax Electric Tramway Co., recently visited Moncton, a local paper stating that their visit was in connection with a proposition to take over the Moncton line. Mr. Huntress recently advised us that they were requested to make a report on the Moncton line & to see if some arrangement could be made to extend it & to put it on a better footing, but that nothing had resulted when he wrote.

Yarmouth, N.S.—The street railway is said to be making considerable improvements in its cars & to have ordered several up-to-date motor cars.

Lines in Ontario.

Belleville Traction Co. The extensions & improvements proposed to be made by this Co. last year were not carried out, as the issue of \$70,000 5% 20 year 1st mortgage bonds was not successful. The Co. hopes to be in a position to go on this year with the work, which will include an extension of the line

from Front St. west to the cemetery, and to a park adjoining it. (May, '98, pg. 80.)

Cornwall Electric Street Ry. Co. Under a judgment recently given by Chief Justice Armour, in the action of the trustees for the bondholders, the Sun Life Assurance Co., of Montreal, against this Co., the road has passed into the possession of the bondholders, for the present at all events, & is being operated by them. The claim of the Sun Life against the Co. was for bonds of the par value of \$100,000 with interest. They are 1st mortgage 5% 20 year bonds. The whole issue was taken by the Sun Life, & the trustees proceeded owing to the interest being in default. According to the statement of the Ry. Company issued in Sep., 1898, the total assets amounted to \$234,956.10. This, however, is believed to be somewhat in excess of the real value. The capital stock of the Co. issued & taken up amounted to \$117,000, out of an authorized capital of \$150,000. A large share of this stock is held in Montreal, & a good portion of it is said to be in the broker's offices. The officers of the Sun Life state that the judgment of the court will cut out all shareholders & unsecured creditors, & that they will have no claim whatever upon the Co. This means that the stock will not be worth more than the value of the paper upon which it is engraved.

One of the leading shareholders of the Ry. Co. ridicules the idea of the unsecured creditors being left out in the cold, & states that it is not by any means certain that the shareholders will be cut off, as the judgment lately handed down by Judge Armour, & under which the Sun Life claims it can squeeze out the present stockholders of the Co., & the various creditors, was merely a decision as to whether the Co. had the legal right to have the mortgage deed specially designate whether or not it covered the property acquired since the time of its execution. The shareholders claim that the decision is a very vague one, & in fact, implies a doubt as to whether the defendants in the case were legally privileged to carry on such action or not, & further states that the judgment is anything but decisive. For this reason some of the stockholders decided to appeal from the decision. It is claimed by the directors of the Ry. Co. that a short time ago, wishing to make further extensions in Cornwall, & to complete an amalgamation with the Gas & Electric Light Companies, which would place the road on a dividend payment basis, an arrangement was drawn up with the holders of the bonds to provide further funds for these extensions, & it would likely have been put into effect had not the mortgagors stipulated that they could not be responsible for the unsecured creditors of the Co. Among the latter were some of the principal stockholders, who had stood by the road in its infancy, & whom the Co. considered should be protected. The bondholders objected to this, with the result that several of the principal creditors brought action against the Ry. Co., & instituted a seizure on some of the Co.'s rolling stock & other properties acquired after the execution of the mortgage. It was then decided to test the validity of the legal action, as to the proper interpretation of the mortgage deed. This action, it is contended, can have no effect whatever on that which has been instituted on the Ry. Co. by its creditors, which comes up some time in March.

Mr. Talbot, of the Sun Life office in Montreal, is in charge of the road for the present. It has 7 miles of track & an equipment of 6 motor cars, 2 trailers, 1 freight locomotive & 1 sweeper. The line was built in 1886.

Galt, Preston and Hespeler. At the 7th annual meeting, Jan. 31, the following were elected:—President, H. McCulloch; Vice-President, M. Todd; Sec.-Treas., W. H. Lutz; other directors, J. W. Leonard, J. C.

Moore, E. Clare & D. Spiers. The report showed last year to be ahead of the previous one in both freight & passenger business & the prospects indicate a further increase this year.

The Hamilton, Chedoke & Ancaster Electric St. Ry. Co. will apply for an amended charter, giving it power to build to Brantford, to change the name to the Hamilton, Ancaster & Brantford Ry. Co., & to increase the capital stock from \$100,000 to \$300,000.

Hamilton, Grimsby & Beamsville.—A deputation from Vineland recently asked the Co. to extend its line to that place, which is 5 miles from Beamsville. The directors have decided they will not consider any proposition to extend the line to Vineland unless the Co. gets right of way to St. Catharines, & the St. Catharines people build a bridge over the canal.

Hamilton Street Ry. At the recent annual meeting the following directors were elected: E. Martin, President; J. A. Bruce, Vice-President; W. Gibson, B. E. Charlton, I. Beer, W. J. Harris & F. W. Fearman.

London St. Ry.—Total gross earnings for 1898, \$113,811.73 against \$101,365.94 in 1897. Passengers carried in '98, 2,841,568; miles travelled, 1,074,302; gross earnings per capita of population, \$2.95. The old board of directors has been elected. H. A. Everett is President, T. H. Smallman is Vice-President, replacing E. W. Moore.

The Co. is suing the city for \$20,000 in connection with the recent strike. The claim is "for inciting riots, causing damage to the plaintiffs, & for neglect of duty & for breach of duty."

The appeal of the Co. to have its property assessed as personal, has been allowed by the Court of Appeal. The City contended that the plant of the Co. was realty, & as such should be assessed. The case went through the lower courts, ending with a decision in favor of the City. This the Court of Appeal judgment reversed, & decided the poles, rails, wires, etc., should be assessed as personalty.

The Co. was recently mulcted at the Assizes in three amounts, of \$800, \$600 & \$2,500 by reason of claims for injuries.

G. Whitaker, of Toronto, has been appointed Assistant Superintendent.

Metropolitan St. Ry.—A special committee of York County Council recently reported having come to an agreement with the Council of Aurora regarding the extension of the road from Richmond Hill to the latter place. The gauge is to be 4 ft. 8½ in., & the road to be built to the satisfaction of the County Engineer.

At a recent meeting of a committee of Toronto City Council City Engineer Rust explained that at present the gauges of the Toronto Ry. Co. & the Metropolitan were the same, about 4 ft. 11 ins., but that a change to 4 ft. 8½ ins. had been suggested on the northern line. He had heard that the explanation of this lay in the desire of the C.P.R. to carry its

freight cars down the line, so as to compete with the G.T.R. It would make it awkward if the Metropolitan made the change.

A. H. St. Germain is agitating for a cancellation of the 15 years' extension of franchise given the Metropolitan Co. over a year ago by York County Council, on the ground that the Co.'s undertakings have not been performed.

Nepigon Electric Ry. Co.—T. A. Gorham, Port Arthur, gives notice of application to Ontario Legislature to incorporate a company under this name, to build a line from Nepigon station, on the C.P.R., to the shores of Lake Nepigon, with branch lines not exceeding 12 miles in length.

Ottawa Electric Ry.—The illustration on page 61 shows a car which gladdened the hearts of thousands of children in Ottawa on Christmas eve. The idea of the Santa Claus car originated with W. V. Soper, of Ahearn & Soper, who, under the nom de plume of Santa Claus, had letters in the local daily papers for several days before Christmas. These letters were dated from various points between the North Pole & Ottawa, & announced that on the afternoon & evening of the day before Christmas Santa Claus, attended by a suite of brownies, would go through the streets of the city upon the top of an electric car, & would distribute oranges to the children as he passed. The last letter gave a time table of the hours at which the car would reach various points on its route. The jolly saint, blowing a tally-ho horn, & surrounded by brownies, passed through the streets on the afternoon & evening of Dec. 24, & very large crowds turned out to see him. The car was decorated on each side with appropriate Christmas mottoes, framed in evergreens & incandescent lights; on the front dashboard was the date, 1898, & on the rear 1899; the windows were filled up with toys & boxes in bright colored wrappings. During the trip about five thousand oranges were thrown out to the children. The car was in no sense an advertisement, but was solely for the purpose of giving an afternoon's amusement to the youngsters of Ottawa. It was a most liberal & commendable treat.

Parry Sound.—The local Board of Trade has recommended the construction of an electric railway between Parry Sound & Depot Harbor. The cost is estimated at \$25,000. (Dec., '98. pg. 272.)

The St. Catharines & Niagara Central Ry.—The notice of application to Dominion Parliament, detailed in our Dec. issue, pg. 273, has been withdrawn & another one substituted which states that application will be made for an act incorporating a company having power to acquire from the purchasers thereof the railway heretofore owned by the St. C. & N.C.R. Co. & to operate it, & with power to extend it to Hamilton & Toronto & to a point on the Niagara River, with a branch to a point on Lake Ontario, & with the usual powers conferred upon railway companies. This road, which was closed for traffic some months

ago, the Dominion Government Engineer having reported it unsafe, was sold under foreclosure proceedings to M. Neelon, of St. Catharines for \$35,000, subject to certain prior liens, amounting to about \$15,000, on land that was taken over by the road & never paid for. The purchaser paid \$3,500 down, but the period for the payment of the balance of the money has been extended by the Master-in-Ordinary several times to permit of the completion of negotiations for the transfer of the property to Haines Bros., of New York City, & others. The road now runs from Niagara Jct. on the M.C.R. to St. Catharines, 12 miles. Since the sale to Mr. Neelon it has been temporarily repaired, & is again being operated by steam. It is the intention of the new owners to electrify it, & it will probably be extended 3½ miles to Port Dalhousie, to connect with the boats. S. B. Colvin, of Glen Falls, N.Y., Treasurer of New York State, & J. A. Powers, banker, Albany, N.Y., are said to be interested with Haines Bros. in the scheme.

The St. Thomas St. Ry. Co. is advertising for a manager, "a man with business experience & knowledge of electricity preferred; must be a hustler."

Smith's Falls, Rideau & Southern Ry.—We are officially informed that \$75,000 of the capital stock of this Co. having been subscribed & 20% paid in, the permanent organization was proceeded with at a recent meeting of shareholders. The following are the officers: President, J. M. Clark; Vice-President, M. Ryan; and other directors, J. R. Lovell, R. J. Brodie, A. Patterson; Sec.-Treas., R.A. Bennett. The affairs of the Co. were reported to be in a very satisfactory manner, & bright hopes are entertained for the future, the early commencement of the work of construction being looked for. The idea is to construct a street railway for the town of Smith's Falls, to handle passengers & also transport freight to & from the various mills & manufactories of the town & the C.P.R. The manufacturing industries of the town being in a very flourishing condition, will readily take advantage of the improved facilities for transporting their goods by electricity instead of horse power, & thus lessen the cost of production. So soon as the line has become established in the town, it is the intention to extend it in the direction of the Rideau Lakes, & thus open up a section of country at present without railway facilities, & also bring within easy reach the famous lakes of the Rideau, which for "lovely scenery & delightful sport fishing" cannot be excelled, & which only requires satisfactory means of access to make them a favorite resort during the summer months.

Toronto Suburban St. Ry.—Notice is given of application to Ontario Legislature for an Act confirming agreements between the Co. & the Village of Weston, the Township of York, the Town of Toronto Junction, & other municipalities.

Toronto Railway.—Gross earnings for Jan., \$95,690.12, compared with \$86,562.36 in Jan., 1898; increase \$9,127.76.

To the Land of Sunshine.

Take the Sunshine Route from Chicago to Los Angeles, San Francisco and other points in California, and escape the rigors of winter in the East and North.

Pullman Tourist Cars for first and second class passengers leave Chicago every Saturday at 2 o'clock p.m. via the Chicago, Milwaukee and St. Paul Railway to Kansas City, thence to California via the Atchison, Topeka and Santa Fe Railway—a real Sunshine Route.

This is the earliest afternoon train leaving Chicago for the West after arrival of morning trains from the East, thus avoiding tedious delay.

The Sunshine Route is essentially the best and most patronized through car-line for men, women and children. Every attention paid to the needs of passengers en route.

Send for a Sunshine Route time-table folder. It costs

nothing. Address A. J. Taylor, Canadian Passenger Agent, 8 King Street E., Toronto, Ont.

Notice is hereby given that The British Yukon Mining, Trading & Transportation Company will apply to the Parliament of Canada, at the next session thereof, for an Act authorizing the said company to construct & operate a line of railway from a point at or near Fort Selkirk to a point at or near Dawson City; thence westerly to the one hundred & forty-first Meridian; also to construct & operate lines of railway from a point at or near Cariboo Crossing or from or near Tagish Houses to Teslin Lake or River & to Allyn, & with the consent of the Governor in Council, to construct & operate branch lines in the Yukon District not exceeding fifty miles in length; to change the name of the company to "The British Yukon Railway Company," & to divide the undertaking of the company into sections, & to borrow money separately upon each of said sections, or on any two or more of them combined; also to confirm the proceedings taken upon the organization of the company; & to further amend the Act incorporating the company.

CHRYSLER & BETHUNE.

OTTAWA, 10th November, 1898.

A conference on radial electric railway accommodation for Toronto was held recently between a special committee of the city council and Manager Keating, of the Toronto Ry. He said he had looked into the question, & had made enquiries as to the probable receipts of radial railways. To the east a line has been surveyed & examined as far as Highland Creek, & as far west as Etobicoke Creek a line had been laid out. He was not prepared definitely to commit the Co. to carry out these projects, but he believed it would be in the interest of the Co. to do so. The matter had been brought before the board, & would be further considered. When the market plans were published he had gone to the City Hall to see that provision was made for these railways. The idea was to carry fruit, eggs, butter, poultry & basket packages generally. What traffic could be got was a matter of speculation. It probably would not pay the first year, but he was convinced it would in the

Quebec Lines.

The Hull Electric Co. has bought for \$100,000 the C.P.R. Co.'s Hull-Aylmer branch, which it has had under lease for some time past, & which it has electrified.

Montreal Island Belt Line Ry.—This Co.'s line from Bout de l'Isle is being utilized to haul 300 to 400 carloads of ice from the Ottawa River to Montreal.

J. Rowley, Supt. of the Co., has been appointed manager of the Bout de l'Isle hotel, which has been taken over by the Co.

The Co. is applying for power to extend its present line of 13 miles for 40 miles.

Montreal St. Ry.—The gross earnings are as follows:—

	1898-9.	1897-8.	Increase
Oct.....	\$133,419.69	\$116,093.09	\$17,326.60
Nov.....	125,125.10	110,608.98	14,516.12
Dec.....	127,678.00	113,029.33	14,648.67
Jan.....	125,276.04	110,155.96	15,120.08

The Co. declared a dividend of 2½% for the

Eighteen months ago the Co. gave notice to the Postmaster-General that the agreement for carrying the letter carriers for the lump sum of \$200 a month would be terminated on Dec. 31, 1898. The Co. kept a record of the fares represented by the travelling of the letter carriers during both winter & summer months, & found they aggregated from \$1,000 to \$1,500 a month, and concluded that \$200 a month was too little compensation. The Postmaster-General is reported to have said that the Department was indifferent as to whether the contract was terminated or not, as he thought the carriers rode too much anyway, & a satisfactory agreement was not reached.

Sherbrooke St. Ry.—It is reported that this line has been sold to F. Thompson & Co., bankers & financial agents of that city, & that they have also acquired the Brompton Falls water power which will enable them to extend the line & increase the number of cars, which

OTTAWA ELECTRIC RAILWAY SANTA CLAUS CAR.

long run, & he advocated the work before the board. The work of construction did not present very serious difficulties. There were two rather large gorges to the east, one at Highland Creek & another at the Rouge, that would have to be spanned by iron trestle work. In the west, the crossing at Etobicoke Creek, the boundary between York & Peel counties, was the principal difficulty. It would be necessary to get the consent of the councils of both counties to this crossing, & in June last he began correspondence to that end. He had recently seen the York Council, & anticipated no serious difficulty in arranging terms. Authority would probably be obtained to extend the abutments of the present bridge, & add a special span to the superstructure for the passage of the cars.

The Co. has notified the City Council that it does not acknowledge liability to grant transfers from day to night cars.

quarter ended Dec. 31 last, payable after Feb. 1.

The Co. will apply to Quebec Legislature for power to increase its stock from time to time, & to authorize the extension of its lines to any point within 10 miles of Montreal.

The 2-mile extension on Rachel St. & up the Papineau Road to the C.P.R. crossing has been completed.

The Co. having decided to concentrate its car building & repair shops at Hochelaga, recently gave rise to a report that \$500,000 would be expended there in new works, & that not only would cars for the Montreal line be built there, but also cars for the Toronto, London, Winnipeg & St. John, N.B., lines. We are informed there is no truth in this. Some additional buildings are to be put up to permit of a concentration of work, but their cost will not exceed \$100,000, & the shops, &c., will be for the use of the Montreal line, & not to build for the other lines above mentioned.

could not be done with the present water power. This railway was opened about a year ago, & the earnings have been very satisfactory, exceeding the expectations of the Co. There are now 6 miles of road in operation, & it is probable that the line will be extended to North Hatley & other outside points.

The B.C. Electrical Supply Co., for the incorporation of which application is being made to the B.C. Legislature, asks for very extended powers, including the construction & operating of tramways, street railways & telephone systems.

Winnipeg Electric St. Ry.—The City Council has notified the Co. to build a line on Sherbrooke St. from Portage Avenue to Notre Dame Avenue, work to be commenced by May 15 next, & to be finished within a year thereafter. The Council wants the Co. to equip its cars with fenders.

TELEGRAPHS & CABLES.

Canadian Pacific Ry. Co.'s Telegraphs.

This department, on behalf of the Commercial Cable Co., announces that on and after Mar. 1 the rates to Holland & Belgium will be the same as the rates to Great Britain, France & Germany, viz: 25c. a word. The Holland rate will be reduced by 7c. a word, & the Belgium rate by 5c. a word.

The Pacific Cable Scheme.

Sir Sandford Fleming's recent letter to Colonial Secretary Chamberlain regarding the establishment of an Imperial cable system, of which the trans-Pacific line between Canada & Australia would form one of the main links, has aroused considerable interest in Great Britain & has been widely & favorably commented on by the press. The London Daily Telegraph says of it:—

"Not from commercial, still less from financial, but from patriotic considerations the announcement which has been made by the Ottawa correspondent of the Times as to the Pacific cable scheme is of supreme interest & importance. The project, in popular language, is to lay down an "all-British cable from the Pacific Coast of the Dominion of Canada, say from Vancouver, across the Pacific to the Australian Colonies." Thereby Canada & Australasia would be put in communication by means of a cable which touched no foreign territory, & would join at Nova Scotia with the Atlantic cables, which come direct to Great Britain. In this way there would be practically secured independent telegraphic communication with the outlying parts of the Empire. The political advantage of this is obvious, but apart from the inherent merits of the Pacific scheme its completion would secure the probability of Great Britain speedily possessing a cable system which no foreign country could control, girdling the globe & connecting our Colonies, dependencies, coaling stations & naval bases.

"The beneficence of the Pacific scheme has been conceded, but hitherto its realization has been impeded by various difficulties. It may be stated at once that there is no notion that the Pacific cable should supersede the present Eastern routes. Its advocates only claim that it should be an alternative route, & they argue that, as the companies who are now doing the work are highly subsidized, it would be impossible for a new and independent organization to compete with them unless they were correspondingly aided by the countries benefited. For some years the question, who should bear the cost, and in what proportion it should be contributed by the interested communities, has been a matter of discussion & negotiation. It has been generally accepted as a fair basis of settlement that the money should be found by the three countries which would be connected by the scheme—Great Britain, Canada & Australasia. The Imperial Government has always been ready to bear its share of the cost, as has also the Canadian Government, but hitherto the proportion to be relatively contributed has not been settled. As to Australasia there have been greater difficulties to surmount, because any arrangement suggested had to be ratified by the Governments of the different Colonies—a process which has necessarily taken a good deal of time. It is now announced that Australasia has fallen into line, & has undertaken to provide four-ninths of the cost of this cable, while the Imperial Government & Canada have agreed to find, in equal proportions, the remaining five-ninths. Should this news be confirmed, there is a strong prospect of the Pacific cable being constructed with the utmost possible despatch.

"The idea is that the line should not be worked by a subsidized company, but should

be a Government-owned cable, managed by the three Governments who have found the capital. The cable is, indeed, a part of the scheme of Sir Sandford Fleming, of Ottawa, who is the pioneer of the agitation for a round-the-world system of cables under British control, & who has recently written to Mr. Chamberlain a long letter, giving at length the arguments in favour of his proposal. In regard to the Pacific line, it is contended that if Great Britain & the Governments associated with it were to retain the ownership of the cable, they could borrow the money required for its construction on such easy terms that they could adopt a very moderate scale of charges for the transmission of messages. A cheap system of telegraphic communication in such a case means closer union between the countries which it connects, the development of their mutual commerce, & the conferring of many social advantages.

Referred as an expert to T. Skinner, Chairman of the Halifax & Bermuda Cable Co., & of the Direct West India Cable Co., & a director of the Commercial Cable Co., a representative of the Daily Telegraph was assured that the Pacific scheme was a matter of great importance, especially in connection with an all-round-the-world British cable system. The experience of any one Government owning cables was, he pointed out, almost nil, and unless a country had the command at both ends & at all the places touched by it, a cable in time of war would be useless. If the all-round-the-world British scheme was realized, the cables would only touch the different parts of the Empire connecting them all by a system of which they would be joint owners & with which no foreign country could interfere, unless, of course, as the result of a successful invasion, or by cutting the cable at sea. Mr. Skinner explained that his object had been to aid this linking together by a telegraphic chain the different parts of the British Empire. "The British Government," he said, "subsidized the Halifax & Bermuda Co. to extend the telegraphic communication from the Atlantic end at Nova Scotia to Bermuda, which is an important harbour for the British North American fleet, & it was the object of several years' agitation to demonstrate to the Government that the Co. should be assisted to get on to Jamaica, & so to place that island & the West Indies generally in direct communication with the mother country. All that we put before the Government was demonstrated at the time of the Venezuela crisis by the fact that when that crisis arose Great Britain was not able to communicate with Jamaica & the other parts of the West Indies, except through the United States. After that experience the Government & Parliament gave us a subsidy to lay a cable from Halifax to Jamaica. That cable was laid in 6 months, & it was just completed in time to enable the Spanish Government during its war with the U. S. to be in communication with Cuba & its other dependencies without its messages being subjected to the surveillance of the U. S. Government."

Telegraph Connection with Atlin.

J. W. Bridges, who has been up the Northern Pacific coast looking into the question of building a telegraph line to Atlin, said in a recent interview:—"So far as I have been able to see, there will be numerous difficulties to overcome. The country is exceedingly rugged & broken, & there are several lakes to cross which will necessitate the use of submarine cables. Some of these lakes, I understand, are both deep & broad, all of which increases the cost of construction. While ordinarily a fair estimate could be made as to the cost per mile for construction, in this case it would require a careful investigation of every foot of the ground to be covered, streams, lakes, depth of water, etc., before

anything like approximate figures of cost could be given. Then, also, the cost of maintaining a line, winter & summer, must be considered, especially in winter. The snows in your mountains are deep, & avalanches & slides are not uncommon at exposed points, so that a line constructed along the side of a mountain, which it appears to me will be necessary in order to get there for repairs, will be liable to injuries every winter.

"The parties that I represent propose a capital of \$50,000 to begin with. This will insure the construction of lines to Atlin & other camps; also an extension south to Juneau. While going up from Juneau, I attempted to follow the appearance of the coast along which a line should be constructed, but owing to the snowstorm I was unable to do as well as I had hoped to. I saw enough, however, to enable me to form an idea of the task of such an undertaking. There are many openings, canyons, creeks, etc., to cross; & the most practical plan, perhaps, will be to follow the shore line as close as possible, which will put the line in easy reach of the linemen in case of a break. The matter of a line from Juneau south to connect with the line at Victoria or some other point, has not yet been taken up, & will not be until we have the line into Juneau, which of itself will be a great step taken towards reaching the outer world."

--Victoria Colonist.

Canadian, B.C. & Dawson City Telegraph Co.—The Secretary of this Co., in London, Eng., informs us that the construction of the proposed lines will be in charge of E. G. Woodford, late State Mining Engineer, Transvaal. In regard to some criticisms on the Co's. prospectus made in a letter from us, the Secretary says:—"The estimate of 200 telegrams a day was arrived at by the directors after mature consideration, & they are well within the mark. The prospectus, as you say, did not contain any estimate of the proposed line. That would not be necessary, inasmuch as the directors had already concluded a contract with a responsible firm of contractors to construct the line."

We regret being unable to agree with the Secretary. In our opinion, the cost of construction should have been given in the prospectus, more especially as a contract had been let.

Halifax & Bermudas Cable Co.—The report for the year ended June last, presented at the recent annual meeting, says: "Since the last report the Co. contracted with the British Treasury to lay a cable to connect Bermuda with Jamaica, via Turk's Islands, & the Direct West India Cable Co. was formed to undertake the work. The contract was signed Aug. 2, 1897, & the cable was open for traffic Jan. 31, 1898. This extension greatly improves the position of your Co. by giving it through traffic. The receipts in the past year were £10,154, as compared with £3,742 in 1896-7. This increase is due to the opening of the Jamaica cable, & to the interruption of other routes during the Spanish-American war. The net result is a profit of £6,655, as compared with £951, an increase of £5,703. It is proposed to make a distribution of profits for the year by declaring a dividend of 5%, amounting to £2,500, leaving £4,155 to be carried forward. Offers for the sale of debentures to the trustees were invited in Dec. & June last, & £4,989 was paid for £5,100 of debentures, which amount has been written off capital expenditure."

On H. P. Dwight's Retirement recently from the Ontario Game Commission, of which he had been a member since its inception, the Commissioners unanimously passed the following resolution: "That the Commissioners desire to place on record their appreciation of the valuable services that have been rendered by Mr. Dwight as a member of this board, & at the same time to express the sin-

cere regard which their uniformly pleasant relations with him have inspired & the deep regret which they feel upon the occasion of his retirement.

TELEPHONE MATTERS.

The Bell Telephone Co.

Full particulars of the hearing of this Co.'s appeal against the assessment of its plant in Toronto were given in our Jan. issue, pg. 31. The Board of County Judges made a sweeping reduction, as will be seen by the following figures showing the assessment as made by the city & as reduced by the judges:—

	Before appeal.	After appeal.
Poles, wires & conduits	\$377,992	\$53,900
Temperance Street switchboard	177,174	12,000
Yonge Avenue & Parkdale switchboards	59,733	3,900
Land & buildings	32,750	32,750
Total	\$638,649	\$102,550

The figures on the land & buildings were not disturbed, an arrangement having been arrived at between the parties. The governing decision was the much-discussed decision of the Court of Appeal in City of Hamilton v. Bell Telephone Co., by which the attachments of the Co. were assessed as scrap metal, instead of as a part of a growing concern. The basis of judgment of the Court of Appeal is understood to be a clause in the statute which provides that the property of such concerns shall be assessed separately in each ward, from which the court concluded the wires or poles of the Co. in one ward would be valueless except for their raw material. It is said the Toronto City Council will make an effort to secure an amendment to the law from the Ontario Legislature.

The Co. has decided to place more of its wires in Hamilton, Ont., underground. At present the underground system runs from the headquarters along Hughson St. to King William St., thence over to John St., on Main St. from Hughson to Macnab St., & from the Co.'s offices along Hughson south to Jackson

St., altogether about ½ mile. The idea is to extend this system south to Hannah St., east to Wellington St., & west to Bay or Hess Sts. The extension may possibly also include a duct northward to Merrick St.

The Megantic Telephone Co., Thetford Mines, Que., has been dissolved.

The Victoria & Inverness Telephone Co., of which A. H. Sutherland, Baddeck, N.S., is Sec.-Treas., is arranging to build lines in Inverness & Victoria Counties, Cape Breton, the proposal being to connect Northeast Margaree, Middle River, Big Baddeck, Baddeck, Nyanza, & Whycocomagh with Orangedale on the I.C.R. Professor Bell, who has a summer house at Baddeck, Cape Breton, is said to be interested in the undertaking.

The British Columbia Telephones, Ltd., has been authorized to carry on business in B.C. The head office of the Co. is at Huddersfield, Eng. The capital is £100,000, divided into 3,000 preference shares of £10 each, & 7,000 ordinary shares of £10 each. The head office in B.C. is at Vancouver, W. Farrell, representative in B.C. of the Yorkshire Guarantee & Securities Corporation, being attorney for the Co.

The British Columbia Legislature has appointed a committee to enquire into the number of hours the female employees at the central office of the Victoria & Esquimalt Telephone Co. in Victoria are employed each day, the number of days that constitute a week's work, & the remuneration paid each employee, together with any information connected with the working of the system that may be deemed necessary by the committee; with power to send for persons & papers, & examine witnesses under oath. In moving for the committee Mr. Smith, of Nanaimo, said that complaints had been made to him by some of the employees of the Co., & as it was a chartered company the house had a right to obtain the information.

A New York despatch says the remarkable possibilities in the utilization of the long distance telephone were strikingly demonstrated on Feb. 4 by a novel plan carried out by the

alumni of the Massachusetts Institute of Technology. Simultaneously the local alumni societies in New York, Boston, Philadelphia, Chicago & St. Louis, sat down to their annual banquets, & one toastmaster presided over the scattered festivities. The banquet halls in the five cities were put upon one grand circuit of a long distance telephone, whereby each heard the speeches delivered in all the others. At each plate was placed a tiny oblong telephone receiver, & immediately after the punch was served, the diners, by holding the little instruments to their ears, listened to after-dinner speeches hundreds of miles away.

Express Companies Items.

The Dominion Ex. Co. has issued a new list of officers & mileage table.

The Alaska Pacific Ex. Co. will, General Manager Hall informs us, continue its service over the White Pass & Yukon Ry., although the latter has organized the White Pass & Yukon Express Co.

The New York Sun complains about the systematic opening of parcels sent by mail. This kind of tampering with both parcel & letter post matter is practised to an extent not generally suspected. It drives much & will drive more mail business to the express companies.

The B.C. Ex. Co. carried gold to the value of \$216,040.30 out of Cariboo in 1898. The total output for Cariboo for the year was over \$250,000. It is estimated that about \$50,000 was brought down by Chinese & other individual miners, which was not included in the figures above.

The Dominion Ex. Co. gives notice that the restrictions which heretofore limited the amount of special collections, notes, drafts, accounts or bills, to \$100 have been removed. Collections in any amount may be received to be returned at the special rates, between all points on this Co.'s lines & the lines of Canadian Express Co. in Canada & the U.S. To & from points on American Express Co.'s lines in Canada the present limit of \$100 will apply.

GALENA OIL CO., Franklin, Pa.

CHAS. MILLER, President.

GALENA OILS are the Standard Lubricating Oils of the World.

GALENA OILS are used on nineteen-twentieths or ninety-five per cent. of the total railway mileage of the United States, Canada and Mexico, and their use is being carefully considered by the leading railway managers of Europe.

GALENA OILS run the fastest trains of the world, and delays are unknown, except when due to mechanical defects, or other well known causes over which the oil has no influence.

The G.T.R. General Passenger Agent.

W. E. Davis was born in Niagara county, N.Y., 1850. He began work as office boy in the Hannibal & St. Joseph R.R., now a part of the Burlington System, at the age of 18, & his early railway education was obtained on Western roads. He came to what is now part of the Grand Trunk Ry. System (Chicago & Lake Huron R.R., now Chicago & Grand Trunk) Aug., 1877, in charge of the passenger business of that Co., which later on included the Detroit, Grand Haven & Milwaukee Ry., Toledo, Saginaw & Muskegon Ry., & Cincinnati, Saginaw & Mackinaw R.R.; & at the time of the consolidation of all the G.T. lines under the present management, he was removed from Chicago to Montreal April 1, 1896.

Missanabie to James Bay.

A measure is before the Ontario Legislature to change the name of the Sault Ste. Marie & Hudson's Bay Ry. Co. to the Ontario & Hudson's Bay & Western Railways & Navigation Co., to extend the time for construction, to authorize the Co. to build a waggon road as a stage route for a portion of its route in advance of railway construction, & to permit the Co. to amalgamate with other companies chartered to extend commercial transit from Ontario to points on the Mackenzie & Yukon basins. R. Kilgour, of Toronto, & other promoters of the Co., recently waited on the Ontario Government to ask aid. By means of several large maps they traced the route of the proposed railway & its proposed connections from Missanabie, on the main line of the C. P. R., by way of the Moose River Valley to the Hudson's Bay, thence by 1,500 miles of deep-water navigation across Hudson's Bay & up Chesterfield Inlet, thence by inland navigation through Great Slave Lake & Mackenzie River & its tributaries to the Yukon & Cassiar districts. Two short portages on the route would require short stretches of railway, not more than probably 60 miles in length, & possibly a third railway might be required to cross an unknown & unexplored tract of country, which, however, is believed to be watered by a navigable river. This route, it was asserted, is 800 miles shorter than that via the C.P.R. to the Pacific coast. The line from Missanabie to Hudson's Bay, it was represented, is by far the shortest of any which can be built connecting with the C.P.R., & it passes through good agricultural land, which presents no great engineering difficulties or more than usually expensive construction. The length of railway to be built is about 240 miles, & by following the valley of the Moose River easy grades could be obtained, which would enable the Co. to build the road for considerably less than by any

other route. It was represented that the construction of the railway would give to Ontario a seaport which would open up to her markets & make tributary all the rich mineral, forest, river & ocean wealth of that vast district. The whitefish, salmon, cod & whale fisheries of Hudson's Bay are, it was urged, the richest in the world, but unfortunately at present the cod & whale fisheries are in the hands of U.S. fishermen. The construction of the railway would afford facilities to control this trade. Lignite has also been found in the district through which the line runs, & on an island in Hudson's Bay is known to exist.

The Co. finds some difficulty in locating the

W. E. DAVIS

line, owing to the want of a waggon road through the district. It is proposed that such a road shall be first constructed, & that the Government allow \$500 a mile for that purpose, the amount to be deducted from its railway grant. This, it was pointed out, would secure a colonization road & a telegraph line this year, & open up means of transportation by which settlers might get into the country. It was stated that if the Government would intimate its purpose to grant such aid as the memorial asked for, arrangements had been made by which 2 steamers would be put on the Moose River & 1 on Hudson's Bay from Moose River to Churchill & Chesterfield Inlet this summer. A letter from the Polson Iron

Works was read, stating that the steamers could be built, if the order was given at once, in time to take them in on the spring freshets. It was also stated that arrangements had been made by which, if the Government gave the required aid, parties were prepared to put up the money to carry through the scheme.

RAILWAY FINANCE, MEETINGS, &c.

The Atlantic & Lake Superior Ry. Co. made application to the Dominion Government, in 1895, to guarantee interest on its bonds for \$20,000,000 for 10 years. The Co. claims that on Sep. 26, 1894, it notified the Government that it was ready to issue bonds, & that on Jan. 15, 1895, it was agreed that the issue should be for £500. On this the bonds were floated & work commenced. Subsequently the Dominion Minister of Finance published a notice in England to the effect that no guarantee had been given. In consequence the Co. claims \$1,500,000 damages for which it is suing in the Exchequer Court. The case was set down for hearing Feb. 17, but was not heard then, therefore the time has elapsed & no new date has been set for the hearing.

Buffalo & Lake Huron.—The report for the ½ year ended Dec., states that the balance, including the amount brought forward from the previous ½ year, after providing for the interest on the bonded debt, is £14,209, which will allow of the payment of a dividend of 5s. 3d. a share, and leave a balance of £424 to be carried forward. The dividend will be paid early in Mar. The directors announce the retirement from the board of A. Ashton, who has acted as Chairman of the Co. since 1870, & that M. H. Maxwell, Jun., has succeeded to this office, while E. Ashton has been elected to the vacant seat at the board.

Canada Eastern.—This line, the purchase of which by the Dominion Government is spoken of, is 136 miles long. The ordinary share capital authorized & paid up is \$1,000,000. The bonded debt authorized & issued is \$1,854,174.60. It received in Dominion Government aid \$366,839.84, & from the Prov. of New Brunswick \$400,000 in addition to \$20,000 of municipal aid loaned. Capital from other sources is stated as \$320,425.21, making a total capital subscribed of \$3,961,539.65, & paid up of \$2,087,365.05, which figures are also given as the total cost of the railway & rolling stock. For the year ended June 30, 1897, the net earnings were \$44,541.14. The proposed purchase price by the Government is said to be in the neighbourhood of \$2,000,000, not \$1,000,000 as stated in our last issue. In speaking on the subject during the New Brunswick elections, the Minister of Railways said he had approached Mr. Gibson on the matter because he thought the purchase of

NEXT ANNUAL MEETING at Toronto, Sep. 20, 1899.

Canadian Ticket Agents' Association.

PRESIDENT, W. E. Rispin, Chatham, Ont.; 1st VICE-
PRESIDENT, S. O. Perry, St. Thomas, Ont.; 2nd VICE-
PRESIDENT, G. Duncan, Quebec; 3rd VICE-PRESIDENT,
W. H. C. McKay, St. John, N.B.; SEC.-TREAS., E. de la
Hooke, London, Ont.; AUDITOR, S. H. Palmer, St.
Thomas, Ont.

EXECUTIVE COMMITTEE, J. A. Macdonald, Arnprior,
Ont.; W. H. Harper, Chatham, Ont.; C. E. Morgan,
Hamilton, Ont.; T. Long, Port Hope, Ont.; A. Calder,
Windsor.

NEXT ANNUAL MEETING at Winnipeg, Oct. 13, 1899.

the C.E. would be a good thing for the I.C.R.
(Feb., pg. 38.)

C.P.R. Annual.—The 18th annual meeting
will be held in Montreal April 5 at noon.

C.P.R. vs. Toronto.—The City of Toronto
has been ordered by the Master in Chambers
at Toronto to pay the C.P.R. Co. \$16,396 in
connection with the York Street bridge con-
struction. The City refused payment on the
ground that the C.P.R. owed it \$46,000 rent
for the alternate station site on the Esplanade.

Dominion Atlantic net earnings for Jan.
\$42,290, against \$33,135 for corresponding
period.

Grand Trunk.—General Manager Hays
will attend the half-yearly meeting in London
Mar. 27, & give information at first hand as
to the progress & condition of the system un-
der the new management. He will be able
to show a constant increase in the business
done, a wonderful augmentation of the rolling
stock, & a general advance auguring well for
the future of the road. The report which will
be submitted to the meeting will show a gen-
erally healthy condition, & evidence will be
forthcoming illustrative of the beneficial ef-
fects of the policy of centralization which Mr.
Hays inaugurated.

Great Northern (U.S.) stock has reached
a price almost equivalent to 300 for the old
stock, which a year ago was selling below
150. The Co. has thus accomplished some-
thing seldom heard of in railroading—doubled
the price of its stock in a year.

Irondale, Bancroft & Ottawa.—The Hud-
son Improvement Co. of Jersey City, N.Y.,
assert a claim against this Co. by reason of a
contract entered into between the companies,
under which the Improvement Co. claims to
be entitled to the bonds & stock under this
agreement in priority to all other persons, &
claims that the present holders of the bonds are
not legally entitled to them, & that the Im-
provement Co. is. (Feb., pg. 38.)

Kaslo & Slocan.—A special general meeting
of the shareholders was called for Mar. 3, for
the purpose of authorizing directors to issue
bonds to the amount, including bonds issued,
of \$30,000 per mile of railway.

Kingston & Pembroke.—In the case of
Folger v. K. & P. Ry. Judge Price has made an
order for the distribution of surplus moneys in
the hands of the receivers amongst the stock-
holders. The amount to be distributed will be
\$20,000. It is said the Co. will be placed in
a solid condition, & new bonds will be issued
under the Dominion statute passed last session.

At the annual meeting, Mar. 6, the old board
& officers were re-elected. Gross earnings for
1898 were \$138,773, expenses, \$103,619,
net earnings, \$35,154.

Lake Erie & Detroit River.—Action has
been begun by a ratepayer of the Township of
Aldborough, Elgin Co., to quash a township
by-law, which gives a bonus of \$7,000 to this
Co. The action is grounded on the failure of
the Co. to extend its line from Ridgetown to
St. Thomas, passing through that township, as
it was to have done.

Northern Pacific.—Statement for 6 months
to Dec. 31:

		Increase.
Gross earnings	\$14,787,043	\$1,411,381
Operating expenses	6,216,472	325,049
Net earnings	\$8,570,570	\$1,086,332
Taxes, rent, and imp.	2,469,860	803,645
Net oper. income	\$7,100,709	\$282,686
Mis. inc., not includ. land sales	241,780	116,684
Net income—		
Main system	\$7,342,490	\$399,371
Prop. lines	261,689	58,195
Total	\$7,604,180	\$457,567

Ogdensburg & Lake Champlain.—The
Rutland R.R. took possession of the Ogdens-
burg & Lake Champlain R.R. Feb. 2. The
price paid is said to have been over \$4,000,-
000. P. W. Clement has assumed charge of
the O. & L. C. as President.

Ontario Railway Subsidies.—During 1898
the Province paid under the head of Railway
Subsidy Fund \$125,649.50.

Ottawa & New York.—The City of Ottawa
is applying to the Ontario Legislature for
power to extend for a year the time limited by
its by-law granting a bonus to this Co., in
which the Co. was to comply with certain con-
ditions therein contained.

Pembroke Southern.—A special meeting of
shareholders is called for Mar. 20 to authorize
the issue of bonds.

Quebec & Lake St. John gross earnings for
11 months to Nov. 30, \$265,348 against \$226,-
674 for corresponding period.

The Co. is asking the Provincial Govern-
ment to extend the period for the guarantee
of interest upon the Co.'s bonds, principally
upon the ground that it keeps an unremuner-
ative section of the railway open in winter for
the benefit of settlers only.

Quebec Subsidies.—The report of the Com-
missioner of Public Works shows that there
are 3,377 miles of railway in operation in the
province. The following amounts were paid
in land & cash subsidies in the past year:
Quebec, Montmorency & Charlevoix, \$15,191;
East Richelieu Valley, \$50,000; Great North-
ern, \$125,253; Baie des Chaleurs, \$9,555;
Montreal & Lake Maskinonge, \$11,375. The
obligations of the Government towards rail-
ways, due partly on Dec. 31, 1898, & partly
on Dec. 31, 1899, amount to \$970,633. No
subsidies will be granted this year. Premier
Marchand, speaking on the matter recently,
said the policy of the Government was first to
restore the finances to a sound condition, &
then it would see about the promotion of
further railway construction. He recognized
the importance of railways, & regretted the
necessity of refusing the aid desired, but until
the equilibrium had been restored in the fin-
ances, he had pledged himself to the people to
add no new obligations to the already heavy
liabilities of the province that could be at all
averted.

St. John, N.B., Bridge & Ry. Extension
Co.—At the recent annual meeting the follow-
ing directors were elected: Judge Barker, J.
H. Parks, Hon. T. R. Jones, W. H. Thorne,
T. Williams (Moncton), H. H. McLean & P.
Tucker.

Saskatchewan & Western Ry.—At the ad-
joined annual meeting at Winnipeg, Feb. 23,
a statement was submitted of the affairs of the
Co., & the following were elected directors:
E. B. Osler, H. C. Hammond, A. M. Nanton,
J. R. Waghorn & H. W. Nanton.

The Tilsonburg, Lake Erie & Pacific
having been extended from the G.T.R. loop
line, south of Tilsonburg to the M.C.R. north
of that town, a distance of 3.42 miles, and a
station having been built, the bonus debentures
for \$10,000 have been delivered to the
Co.

Vanderbilt Clearing House.—The Vander-
bilt lines intend to establish a clearing house
at Buffalo to audit the accounts & clear the
balance between the various roads on all
traffic interchanged at Buffalo & Suspension
Bridge. The clearing house will be in charge
of W. Nicholson, now Auditor of the Fall
Brook Ry. The earnings on all traffic inter-
changed will be accounted for through the
clearing house, instead of through the audit-
ing department of each road, as at present.

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net
profit & increases or decreases over 1898,
from Jan. 1, 1899, are as under;

Earnings.	Expenses.	Net Profits.	Increase or decrease.
Jan. \$1,864,570.36	\$1,247,036.50	\$617,533.86	\$101,906.27 +
+ Increase.	- Decrease.		

Approximate earnings for Feb., \$1,752,-
000, against \$1,488,000 in Feb., 1898, an in-
crease of \$264,000.

SUBSIDIARY LINES.

DULUTH, SOUTH SHORE & ATLANTIC.—
Approximate earnings for Feb., \$134,827,
against \$108,453 in Feb., 1898, an increase of
\$26,374.

Gross earnings for 1898, \$1,821,807; operat-
ing expenses, \$1,224,045; net earnings, \$597,-
761; total income, \$603,179. Interest on
bonds absorbed, \$859,616, & taxes, \$41,754,
leaving a deficit of \$298,191, against \$362,-
155 for 1897.

MINERAL RANGE, HANCOCK & CALUMET.—Approximate earnings for Feb., \$23,779, against \$19,809 for Feb., 1898, an increase of \$3,970.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—Approximate earnings for Feb., \$246,362, against \$244,083 for Feb., 1898, an increase of \$2,279.

Net earnings for 6 months to end of Dec., 1898, were \$1,096,731, against \$1,046,015 for corresponding period.

G. T. Earnings, Expenses, &c.

The Secretary informs us under date of Feb. 10 that subject to audit, the results of the accounts for the half year to Dec. 31, 1898, are cabled as follows:

Gross receipts.....	£2,140,500
Working expenses.....	1,428,000
Net receipts.....	712,500
Net revenue charges for the ½ year, less credits.....	485,300
	£227,200
Deduct—	
Chicago & G. T. deficiency for the ½ year payable by the G. T. Co. under traffic agreements.....	£14,500
D. G. H. & M. deficiency for the ½ year.....	3,900
	18,400

Surplus for the ½ year..... £208,800

This surplus of £208,800 added to the balance of £2,200 from June, 1898, makes £211,000 available for dividend, which will admit of the payment of the full dividend for the ½ year on the 4% guaranteed stock, and a dividend of 3% on the 1st preference stock, leaving a balance of about £4,000 to be carried forward.

For the purpose of comparison the following figures for the corresponding previous ½ year may be given: Gross receipts, £2,247,151; working expenses, £1,434,804; net receipts, £812,347. This time last year the whole of the surplus, after paying debenture interest, was applied to the clearing off of the debit to revenue account. The year 1898 has fallen short of expectations. But it is very good as compared with former experience, & now that there is peace between the two great Canadian companies better results may be expected for 1899.

The following statement of earnings supplied from the Montreal office, includes the G. T. of Canada, the Chicago & G. T., & the Detroit, Grand Haven & Milwaukee Rys:

	1899	1898	Decrease	Increase
Jan..	\$1,956,281	\$1,916,332		\$39,949
Feb...	1,844,434	1,674,453		149,981

The following figures are issued from the London, Eng., office:

DETAILS OF GRAND TRUNK RECEIPTS.

Aggregate Jan. 1 to Jan. 31:

	1899.	1898.
Passengers, number.....	417,379	423,292
Passengers, amount.....	£ 70,829	£ 68,642
Immigrants, number.....	108	408
Immigrants, amount.....	£ 89	£ 270
Mails, express, &c.....	£ 12,433	£ 12,371
Freight, tons.....	781,726	809,401
Freight, amount.....	£ 221,190	£ 232,721
Miscellaneous receipts.....	£ 10,582	£ 4,726
Total receipts.....	£ 315,123	£ 318,730
Decrease.....		£ 3,607

W. L. Benham, Western Freight Manager for the Great Northern (U.S.), with headquarters at Seattle, has resigned. He is said to have received an appointment with the White Pass & Yukon Ry.

Lieut. G. D. Bowles, R.N.R., chief officer of R.M.S. Empress of China, was presented at Vancouver recently with a gold mounted & engraved walking stick, made from the wood of the Str. Beaver, on his leaving for England.

RAILWAY PROJECTS.

Algoma Lines.—Mr. Farwell, M.P.P., has introduced 5 bills in the Ontario Legislature to secure charters for roads to develop mining districts. The Bruce Mines & Rock Lake road is a 25-mile proposition, to run out of Bruce mines & tap a nickel district. The Thessalon & Grand Portage will be 20 miles long, to tap a copper mining country, & will pass through the placer gold mining district

Ashcroft to Glenora.—Gemmell & May, Ottawa, give notice of application to Dominion Parliament to incorporate a company to build a railway from or near Ashcroft or Kamloops, or some point between same, to Barkerville, thence to Glenora on the Stikkeen River.

Atlin Branch of W.P. & Y.—A deputation recently waited on the B.C. Government urging aid to the White Pass & Yukon Ry., to build a branch into the Atlin district. G. W.

Mitchell, of Ottawa, who is interested in the line, said the Co. was constructing, entirely out of its own resources, 48 miles of railway & solving the transportation of the Yukon & incidentally aiding the Atlin district. This was a strictly commercial proposition, & his Co. wanted nothing from the Province, although 28 miles of the road was through B.C. territory; but when it came to building branches & developing an entirely new section he considered that the Province, which would largely benefit by the construction of a line to Atlin, should certainly share in the outlay & the risk. The Victoria & Vancouver members of the deputation set forth the following arguments in favor of the Province assisting the railway: The urgent necessity of certain & direct railway communication with Atlin City; the White Pass & Yukon Ry. people, who are behind this enterprise, are now building from Skaguay to Bennett without asking for any subsidy in cash or land; the Atlin country can be more easily reached from Log Cabin on the line of the W.P. Ry. than by any other route; the distance from Log Cabin to Atlin City is 51 miles, 29 miles of railway & the remainder by water; the W. P. & Y. Ry. Co. will construct this branch provided sufficient aid is granted either in the shape of a substantial subsidy or a guarantee. The line will cost \$255,000 a mile.

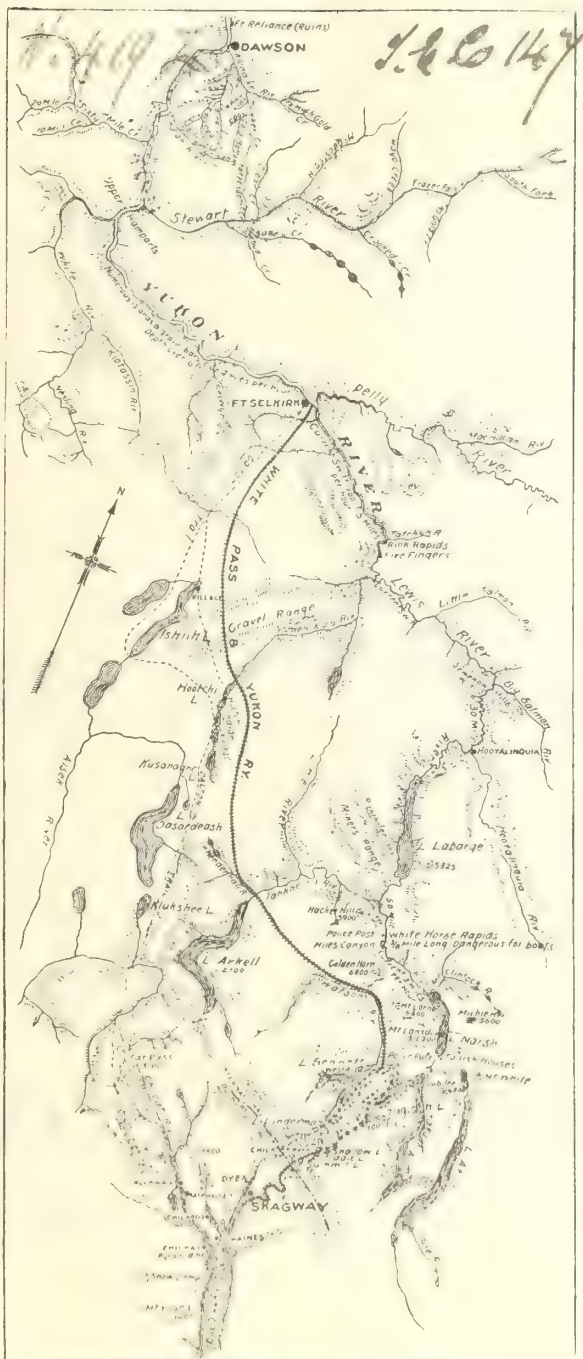

Atlin Transportation Co.—W. Tytler & E. C. Cargill give notice of desire to form a company under this name under the Tramway Co. Incorporation Act, to build a tramway from Taku Arm to Atlin Lake, & thence to Surprise Lake, Cassiar District, with branch lines.

Port Angeles.—There is a scheme on foot to construct a railway from Port Angeles, Wash., to a point on Puget Sound, where connection can be made with a transcontinental railway system. Towards the consummation of this scheme, the already overburdened taxpayers of Victoria—which by means of a ferry it is proposed to make the B. C. terminus—are to be asked to contribute \$150,000 as well as other considerations. The proposition is not received with very great favor by Victoria property owners.

J. W. Blabon, who has been Purchasing Agent of the Great Northern since 1891, has been appointed Western Traffic Manager, with headquarters at Seattle, Wash., succeeding W. L. Benham, whose title was Western Freight Manager.

Vice-President Shaughnessy's visit to Europe is believed to be mainly in connection with matters relating to the Co.'s financial matters & to meet some of the principal continental stockholders.

F. C. Bachelder, heretofore Superintendent of the Minnesota division of the Minneapolis, St. Paul & Sault Ste. Marie, has been appointed Superintendent of the Wisconsin & Peninsula division of the same road, with headquarters at Minneapolis, Minn., in place of D. Willard, resigned.

THE WHITE PASS AND YUKON RAILWAY.

on the Mississauga river. Another, to be named the Nickel Range road, will run from the Soo branch of the C.P.R., 6 miles to a nickel property, & is being projected by Mr. Clergue, manager of the pulp & nickel works. The Worthington & Onaping Ry. is proposed to develop nickel properties on Lake Onaping. It will be 25 miles long. The fifth & largest, the Algoma Central, will run from the Soo to Missanabie, & a branch will tap the Michipicoten gold district. It will be 100 miles long.

RAILWAY APPOINTMENTS, &c.

Canadian Pacific.—J. Cardell, whose appointment as Assistant Master Mechanic, was ~~announced in our last issue~~, will have headquarters at Calgary, Alta. The position of ~~Assistant Master Mechanic~~ at ~~Calgary~~ has been abolished. The position of Acting Road Foreman, vacated by S. Phipps, appointed as Assistant Master Mechanic at Winnipeg, has been abolished. F. E. Hobbs' appointment as Assistant Master Mechanic of the Pacific Division, does not interfere with the position of Master Mechanic of the Division held by L. R. Johnson, who is now in Japan on steamship business, & who will return to Vancouver in the spring.

J. Osborne is expected to leave Montreal for Winnipeg, to assume his new duties as General Superintendent of the C.P.R. Western Division, shortly after Vice-President Shaughnessy's return from England.

C. Lawrence has been appointed storekeeper at Nelson, B.C.

Mainly About People.

F. Belcher, of the Northern Pacific's Toronto office, has been transferred to the Winnipeg ticket office.

A. J. Gastin, formerly of Toronto, & at one time Superintendent of the G.T.R. rolling mills east of the Don, died suddenly in Boston recently.

G. F. Evans, of the Westinghouse Mfg. Co., is expected to arrive in Hamilton, Ont., shortly from Russia, where he has been establishing works for the Co.

C. R. Hosmer, Manager C.P.R. Co.'s Telegraph, has been elected a director of the Merchants Bank of Canada, to succeed the late T. H. Dunn, of Quebec.

J. Buntsen, General Manager B.C. Electric Ry., who has been in poor health for some time, leaves for England Mar. 18, intending to be absent 3 or 4 months.

C. R. Hosmer, Manager C.P.R. Co.'s Telegraph, has returned to Montreal from Paris, where he was called owing to the illness of his daughter, who has recovered. Mrs. Hosmer is still abroad.

A. C. Henry, C.P.R. purchasing agent, who has been in Bermuda for his health for the past month or so, expects to leave for home March 16. At last accounts he was much better, though still suffering slightly from rheumatism.

R. Brydone-Jack, who was engaged on the White Pass & Yukon Ry. as trustees' engineer, being the representative of the English bondholders of the road, died in Alaska recently, aged 36. His family was awaiting his return in Vancouver when the body arrived. He was a son of the late Dr. Brydone-Jack, president of the University of New Brunswick.

A prominent official of the C.P.R., in recently discussing the report of Sir Wm. Van Horne's resignation, stated that it was a rumor of annual occurrence & was not given any consideration in railroad circles. The news whenever it did come would be from Montreal & would most likely be announced at the annual meeting of the shareholders & not through a private cablegram.

In a recent article in the London (Eng.) Review on "The Newer Forces of Canada," Sir Wm. Van Horne is referred to as a person hardly less influential than the Premier. As the guiding spirit of the C.P.R. he would naturally be a great factor in the country's progress, but the man's strength of character, his numerous activities, says the writer, are daily influencing thousands throughout the country. He has a mighty talent for inculcating sound business methods, & he has a constant stimulating effect on the commercial & industrial heart of the Dominion.

White Pass & Yukon Railway.

In response to a request we have been furnished with the following interesting official information about this line, under date of Feb. 24:

Active operations on construction work were begun about June 1, 1898, & have been continued, without a break, since then. The summit of White Pass was reached with the rails on Feb. 15, 1899, & the Co. is now operating 2 miles beyond White Pass, making a total distance of rail opened for traffic of 22 miles from the Co.'s wharf at Skaguay. From Log Cabin to the summit, about 7 miles, will be completed by the end of Feb., ready for the steel. From 3 miles out of Skaguay to the summit of the Pass has been continuous rock-work, upon which has been consumed nearly 350 tons of dynamite. One familiar with this class of work & the use of explosives can form a very fair idea of the magnitude of this class of construction.

The deepest open cut is 16 ft. at Porcupine Hill, some 7 miles from Skaguay by rail. The balance of the rock-work has mainly been

side-hill work, with the exception of one tunnel of about 500 ft. in length, which is about 16 miles from Skaguay by rail & was bored through a spur to avoid a sharp curve. The maximum grade of the road is 3-9/10ths%, which holds almost continuously for about 13 miles. Ballasting material, up to the present, has been obtained from the bed of Skaguay River, near Skaguay, but now that the line is beyond the summit, vast quantities of the finest kind of gravel for ballasting will be hauled down grade & distributed from the summit to Skaguay, to put the bed in first-class condition. The major portion of the ties is sawed ties of fir from the mills of Puget Sound. Only a small portion of the timber adjacent to the line of the road was suitable for ties. The rails are 56 lbs. T steel, which is an unusual heavy rail for a narrow gauge (3 ft.) railway, & will thus enable a first-class alignment & grade to be maintained throughout the year. Sufficient rails are on hand to complete the laying of the line almost to Caribou Crossing.

About 1,650 men are now employed on construction, which is the largest number in the service of construction since work was begun. About the end of last July approximately 1,500 were on the pay roll of the construction force, but the discovery of gold on Pine Creek, resulting in the stampede to Atlin Lake, pulled down the force in 10 days' time to less than 500, & from that date until the first of the year it has been a struggle to get over 1,000 men upon the work. The question of labor has been a very serious one on all of this work. A higher price of wages has been paid for common labor than has probably ever been paid on any railway construction work of a similar class in the world; but, notwithstanding this fact, the allurements of gold seeking have been such as to make it extremely difficult to keep good men on construction. Had the Co. been able to maintain a force of 1,500 men from July through the fall the line would undoubtedly have reached the summit before Dec. 1, & the work would now have been well on towards its completion to Lake Bennett. However, if the present force can be maintained the Lake will undoubtedly be reached with the rail by the opening of navigation, or about June 1.

In an effort to expedite the work the Co. purchased 3 second-hand, narrow gauge locomotives in Seattle, which were formerly used on the Oregon Improvement Co.'s road from Seattle to its mines. These locomotives were thoroughly repaired & forwarded to Skaguay & have done excellent service in handling con-

Mica Boiler Covering Co., Limited, 9 Jordan St., Toronto, Ont.

struction material. In July the Co. purchased 2 more second-hand locomotives, which were in first-class repair, making 5 in service until Feb. 1 when a 50-ton "Climax," geared locomotive, (that was second-hand, although but 6 months old), was purchased & is now just about in service. In Dec. an order was placed with the Baldwin Locomotive Works, of Philadelphia, for the construction of two 45-ton, compound locomotives, equipped with the most modern appliances & of a consolidation type. The Baldwin Works turned these locomotives out in less than 28 days from the time the order was received. These are now in transit between Seattle & Skaguay & will probably be in service by Mar. 1. The Co. has also in service 6 passenger coaches & 1 baggage car, 30 box cars & 40 flat cars. The box & flat cars were framed in Seattle & sent to Skaguay in a knocked-down condition &

The Co. has at Skaguay a large machine shop, equipped with the most modern & up-to-date type of machine tools, such as a 36 in. x 8 ft. bed planer, a 42 in. swing engine lathe, another 22 in. swing engine lathe, a mortising & post-boring machine, a wheel press, a 38 in. drill press, emery wheels, band saws, 25 h. p. boiler & engine to run the machinery of the shops; blowers & blacksmith's forges & a generally thoroughly equipped machine shop incidental to the requirements of a railway of this size. A large 2-story station has just been completed near the water front in Skaguay, the lower portion of the building being provided with ticket office, baggage room, waiting rooms, telegraph operator's office, etc., while the upper story has been designed for & is now occupied by the heads of departments & their assistants for the operating department of the road at Skaguay.

been completed for a branch line from Log Cabin to Atlin.

The road is already handling a vast amount of freight, there being at present over 600 tons in the warehouses at Skaguay awaiting transportation to the summit, where it is transferred from the end of the rail to 2-horse sleds, & by that means transported to Lake Bennett or to Atlin. The present general tariff, which is a special tariff for general merchandise, etc., in car-load lots, is \$2.50 per 100 lbs., from Skaguay to summit of White Pass, or the end of the railway. From the end of the rail to Lake Bennett, the rate is \$2 per 100 lbs. The Co. has appointed & located at Skaguay a customs agent who attends to the preparation of the customs papers incidental to the passage of bonded freight through Alaska territory, for which service a charge of \$1 is made for all papers

GRAND TRUNK RAILWAY SYSTEM. VICTORIA JUBILEE BRIDGE OVER ST. LAWRENCE RIVER, MONTREAL.

there set up on trucks which had been purchased complete & ready for the car body. All the rolling stock is equipped with the Westinghouse air brake service, with all the latest improvements, also with automatic couplers. The Co. will thus have in service by Mar. 1, 8 locomotives & the above enumerated rolling stock, which will be ample equipment to handle the vast amount of freight now offering & also enable it to forward its construction supplies. The Co. has also a snow plow, which it constructed at Skaguay, & with which it has been enabled thus far to keep the entire line of track open. Next year it will probably be found expedient to provide a rotary snow plow, as also to construct at various points snow fences & a few snow sheds. The major portion of the road, however, is so located as to be but little troubled with snow slides.

On the Co.'s wharf at Skaguay it has a large galvanized, corrugated iron warehouse & is now constructing a second one. Having a bonded privilege with the U.S. Treasury Department, the Co. is thus thoroughly provided for the handling of bonded freight through Alaska for British Columbia & Northwest Territory points, & a vast amount of this freight is now being handled. The Co. is also providing for the erection of 2 large, corrugated iron warehouses at Lake Bennett for freight purposes.

The Co. has constructed & has now completed & in operation a telegraph & long distance telephone line from Skaguay through to Lake Bennett, with instruments located at various points along that distance.

The preliminary survey for the road from Lake Bennett onward to Fort Selkirk was completed early last fall. A survey has also

for a shipment of 1 ton or less, or \$1.50 for a shipment of over 1 ton. By this means no delay is occasioned in the handling of bonded goods through the U.S. Customs Department at Skaguay.

The Alaska portion of the road has been constructed under the provisions of the Pacific & Arctic Ry. & Navigation Co., of West Virginia, while the British Columbia portion is being built under the charter rights of the British Columbia-Yukon Ry. Co., & the road is operated under the general title to the public of the White Pass & Yukon Route.

The following is a list of the general officers of the Co. as at present constituted.

S. H. Graves, President, Chicago, Ill.
F. C. Elliott, Secretary, Chicago, Ill.
J. W. Probert, Treasurer, Chicago, Ill.
A. L. Berdoe, Auditor, Seattle, Wash.
E. B. Hussey, Purchasing Agent, Seattle, Wash.

I. H. Gray, General Traffic Manager, Seattle, Wash.
 E. C. Hawkins, General Superintendent & Ch. Eng.,
 Seattle, Wash.
 F. H. Hixon, Assistant Chief Engineer, Skagway,
 Alaska.
 T. H. Whiting, Divisional Superintendent, Skagway,
 Alaska.

A Vancouver despatch, dated Mar. 8, says the laborers on W., P. & Y. Ry. construction have struck, the Co. having reduced wages from 35c. to 30c. an hour, & added another hour to the day's work.

Grand Trunk Betterments, etc.

The Victoria Jubilee Bridge, an illustration of which is given on page 60, is being rapidly pushed forward, so as to secure its completion by May 1. Work on the roadway and sidewalk for vehicular and pedestrian traffic is now being done. On the south side of the bridge the iron lattice work on the outer edge already extends to about the centre. Large consignments of the lattice work are arriving almost daily.

This bridge, which was designed by the Co.'s Chief Engineer, J. Hobson, was commenced in Oct., 1897, by the erection of the first span on the west end, the structure being built completely around the tube of the old bridge, the latter being cleverly utilized as a roadway on which a temporary steel span was moved out to the first pier, & the new structure then erected outside the temporary span. The progress of the work was delayed for 2 months during the winter of 1897-98, owing to very severe weather, & the actual time of construction has only extended over a period of about 8 months. During that time the enormous traffic was delayed but very little, practically nothing to speak of, the longest time, on any one occasion that the line was closed to traffic, being about 2 hours, & the total length of time closed during construction being about twenty hours. This is a very remarkable result, when the following facts are taken into consideration: While the old bridge, entire, weighed 9,044 tons, the new bridge weighs 22,000 tons. The total length of bridge is 6,592 ft., number of piers, 24, number of spans,

25, length central span, 330 ft., length side spans, 242 ft. While the width of the old bridge was 16 ft., the width of the new bridge will be 65 ft. The height of the old bridge was 18 ft., the height of the new bridge over all is 28 ft. The total cost of the new bridge, which provides double track for railroad trains, drive-ways for vehicles on each side, & foot-walks on the outside of drive-ways, will be about \$2,000,000. The contract price of the old Victoria Bridge was \$6,813,000. The flooring of the present bridge will weigh 2,800 lbs. per lineal foot, & each span has been so erected that it will carry not only a train on each track, moving in opposite directions, but going at a rate of 45 miles an hour, with a total weight of 4,000 lbs. to the lineal foot, moving at the rate of 25 miles an hour, as well as drive-ways & foot-walks crowded with vehicles & pedestrians. The new bridge will rank, from an engineering standpoint, with the foremost structures of the age, as the bridge which it replaced ranked the foremost, as a monument to the skill of the engineers & bridge builders of the period in which it was built. The opening of the double track on the new bridge marks an era in the handling of traffic over the G.T.R. system, for, whereas the old bridge could accommodate a maximum of but 100 trains a day, as they were required to travel at a low rate of speed, & one train could not follow another until the preceding one was out, thus losing a considerable amount of valuable time during a day, the present bridge has almost an unlimited capacity in this respect, as trains can be moved rapidly & follow each other in rapid succession, owing to the establishment of a modern electric block system, which will permit 2 or 3 trains on the bridge at the same time. This will enable the G.T.R. to handle with facility the large freight business passing through Montreal for export to Europe, which has heretofore been more or less hampered, owing to the limited capacity of the old bridge, as well as handling in a proper manner the large passenger business which annually comes to & through Montreal during the summer tourist season.

Entrance to Montreal.—In spite of statements to the contrary, no steps have been taken to advance the project for the abolition of the level crossings in Montreal. No thought of the new elevated road has been definitely shaped in the official mind; no plan exists on paper. The initiative must be taken by the Montreal civic committee which was appointed several years ago, & which has been renewed from time to time. The Co. is prepared to deal with the question in a liberal spirit; it will not make any advances. Mr. Hays would be glad to see the level crossings abolished; the urgency lies with the city.

Montreal General Offices.—A water color sketch of the new offices has been sent to the directors in London. This gives perspective, atmospheric effects, & the sense of color harmony. The idea of Architect Waite was to produce what is called monumental color, & in this he has succeeded admirably, for so delicately has the color scheme been blent that the shadings and graduations are seen to grow naturally out of the architectural design. This is what will actually be realized in the material—a colour harmony produced in stone—the shadings following a natural growth, which will give to the completed building the sense of a perfect harmony. Sir Charles Rivers-Wilson has great taste in architecture, while the members of the board are much interested in a building which will be one of the best of its character on this continent. The sketch will, no doubt, be examined by prominent English architects. Mr. Waite has given much care to the work, which presents certain new features & details, not shown in the original drawing. The street cars are seen running in front of the building, while in the centre is seen a great clock, which will be found to be a great convenience to business men & to others. The clock was added upon the suggestion of several prominent Montrealers, & Mr. Hays was heartily in favor of this addition, which will be an ornament & a convenience. Since the plans were prepared and the cost estimated, certain materials to be employed in the building have gone up in price. Iron, for instance,

The following leading railroads of Canada are using Page fencing in quantities of from 1 mile to 100: Canadian Pacific; Grand Trunk; Intercolonial; Lake Erie & Detroit River; United Counties; Canada Atlantic; St. Lawrence & Adirondack; Michigan Central; Manitoba & Northwestern; East Richelieu Valley; Toronto, Hamilton & Buffalo; Thousand Islands; Crow's Nest Pass.

For further particulars send to the Page Wire Fence Co., Ltd., Walkerville, Ont.

has taken an upward turn, & when it is considered that there will be several thousands of tons of iron in the structure, the difference in the total cost will be considerable. Steps are being taken to grant only monthly leases to the tenants of St. Ann's market, so that when the G. T. offices are completed the market site may be turned into a public square.

Middle Division.—A considerable quantity of work is in contemplation for this year. Last year on this division about 250 miles of track were changed, 120 being of new 80-lb. steel, & the other released steel. This year it is expected that the same amount of steel renewal will take place. Most of the new rails will be laid between Toronto & Hamilton, & the rest at various points on the Southern division, & on the main line west of Stratford. It is the intention to remodel the southern yard at York, & it is expected that this with contemplated extensions will give double the present car accommodation, which is too small at busy seasons. The yard at Niagara Falls will also undergo considerable alteration & extension, & coal chutes will be erected both there and at Fort Erie. Stations at various points will undergo alterations & additions, particularly between Toronto & Niagara Falls. Dundas, Grimsby, Port Credit,

Canadian Pacific Betterments, Etc.

Atlantic Division.—In August last, page 153, we published a pretty full description of the deep water terminal facilities which the Company has provided at West St. John, N. B. We now give a plan of them on pg 73. All the tracks & structures shown on each are available for the handling of steamship traffic. The 4 buildings indicated by numbers & the 2 marked C. P. Ry., are freight warehouses. As the plan is on a scale of 450 feet to an inch, it will be seen these are of sufficient dimensions to fully accommodate the present requirements of the steamships & the railway. As shown on the plan there are track connections to all of these warehouses as well as to the buildings appearing in the rear of them. These last mentioned constitute enclosed and protected stock yards, in which accommodation is to be found for 600 cattle with provision for feeding. The stock yards being centrally located, the cattle are driven through temporary barricades direct to vessels without reloading on cars. A large horse barn has, by arrangement with the Co., been constructed by A. C. Smith & Co., this being one of the buildings shown at the upper end of the North Rodney wharf. The

but the business feature has its attractions & in this consideration alone the port is entitled to recognition. No doubt many who have not yet visited the Maritime Provinces, will avail themselves of the opportunity for a holiday trip next summer in order to obtain personally a more definite knowledge of the facilities than can be given in plans or in writings, & I believe they will be well received either individually or in numbers by the city corporation & the board of trade as well as the citizens generally of this enterprising community."

It is said the Co. has in contemplation the construction of a large extension or addition to the terminal facilities above mentioned at a cost of about \$150,000. Much depends on the result of the soundings & borings now being made off Blue rock. If the report is favorable a wharf at right angles to the present structures may be erected. One of the features will be a large coal pocket, the want of which has been much felt of late.

Montreal-Toronto Double Track.—The greater portion of the grading for the double track has been done between Western Jct., mileage 6.5 west of Montreal, & St. Annes, mileage 20.4, & the work will be completed in the spring just as soon as the weather will

CANADIAN PACIFIC RAILWAY STATION AND HOTEL, MOOSE JAW, ASSINIBOIA.

& Oakville will be among the stations which will be rendered more up-to-date. Work on the station at Galt will be resumed as soon as the weather permits. Work on the round house at Sarnia is being pushed as fast as possible. When completed the building will hold 30 engines, which will be housed there instead of at Point Edward, as at present. Interlocking signals at various points will also probably be established. The double tracking of the single line between Hamilton & St. Davids, 39 miles, so as to make a continuous double track between Toronto & Suspension Bridge, has, it is said, been seriously considered, but it will not be done this year. The traffic over this line is growing very heavy, and the necessities of the fast passenger service seriously interfere with it.

The Newfoundland Ry. has 548 miles of main line, & with branches a total mileage of 629. The officers are: R. G. Reid, Proprietor; W. D. Reid, General Manager; H. D. Reid, Assistant General Manager; R. G. Reid, Jr., Superintendent; G. H. Massey, Chief Engineer; H. A. Morine, Freight & Passenger agent; H. McNeil, Auditor; H. S. Cormack, Treasurer, & H. Crawford, Purchasing Agent, all with offices at St. John's, Nfld.

barn contains 60 separate single stalls, as well as box stalls for horses, & the conditions required of the firm in caring for the horses are simply that the owners of the stock shall be satisfied, this being both brief & conclusive. The grain conveyers, as the plan indicates, reach all of the steamship berths, so that vessels may discharge & receive cargoes without changing their position, & while this arrangement permits of independent communication with each vessel it also allows the simultaneous delivery of grain to any three vessels of the five that occupy these berths. Of course the plan does not show it, but the cross conveyer from the elevator to no. 3 berth & from that to the angle between nos. 3 & 4 has a double belt, so that nos. 3 & 4 may be operated independently, as may also all the others. The works as shown on the plan are fully completed & in operation this season, & whatever extensions may hereafter be found necessary to provide for a future increase of traffic, it will be seen that St. John is already fairly well equipped for handling the winter port business. An official of the Co. at St. John writes us:—"It is gratifying to observe that the attention of western shippers is being more and more directed to St. John. The sentiment connected with the development of a Canadian winter port is a very good thing,

permit. It is not the intention to do anything towards double-tracking the line west of St. Anne's this year.

Fort William-Winnipeg Double Track.—As stated in our last issue all the long crossing sidings which have been put in during the last year or two have been so located as to form part of the permanent double track. The same policy will be pursued with the sidings to be put in this year. An engineer will go over the line between Fort William & Winnipeg this year & prepare an estimate of the cost for double tracking throughout, a work which will have to be done in the near future on account of the certain increase of traffic.

Moose Jaw Station & Hotel.—The illustration on this page shows the combined station and hotel which is being built at Moose Jaw & which was fully described in our issue of Nov. last, pg 236. The building, which is about finished, is constructed of specially made Victoria, B.C., brick, with trimmings of Calgary stone, similar to the material used in the Vancouver station. It is a very imposing building. The architect is E. Maxwell, Montreal.

Calgary Workshops, &c.—The Co. has, during the past year, erected at Calgary a 12 stall round house with car repairing shop ad-

ing, 200x70 ft. & a blacksmith shop 60x70 ft. These are built throughout with Calgary sandstone & heated by steam. Adjacent to them are the coal pockets, water tank & cinder pit with depressed track. The store building & oil house will be located on a separate siding adjoining. The erection of these buildings means a large expenditure to the Co. in providing additional storage tracks & yards.

Tunnelling the Selkirks.—It is said surveys are contemplated with a view of doing considerable tunnelling in the Selkirk range so as to avoid maintaining some of the snow sheds.

Steamship Station & Hotel. The station at Sicamous Jet., B. C., which was burned last year, is being replaced by a combined station & hotel building, the track elevation & ground floor plans of which are given on page 75. The building is of frame covered with cedar shingles. The arrangement of the 1st floor can be readily gathered from the plan. The rear of the station faces Shuswap Lake, a splendid view of which will be obtainable from the wide gallery surrounding the building on three sides. In the basement will be situated men's lavatories, laundry, storeroom, fuel cellar & heating apparatus. On the 1st & 2nd floors will be 28 bedrooms, a drawing room, a smoking room & a large balcony overlooking the lake from these latter. The architect is E. Maxwell, Montreal.

Columbia & Western.—In reference to the report that a contract had been let for the extension of the Robson-Midway line, 15 miles beyond Midway to Rock Creek, we were officially informed, Feb. 14, that no such contract has been let.

Surveys, Construction, Betterment, &c.

Cariboo.—It is reported at the Pacific Coast that a survey for this line will be started at an early date. Work must be commenced by April or May next or the charter will expire. It is said the present holders purchased the charter for \$50,000 & paid \$15,000 in cash, the balance to be paid in stock in the railway. (Jan., pg. 11.)

The Chilcot R.R. & Transportation Co. has built a steam road of ordinary construc-

tion from Dyea, Alaska, at the head of Lynn Canal, to Canyon City, 8 miles, & from that point an aerial cable way, 8 miles long, carries passengers & goods through the Canyon & over Chilcot Pass to Crater Lake, whence water connection is made to Lake Bennett & to the Yukon River. The cable road is suspended on standards set at intervals, & rises 2,500 ft. in the first four miles. The tramway has capacity of 100 tons of freight a day.

Duluth, South Shore & Atlantic.—It is said a branch will be built from Newtonville, Mich., to the new copper range, following the Sturgeon river.

Great Northern.—The Quebec Harbor Commissioners have granted a site to this Co. for the erection of a grain elevator of a capacity of 1,000,000 bushels to be completed before May, 1900.

Intercolonial.—The terminal improvements at St. John, N. B., which have already been started, consist of a commodious wharf, with 27 ft. of water alongside at low tide, and berths for 3 large ocean steamers, with a large warehouse on the wharf & 500,000 bushel elevator to be built north of the passenger train shed. Grain conveyers will run from the elevator to the wharf. A number of additional tracks will be laid down. Connolly Bros., the contractors, are already at work on the wharf & tenders are to be sent in by Mar. 25 for the elevator and warehouse. (Feb., pg. 40.)

The Kootenay Ry. & Navigation Co. is building a line from Bonner's Ferry, Idaho, to Kuskanook, B.C., on Lake Kootenay, a distance of 50 miles. The portion from Bonner's Ferry to the international boundary line is incorporated under the name of the Kootenay Valley Ry., the portion in B.C. is incorporated as the Bedlington & Nelson Ry. On Feb. 14 we were advised that work was progressing generally the whole length of the line, and that about 1000 men were at work. There is nothing special in the physical features of the line. It runs along the foothills near the bottom land, & is being constructed just above the high water mark of the Kootenay River, along the easterly side. The valley from Bonner's Ferry to Kootenay Lake is very level, only falling a few feet in the entire distance. The bridge across the Kootenay River is the only structure of any consider-

able magnitude. There are no tunnels. The general average & total cost of the work will be heavy. (Jan., pg. 12.)

Lake Erie & Detroit River.—Plans are being prepared for a slip dock at Rondeau, which is expected to be built by May, to accommodate the car ferry Shenango No. 1. It is expected to cost about \$20,000. Particulars about the operation of the Co.'s ferries, &c., will be found under the head of Ontario & the Great Lakes, in the shipping department of this issue.

Manitoba & Southeastern.—On Feb. 20 we were informed that nothing definite had been decided in regard to the portion of the line to be constructed in Minnesota. As we previously stated, power will have to be procured from the Minnesota authorities. This line will go through Minnesota for about 45 miles. At War Road River, which enters Lake of the Woods near the boundary line, there is quite a settlement. It is expected large shipments of fish will be made there instead of at Rat Portage, on the completion of the line. The country is very flat south of the boundary line, as it is on the Manitoba side. Ties are already being delivered along the route & bridge lumber is being cut. (Feb., pg. 40.)

Midland, of Nova Scotia.—Contracts have been let for the steel superstructures of bridges between Windsor & Truro, including those across the St. Croix & Shubenacadie River, or about 17 spans. (Feb., pg. 40.)

Northern Pacific.—The Winnipeg station & divisional offices, recently destroyed by fire, will undoubtedly be rebuilt, & it is expected the hotel will also be rebuilt, though probably on a smaller scale. It is said plans are being prepared by a Winnipeg architect, but it is not expected the building will have as many stories as the original one. (Feb., pg. 49.)

Ontario & Rainy River.—A tote road is being made from Finmark station, C.P.R., to Lake Shebandowan, to take in supplies. (Feb., pg. 40.)

Ottawa Union Station.—President Booth, of the Canada Atlantic system, is said to be opposed to the terminal company scheme, mentioned in our last issue, & says he is anxious to proceed with the erection of a cen-

SINGLE EXPANSION AND COMPOUND LOCOMOTIVES.

Broad and Narrow Gauge Locomotives; Mine and Furnace Locomotives; Compressed Air Locomotives; Steam Cars and Tramway Locomotives; Plantation Locomotives; Oil Burning Locomotives.

Adapted to every variety of service, and built accurately to gauges and templates after standard designs or to railroad companies' drawings. Like parts of different engines of same class perfectly interchangeable.

Electric Locomotives and Electric Car Trucks with Approved Motors.

Burnham, Williams & Co., Philadelphia, Pa., U.S.A.

tral station as soon as permission is given & plans approved. Sir William Van Horne has written the City Clerk that he is not personally in favor of the terminal scheme, & that he cannot see his way clear to endorse it. He suggests, however, if convenient, that the committee should leave the matter over until Vice-President Shaughnessy's return from Europe, as such matters come more within Mr. Shaughnessy's department.

Quebec Bridge.—Tenders have been received from 1 Canadian & 3 U. S. firms for both cantilever & suspension bridges. It is said a committee of experts will be appointed to decide which shape the bridge shall take, & that then the contract will be awarded. (Feb., pg. 41.)

Rutland-Canadian.

—Chief Engineer J. W. Burke advises us from South Hero, Vt., that work has been begun. The contractors are O'Brien & Sheehan, of New York City. The line from Burlington, Vt., to Rouse's Point, N. Y., will be about 50 miles in length. The Railroad Gazette says the bids ranged from \$499,000 up to \$1,100,000. The contract does not include the building of 800 ft. of steel bridging with three spans.

The Toronto, Hamilton & Buffalo is said to be taking options on property for the building of its proposed spur in the north-east part of Hamilton. (Feb., pg. 40.)

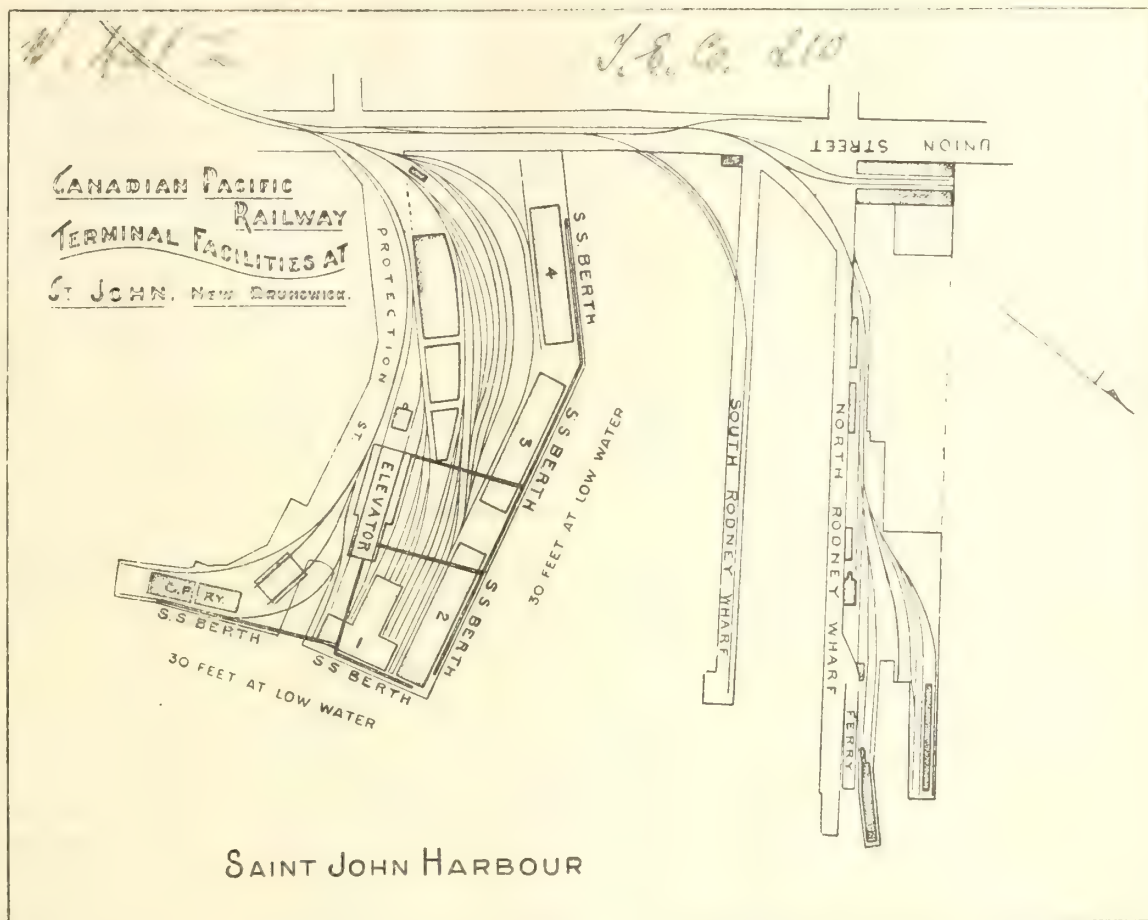

South Shore.—At a recent political meeting, A. A. Bruneau, M.P., said the Federal Government will next session grant a subsidy to this Co., & that the promoters are preparing to go ahead this spring with the work of connecting Sorel & Levis. The line now runs from St. Lambert, $6\frac{1}{2}$ miles from Montreal, to Sorel, 45 miles. Mr. Bruneau also announced that it is proposed to erect 2 large grain elevators at Sorel.

Canadian Pacific Equipment.

Since Jan. 1 orders have been placed for building 10 heavy consolidation engines, 2 parlor cars, 4 first-class passenger coaches & 1 combination second-class coach & smoker at the Co.'s works in Montreal & for 500 30-ton box cars at the Co.'s Perth shops. An order has been placed outside for 120 stable cars for the transportation of Northwest cattle.

The locomotives are for freight service & will in all probability be the same as the lot just completed, & which were equipped with cast steel driving wheel centres, compound cylinders & 4,000 imperial gallon tanks, with steel tender frame, the weight of locomotives in working order being 152,000 lbs.

The passenger cars will be finished on the outside with mahogany and will be equipped with wide end vestibules, standard steel anti-telescoping platforms, Westinghouse air brakes, air signals & steam heating, & while it is rather early to speak of the inside finish it is quite safe to say that it will be first-class in every respect.

SAINT JOHN HARBOUR

The stable cars will be wider and higher than the ordinary stock car, & will be equipped with feeding racks so that it will be unnecessary to unload the cattle en route for feeding purposes. They will be sheathed on the ends and on the sides half way down from the top, so as to protect the cattle from the weather. Both stable & box cars will be equipped with Westinghouse air brakes.

At the annual meeting April 5 the shareholders will be asked to authorize the purchase of rolling stock to the value of \$1,000,000 as the traffic may require it.

Grand Trunk Equipment.

An order has been given to build 12 locomotives in the Co.'s Montreal shops, 6 of them being 10-wheel passenger engines & 6 moguls for freight service. The driving wheels of the passenger engines are to be 72 ins., & the total weight of each will be 166,000 lbs., making the total weight of engine & tender 268,000 lbs. Forty-three in. wheels will be used under the tender, & the tank capacity will be 4,500 gallons; the weight of the tender alone being 55,000 lbs. The mogul locomotives will be constructed with all the modern improvements & the latest devices known to mechanical skill, & will be some of the most desirable engines placed on any railway. They will be used exclusively for freight service, & will be distributed over the different divisions of the system. The driving wheels of the moguls will be 62 ins. in diameter, the total weight of the engine & tender being 253,000 lbs. Some idea of the hauling capacity of these locomotives may be gathered from the fact that the weight of these locomotives that rest on the drivers alone is in the neighborhood of 130,000 lbs.

The Co. has made a great improvement in its rolling-stock, which enables it to very considerably increase the carrying capacity of

freight cars, by replacing the small journals with heavier ones, in cars of 30,000 lbs. capacity. The device has enabled the General Superintendent to issue a circular giving authority for these cars to be loaded hereafter up to 10% above their marked carrying capacity, whereas the former regulations permitted an addition of only 5%. This will enable the load of each car to be increased 3,000 lbs. The Co. has, however, very few cars that carry less than 40,000 lbs.

Intercolonial Railway Equipment.

The illustration on page 77 shows one of the compound consolidation locomotives recently built for this line by the Baldwin Locomotive Works. The general dimensions are as follows:

CYLINDERS.—Diameter, high pressure	15 $\frac{1}{2}$ in.
" Diameter, low pressure	26 in.
" Stroke	28 in.
" Valve	Balanced piston
BOILER.—Diameter	60 in.
" Thickness of sheets	11-16 in.
" Working pressure	200 lbs.
" Fuel	Soft coal
FIRE-BOX.—Material	Steel
" Length	14 $\frac{1}{2}$ ft.
" Width	4 $\frac{1}{2}$ ft.
" Depth, front	65 $\frac{1}{2}$ in.
" Depth, back	60 in.
" Thickness of sheets, sides	11 in.
" Thickness of sheets, back	11 in.
" Thickness of sheets, crown	11 in.
" Thickness of sheets, tube	1 $\frac{1}{2}$ in.
TUBES.—Number	230
" Diameter	2 $\frac{1}{2}$ in.
" Length	14 ft. 0 in.
HEATING SURFACE.—Fire-box	164.1 sq. ft.
" Tubes	10,450
" Total	10,614.1
" Grate area	32.04
DRIVING WHEELS.—Diameter, outside	56 in.
" Diameter of centre	50 in.
" Journals	28 x 12 in.
ENGINE TRUCK WHEELS.—Diameter	33 in.
" Journals	18 x 10 in.
WHEEL BASE.—Driving	15 ft. 3 in.
" Total engine	23 ft. 6 in.
" Total engine and tender	49 ft. 0 in.
WEIGHT.—On drivers	145,000 lbs.

WEIGHT.—On truck.....	17,500 lbs.
Total engine.....	102,500 "
TENDER.....	33 in.
Length of wheels.....	44 1/8 in.
Capacity.....	4,000 gals.
SAVES.....	Light

Railway Equipment Notes.

The Duluth South Shore & Atlantic has ordered 400 hopper-bottom ore cars to be delivered June 1. They will be 26 ft. long, 8 ft. wide, 7 ft. high. They will be of 60,000 lbs. capacity, & will have 33-in. wheels, weighing 600 lbs., metal trucks, with Westinghouse quick-action brakes.

The Lake Erie & Detroit River has bought 15 cars for the use of its excursion business between London & Port Stanley. They are second hand but quite comfortable for excursion traffic. Two of the Co.'s passenger locomotives were destroyed recently by a fire in the Erie & Huron division roundhouse.

The Michigan Central has ordered material for 10 locomotives, two 10-wheelers & eight 6-wheel switchers. Of the latter 6 will be built at the Co.'s shops in Jackson, Mich., & the others at the St. Thomas, Ont., shops, as they are to be used on the Canada Southern division. The dimensions will be in general the same as the Co.'s present standard engines of those two classes.

Rhodes, Curry & Co., Amherst, N.S., have established branch works at Halifax. This consists of planing mills, lath mills, saw mills, shingle mills, brick works, car works, machine works & foundry. During the past year they made large additions to their car works, both in the way of buildings & machinery. They have orders on hand for about \$250,000 worth of rolling stock, including box & flat cars, postal & express & baggage cars & snow ploughs. They employ on an average 250 men at Amherst, 35 on their sawmill property at Little Forks, & 100 on building contracts in Nova Scotia & New Brunswick.

In 1898 the Baldwin Locomotive Works completed 760 locomotives, representing every service in which a locomotive is used. Much of the output was shipped to foreign countries, the larger part going to Japan & Russia. This record does not, however, reach that of 1891, when 946 engines were built, which very nearly reached the estimated capacity of the works. This year opened with orders for 200 locomotives, & they are still coming in. These orders are mostly for rapid delivery, & the works are running day & night in consequence. One order recently

received is for 71 locomotives for the Chinese Eastern, a part of the trans-Siberian.

When a train is rounding a curve, the ordinary locomotive headlight points off into the surrounding country, & is useless. A mechanical engineer of a Western railway has devised an attachment by means of which the light is maintained in line with the track. The light is mounted on a turnable which is rotated through the proper angle by a cable passing around pulleys & leading to the two piston rods of a small double-acting air cylinder. The motion of the piston is regulated by a valve in the cab, the air pressure being taken from the air brake system. The headlight turns on inclines so arranged that when the headlight travels up the incline it will have bearings on the two quarters on which it travels. The object of this is to return the headlight to its normal position automatically when the air is released. The device has been practically tested.

Automatic Couplings in Britain.

A bill recently introduced in the British House of Commons gives the Board of Trade power, five years hence, to compel British railways to supply the whole of their rolling stock with automatic couplings. In introducing the bill the President of the Board of Trade, Mr. Ritchie, paid a well-deserved compliment to the efforts of the two chief Canadian railway companies to minimise the loss of life among those of their employes who are engaged in shunting operations, & stated that the report presented by Mr. Hopwood, the head of the Railway Department of the Board of Trade, as the result of his recent visit to Canada & the U.S., proved that the use of automatic couplings had very greatly reduced the casualties among the men. But whereas in the U.S. the adoption of these appliances had been forced upon the railway companies by legislation, in Canada the C.P. & the G.T. Cos. had on their own initiative, & without any form of compulsion, applied them, "wholesale." They have had their reward in the much greater security of life & limb in the ranks of their employes.

The bill has aroused the ire of the British railway companies, & Lord Claud Hamilton, Chairman of the Great Eastern Ry., has seceded from the Conservative party in consequence of it. The British Railway Association has arranged to send five prominent railway officials to America to investigate the facts upon which the Government bases the bill. It is estimated that to supply the whole

to the rolling stock of the lines in Great Britain with this device will cost \$10,000,000.

Preparing for Summer Travel.

The G.T.R. & C.P.R. are making arrangements for spring and summer traffic. Schedules are being prepared, dealing with general & local business. The latter is receiving a goodly share of attention, seeing that it grows every year, & will, in the near future, become an important factor in the business of both companies. A great effort is to be made this season to attract tourists to the country. The G.T.R. is making a spirited bid for tourist trade in the Muskoka Lake region. It has spent a good deal of money in securing & distributing in the great U.S. centres views of the beauty spots in this vast region, so slightly known, comparatively speaking, & which may be considered one of the most attractive districts in Canada. Ontario, no doubt, has found out something of her own beauty, but Muskoka has been hitherto unknown to the great body of Canadians. Visitors from the United States have been, in considerable numbers, charmed with what they have seen; but the effort is to be made this coming season to popularize this resort all over Canada & the U.S. by the wide dissemination of literature & pictures.

The C.P.R. has always looked to the U.S. public for the patronage of the beauty spots it had to offer along its system, & while effort is to be made to bring a large number of people to the cities of Montreal & Quebec, & the rural parts of Quebec, a good deal of thought & labor has been given to the exploitation of the Temiscamingue region. This includes the scenery on either shore, in both Quebec & Ontario, & the lakes which stretch for many miles through a country which may still be truthfully described as a solitude—romantic in the extreme, soft with sylvan beauty, bold with jutting headlands & hills, & various with wood & open stretches which gives promise to the settler. A magnificent series of views has been prepared & issued, setting forth all the more attractive spots in this vast region; destined sooner or later to be the home of a thriving population. The lakes & rivers & islands are almost without number; game is abundant, & fishing offers constant & abundant reward. The difficulty of access may be to some a drawback; but there is no doubt that many U.S. tourists will make holiday in this region during the coming summer—those who tasted of its charms last year hav-

ing spread the most glowing reports among their friends.—Witness.

Grand Trunk Tourist Literature.

The tourist publications, which have been issued by the General Passenger Department of the G.T.R. for the season of 1899, & which are being circulated throughout Canada & the U.S., are full of interest, the text giving graphic & concise descriptions of the regions in Northern Ontario, including the Muskoka lakes, the Lake of Bays, the Magnetawan river & the 30,000 islands of the Georgian Bay. The pamphlets are profusely illustrated with half-tone reproductions of river, lake & inland scenery with here & there a deer hunting picture or some fishing scene that makes one long for summer & the holidays. The publications are printed on the best paper, & by a somewhat new & novel process, which has been perfected after long & careful experiment with blending of colors & mix-

Passenger Traffic Notes.

The C.P.R. is making a big display at the New York sportsmen's show.

The Rutland, Fitchburg Ry. started, on Mar. 1, a vestibuled express train service between Montreal, Boston, Worcester & southern New England points via Lake Champlain & Burlington.

The G.T.R. City Ticket Office in Toronto was moved into its new quarters, northwest corner King & Yonge sts., Mar. 1. The new office is a great improvement on its predecessor. It is rumored the G.T.R. will lease the Canada Life offices in Hamilton when that company moves to Toronto.

The Northern Pacific railroad will, on Mar. 12, start double daily continental trains from St. Paul & Minneapolis to North Pacific coast points. One train, the Puget Sound Limited, will leave St. Paul at 8.55 a.m., the other, the Oregon Limited, will leave St. Paul at 10.30 p.m. Both will make equal time.

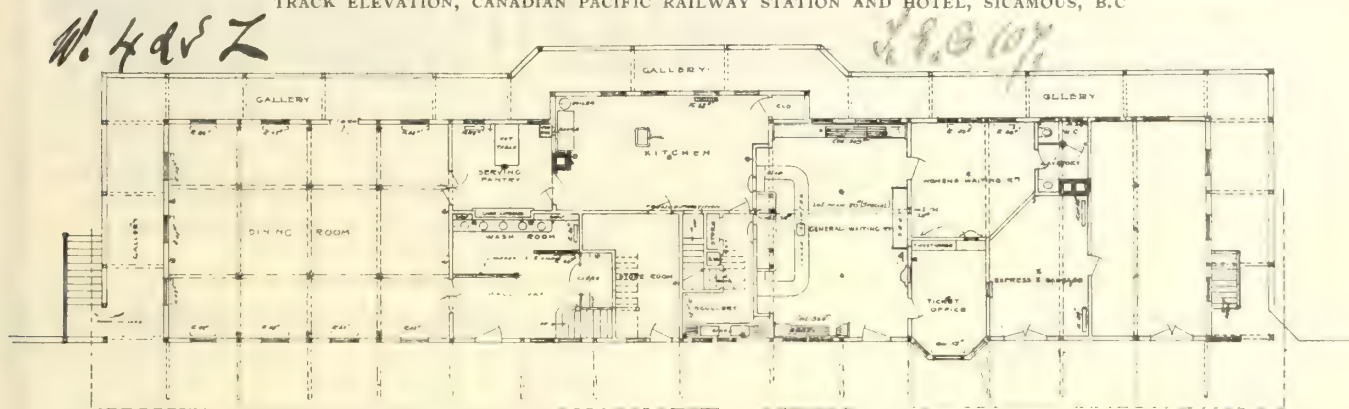

Grand Trunk & Canada Atlantic.

Arrangements have been completed whereby a through & efficient freight service will be inaugurated between Montreal & Ottawa, trains running solid between these two points, obviating the changing of engines & crews at Coteau Jct. This means that the freight service between Parry Sound & Montreal will be placed on precisely the same footing as the passenger service has been for years. This business will be centralized in Montreal & Ottawa, & Coteau Jct. will become a merely wayside station. As a point of grain shipment its history has closed.

The difficulty in regard to the interruption of the through passenger service between Toronto & Parry Sound has been overcome. The alteration which the G.T.R. had to make in its through service by reason of the resumption of its old relations with the C.P.R. at the close of the rate war dislocated the Parry Sound connection. Arrangements have been made between the companies by which the

TRACK ELEVATION, CANADIAN PACIFIC RAILWAY STATION AND HOTEL, SICAMOUS, B.C.

GROUND FLOOR PLAN, CANADIAN PACIFIC RAILWAY STATION AND HOTEL, SICAMOUS, B.C.

ing of ingredients, to get the very artistic & beautiful effect which they present. It is styled "Luxotype," & is entirely new from a printer's standpoint. Among the publications issued are "Muskoka Lakes—Highlands of Ontario"; "Lake of Bays—Highlands of Ontario"; "Among the 30,000 Islands of the Georgian Bay"; and a special brochure entitled "Hay Fever," giving the cause of this annoying disease & how to avoid & cure it. The several pamphlets bristle with pointers for the tourist, camper, hunter & angler. A postal card to W. E. Davis, General Passenger & Ticket Agent, Montreal, will secure copies.

J. Bryce, Manager Canadian Express Co., Montreal, writes: "It is pleasing to note that THE RAILWAY & SHIPPING WORLD is keeping well up to date. Its construction & the information contained therein are certainly very creditable."

There is a good deal of talk about future service between Montreal & Ottawa. At present the C.P.R. makes it over the Montreal & Ottawa section in 2 hrs. 40 mins., the Canada Atlantic doing it in 2 hrs. 55 mins. via Coteau Jct. & G.T.R. It is said the C.P.R. will shorten up to 2 hrs. 15 mins., & that the Canada Atlantic will also shorten up its time, making the run in 2½ hours. The C.P. mileage is 111.04 & the Canada Atlantic—G.T.R.—116.06.

Business on the extension of the Lake Manitoba Ry. & Canal Co.'s line, which was built last year, is extending rapidly. It was thought one train a week from Sifton to Cowan would be sufficient, but the Co. has found the traffic sufficiently large to put on a second train with two passenger coaches. These coaches are occupied from week to week with settlers going in, & the country from Cowan, at the end of the track, to Swan River, is a regular beehive with people teaming in their affects.

daily through service by way of Scotia Junction will be renewed, a connection being made by the O., A. & P.S. Ry. at Scotia Junction with the G.T. express leaving Toronto at 3.15 p.m.

Freight Traffic Matters.

The Kaslo & Slocan Ry. is doing a heavy ore carrying trade.

Business on the Manitoba & Northwestern continues to keep up, & is considerably ahead of the corresponding period last year. A good deal of wheat is steadily coming out. Cattle have not yet commenced to move.

Recent negotiations between the War Eagle Consolidated Mining Co. & the C.P.R. have reduced the freight & smelter rates on Rossland, B.C., ore from \$7 to \$6 a ton, & efforts are being made to secure a still better figure. With the object of securing a lower rate by offering the railway more business,

It is thought ore will be shipped from the Central States the course of two months.

The shipments of grain over the G.T.R. from the Midland, Ont., elevators have been light recently, although the general traffic movement over the entire system is very heavy. Most of the grain going out of Midland is for local consumption, there being continually no export movement from there. The Midland elevators are now pretty well cleared out, and grain dealers having stuff in elevator No. 2, the old elevator, will have to clear it all up by the middle of Mar., as the elevator will then close down for repairs.

General Freight Agent Wallace, of the I.C.R., has recently made contracts for westward bound coal freight, which will assure new business on the road both summer & winter. A contract has been made to haul coal from Picton county to Montreal, over almost the whole length of the line. The contract will average from 40 to 100 cars a week. A contract has also been entered into with the C.P.R. for the I.C.R. to haul from Springhill & Maccan to St. John about 150 cars a week. There is also an enormous expansion of freight business for Newfoundland from Montreal to North Sydney—all new business & diverted from New York. This is now equal to about 25 cars a week, & the trade is merely in its infancy.—Moncton Transcript.

In 1898 84,094 cars loaded with products from Michigan, Wisconsin, Indiana, Illinois & other Western States passed through the St. Clair tunnel for points in the Eastern States. This equals 4,200 trains of 20 cars, or 11½ trains a day, 9 cars an hour, or 1 car every 7

minutes during the 365 days of the year. None of this freight stopped in Canada. From these figures it will be seen that the Chicago & Grand Trunk is an important feeder to the G.T.R. Of the above through freight 658,123 tons consisted of agricultural products of the above states, 260,781 tons of animals, 16,120 tons of mining products, 47,519 tons of the product of forests and 153,519 tons of manufactured goods. The total tonnage amounted to 1,142,164. When it is taken into consideration that nearly all of the different cars come back over the same line it will be seen that the average number of through cars passing through the St. Clair tunnel is about 1 every 3½ minutes during the year. The west bound tonnage is less than ½ of the east bound tonnage.

For 15 years the C.P.R. found an elevator of 250,000 bus. capacity, sufficient for their trade at Owen Sound. In 1897 it became necessary for them to put up an additional elevator of 850,000 bus. capacity with a marine leg of 10,000 bus. capacity per hour. Also, the largest flour sheds on the Canadian side of the great lakes were erected. During the first year of the operation of the new elevator 2,264,247 bus. of grain were handled, & last season this was increased to 3,184,102 bus. In addition to this, during the past season the Co. handled through its sheds at Owen Sound 103,161 tons of western flour, etc., & had return freights westward amounting to 67,904 tons. A largely increased amount of local freights were also handled by the C.P.R. during 1898. In 1897 the Co. opened up a new trade at Owen Sound by establishing a line of steamers with Gladstone, Mich., & Chicago. The

steamer Alice Stafford ran on this route, assisted by other steamers. Last season the Stafford alone took to Owen Sound 31,648 tons of merchandise, principally U.S. flour, sugar & gluten meal for export.

Canadian Freight Association.

A largely attended meeting was held in Montreal, Mar. 3.

Representatives of the Merchants Line reported following as their proposed fleet for the season of 1899:—Persia, Ocean, Arabian, Sir S. L. Tilley, Cuba, Lake Michigan, Melbourne & Myles.

The R. & O. N. Co. reported the Bohemian, Corsican, Spartan, Algerian & Hamilton.

Mr. Smith reported the Canada Atlantic Transit Co. with steamers to and from Depot Harbor. Names of vessels to be subsequently reported.

The Georgian Bay & Lake Superior Steamboat Line reported the City of Collingwood and Majestic to sail between Collingwood, Owen Sound, Fort William and Duluth, calling at principal ports en route.

Mr. Hepburn reported the steamer Alexandria on the St. Lawrence River & Bay of Quinte ports route.

Differentials in favor of boat lines.—The following differentials were proposed & agreed to (sugar in all cases excepted):—

To & from St. Lawrence River ports between Kingston & Montreal inclusive:—

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd-numbered sections along the Main Line and Branches, and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6

per acre.

Lands in Assiniboia, east of the 3rd meridian, average

\$4 to \$6 per acre.

Lands west of the 3rd meridian, including the Calgary

District, generally \$3 per acre.

Lands in Northern Alberta and the Lake Dauphin

District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or other crops.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.
160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.
160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.
160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.
160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.
160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the purchase money.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

5	4	3	2	2	1	1	2c. per 100 lbs.
---	---	---	---	---	---	---	------------------

The special commodities from Bay of Quinte ports, eastbound, to consist of apples in bbls., cheese, eggs, flour, mill feed, canned goods & evaporated apples. To & from other ports east & westbound & to Bay of Quinte ports westbound to consist of the articles in the G.T.R. & C.P.R. special iron, etc., commodity tariffs. It being agreed that no special

wharfage & insurance, &, as regards cartage, exactly the same arrangements to be in effect as in connection with the lake & rail lines. The local rates to Lake Superior ports to include wharfage, except to Sault Ste. Marie, Duluth & the "Superiors." The insurance to be equalized as against the lake & rail routes. The cartage arrangement same as lake & rail lines. This arrangement to remain in effect until July 1, 1899, subject to 15 days' notice to the Chairman, on the part of the all-water lines as to continuance or otherwise.

Basis of rates to Winnipeg & North-West Territories.—The basis of rates Montreal & points west in Ontario to Winnipeg rail & lake were adopted, same as last year, viz:—

1	2	3	4	5	6	7	8	9	10 classes.
143	123	103	87	72	70	55	55	—	47c. per 100 lbs.

The local rates from Fort William & Duluth to Winnipeg were announced to be:—

1	2	3	4	5	6	7	8	9	10 classes.
116	98	80	66	57	47	35	35	—	27c. per 100 lbs.

Rates to other points in the North-West to be on same basis as last year.

It was agreed that through tariffs should be published, & show precisely what is included in the rates—whether insurance, wharfage, etc., etc.

Traffic to & from connecting lines.—The Canadian Pacific, Grand Trunk & other com-

2 lb. Cans	45 lbs. per case.
3 lb. Cans	65
Gallon Cans, 6 cans per case	45
Gallon Cans, 12	90
Tomatoes, 3 lb. Cans	70

Blank books.—Including exercise, scribbling & practice books. Note books & writing tablets without printed matter, except on outside covers: in cases, L.C.L. To Winnipeg, Man.; Portage la Prairie, Man.; Brandon, Man., at 3rd class rates via lake & rail or all rail. Same articles to take 5th class rates when shipped to same points with paper, classifying 5th class, in carloads.

Boots & shoes.—Leather, rubber or felt, in freight or mixed carloads, to be taken at 3rd class rates, minimum 20,000 lbs. to Manitoba & Northwest.

Groceries & dried fruits.—Groceries classified 5th class, c.l., & dried fruits, mixed carloads, from all points, Montreal & west in Ontario, to points west of Fort William & Duluth in Canada, groceries 5th class, dried fruits, 4th class to Manitoba & Northwest.

Flour, oil cake, etc., ex Manitoba & Northwest.—That the minimum rate on flour & oil cake from Fort William & Duluth be 15c. per 100 lbs. to all direct points Montreal & west in Canada; the rate to Montreal to be exclusive of terminal charges at that point.

Other traffic eastbound ex Manitoba & Northwest.—Traffic other than grain, flour &

BALDWIN COMPOUND CONSOLIDATION LOCOMOTIVE FOR INTERCOLONIAL RAILWAY.

rates, east or westbound, are to be made without the concurrence of transportation co.'s interested. Wharfage included at railway competitive points on the Bay of Quinte—at other points wharfage to be added to the rates.

It is understood & agreed that in the application of the differential arrangement as proposed herein, the rates quoted by the boat lines shall be based on the gross all-rail rates, i.e., the all-rail rates plus the usual additional cartage charge at cartage points. The rates quoted by the boat lines shall be: westbound, exclusive of cartage at shipping point, & also insurance, but to include cartage on cartage freight & wharfage at destination, except as otherwise provided herein. Eastbound the boat rates shall include cartage at shipping point (if a cartage station), but shall be exclusive of insurance & cartage at destination.

It is also understood that the boat lines will be governed by the rules of the Freight Inspection Bureau & the Canadian Joint Freight Classification.

Traffic to Lake Superior & the North-West.—It was agreed that no differentials be accorded the all-water lines on local or import traffic destined to Sault Ste. Marie, Lake Superior ports and points beyond. The all-water lines to quote the same through rates to points indicated as given in the tariffs printed by the Grand Trunk & Canadian Pacific Rys. The rates quoted by the all-water lines to points west of Duluth & Fort William, to include

panies interested to agree with lateral lines upon the arbitrariness to be charged over & above junction point rates, same to be included in printed tariffs.

That with regard to local business to Georgian Bay, Manitoulin Islands, Lake Huron & Lake Superior ports, last year's tariffs be reaffirmed, including Parry Sound & French River. The steamers represented at this meeting will not take traffic from Montreal, St. Lawrence River, Lake Ontario or Lake Erie ports to or for Lake Huron or Georgian Bay ports. Lighthouse supply trip excepted. All commodity tariffs & special arrangements in force last season expired with the close of navigation, &, if not specially renewed by agreement, now or subsequently, would be inoperative this season.

Ale, beer & porter, in glass & wood, any quantity, local to Georgian Bay & Lakes Huron & Superior ports only, at 25c. per 100 lbs. from Toronto and West, and 30c. per 100 lbs. east of Toronto to & including Montreal. Returned empties to take same rates. This arrangement will not apply on through shipments destined to points beyond Fort William or Duluth. Mixed cars of doors & sashes, glazed or unglazed, & common mouldings, in the white, to Manitoba & North-West, to be taken at 7th class, minimum 24,000 lbs.

The following weights will apply on shipments of canned fruits & vegetables: all canned fruits & vegetables except tomatoes:—

oil cake, shall take the same rates eastbound as apply westbound, subject to the same conditions as agreed to on westbound business for the current season.

Flour, oatmeal, corn meal, rolled oats, malt, oats, corn, split peas & pot & pearl barley in packages (straight or mixed carloads), minimum 30,000 lbs. per car.—From Montreal & points west in Ontario & connecting lines to Winnipeg, Emerson & Portage la Prairie at basing rate of 21c. per 100 lbs. west of Duluth or Fort William, plus 8th class proportionate rates to Duluth or Fort William as per current lake & rail tariff if routed lake & rail, Brandon one cent per 100 lbs. additional.

Woodenware, indurated ware, brooms, brushes, washboards, clothes pins, wooden churns, paper & matches (mixed carloads, actual weight, minimum 20,000 lbs.)—To Winnipeg, Portage la Prairie & Brandon, at the carload rate on each article in accordance with Canadian joint freight classification. Should the actual gross weight be less than the minimum of 20,000 lbs., the weight of the lowest classed article will be increased so as to make up the minimum. (Brush & mop handles & step-ladders will be classed as woodenware under this arrangement & will take 5th class rates.)

Rates from & to points east of Montreal.—The usual agreed C.P.R. & G.T.R. arbitrary rates over the Montreal rates herein arranged, or hereafter agreed upon, to apply to a

from all points east of Montreal, except as otherwise provided for—same to be shown in printed tariffs.

Commodity rates from Montreal.—The commodity rates as per pages 5, 6 & 7 of minutes of meeting of March 3, 1898, were adopted for the season of 1899.

Mixed cars special commodities.—Lake & rail tariffs to provide that mixed carloads of commodities will take the same carload rating so long as they are under the same class & included in the same group. See pages 5, 6 & 7 of meeting of Mar. 3, 1898.

Iron commodities.—Iron & steel (bar, band, bundle, boiler & sheet), corrugated & galvanized iron in sheets, iron pipe & pipe fittings, iron boiler tubes, tacks, nails & spikes (iron & steel), wire (barb, fence or telegraph, & staples when part of shipment), horse-shoes, bolts, nuts & washers, rivets & putty, straight or mixed carloads, minimum 24,000 lbs., from Montreal & west. To Winnipeg 57½ c. per 100 lbs., Portage la Prairie 68c., Brandon, Man., 74½c.

Bark extract, c.l. to Winnipeg. At 5th class tariff rates.

Basis of rates, etc.—That the agents of all the boat lines shall adopt & use the Canadian joint freight classification & the rules governing the same, in connection with all freight carried under these arrangements, & shall also be subject to the rules governing the Canadian Bureau of Freight Inspection.

Cartage.—In connection with all the arrangements herein provided for the Canadian Pacific, Grand Trunk, M.C.R., & other railway companies' rates shall be understood as being subject to an extra charge of 1c. on 5th class & 1¼c. on classes 1 to 4, inclusive, minimum cartage charge 10c., at all cartage points in Ontario & Quebec, & the steamboat companies agree to take these extra charges to account before applying the agreed differentials & to provide for these charges in all tariffs.

Manitoba & Northwest rates.—It is understood that the term Manitoba & Northwest does not include Kootenay, the Canadian B.C. or U.S. Pacific Coast points.

Rates to Pacific Coast & Kootenay District, westbound only.—The following differentials will be allowed on all water & lake & rail class & commodity rates via Fort William & Duluth, as compared with all-rail rates to Pacific Coast & Kootenay, B.C., points:—

1 2 3 4 5 6 7 8 9 10 classes.
10 8 7 6 5 5 5 5 - 5c. per 100 lbs., as per Canadian joint freight classification.

These differentials to be absorbed by the lines east of Fort William & Duluth on B.C. Coast traffic, & by the lines west of Fort William & Duluth on Kootenay traffic.

Maintenance of rates.—It is agreed by the representatives of all lines present to faithfully maintain the rates & regulations as provided for in the minutes of this meeting, & it is also agreed that no passes or reduced passenger fares shall be granted for the purpose of securing or influencing traffic to the territory covered by these agreements.

Grand Trunk Operating Notes.

An item has been going the rounds of the daily press to the effect that the G.T.R. management has posted notices in the round houses & car shops on the system that hereafter employees will get their monthly pay on Sunday, & that this is to obviate the loss of time involved by paying on week days. We are officially informed there is no truth whatever in the statement.

It is said the G.T.R. Co. has reached a settlement with the widow of Driver Brady, who lost his life at Murray Hill crossing disaster. The son & daughter of deceased will be given life employment at \$50 & \$25 each per month. The widow's portion has not been disclosed. J. McNamara, of Brockville, who was one of the most severely injured passengers, is said to have received \$2,400. He will be disfigured for life. The widow of W. Lunness, the Toronto cattle dealer, received \$6,750.

Arbitration as a means of settling disputes between railway companies & their employees has had another practical trial on the G.T.R. The dispute arose on account of the discharge of 4 locomotive firemen for failing, as it was claimed, to comply with the rules of the Co. when called upon to respond for duty. The men having failed to effect a settlement, it was proposed & accepted that the cases be referred to arbitration, one arbitrator to be selected by the Co. & the other by the men. In the event of these two failing to agree, then the third was to be called in. B. B. Osler, of Toronto, was selected by the G.T.R., & E. E. Clark, Grand Chief of the Order of Railway Conductors, was selected by the men. After submitting & reviewing the evidence in the case, an understanding was arrived at, which resulted in the restoration of two of the firemen, D. McGowen & J. Laing, to the service of the Co. Failing to agree upon the case of J. Burk, the third arbitrator, Chancellor Boyd, of Toronto, was called in, who, after listening to the arguments on both sides, as presented by Messrs. Osler & Clark, took the cases under advisement, & has made the final award, which was against the restoration of J. Burk.

The General Superintendent has issued the following circular to agents & conductors:—
"The present heavy demand for cars of every

description (especially large capacity box cars) requires the utmost vigilance & prompt movement of all cars in order to secure the greatest possible use of our equipment. Cars should be selected for loading all classes of heavy freight with strict reference to their suitability for character of load offered. Every car should, so far as possible, be loaded to its full stencilled capacity. Special attention must be given to the prompt loading & unloading of all long & large capacity cars. When suitable full load is not in sight for a car of large capacity, it should be immediately reported to the Train Master for distribution. Small capacity cars must be used for 'shed' or short haul freight, & every possible effort made by agents & conductors to fill up cars used in doing way work on local freights. Foreign box cars must be utilised so far as possible for shipment to points off the System in homeward direction. When suitable cars are not on hand agents should make special request by wire for them. Agents should also remember that a foreign car may be loaded to any point if freight is routed by the railway owning the car. This is imperative in all cases. When absolutely necessary, cars may be loaded 10% above their marked capacity, but never more, except by special permission. Agents should use the greatest care in making up daily car reports, & see that all cars on hand are properly shown under each head, also correctly entered in daily telegraphic car reports."

Canadian Pacific Operating Notes.

The Co. has, it is claimed, saved over \$300,000 in the amount of coal consumed over its system in the past year, as the result of a circular to firemen, giving specific instructions in regard to the use of fuel. The circular called attention to the necessity of economizing in the matter of fuel, & pointed out that large quantities were being needlessly consumed. The report that there was trouble between the Co. and the firemen on account of the circular is denied by the officials.

The Assistant to the Manager of the Western Lines has issued the following circular: "The practice of overloading this Co.'s freight equipment, box cars particularly, appears to be on the increase. The particular attention of all concerned is called to the serious results which may follow this dangerous practice. Agents at stations where there are no track scales must be careful to examine all cars after loading has been completed. Make sure that cars loaded with grain are not filled above the grain line. A careful examination will enable any agent to detect cars which are overloaded, & which must not be allowed to

INSURE IN

The Canadian Railway Accident Insurance Co.

proceed without the excess being removed by the shipper. Call the attention of all shippers at your station to the fact that the regulations of the Co. will result in the collection of double rates on anything in excess of the capacity of the car. Be careful to ascertain the stencilled capacity of box cars with numbers lower than 10,000, the majority of these being only 30,000 lbs. capacity. Also look out for C.P.D. cars 20,000 to 20,198, 20,548 to 20,638, which are only 30,000 lbs. capacity, & C.P. box cars 30,998 to 31,198 which, although 34½ ft. long & 7 ft. high & closely resembling this Co.'s 30-ton equipment, are only of 40,000 lbs. capacity. Agents & trainmen must also be particular to see that the load in cars is evenly distributed, remembering that a car which is overloaded or loaded to the full capacity & not evenly distributed, is much more liable to derailment, & any agent who permits cars to leave his station in this condition, or any trainman, having occasion to open or load freight into such cars, allows them to go forward will be responsible for the results. The special attention of all agents & men at track scale stations particularly, is called to clause 2 in Freight Traffic Manager's circular 5, requiring the removal of excess weight when cars are found to be dangerously overloaded."

E. C. Hawkins, Chief Engineer & Superintendent of the White Pass Ry., has issued an order at Skagway prohibiting all Sunday work in the offices of the Co. Special attention is to be given to business during office hours, but late hours & Sunday work are to be avoided whenever possible.

The station agents on the Chicago Division of the Erie Ry. have been supplied with light wooden hoops, about 18 in. in diameter, for use in delivering train orders to enginemen & conductors who do not stop at the station. The hoop is attached to a stick about 4 ft. long, & the station man can thus easily hold it where the trainman can run his arm through it at any ordinary speed.—Railroad Gazette.

Toronto, Hamilton & Buffalo Ry.

The bonds of this Co., amounting to \$3,280,000, have been placed on the market by Edward, Sweet & Co., of New York. The syndicate had the bonds underwritten in England at 98c., but that deal did not go through, & they are held at par. They call for 4% interest. The prospectus reads as follows:

The T. H. & B. Ry. has been built in pursuance of a contract made in July, 1895, between the New York Central & Hudson River R.R. Co., the Michigan Central Ry. Co., the Canada Southern Ry. Co., & the Canadian Pacific Ry. Co. The railroad which, in pursuance of the agreement made, was constructed, passes through a section of country possessed of unusual natural resources & terminates in a city of over 50,000 inhabitants, well supplied with manufacturing facilities. An extension of this line westwardly from Hamilton, through Brantford to Waterford—a station on the Canada Southern Ry.—also serves two large manufacturing towns & a rich agricultural region.

The contract, the term of which is 50 years, provides, among other things, as follows: That 70% of the stock be taken over by the allied companies, & that during the term of the contract voting power on this stock, giving control, be vested in the New York Central & Hudson River R.R. Co.—5 of the 7 directors of the company to be named by the allied lines. All traffic which the proprietor lines can control, destined to points on the new line & its connections, to be sent via that line. Twenty-five per cent. of the earnings of the proprietor companies, & their leased & operated lines, on all traffic inter-

changed with the new line, to be set aside in each 6 months' period during the term of the bonds as a guaranty fund from each to pay any deficit in interest on the bonds in that period. Through service, without change of cars, during the period of the contract to be maintained between the stations & terminus of the proprietor lines, at Buffalo, Suspension Bridge & Toronto. The C.P.R. Co. to pay to the T. H. & B. annually 4% upon ½ of the cost of the Hamilton terminals of the latter, such cost having been agreed upon between the companies interested at \$1,571,770.28. The C.P.R. Co. to pay annually to the T. H. & B. its proportion of the expenses of operation & maintenance of the Hamilton terminals of the latter, the amount payable to be determined on the basis of wheelage. The road to be built & equipped under the specifications of the Michigan Central R.R., & under the supervision of engineers appointed by the proprietor companies.

The road was built as required in the contract, in the most thorough, substantial & permanent manner. The line between Welland & the C.P.R. connection was laid with 80-lb. rails, & the balance with 70-lb. rails. The total issue of bonds secured by 1st mortgage upon the franchise & property, now owned & hereafter to be acquired by the Co., is \$3,280,000. On Aug. 1, 1898, new construction & expenditure for betterments were nearly completed, & since that time the net earnings of the Co. have been more than sufficient to pay the interest on the bonds. The results of operation under the agreement in the 5 months' period ended Dec. 31, 1898, are as follows:

Total net earnings of the Co.	\$55,587.31
Amount of guaranty fund.	75,784.08
Amount available for interest	\$131,371.39
Total amount of interest	54,666.65
Excess for 5 months over total interest charged	\$76,704.74

C.P.R. ANNUAL REPORT.

The 18th annual report for the year ended Dec. 31, 1898, dated Feb. 27, 1899, & signed by the President, Sir Wm. Van Horne, has been addressed to the shareholders as follows:—

A balance sheet of the affairs of the Co. at Dec. 31, 1898, together with the usual statements & schedules, are herewith submitted.

The gross earnings for the year were.... \$26,138,977.13
The working expenses were..... 15,663,605.51

And the net earnings were..... 10,475,371.62
Add interest earned on deposits & loans & income from other sources..... \$87,066.86

Add interest due from D., S. S. & A. Ry. Co. on consolidated bonds held by your Co. against debenture stock issued..... \$800,280.00
Less advanced by your Co..... 395,280.00

Add interest from M., St. P. & S. St. M. Ry. Co. on bonds held by your Co. against debenture stock issued..... 126,400.00

423,366.86
\$10,804,738.48
Deduct fixed charges accrued during the year, including interest on land bonds..... 6,774,321.24

The surplus for the year was..... \$4,124,417.24
From this there has been charged off the ½-yearly dividend on preference stock, 2% paid Oct. 1, 1898..... \$245,846.07
And ½-yearly dividend on ordinary stock, 2% paid Oct. 1, 1898..... 1,300,000.00

Leaving balance..... 3,578,571.17
From this there has been declared a 2d & ½-yearly dividend on preference stock of 2% payable April 1, 1899..... \$237,162.50

And a 2nd ½-yearly dividend of 2% on common stock payable April 1, 1899..... \$1,300,000.00

The working expenses for the year amounted to 59.92% of the gross earnings, & the net earnings to 40.08%, as compared with 57.16% & 42.84% respectively in 1897.

The earnings per passenger per mile were 1.52c., & per ton of freight per mile 0.76c, as against 1.82 & 0.78c. respectively in 1897.

Although the gross earnings for the year were considerably beyond those of 1897, the net earnings show a comparatively small increase. This was due in part to the rate disturbances which continued during 9 months of the year, but in greater part to the long-continued rains following the harvest in the Northwest, which prevented the threshing & harvesting & marketing of grain until within a few weeks of the close of lake navigation, making it necessary to find employment for the Co's rolling stock in other traffic affording little profit.

The passenger rate difficulty which prevailed at the date of the last annual report continued until Nov., when it was terminated with results not unsatisfactory to your directors. This settlement resulted in a restoration of the North Bay arrangement with the G.T. Co. & in removing all visible causes of friction with that Co.

The Co's ocean & lake steamships, & its telegraph, express, sleeping cars & grain elevators, have continued to add largely to your profits, & together show a handsome increase over any past year.

Your property has been maintained in excellent condition throughout & has been much improved in the way of permanent structures & station & terminal facilities, & large additions have been made to its equipment. A detailed statement of the expenditures for permanent improvements & new equipment is appended.

Two hundred & eighty miles of your principal lines were relaid during the year with steel rails weighing 73 lbs. a yard in place of the original 56 & 60 lbs. rails.

The application of automatic couplers & air brakes to your freight equipment is well advanced, & the end of this heavy expense will soon be reached.

The Crow's Nest Pass line was completed to Kootenay Lake in Oct., too late in the year to affect your year's results as regards earnings.

The acquisition of the Columbia & Western Ry., which was authorized at your last annual meeting, has been carried out, & a formal lease has been entered into which you will be asked to approve. That railway is now in the possession of your Co., & its extension westward from Robson to the Boundary Creek mining district (100 miles), to which your assent was also given, is now well advanced, & is expected to be completed about midsummer. This extension, although unusually expensive in construction, is fully justified by the extensive developments in the districts it is intended to serve, & which are as yet without railway facilities. The Co. will acquire in connection with this line 1,600,000 acres of land from the Province of British Columbia; but it is probable that this grant will be converted into a cash subsidy.

The attractions of the Klondike drew away many prospectors & miners from Southern British Columbia early in the year, but the development of the mines of the latter district has continued & the shipments of ores have increased as rapidly as the means of transportation would permit. The much desired shipping facilities afforded by the new Crow's Nest Pass line & the facilities which will soon be afforded by the Boundary Creek line, will, without doubt, give a great impetus to the shipments & to business generally in the Kootenay, Rossland & Boundary Creek districts.

Two extensions of branch lines in Manitoba were made during the year, one of the Stonewall branch northward to Foxton, 10.6 miles, & one at the Pipestone branch westward, 17 miles; the settlement of the country having made both of these necessary.

Your Co. expended a considerable amount, about the beginning of the year, in ocean & river steamers for the expected large movement towards the Yukon (Klondike) country; but, unfortunately, the steamers could not be got ready in time to take full advantage of such trade as there was; it is, however, expected that the present season will afford them profitable employment.

The Co.'s hotel at Quebec, the Chateau Frontenac, has been most successful, & a large addition was made to it last year to meet the requirements of the travel it had so largely stimulated. It has not only become profitable in itself, but has from its beginning added materially to your passenger earnings.

A final agreement for the sale of the Aylmer Branch, between Hull & Aylmer, 7.5 miles, for \$100,000, has been entered into, subject to your approval.

During the year \$919,000 of the 4% consolidated mortgage bonds of the Minneapolis, St. Paul & Sault Ste. Marie Ry.; \$717,500 of the 5% 1st mortgage bonds of the Montreal & Ottawa Ry., & £120,000 of the 4% 1st mortgage bonds of the Columbia & Kootenay Ry., in respect of interest upon all of which your Co. is liable as guarantor, were purchased with the proceeds of £412,191 4% consolidated debenture stock, your Co. thereby effecting a considerable annual saving.

During the year £2,285,000 of 4% preference stock was created & sold, & the proceeds have been applied to the purchase of the Alberta Ry., to the completion of the Crow's Nest Pass line, & towards the expenditures for additions, improvements & equipment already authorized by the shareholders.

The purchase price of the Columbia & Western Ry., the amount expended on its extension from Robson to Boundary Creek, & the cost of the extensions of the Stonewall & Pipestone branches, together with a portion of the amount expended on general improvements & equipment, have been temporarily advanced from the Co.'s surplus.

The Duluth, South Shore & Atlantic Ry., although still requiring assistance from your Co. is steadily improving in its earnings. The discovery of extraordinary deposits of cheaply mined iron in adjacent districts 6 or 7 years ago forced a heavy reduction in the rates of that railway on iron ore, which had been its chief source of earnings; but this loss is being made good by the development of a diversified traffic, & your directors are encouraged to believe that this line will soon be self-sustaining.

The Minneapolis, St. Paul & Sault Ste. Marie Ry. earned last year \$413,275 above all its interest & other fixed charges, but necessary expenditures for rolling stock and various ad-

ditions & improvements prevented the repayment to your Co. of any part of the advances made prior to 1897. You will be asked to approve measures for placing this important line on a proper financial footing, such as will admit of its healthy development & insure its continued profitable working.

You will be asked to approve expenditures for improvements of permanent way aggregating \$150,979; for additional station, yard & terminal facilities at Montreal, Vancouver & other points, \$788,187; for the completion of air brake & automatic coupler equipment, \$365,010; for branch lines to mines in connection with the Crow's Nest line, \$300,000; & to authorize the purchase of rolling stock to the extent of \$1,000,000, as the traffic of the Co. may require.

Your directors are glad to be able to report a continued & marked improvement in land sales, which for the year were 348,608 acres for \$1,121,744, against 199,482 acres for \$665,740 in 1897, & 87,878 acres for \$308,928 in 1896.

The satisfactory progress which has been made in the settlement of the Northwest is evidenced not only in the largely increased land sales of the Co., but in the number of homesteads taken up from Government lands in Manitoba & the Territories beyond, which, according to official returns, were 4,848 in 1898 as against 2,406 in 1897.

A much larger amount of grain from the Northwestern crops remains to be moved than ever before at this time of the year, & this, together with the most satisfactory agricultural & industrial conditions now prevailing in Canada, which are due in a great measure to good crops & good prices & to successful mining, gives promise of a large spring & summer traffic.

CONDENSED BALANCE SHEET, DEC. 31, 1898.

The Packing of Frogs.

The case of the G.T.R. vs. Washington, which came before the Judicial Committee of the Imperial Privy Council recently, was an appeal from a judgment of the Supreme Court of Canada of Dec. 9, 1897, reversing a decree of the Court of Appeal for Ontario & restoring a judgment of Justice Street. The arguments were heard in Aug. last before a committee consisting of Lord Macnaghten, Lord Morris & Sir Henry Strong, when judgment was reserved.

Lord Macnaghten, in delivering on Feb. 25 for Sir H. Strong, their lordships' judgment, said the action was brought by the respondent against the appellants to recover damages for injuries suffered by him resulting in the loss of his arm in Jan., 1896, while in the discharge of his duties as a yardman in the Co.'s employ at Hamilton. At the trial before Justice Street the jury found that the injuries to the respondent were caused by his foot having caught in a "frog" in the Co.'s yard, & that the Co. had been guilty of negligence in not having the frog "blocked" or properly protected. Judgment was thereupon entered for the respondent for \$2,500, the amount at which the jury assessed the damages. That judgment, having been reversed by the Court of Appeal, was restored by the Supreme Court. The only question raised related to the proper legal construction of an act of Parliament imposing certain duties on railway companies. That enactment was sec. 262 of the Railway Act (Canada), 51 Vict., c. 29. It was in the following words:

"1. This section shall apply to every railway & railway company within the legislative authority or jurisdiction of the Parliament of Canada. 2. In this section the expression 'packing' means a packing of wood or metal, or some other equally substantial & solid material, of not less than 2 in. in thickness, & which, where by this section any space is required to be filled in, shall extend to within 1½ in. of the crown of the rails in use on any such railway, shall be neatly fitted so as to come against the web of such rails, & shall be well & solidly fastened to the ties on which such rails are laid. 3. The spaces behind & in front of every railway frog or crossing, & between the fixed rails of every switch where such spaces are less than 5 in. in width, shall be filled with packing up to the under side of the head of the rail. 4. The spaces between any wing rail & any railway frog, & between any guard rail & the track rail alongside of it, shall be filled with packing at their splayed ends, so that the whole splay shall be so filled where the width of the space between the rails is less than 5 in.; such packing not to reach higher than to the under side of the head of the rail; provided, however, that the Railway Committee may allow such filling to be left out, from Dec. to April in each year, both months included. 5. The oil cups or other appliances used for oiling the valves of every locomotive in use upon any railway shall be such that no employe shall be required to go outside the cab of the locomotive while the same is in motion for the purpose of oiling such valves."

The Railway Committee of the Privy Council in Canada, on Nov. 19, 1889, in pursuance of the authority conferred on them by subsection 4, made an order that the appellants should be at liberty to leave out the packing or filling of frogs & other spaces from Dec. to April in each year. Their Lordships were unable to see that there was any error in the judgment of the Supreme Court in so construing the Act as to restrict the powers of the Railway Committee to the filling required by subsection 4. The words "such filling" in the proviso in their primary significance must mean the filling required by the immediately preceding part of subsection 4, & did not include that made obligatory by sub-

section 3. And that the ordinary grammatical construction ought to prevail unless it could be shown that there was to be found in the statute some context or provision making it imperative to enlarge the scope of the proviso so as to include the cases dealt with in subsection 3. Their Lordships were unable to find any such context, & were consequently of opinion that the judgment of the Supreme Court was right. If it had been intended to include in the proviso to subsection 4 the cases provided for by subsection 3, it would have been obvious that the plural word "fillings" should have been used; therefore, though not, of course, by itself conclusive, it was not immaterial to observe that the word "filling" in subsection 4 being in the singular number supported the construction adopted by the Supreme Court. The decision of the Court of Appeal seemed to have been influenced by contrasting the Act of Parliament with certain statutes enacted by the Legislature of Ontario for the regulation of Provincial railways. As those were enactments emanating from a different legislative body from that which passed the statute to be interpreted, & could not be said to be "in pari materia" with it, their Lordships were unable to see that they ought to have any influence upon the question to be decided arising exclusively upon the Dominion Act & relating only to Dominion railways. Their Lordships would humbly advise her Majesty to dismiss the appeal & to affirm the judgment of the Supreme Court. The appellants must pay the respondent's costs.

Canadian Pacific Railway Projects.

The latest map issued by the C.P.R. shows a large number of projected lines. Most of these have been shown in one or more former maps as follows:—

In Quebec, an extension of the Lake Temiscamingue branch northwesterly to Les Quenais.

In Ontario, from Kleinburg to Sudbury Jct.

In Manitoba, from Stonewall northwesterly via the Narrows of Lake Manitoba to connect with the L.M.R. & C. Co.'s Ry. at Dauphin.

In the Northwest Territories, from Estevan due west some 50 miles. From the terminus of the Pipestone branch west & north-west to Regina. From Moosomin southwest & west to join the last-mentioned line near the 50th parallel. From Saskatoon to Battleford. From Swift Current north-westerly to Sullivan Lake, Alberta.

In British Columbia, from the terminus of the Columbia & Western Railway, now under construction, at Midway via Penticton to a connection with the main line of the C.P.R. at Hope.

Two projected lines are shown for the first time on this year's map, one from Fort Steele Jct., on the Crow's Nest Pass line, along the valley of the Columbia River, to Golden. The other from the terminus of the Arrow Lake branch, at Arrow Head via Trout Lake to Kootenay Lake. A survey for the latter is now being made.

Canadian Pacific Railway Mileage.

Following is an official statement of the mileage on Dec. 31, 1898:

	MILES.
Mileage included in the C.P.R. traffic returns.	6681.2
Mileage of other lines worked.	732.4
Mileage under construction, including extension of Pipestone and Stonewall branches and a portion of the Crow's Nest Pass line, which, although practically completed, is not in operation at the end of the year.	250.0
Mileage of lines owned.	7663.6
Minneapolis, St. Paul & Sault Ste. Marie Ry.	1245.0
Duluth, South Shore & Atlantic Ry.	589.0
	18,198.2

Miscellaneous Railway Notes.

The Brown System of Discipline.—General Manager Pennington says this system is in use on the Minneapolis, St. Paul & Sault Ste. Marie Ry., & that it has proved in every way superior to the former way of handling men.

Calgary & Edmonton net earnings, Jan., \$7,014.79, against \$17,100.89 in Jan., '98.

The Canada Atlantic is building 500 box cars, all of 70,000 lbs. capacity, equipped with steel trucks & Westinghouse air brakes.

Car Heating Couplers.—The Consolidated Car Heating Co. has taken action against F. E. Cane, of Montreal, Canadian agent of the Gold Car Heating Co., alleging that that Co., through him, has sold its steam heating couplers to Canadian railways, & placing damages at \$15,000. The Consolidated Co. claims that the Gold coupler is an infringement of the Consolidated coupler. This is denied by the Gold Co., and Mr. Cane informs us the latter Co. will protect all its customers.

Detroit River Bridge.—The bill introduced in the U. S. Senate, by Senator McMillan, to provide for the construction of this bridge, a summary of which was given in our Feb. issue, pg. 36, was not reported from the Committee on Commerce, and therefore failed to become law. The following paragraph in a Buffalo paper was doubtless written in the expectation that the bill would pass at the recent session of Congress: "Next winter the railways running into Detroit from Windsor will not be tied up with a blockade boat ferry, but will use the bridge if it is built in time. Everything is ready for work on the new bridge, & it will be located at the south bend of Belle Isle. The structure will be a high bridge, 117 ft. above the water, with a clear cantilever span of 1,300 ft. over the Canadian channel, & a total length of cantilever construction of 2,400 ft. There is also to be a steel viaduct 1,000 ft. in length, & 3 truss spans over the U.S. channel, each 335 ft. long."

Dominion Atlantic.—A special general meeting will be held in London, Eng., March 30, at which the report for 1898 will be submitted & directors elected. A resolution will be submitted authorizing the directors to issue £100,000 4% 2nd debenture stock similar to the existing £250,000 created by the trust deed of 1896.

G.T.R. Appointment.—J. Foley has been appointed Roadmaster of 22nd District from Guelph to Southampton, Harriston to Warton, & Owen Sound Branch, vice T. Lockhart assigned to other duties.

Great Northern.—A Montreal despatch says: Ross, Barry & McRae have undertaken the contract of completing this line, ex-

tending from the end of the track at Shawenegan, Que., to Hawkesbury, 88 miles. All the bonds, subsidies & bonuses have been transferred to them, & they will finish the road in 18 months. (Jan., pg. 11.)

The Great Northern Ry. (U.S.) will move its Toronto offices to the northwest corner of King & Yonge Sts., on the 1st floor over the G.T.R. offices, on April 1.

Hamilton & Caledonia.—Walter Anderson, Hamilton, who is Secretary of this proposed railway company, for the incorporation of which application is being made to the Ontario Legislature, writes us that he has every reason to believe the construction of the road will be proceeded with as soon as the charter is obtained. (Feb. pg. 34.)

Inverness & Richmond.—In Nov. last, pg. 238, we gave particulars of the charter for this Nova Scotia line, & of its control by P. Ryan & R. H. Bowes, of Toronto. They have given an option on it to Mackenzie, Mann & Co., & it is expected that firm will take it over & build the line. D. D. Mann has been in Nova Scotia recently in connection with the matter, & made a deposit of \$2,000 with the municipality of Inverness in accordance with a resolution of council. It is said P. Ryan has secured nearly all the coal-mining properties at Port Hood, paying cash for options in almost every instance. This is taken as evidence of the bona fides of the undertaking. The I. & R. Ry. Co. has already several miles of the "shore road," so called, graded between Port Hastings & Port Hood. The county has paid \$7,000 for the right-of-way. It is expected that work will be commenced vigorously early this spring, so that the outlook in this connection is very fair. A meeting of the Co. will be held in Halifax, Mar. 16, to authorize the issue of 1st mortgage bonds for \$15,000 a mile from the Straits of Canso to Cheticamp.

Liability to Passengers.—In the Exchequer Court at Ottawa recently, in the case of Colpitts v. the Queen, the decision was in favor of the Crown, & dismissing the petition. The suppliant was one of those injured in the Palmer's Pond accident, on the I.C.R., near Dorchester, N.B., in 1897. Justice Burbidge held that railway companies are not liable to passengers they carry for injuries they may receive unless there be negligence of some kind. They do not insure the safety of their passengers; their obligation is to use reasonable care to carry their passengers safely. In other words, it is upon the suppliant to show that the injury of which he complains resulted from the negligence of an officer or servant of the railway. The Judge, therefore, declined to entertain the claim for damages against the Government in the present suit, & ordered that the action be dismissed with costs. The Colpitts case was a test one. If he had won

several other suits would have been entered against the Crown.

From Morris, Man.—Howell & Mathers, Winnipeg, give notice of application to the Manitoba Legislature to incorporate a company to build a railway & telegraph line from or near Morris, northwesterly to or near Portage la Prairie, with the right to build a branch line from the main line in Township C, Range 2 west, to or near Carman; thence westerly to or near the western boundary of Township 6, Range 10 west, thence northwesterly to or near Carberry; thence northwesterly to or near Neepawa; thence northwesterly to the western boundary of the Province; & also with the right to build a branch line or extension from the easterly terminus, easterly, northeasterly or southeasterly to the eastern boundary of the Province south of Township 10.

Ottawa & New York.—We were in error in stating in our Jan. issue, pg. 13, that the bridge over the north channel of the St. Lawrence River had been completed last fall. There remains to be erected the suspended arm of the north cantilever, a matter of a few days' work only. The plans for replacing the wrecked bridge over the south channel are not sufficiently complete to admit of any information regarding them being given now.

Qu'Appelle, Long Lake, & Saskatchewan net earnings, Jan., \$125.56, against \$3,091.39 in Jan., '98.

Saskatchewan & Western.—The following officers have been elected:—President, A. M. Nanton; Vice-President, H. C. Hammond; Sec.-Treas., W. R. Baker.

United Counties.—H. Upton has been appointed Traffic Manager of this Co. with headquarters at 22 St. John St., Montreal, & all matters appertaining to rates, divisions, &c., will hereafter be dealt with by him. He will continue to discharge the duties of Auditor & Freight Claim Agent.

Corner GRANVILLE and GEORGIA STREETS,

VANCOUVER, BRITISH COLUMBIA.

Rates \$3 per day and upwards

The most comfortable and commodious hotel in the North-West.

Omnibus and Baggage Van meets all Trains and Steamboats.

CHAS. D. TAPRELL, Manager.

WHAT WE THINK.

—The idiotically placed railway swing bridge pier, which has been a serious interference with the successful use of the canal at Sault Ste. Marie, Ont., has been removed & the bridge replaced by one which extends across the whole width of the canal. The pier should never have been provided, and it would be interesting to learn who recommended it in the first instance.

—The railway traffic returns for the current year are, up to date, of a most satisfactory character. The C.P.R. leads with a tremendous increase, the approximate gross earnings for Jan. & Feb. showing an increase of \$455,000, the Grand Trunk figures for the same period showing an increase of \$189,930. Other lines, there is every reason to believe, generally show increases. With the absence of any rate disturbance the outlook for the year is very bright.

—Some opposition papers are attacking the Baldwin locomotives recently brought in for the Intercolonial, stating they are not working satisfactorily & that they are not what is required. The question of the importation of locomotives for a Government line may, perhaps, be a debatable question, but the quality of the Baldwins is beyond question. There is no better locomotive made, and we are inclined to think that Mechanical Superintendent Joughins, who is responsible for the specifications, knows what is required on the I.C.R. better than the political newspaper critics.

—The scheme for the consolidation of electric railway interests, with the Buffalo Railway as the central figure, & including the Niagara Falls Park & River Ry., particulars of which are given on pg. 89 of this issue, is, we have reason to believe, expected by the directors of the N.F.P. & R.R. Co. to go through. While we should be sorry to see the control of this line pass out of local hands they cannot be expected to refuse a good offer for a property which so far has not proved a remunerative investment, & which could undoubtedly be operated more economically & successfully as part of the consolidated system proposed.

—The fallacious idea that a reduction of passenger fares would produce such a large increase of travel as to more than compensate the railways was given utterance to at the recent annual meeting of the Toronto Board of Trade, when the President, referring to last year's rate cutting between the two principal lines, said that if the results were analyzed he thought it would be found that the railways were not sufferers to any material extent in consequence of the low rates which prevailed, as owing to the increased traffic any deficiency in net earnings must have been very largely overcome. The figures, however, tell a different story. The disastrously low rates prevailed during 9 months of last year. The Grand Trunk reports show that in 1898 that line carried 6,833,464 passengers, against 6,533,024 in 1897, & the passenger receipts for 1898 were £1,025,258, against £1,083,912 in 1897. So that in 1898 the G.T. carried 300,440 passengers in excess of the previous year, for which it received £58,654 less in cash. The handling of 300,440 more passengers required the use of more equipment, more train men, more clerical work, & involved other expenses, while \$285,410 less was taken in. The C.P.R. does not publish its passenger & freight receipts separately each month, & at the moment of writing its figures for 1898 are not available, though they will probably be received before this paper goes to press & room may be found for them elsewhere. They will probably be found to tell

a very similar story, though not perhaps to quite the same extent.

—The announcement from Ottawa that the Dominion Government has decided to build a telegraph line from the terminus of the Government system at Quesnelle, B.C., to Dawson City, Yukon, on the ground that the ministers have decided that the franchise is too valuable & too important to be allowed to go into any but Government hands, is hardly a surprise, as there have been strong rumors to that effect for some time past, but it is a curious decision in view of the record of the Government on the question. At the last Dominion session acts were passed incorporating the Dawson City & Victoria Telegraph Co., & the Northern Commercial Telegraph Co., both being empowered to establish telegraph communication between British Columbia & Dawson City. The latter Co. does not seem to have done anything under its charter, but the first mentioned charter was acquired by the Canadian, British Columbian & Dawson City Telegraph Co., which has been organized in England with a share capital of £300,000, & which recently issued £225,000 1st mortgage debenture stock. We were recently informed that this Co. had let a contract for the construction of the line, & that the Resident Engineer had been despatched to British Columbia to start the work, so that no doubt considerable expense has been incurred. When the prospectus of the debenture stock was issued we felt compelled to criticise it adversely on account of the visionary estimates it contained, but we want to see the Co. get fair play, & now that the Government has decided to build a line & ruin the franchise, the Co. is certainly entitled to liberal compensation. If there are reasons to-day for the line being built by the Government, they doubtless existed a year ago, & the two charters above mentioned should not have been granted. The fact that the C., B.C. & D.C. T. Co. was issuing debentures & preparing for work was given wide publicity, & yet it does not appear that the Government notified the Co. of its intention to render the charter valueless. This mode of procedure is unworthy of a Government, & is calculated to seriously prejudice Canadian interests in Europe. If capitalists once came to the conclusion that they are not to be treated honestly by the Government, & that after proceeding in good faith to carry out the powers unanimously given them by Parliament, their franchises are to be arbitrarily rendered worthless, they will leave such investments severely alone. The two charters granted last session provided for the rates for messages being subject to the control of the Governor in Council, a sufficient safeguard against excessive charges, & we fail to see any reason, "from the standpoint of the national safety" or otherwise, for the Government's action in this matter. Given a government control of rates, as provided by the statutes, there is every reason to believe that a line from Quesnelle to Dawson could be built & operated more economically & more effectually by a company than by the Government.

Some extraordinary, & in our opinion unjustifiable, legislation was enacted at the recent session of the British Columbia Legislature, at the instance of the Attorney-General of that Province. The Railway Aid Act of 1890 provided that the Lieutenant-Governor-in-Council might grant aid to a line from Ashcroft to Cariboo, to an Okanagan line & to the Farwell branch of the C.P.R. No subsidy had been granted to any of these lines under the authority above mentioned, & an act was passed taking away the power from the Lieutenant-Governor-in-Council. To us this act seems to have been unnecessary & probably injudicious, as the want of such power by the executive might seriously delay construction,

but there is no other objection to it. But some other clauses of the act are of an altogether different character. By acts passed in 1897 & 1898, aid, not to exceed \$4,000 a mile was granted towards the construction of lines from Penticton to the Boundary Creek district, about 100 miles; from Robson to the Boundary Creek district, about 80 miles; from the Pacific coast, near Point Roberts, to Penticton, about 230 miles; from Bute Inlet to Quesnelle, about 230 miles, & from Teslin Lake to a seaport in B.C., not more than 400 miles. Under the authority of these acts the late Turner government entered into contracts with Mackenzie, Mann & Co., for the construction of lines from Penticton to Boundary Creek; from Point Roberts to Penticton, & from Teslin Lake to a seaport in B.C. The act recently passed takes away the power to aid the lines subsidized in 1897 & 1898, & cancels the contracts with Mackenzie, Mann & Co. The only excuse the members of the Government & their supporters in the House could offer for the measure was the technical plea that the contracts were not binding, because their carrying out by Mackenzie, Mann & Co. was dependent on that firm's being able to secure Dominion aid also. On the strength of the contracts the contractors went to considerable expense for surveys, &c., & were endeavoring to secure aid from Ottawa. Ex-Attorney-General Eberts, in opposing the cancellation of the contracts, fittingly termed it repudiation, & remarked that capital being timid such action would have the effect of scaring it away from the Province. British Columbia is a magnificent field for investment, & has been brought so prominently before the world during the last few years that capitalists have been turning their attention to it to an extent previously unknown. But they will soon call a halt if they once get the impression that the Legislature is ruled by repudiationists, & that any contract they enter into—to which the Government is a party—is liable to cancellation. Unfortunately for British Columbia, its government at present is dominated by the Attorney-General, a carpet-bagger from Manitoba, who left behind him there a record for just the sort of legislation he has recently forced through the Victoria House. On becoming Attorney-General of Manitoba about 10 years ago, one of his first acts was to secure the passage of a bill cancelling two contracts with the Government, which were held by political opponents; among the clauses of the bill being one which took away the rights of the contractors to appeal to the courts for compensation! This is mentioned merely to show that he is capable of securing any legislation which may suit his purpose, no matter how arbitrary or outrageous it may be, & that no contractor or investor is safe in British Columbia so long as he is a member of its government.

Good Luck for a Good Fellow. A recent Montreal despatch said: "'Charley' Hosmer has made half a million dollars in London. This statement was on everybody's tongue to-day on the stock exchange & other public resorts, & all appeared to be delighted to learn that the Manager of the C.P.R. Co.'s Telegraph had struck it rich, as mining men would say. It appears that while Hosmer was in London recently he was so successful in a deal that his profits reached the splendid sum of £100,000. From being a poor boy Hosmer has become a millionaire." We do not vouch for the accuracy of all the foregoing, though it is pretty well known that Mr. Hosmer has amassed a large fortune. His good luck is gratifying to everyone who knows him, for there is no better fellow made.

F. D. Anthony, Chief Engineer, Ottawa & New York Ry., has moved his office from Cornwall, Ont., to Ottawa.

Direct Taxation in Ontario.

Under the title of An Act to supplement the revenues of the Crown in the Province of Ontario, the Treasurer of the Province has submitted to the Legislature a measure to tax banks, insurance, loan & trust companies & a number of other corporations, including steam & electric railways, sleeping car, express, telegraph & telephone companies. In consequence of the emphatic protests against the measure, it has already been changed in many respects, & it is probable that before it gets through the house a number of other alterations will be made. Following we give a summary of the principal provisions of the bill as affecting the interests we specially represent, as they stand at the time of writing (Mar. 11).

The taxes provided for are to be paid on Nov. 1, 1899, & thereafter on June 1 in each year.

Every railway company operating a line or part of a line of railway within the Province shall pay \$5 for each mile of railway from terminus to terminus operated or used by the company. The word "railway" or the words "railway company" shall not include an electric railway or electric railway company or a tramway or a tramway company.

Every street railway company in any city in the Province & every company working or operating a railway or part thereof entirely or partly by electricity in any city in the Province for carrying passengers shall pay \$20 for each mile of track when the same does not exceed 20 miles in such city, \$35 for each mile of track when the same exceeds 20 miles, but does not exceed 30 miles, \$45 for each mile of track when the same exceeds 30 miles, but does not exceed 50 miles, & \$60 for each mile of track when the same exceeds 50 miles. The mileage shall be computed on the single track, each mile of double track being counted as 2 miles of single track.

Every telegraph company which owns a line or part of a line of telegraph where the same or part thereof is operated or worked by others or by any other company other than the owners within the Province shall pay $\frac{1}{10}$ of 1% on the paid-up capital of such company, but where a company owning the line is taxable under the preceding clause, it shall not be taxable for an additional $\frac{1}{10}$ of 1% under this clause; & every company which operates or works in the Province a telegraph line or part of a telegraph line or one

or more lines or parts thereof under lease or agreement with the owners of such line or lines or parts thereof shall pay $\frac{1}{10}$ of 1% upon the paid-up capital of such company.

Every railway or other company which owns a line or part of a line of telegraph operated in the Province shall pay a tax of $\frac{1}{10}$ of 1% upon the amount of capital invested in the telegraph line or works.

Every telephone company working or operating a telephone line for gain in the Province shall pay a tax of $\frac{1}{10}$ of 1% upon the paid-up capital of such company.

Every gas company and every electric lighting company in any city in the Province shall pay a tax of $\frac{1}{10}$ of 1% on its paid-up capital, but this shall not apply to any gas or electric works owned by a municipality & operated for the purposes of the municipality.

Every express company or company doing express business or a general express business in the Province shall pay \$2,000.

Every company doing business in the province by either leasing or hiring sleeping cars or parlor cars to a railway company, or whose sleeping or parlor cars run upon or are used by a railway company within the Province shall pay $\frac{1}{10}$ of 1% upon the capital of the company invested in cars & rolling stock used in Ontario during the preceding year.

Street or electric railway companies in cities, telegraph companies, telephone companies, express companies & sleeping or parlor car companies which pay the taxes imposed by this act, shall continue to be assessable & taxable for municipal purposes as they were by law assessable or taxable on Feb. 1, 1899.

The assessment & taxation of railway companies shall continue to be made under & in accordance with The Assessment Act, sec. 31, & railways shall not be liable to municipal assessment or taxation in respect or by reason of the crossing of streets or highways by the tracks or roadways thereof.

Nothing in this act shall affect or interfere with any special assessment by a municipality upon property benefited by any local improvement for the cost of such local improvement.

On or before July 1, 1899, & thereafter on or before April 1 in each year every corporation or company on which a tax is by this act imposed & which is doing business in the Province shall without any notice or demand to that effect from the Government deliver in duplicate to the Provincial Treasurer a detailed statement in which shall be set forth the name of the corporation or company, its business, the amount of its capital stock, & the

amount thereof paid up; & in the case of companies under or within clause 13 of sec. 2 the amount of capital of the company used or invested in sleeping or parlor cars or rolling stock of such classes of cars used in the Province during the preceding year, & in the case of railways, street railways or railways operated by electricity & other companies paying a mileage rate the number of miles in operation in any city or cities within the Province. Such statement & the information required by this section shall be made & furnished by & under the oath of the president & manager or of the manager & vice-president having personal knowledge of the affairs of the company & in the case of extra provincial companies by the manager or chief agent of the company in Ontario & the accountant or secretary thereof or by such other person or persons connected with the company or corporation as the treasurer may require & shall be in accordance with one of the forms in the schedule to the act.

Every corporation or company which, & the agent of any company who, neglects to conform to the provisions of the preceding section shall each be liable to a penalty of \$20 a day for each day during which default is made & the company shall also be liable to pay a tax of double the amount for which it would have been liable under the preceding sections, & any penalty or such double tax may be recovered with costs in an action brought in the name of the Treasurer aforesaid to be tried by a judge without a jury.

Dominion Railway Legislation.

No less than 56 applications have been made for legislation in regard to railways at the current Ottawa session.

An application will be made for a charter for a railway from Edmonton via Athabasca Landing & Lesser Slave Lake to Peace River, & to navigate the Athabasca River from Athabasca Landing to the mouth of Little Slave River & onward to Lesser Slave Lake. An extension of time is sought on behalf of the Northern Pacific & Manitoba Ry. Co. for the completion of its undertaking. A company asks power to build from Edmonton to Victoria, & thence by Beaver Lake to South Edmonton. The Saskatchewan Ry. & Mining Co. seeks the right to construct branch lines prior to the construction of the main line. The Red Deer Valley Ry. & Coal Co. asks an extension of time to fulfil its charter. The Bran-

don & Southwestern Ry. asks power to build west to the boundary of the province.

Among some of the Yukon schemes which will come before the House, the following may be mentioned:—The British Yukon Ry. Co., which has already constructed a line over the White Pass, & operates the same under authority from both Canada & the U.S., seeks power to continue to Fort Selkirk, & on to the international boundary; also to build from Cariboo Crossing or Tagish House to Teslin Lake or river, & branches anywhere in the Yukon, not exceeding 50 miles in length. Three applications are in for charters over the Dalton trail. One project is known as the Alaska & Northern; another is the Pacific & Yukon Ry. & Navigation Co. The last-named company proposes building through the Chilcot Pass to Dalton's Post on the Alsek River, & thence by the most feasible route to a point on the Lewes River below Five Finger rapids. Another concern proposes locating a line by the Stickeen River route, & southerly from the Stickeen to a point on the coast of B.C. They also propose the alternate route by way of the Lynn canal to Dawson, & power to build "branch lines & lines of railway along or near any creek or watercourse in the Yukon district." In the Yukon itself several charters are sought. One is for a road from Dawson City along Klondike River to Hunker Creek, Dominion Creek, Indian River & back to the Yukon, from which the route would lead back to Dawson. Another is from Klondike City along Bonanza, & across to Sulphur Creek & Dominion River, with branches along Hunker, Dominion & Quart creeks, & along any other creek & watercourse, or to any other place in the Yukon district. A third proposes operating a road from Dawson to the forks of the El Dorado & Bonanza creeks, & from Dawson to the divide of Dominion & Sulphur Creeks, with power to build branch lines of 30 miles. The Ashcroft route, which has found many advocates, will be utilized for a railway project, if the application for the right to build a line from Ashcroft to Dawson City, & from Ashcroft southward to the international boundary line, is granted.

Applications are not lacking from other portions of Canada to provide & improve existing means of communication. Among the most important of these is that of the Corbin syndicate, which last session put up such a fight against the C.P.R. for access to the Boundary Creek region of B.C. The application is renewed almost in the same terms as last year. The B.C. Southern Ry. Co. will ask for an extension in time for the completion of its eastern section, & power to connect with the C.P.R. at Golden. The Bedlington & Nelson Ry. Co. will make application for Federal incorporation. Another company proposes building from the C.P.R. main line, between Kamloops & Ashcroft, to Quesnelle, & following the route by the Telegraph trail to Hazelton, or alternately from the same starting point to Barkerville in the Cariboo country, & thence by the Telegraph trail to Hazelton.

While British Columbia & the Yukon will be the chief centres of activity in railway promotion, Manitoba & the Territories will not be overlooked, though the country is covered with charters for unbuilt railways. The Edmonton District Ry. Co. has given notice of a bill authorizing it (in addition to the powers already conferred) to build a line from the line already authorized to the Yellow Head or Peace River pass, & on through the mountains by the most practical route to the Pacific ocean. An alternative proposition is that it be allowed to connect with the projected line of the British Pacific Ry. Co., & that authority be given to construct branch lines to the navigable waters of the Yukon river. It is proposed to change the name of the company to the Edmonton, Yukon, Pacific Ry. Co. The Nipissing & James Bay Ry.

Co. will have a bill before Parliament to extend the time for the completion of its undertaking. An application will come before Parliament for a charter for a railway from Lake Winnipegosis to Edmonton.

Recent British Columbia Legislation.

At the session of the British Columbia Legislature just closed, the following acts relating to transportation interests were passed:—

To incorporate the Kamloops & Atlin Ry. Co.
To amend the North Star & Arrow Lake Ry. Act, 1898.

To incorporate the Vancouver, Northern & Yukon Ry. Co.

To incorporate the South Kootenay Ry. Co.
To incorporate the Atlin Short Line Ry. & Navigation Co.

To incorporate the Big Bend Transportation Co.

To amend the Kitimaat Ry. Act, 1898.

To amend the Kootenay & Northwest Ry. Co.'s Act, 1898.

To incorporate the Cariboo-Omenica Chartered Co.

To amend the Columbia & Western Ry. Subsidy Act, 1896.

To incorporate the Atlin Southern Ry. Co.

To grant a subsidy to a railway from Midway to Penticton.

Respecting the Canadian Pacific Navigation Co.

The Yukon Telegraph Line.

F. Richardson, heretofore Inspector of the Eastern Division of the C.P.R. Co.'s telegraph, has left with a number of assistants for the Pacific coast under instructions from the Dominion Minister of Public Works to construct a telegraph line from Skagway to Dawson as a Federal work. The estimated cost of the line for the distance of 600 miles between the points named is \$150,000, on the basis of \$250 a mile. It is expected that the line will be in operation by Nov. 15, & when it is completed Dawson will be brought within 6 days' communication of Ottawa. Whether the sea link will subsequently be connected by a cable between Vancouver & Skagway, or whether the Government line from Quesnelle in the Cariboo country will be extended northward to connect with the Skagway-Dawson line, has yet to be determined. Mr. Richardson was sent out by the Government last year to report upon the feasibility of a line by the old telegraph trail from Quesnelle, his estimate of cost being \$350,000. This line could not well be completed before the end of 1900, & it has been decided to construct the shorter line first.

Nova Scotia Transportation Questions.

A conference of representatives of the boards of trade throughout N.S. was held at Halifax in the middle of Mar. Among the subjects for discussion were, "Subsidies to trans-Atlantic freight steamships," "Freight rates on the Dominion Atlantic Ry.," "Winter mail service between Canada and England."

In the discussion on the subsidies to trans-Atlantic freight steamships much difference of opinion was expressed. It was, however, pretty clearly established that cheaper ocean freight rates can be obtained from New York, Boston & other U.S. ports, than from Halifax—one delegate showing that the rate on apples from Halifax to London is 75c. a barrel, against 48c. from Boston. It was also pointed out that for 20 years the Dominion Government had subsidized steamers to call at Halifax, & that they then proceeded to Portland to load Canadian products. A resolution against the granting of subsidies was carried.

The discussion on D. A. Ry. freight rates was enlivened by a tilt between P. Innes, ex-Superintendent of the line, & P. Gilkins, the present Superintendent, in which the former charged that the rates were excessive & the latter maintained that they were as low as on any line in Canada, & in some cases lower. The meeting passed a resolution asking the Dominion Government to appoint a railway commission with judiciary powers, on the lines of the English Railway Commission, or the U.S. Interstate Commerce Commission, which would hear & adjudicate upon the complaint of individuals or localities & which would authoritatively fix reasonable rates.

On the question of the winter mail service it was resolved that until the initiation of the fast Atlantic service, the winter mail service between the United Kingdom & Canada should have its winter terminus at a port on the Atlantic coast of N.S., & that in the contract for the performance of each service to be entered into by the Government & a steamship company, while it should be stipulated that the western terminal port should be in Canada, there should be no provision obliging the Company's steamships to proceed to any port other than that at which the mails are to be landed.

Delegates from Sydney brought up the question of improved passenger train service on the I.C.R. in Cape Breton, stating the necessity for fast express trains and alluding to the present trains as "express" merely so as not to hurt the feelings of I.C.R. officials. It was stated that no satisfaction could be obtained from General Manager Pottinger. A resolution demanding an improved service was passed.

A resolution was passed urging the Dominion Government to build a coal shipping pier & provide terminal facilities for handling coal traffic at Pictou.

Railway Committee of Privy Council.

An important session was held at Ottawa, Feb. 22, when a number of cases came up for hearing. The principal one was the complaint of the Sun Oil Refining Co. of Hamilton, associated with which were The Gall Schnieder Oil Co., Montreal; The Atlantic Oil Refining Co., Montreal, & The American Oil Co. The complaint was as follows:

"Your complainants necessarily import from the U.S. & sell in Canada large quantities of U.S. petroleum & its products. According to the uniform classification of freight, prescribed by the Governor-in-Council under the Railway Act & now in force, illuminating oils & lubricating oils in wood are classed as 5th-class for car lots & 3rd-class for less than car lots. The railway companies, by their tariff issued Oct. 1, 1898, have advanced the through rate per 100 lbs. from Toledo to Montreal upon these goods from 29½ to 46½c.; from Buffalo to Montreal, from 17½ to 35½c.; & from Buffalo to Hamilton, from 10½ to 16½c. This advance is unjustifiable & unreasonable, and is made indirectly against manufacturers or dealers in these products in Canada in favor of the Standard Oil Trust of the U.S., which owns & operates large industries for the manufacture of oil in Canada. The associated railway companies, by their tariff issued 16 Jan., 1899, have advanced local rates in Ontario on U.S. petroleum & its products over 50%, while the local rate on Canadian petroleum & its products remains the same as it formerly was. Your complainants cite the following instances in support of the statements contained in the preceding paragraphs, lastly mentioned, under the tariff from Hamilton to the following places: 23¼ miles, Hagersville rate, Canadian 15c., U.S. 25¼c.; 18 miles, Harrisburg rate, Canadian 11c., U.S. 21c.; 12 miles, Copetown rate, Canadian 9c., U.S. 19½c.;

2 miles, Dunnville rate, Canadian 15c., U.S. 10c. & the rates to all other local points are fixed in the same proportion. Under the tariff the charge on the Canadian product has remained the same as it formerly was, & the advance has been on the U.S. product only. The tariffs of Oct. 1, 1898, & Jan. 6, 1899, have been issued & put into force without the previous revision & approval of the Governor-in-Council, & no order in Council has been passed altering the rates previously fixed, as required by the provisions of the railway act. By reason of the facts herein complained of your complainants have sustained loss, & are greatly impeded in the transaction of their business. It was submitted that these tariffs were illegal, & the complainants asked that they be disallowed.

After argument by G. L. Staunton for the petitioners, by G. M. Clark for the C.P.R., & by B. B. Osler for the G.T.R., Mr. Osler announced that the G.T.R. would absolutely withdraw its tariff of Jan. 6. Mr. Clark followed suit for the C.P.R., & the Minister of Railways announced that the Committee would consider the question of the Oct. tariff at a later date, when the question of what is through traffic will have to be decided.

Intercolonial Ry. & St. John Ry. Co.—Counsel for the St. John (street) Ry. Co. strongly opposed the application on behalf of the Intercolonial to compel the electric railway company to assist in the maintenance of protection at Mill street. He claimed that the St. John Co. was the successor & owner of the People's Street Ry. charter granted in 1866., & that 3 of the I.C.R. tracks at the point in question only had been put down in 1883, thereby making the steam road responsible. Moreover, part of the arrangement between the city & the I.C.R. was that the latter road should protect the crossing. Deputy Minister Schreiber asked the Committee to order an interlocking switch to be put in to guard against accident in case the street railway car broke loose on the hill. Decision was reserved.

The Montreal Island Belt Line Ry. Co. applied for permission to construct a branch line from their main line to the Dominion Cotton Mills Co.'s works in Montreal. The line is quite a short one, being but 2,100 ft. in length. Counsel for the Montreal St. Ry. Co., took the ground that the case did not come within the jurisdiction of the Committee & claimed that the City Council had not sanctioned the extension. After argument it was decided that the case stand over till the City Council expresses itself thereon.

Kootenay Ry. & Navigation Co.—Application was made on behalf of this Co.'s subsidiary, the Bedlington & Nelson Ry. Co. for running powers over some 15 miles of the C. P.R.'s Crow's Nest Pass line from or near Creston to Kootenay Landing, the application being based on the statute 60-61 Vic., cap. 5, sec. 1, sub-sec. f, which reads as follows:

"That the Railway Committee of the Privy Council may grant running powers over the said line of railway & all its branches & connections or any portions thereof, & all lines of railway now or hereafter owned or leased by or operated on account of the Co. in B.C. south of the Co.'s main line of railway, & the necessary use of its tracks, stations & station grounds, to any other railway company apply-

ing for such grant, upon such terms as such Committee may fix & determine, & according to the provisions of the Railway Act & of such other general acts relating to railways as are from time to time passed by Parliament, but nothing herein shall be held to imply that such running powers might not be so granted without the special provision herein contained."

J. A. Gemmill, in supporting the application, asserted that the applicant had prior right to the portion of the route required, & that the C.P.R. Co. had taken possession of part of route which had been laid out for the B. & N. R. The physical difficulties rendered the construction of a separate line under present conditions almost prohibitive. The cost would average \$30,000 a mile. G. M. Clark, for the C.P.R., opposed the application & submitted there were no physical difficulties justifying the Committee giving running powers. The Minister of Railways referred to the subsidy given by the Dominion to the Crow's Nest line on the understanding that other roads were to be given running powers. Mr. Clark contended the C.N.P. line had cost far more than the estimate on which the subsidy was based. The case was adjourned to give the parties a chance to come to an understanding on the question of cost before the making of an order by the Committee.

The Brandon & Southwestern Ry. Co. applied for permission to cross with its proposed line the C.P.R. Southwestern Branch near Carrol, Man., & the C.P.R. Pembina Mountain Branch near Deloraine, Man. The hearing was adjourned in order to allow the applicant to put in plans & profiles showing the crossings proposed.

The Maritime Electrical Association will meet in Halifax on or about April 18.

E. L. Drewry, Proprietor of the Redwood & Empire Breweries, Winnipeg, Man., always issues a very handsome calendar. For many years he has used English productions of great merit, but this year he has put out a local work, which is of special interest in Western Canada, as it accurately represents a member of each of the three principal corps—the Royal Canadian Dragoons, the Northwest Mounted Police & the 90th Manitoba Rifles, over the title, "Western Soldiers of our Queen."

The C.P.R. will this season undertake the handling of grain cargoes directly at Owen Sound as it does the other lines of freight arriving there, instead of letting the work out to contractors. For some years past the grain shovelling in the vessels' hold, has been under contract.

COAST & INLAND SHIPPING.

Cheap Transportation on the Lakes.

Statistics for the past year just closed, show that on the Great Lakes, at least, there is still a very wide difference in favor of the water lines. The railroads have charged 1c for carrying 1 ton of coal 4 miles under the conditions which produced the lowest freight rates on American railways. It is well known that the cost of shipping such coarse freight is often brought down below the level which would be practicable if the profits on other merchandise & on passenger traffic did not

pay the fixed charges of the railroad companies. Against this minimum of 1c for every 4 miles 1 ton of coal is carried on land, where the competition between railroads is most severe, there must be placed an average charge of transportation on the Great Lakes which is not over 1c. for every 20 miles for similar freight. That is, the cost of shipping coarse merchandise by water on the chain of inland seas which stretches 1,000 miles through the richest part of North America is only about 20% of the lowest rate for such service on the railroads. Improvements in railroad equipment & methods of operation are offset, from year to year, by equal progress in cheapening water transportation. The result is that the lakes are still of enormous economic value. They not only afford means of transporting many million tons of merchandise at rates much below the lowest which could be had on land, but they keep the cost of moving freight by rail far under the level which would be maintained if it were not for the tremendous force of water competition.—Cleveland Leader.

Fort William Navigation.

President Muir, of the Winnipeg Grain Exchange, in speaking at the recent annual meeting, said: "Your Secretary was directed to interview the Dominion Minister of Public Works, asking the Government to provide means to extend the season of navigation to Fort William, by keeping the river there clear of ice to the last possible date. The result was disappointing, as the Minister failed to grasp the idea outlined in our representations that at a small expenditure the river could be kept open until the date that the Sault river & canal freeze up, thus allowing large quantities of grain to go forward by boat which otherwise must remain at Fort William until the following May, or be shipped all rail to the seaboard at a heavy loss to shippers. Our members were anxious to have Fort William harbor kept open as long as the harbor of Duluth. The Minister seemed to think it was contrary to the will of providence that any such attempt should be made. A proposition is under consideration by which millions of dollars would be spent to improve harbors & railways in Ontario for the purpose of retaining the grain trade to Canadian ports; yet the small amount required for improvements at Fort William has been refused. I trust the Dominion Government will deal with the matter during the year in a more practical way than they have dealt with it in the past."

Winter Navigation of the Lakes.

F. B. McCormick writes from Pelee Island, Ont., to the Marine Record: "For many years this very important question has been discussed with more or less intensity & then suffered to drop into indifference again. I think I may opine that in the minds of practical men its entire feasibility is fully admitted. Since Capt. W. Clinton, of Windsor, Ont., nearly 30 years ago built the ferry steamer Victoria, after which the other Detroit River ferries have been modeled & improved, the fact of winter navigation has been fully established. But with the enormous growth of the lake marine, new & extended necessities have

arisen, & the imperative need of such service is conceded. If there existed across or through the Great Lakes natural winter channels like that which is open to-day from Wheatley, Ont., via Point Pelee, Pelee Island & Kelley's Island to Sandusky, Ohio, to the eastward of the Islands, entirely free of ice all winter long, simply because the ice is held up the lake by the chain of islands, then this winter navigation would be but a simple problem. If, then, we may say that this question is no longer a matter of doubt, the only question remaining is the financial one, 'Will it pay'? I think so. By the building of a few powerful steamers, with bows very like the ordinary whaleback, but especially strengthened to stand the strain of ice-breaking, & with a beam somewhat greater than her consorts, so as to give room for their ready passage in her wake, a steamer or heavy steamers can be built which will head the van & be the pilots of their fleets. As all the nautical world knows, the modern ice-breaker does not cut, she simply rides the ice down by & under her receding stem, as she glides over & bears it down beneath her. The ponderous hulls which crowd our waters, with only slight modifications, can be made to work both winter & summer, & the additional expense, especially if these vessels lead fleets of freighters, will not be a bar to success."

Richelieu & Ontario Navigation Co.

At the meeting of directors, Mar. 8, Capt. H. Esford was appointed commanding officer of the new steamer Toronto. The new vessel was naturally a prize which was looked on with envy by a great many of the old commanders in the fleet, & there has been a good deal of rivalry as to who would secure it. Capt. Esford was the choice of the committee of management, & the directors endorsed the decision. Capt. Esford was commanding officer of the Corsican, & has been in the employ of the Co. as pilot & officer for a good many years. Capt. McGrath, who commanded the Bohemian last year, will take the Corsican, while the Bohemian will be under Capt. Dunlop. Capt. Esford is a resident of Barriefield, a suburb of Kingston, & is well known, particularly at the ports touched by the Western line, as he is the oldest captain in the Co.'s employ on that line. We mentioned him last July as the man who would get the position and our forecast has been borne out.

The other appointments are as follows:—Capt. Boucher, for the str. Quebec; St. Louis, the Montreal; Gouin, the Berthier; E. Gouin, the Terrebonne; Raymond, the Cultivateur; Paulin, the Chambly; Dougal, the Canada; Riverin, the Carolina; Lapierre, the Saguenay; Grange, the Spartan; Crepeau, the Mouche-a-Feu; Berthiaume, the Sorel; & Faubert, the Riviere-du-Loup.

The time table for the coming season has been arranged. The mail steamers will this summer leave Toronto at 2.30 p.m. daily, instead of 2, which was the time during previous

RICHELIEU AND ONTARIO NAVIGATION CO.'S STEAMER TORONTO.

seasons. The only boat making a call at Charlotte, N.Y., will be the Toronto. In Toronto she will dock at the Yonge Street slip side of Milloy's wharf, the old wharf being too short for her.

In January we published an illustration of the str. Toronto from a photograph taken in Toronto Bay. The illustration published on this page is from a drawing which the management has had made, & which is more of a broadside view.

L. E. & D. R. R. Co.'s Lake Erie Line.

The Lake Erie & Detroit River Ry. Co.'s car-ferry Shenango No. 1, after being stuck in the ice on Lake Erie for 5 weeks, made Port Stanley on Mar. 1. W. Blanck, who went from Detroit to release her by the use of dynamite, said on his return: "When we tried to get out to the craft the first time she was about 15 miles out in the lake off Port Burwell. We made a trip toward her for 8 miles over the ice & then struck clear water & were forced to take to the open boat we had along with us. But the ice crushed in about the sides of our skiff & we were forced to turn back. We made the attempt again the next day, crossing the wide stretch of ice on skates & pulling behind us a flat boat fitted with runners. The ice we went over was firm & glassy, though only from 1 to 4 ins. thick. We reached the boat the next day & cleared away the ice around her with dynamite. Then we got the ferry to about 2½ miles below Clear Creek, but were again blocked at this point. We saw it was no use to make further efforts till the weather moderated & the ice in some measure cleared away. It is now piled up far higher than the gunwales of the craft, & I am not exaggerating when I say it is fully 40 ft. thick." It may be added that when the Shenangos, Nos. 1 & 2, were running for the former owners they met with similar difficulty. They are not high-powered car carriers of the kind that are used in the Straits of Mackinac, & in crossing a long stretch of open water on Lake Erie they are not able to keep up a regular service, even in the heavy weather of fall months.

The Co. is overhauling the str. Flora at Sandwich, in fact she is practically being rebuilt & put in first-class shape. The old boilers & engine are being replaced by new ones. She is also being refurnished throughout with electric light. The improvements will cost from \$25,000 to \$30,000. She is expected to be ready for service by the end of May or middle of June, when she will run on the Cleveland, Rondeau & Port Stanley route in connection with the Co.'s railway.

In the railway betterment news on an earlier page of this issue mention is made of the slip dock to be built by the Co. at Rondeau. When it is completed, early in June, the Shenango No. 1 will call at that port in addition to Port Stanley. It is not the intention to abandon Port Stanley or Port Dover. When the arrangements are completed at Rondeau the Shenango, & perhaps other ferries, will be run between Conneaut & Rondeau & Sandusky & Rondeau.

E. C. Walker, Walkerville; F. H. & J. H. Walker, Detroit; Dr. S. A. King, Kingsville, & W. Woollatt, Walkerville, are applying for incorporation as the Lake Erie Navigation Co., Ltd., with a capital stock of \$40,000.

Dominion Notices to Mariners.

The Department of Marine has issued the following notices:

No. 8, Feb. 24. North Atlantic Ocean, off Nova Scotia.—Dangerous wreckage.

No. 9, Feb. 27. New Brunswick.—1. Beaver Harbor whistling buoy. 2. Change in position of the back range-light on Pointe du Chêne railway wharf.

No. 10. Nova Scotia.—Buoyage of West Dublin Bay and Crooked channel.

General Shipping Notes.

The str. Pro Patria, which runs between Halifax & St. Pierre Miquelon, is being equipped with electric lights.

Capt. J. McGowan, last year on the Ottawa River Navigation Co.'s str. Duchess, will

and the steamer now being built in Toronto, to run between Ottawa & Toronto.

It is expected that as a result of recent purchases of coal & iron properties in Newfoundland & Cape Breton, iron shipbuilding in the Maritime Provinces will soon be an accomplished fact. An endeavour is being made to start it in Halifax.

A meeting of the various local societies of marine engineers, under the name of the National Association of Canadian Marine Engineers, was decided on at a recent meeting in Toronto. It was decided to hold the first convention in Montreal as soon as possible after the close of navigation this year.

Application will shortly be made for the incorporation of the Richelieu River Navigation Co., with headquarters at St. John's, P.Q., & with a capital of \$25,000, which it is understood has been subscribed. We gave on page 55 of our last issue a description of a steamer which is being built for this Co. by the Polson ironworks, Toronto.

Probably the most notable vessel built during the past year in the shipyards of the Ohio and Mississippi rivers is the str. Kate Adams, for the Memphis & Arkansas City Packet Co. It is more than probable the construction of the Adams will mark a new era in shipbuilding on rivers. She is the first steel hull side-wheel packet boat built for passenger & freight service on the rivers. As strength has been sacrificed in large wooden steamers of the river type to secure lightness of draught, particular attention has been directed to the results obtained from the adoption of steel for this hull. When this boat went into commission with complete outfit on board, her draught was only 3 ft. 3 ins., whereas 2 boats having wooden hulls, built at the same yard, of the same general dimension, & exactly the same engine & boiler power, each showed under similar conditions a draught of 4 ft. 4 ins.—Marine Record.

In British Columbia Waters.

Capt. Ford is having a steamboat built at Lulu Island.

A. Ansberg is having a steamboat built at Vancouver for Fraser River salmon business. She will be 92 ft. long & cost about \$16,000.

Mackenzie Bros., Vancouver, are building another steamer of the type of their present vessels, the Fingal & Staffa.

The str. Alpha, brought round the Horn last year & used in the northern B.C. trade, is advertised for sale at Vancouver, B.C.

The C.P.R. tug Ymir will be launched as soon as the ice has broken up. When she is afloat the str. Nelson will be laid up for repairs & the Ymir will ply between Nelson & Kootenay Landing with the Co.'s freight barge.

R. P. Rithet & Co., in their last monthly report, say: "During the first part of the month

grain freights improved appreciably, but as foreign markets made no response, exports could do little business & rates have weakened again. The close, however, still shows some improvement on our previous quotations. Weather conditions being favorable owners are asking advanced rates for new crop loading, & 30s. is the last indication. The course of lumber freights has been steadily forward, & quotations have had to be marked up for every destination. Vessels continue so scarce as to justify an opinion that rates are likely to continue on a comparatively high level for some time to come."

Ontario and the Great Lakes.

The str. Alexandria is undergoing an extensive overhauling at Picton.

It is said R. O. & W. B. Mackay will take over the propeller Myles next season.

M. McInnis, of Meaford, is having a tug 60 ft. long, 13 ft. beam, 6 ft. deep, built at Owen Sound.

Capt. T. Donnelly, Kingston, has been appointed inspector for Lloyds, & will resign his position as Government steamboat inspector.

Maitland, Rixon & Co., Owen Sound, are having a tug built, to replace the burned Ainslie. She will be 93 ft long, 18 ft. beam & 10 ft. deep.

The statement recently published in a Niagara Falls paper to the effect that the Niagara Navigation Co. intends building another steamboat is without foundation.

W. J. Poupore, Ottawa, is having built at Kingston a steam launch 43 ft. long, 8 ft. beam, with a 6 x 6 high pressure engine, for use on the Ottawa River from Pembroke.

The owners of the steamers that rescued the schooners Melrose & Minnedosa on Lake Huron last fall, & took them to Alpena, are suing the Montreal Transportation Co. for \$13,000 salvage.

It is said the Hamilton Steamboat Co. is negotiating for the purchase of Oaklands, across Hamilton bay. If a deal is made the Co. proposes to build an hotel & a wharf & make other improvements.

Capt. Melancthon Simpson, formerly one of the best known of Lake Ontario captains, died in Toronto recently, aged 72. He was also a ship builder & a large number of the lake schooners were turned out under his superintendence.

Efforts are being made by people in the localities interested to get one or more good boats, carrying passengers & freight, to run between Windsor & Sault Ste. Marie, along the eastern shore of Lake Huron, calling at Sarnia, Bayfield, Goderich, Kincardine, Port Elgin & Southampton.

Capt. J. Malcolmson died Mar. 4, aged 83, at Hamilton, where he had lived for 60 years. In 1855 he sailed the John Hensen, in 1856 the

John Ray, in 1857 the brig Orkney Lass; from 1860 to 1868 the barque Malta and from 1868 to 1881 the schooner New Dominion. He had a wide reputation as a careful navigator, and in all the years of his sailing was never wrecked. He retired in 1881.

The Thousand Island Steamboat Co.'s steamers New York, Empire State, St. Lawrence, America, New Island Wanderer, Pierrepont & Jessie Bain are being overhauled. The business will be conducted on the same lines as last season. The New York & Empire State will run from Clayton to Montreal, & the America will connect with them from Kingston. It is expected that the improvements being made to these boats will increase their speed.

Capt. Craig, of Port Arthur, Ont., is contemplating a trip to Thunder Cape & probably to Isle Royale, at any rate for a distance toward the latter point, in order to ascertain the condition of the ice between the Cape & Island, for a firm of Buffalo vessel insurance agents who are desirous of inspecting the steamer Harlem, which was wrecked on the outer side of Isle Royale last fall. The wreck lies about 20 miles from Passage Island.—Marine Record.

The 14 ft. navigation through the St. Lawrence system of canals for 1899 is now regarded as an impossibility. The contractors who are unable to push the Galop rapids canal have laid the cause of delay before the government & have been granted an extension of time until the spring of 1900 to complete the work. The deep water steamboat line between upper lake & seaboard must transfer to barges at Kingston, Prescott & Ogdensburg as formerly.

A meeting of representatives of the shipyards on the great lakes was held in Cleveland, Ohio, recently, to discuss the proposed consolidation of shipyard interests. It is stated that the deal will undoubtedly be consummated, & that by the end of April the new organization will be in working order. Practically all the yards on the lakes will be in the combine. It is proposed to purchase outright the Wheeler yard at Bay City. The consolidation will involve millions of dollars invested in shipyard plants & put an end to competition in vessel-building on the lakes.

Ice has been giving the Windsor-Detroit car ferries a lot of trouble. One day recently a M.C.R. ferry attempted to cross the river with a passenger train on board. The powerful steamer made good headway until she got within a few feet of her slip on the Detroit side & then she stuck. The ice had anchored to the bottom. The other car ferries attempted to push her into the slip, but the combined efforts of the 3 steamers failed to get her any nearer. Cables were attached to the ferry & carried ashore, and 2 powerful locomotives were given the task of pulling her into the dock. The combined efforts of the ferries & locomotives finally succeeded in getting her in.

To the Land of Sunshine.
Take the Sunshine Route from Chicago to Los Angeles, San Francisco and other points in California, and escape the rigors of winter in the East and North.
Pullman Tourist Cars for first and second class passengers leave Chicago every Saturday at 2 o'clock p.m. via the Chicago, Milwaukee and St. Paul Railway to Kansas City, thence to California via the Atchison, Topeka and Santa Fe Railway—a real Sunshine Route.
This is the earliest afternoon train leaving Chicago for the West after arrival of morning trains from the East, thus avoiding tedious delay.
The Sunshine Route is essentially the best and most patronized through car-line for men, women and children. Every attention paid to the needs of passengers en route.
Send for a Sunshine Route time-table folder. It costs nothing.
Address A. J. Taylor, Canadian Passenger Agent, 8 King Street E., Toronto, Ont.

BURN
E. B. EDDY'S
MATCHES

Two lake charts have just been published by the U. S. army engineers. One of them covers, on a large scale, the St. Mary's River from the canals down to Twin islands in Mud lake, & the other is a general chart of Lake Michigan on one sheet. The engineers have been at work on resurveys connected with the making of these charts for several years past, & they are corrected in every detail up to date. The river chart will be known as St. Mary's River chart no. 2. It takes in both channels, old & new. The Lake Michigan chart extends well across the Straits of Mackinac.

The grain merchants of Montreal are eagerly looking forward to the opening of navigation. It seems, however, now pretty certain that the canals will not be opened until May 1 or after, & in this, as in other respects, the auspices are different from those of last year. Last year the canals were opened about the middle of April, & grain was able to meet some of the first boats, but this year the barges will not be able to get into Montreal until May 5 or 6. Steamers will leave Great Britain for Montreal about April 15, arriving here about April 25, so that there may be 10 days between the arrival of the ships & the advent of the grain-laden barges, unless the Minister of Railways & Canals becomes awake to the importance of the situation. The Kingston Board of Trade has protested against the order of the Government to keep the canals closed until May 1. If the opening is delayed until that date much of the Western grain to come east will be diverted to routes other than the St. Lawrence River.

Yukon & Northern Navigation Matters.

It is said the Alaska Trading & Transportation Co. will place a new line of boats on the lower Yukon this summer.

Large quantities of supplies have been sent north from Victoria for the Bennett Lake & Klondike Navigation Co.'s steamers on the northern lakes.

The str. Willie Irving, though a stern wheel-er only 80 ft. long & 20 ft. beam, made \$23,000 on one round trip last year. She made 10 trips during 4 months of last season, & is the boat that shot the Five Finger rapids 2 miles in length in 2½ minutes.

The latest Klondike flotation in England is the Bennett Lake & Klondike Navigation Co., with a capital of £100,000. Mr. Lowles, M.P., is Chairman. The flotation excites some adverse comment. The Westminster Gazette says the new shares will be left to gamblers, who have underwritten them upon terms the directors do not find convenient to disclose, making use of the obnoxious waiver clause to hide the contracts from those whose money they seek.

It is expected there will be at least 3 steamers on the Skeena river this year—2 to be operated by the Hudson's Bay Co., & 1 to be under the management of an English syndicate. From the manner in which northern traffic is now shaping itself, it would seem as though there will be quite a rush into the Omineca country this year, several large parties having already started out with the intention of going into the country over what is known as the Greece trail, leading inland from the Naas river. Port Simpson business men have big expectations of what a mining excitement will do for them this coming season, & are looking forward to early navigation on the river, basing their calculation on a mild & open winter, which they regard as a hopeful sign of the ice all disappearing with the first blush of spring. At Cunningham's a start has been made to provide increased wharf accommodation for the steamer belonging to the syndicate referred to.

ELECTRIC RAILWAYS.

Queenston-Lewiston Bridge.

We published last month, page 59, a brief description of the suspension bridge building across the Niagara river near Queenston, Ont. The illustration now given shows the general design and construction of the bridge & tells about all that there is to be told now about this structure. It will be noticed that it is built without stays, thus conforming to the views of many of those who have recently written about the New York and Brooklyn Bridge. It will be noticed also that the cables are spliced for a considerable length at either end with eyebars. This was done, as we explained last month, because the cables taken from the upper suspension bridge at Niagara Falls were not long enough to carry the whole length of the span and yet were long enough and good enough to be used so far as they would go.

The peculiar location of this bridge, by which the towers are founded so much higher than the landings, permits and requires a novel construction, namely, the use of the rocker bents at each end of the stiffening truss. These bents support the cables at that point. They are hinged at the shoe, at the end of the truss, and at the top, and they act in themselves as towers.

The principal dimensions of the bridge and of these bents can be taken off the engraving. The bridge is 1,040 feet between towers and 800 feet between rocker bents and 28 feet wide between trusses.—Railroad Gazette.

Work on the bridge has been suspended owing to the dangerous condition of the ice-covered cliffs on both sides of the river. Nothing further will be done on the bridge until the weather makes the conditions better. There is no possibility of having the bridge ready for use until the spring. The retaining walls on both sides of the river have been finished and the pier work is practically complete. As soon as work is resumed the superstructure will be put in its place.

Consolidation of Electric Lines.

On Feb. 27, the Buffalo, N.Y., Commercial said: "The most stupendous business deal in the history of Buffalo, both in point of public & private interests concerned & in the amount of capital involved, is about completed. It involves some \$25,000,000 of capital. Briefly, it is the sale of the entire street railway system of Buffalo & a number of suburban lines. The deal includes the properties of the following companies: The Buffalo Ry. Co., the Buffalo Traction Co., the Buffalo, Bellevue & Lancaster Ry. Co., the Buffalo & Niagara Falls Ry. Co., the Buffalo & Lockport Ry. Co., the Niagara Falls Park & River Ry. Co. (running along the river bank on the Canadian side), the Niagara Falls & Clifton ridge Co., & the Lewiston & Queenston Heights Bridge Co. This immense combination of interests has been sold to a syndicate composed of New Yorkers & Philadelphians, & all of the interests named are to be consolidated under one management. A summary of the capital stock & bonded indebtedness of all the corporations involved, with the exception of the Capital Stock of the Niagara Falls & Clifton Bridge Co., which could not

be obtained, is as follows: Buffalo Ry. Co. (including Bellevue & Lancaster road), \$15,250,000; Buffalo & Niagara Falls Ry. Co., \$2,150,000; Buffalo Traction Co., \$3,858,000; Buffalo & Lockport Ry., \$1,500,000; Niagara Falls Park & River Ry., \$1,000,000; Lewiston & Queenston Heights Bridge Co., \$285,000, making a total of \$24,105,000."

An Electric Railway Decision.

One, Fraser, desiring to ride on a trolley car belonging to the London St. Ry. Co., & finding all the seats occupied, & the rear platform crowded, jumped on the foot board running alongside the car, while it was in motion. The car had to cross a bridge, on approaching which there was a curve. This caused Fraser to sway out as the car entered the bridge & strike a post thereon by which he was thrown out & injured as there was only 14 inches between the post & the side of the car. Held by the Ontario Divisional Court that the plaintiff must be taken to have been invited to occupy the footboard by the Co., & while there, should have been carried in safety, which could not be done on account of the manner in which the bridge was constructed, therefore there was negligence. The jury at the trial gave a verdict of \$3,300. The Divisional Court thought this excessive & ordered a new trial, unless plaintiff accepted \$2,000 & costs.

Galt, Preston & Hespeler St. Ry. Co.

The report presented at the annual meeting, Jan. 31, stated that the business of 1898 had been fairly successful, the earnings showing considerable increase. The passengers carried numbered 235,495, against 221,674 in 1897. The freight carried was 12,716 tons, against 12,973 in 1897. The increase in earnings from all sources was \$1,191.99. The drop in freight tonnage is owing to the fact that during half of 1897 a freight business was done with Berlin, which ceased Dec. 31, 1897.

A number of additions and improvements to the plant were made during the year. The financial statement is as follows:

The following directors were elected: H. McCulloch, President; M. A. Todd, Vice-President; J. W. Leonard, J. D. Moore, D. Spiers, F. Clare, W. H. Lutz.

Hamilton, Grimsby & Beamsville.

At the annual meeting, Jan. 23, the report showed an increase of \$760 over 1897. The Co. paid 5% dividend, & showed a surplus for the year of \$295.10. The heavy snowstorm in Dec. stopped operating for a week, which cut down the revenue fully \$1,200. The freight, fruit & express business is steadily increasing, & should the line be extended to St. Catharines—some 12 miles further—delivering C.P.R. freight & express cars to the centre of that city, no doubt it would be a great benefit to that district & increase the Co.'s revenue considerably.

Canadian Pacific Railway Company.

Dividends for the half year ended December 31st, 1898, have been declared as follow:

On the Preference Stock two per cent.
On the Common Stock two per cent.
Warrants for the Common Stock dividend will be mailed on or about April 1st to Shareholders of record at the closing of the books in New York and London respectively.

The Preference Stock dividend will be paid on Saturday, April 1st, to Shareholders of record at the closing of the books at the Company's London Office, 1 Queen Victoria Street, London, E.C.

The Common Stock transfer books will close in London at 3 p.m. on Tuesday, February 28th, and in Montreal and New York on Friday, March 10th. The Preference Stock books will close at 3 p.m. on Friday, March 10th.

All books will be re-opened on Thursday, 6th April. By order of the Board.

CHARLES DRINKWATER,
Montreal, February 6th, 1899. Secretary.

Notice to Shareholders.

The Eighteenth Annual Meeting of the Shareholders of this Company for the election of Directors and the transaction of business generally, will be held on Wednesday the fifth day of April next at the principal office of the Company at Montreal, at twelve o'clock noon.

The Common Stock transfer books will close in London at 3 p.m. on Tuesday, February 28th, and in Montreal and New York on Friday, March 10th. The Preference Stock books will close at 3 p.m. on Friday, March 10th.

All books will be re-opened on Thursday, April 6th.

By order of the Board,
CHARLES DRINKWATER,
Secretary.

	\$11,035 00
Balance to profit and loss.....	\$2,950 11

The directors & officers for the current year are:—President, C. J. Myles; Vice-President, W. J. Harris; other directors, L. Bauer, R. Ramsay, A. H. Myles, J. Gage; Treasurer, R. S. Martin; Secretary & Manager, A. J. Nelles.

Two of the Co.'s conductors were recently fined \$5 & costs each at Winona for charging fares in excess of those allowed by the Saltfleet Township by-law. The Treasurer of Saltfleet municipality was complainant. The Co. will appeal.

R. McCallum, Engineer of the Ontario Public Works Department, recently made an inspection of the line as directed by the trial judge in suit brought by Saltfleet municipality against the Co. Engineer Patterson has also been over the line, it being intended to compare his report with Mr. McCallum's at the trial.

Maritime Provinces Electric Lines.

The Bedford Electric Co., with headquarters at Halifax, is capitalized at \$250,000. It proposes to install an electric plant at St. Margaret's Bay, to transmit light & power to Halifax & other points in the vicinity, & to furnish power for the operation of an extensive pulp mill to be erected. The transmission line will be 18 miles in length, & the pipe line from the power house to the dam about 4,000 ft. in length. It is also proposed to operate an electric tramway to Halifax. M. M. Keefe, Halifax, is President, & A. E. Soulis, Manager & Secretary.

Halifax Electric Tramway gross earnings for Jan., \$16,559.07, against \$15,133.24 for corresponding period. The Co. at the beginning of the year began selling ticket-books of 25 for \$1.

Moncton St. Ry.,—B. F. Pearson, a director, & F. A. Huntress, Manager of the Halifax Electric Tramway Co., who recently visited Moncton, have made their report to the owners of the railway in regard to the Street Ry. Co. obtaining the street ry. & municipal gas & electric light under one company, the City to turn over the works and business to the St. Ry. Co. for a certain number of years for cer-

tain compensations. The matter has been laid before the City Corporation for action & is under consideration.

Trenton to Westville.—A project is on foot to build an electric railway between Trenton & Westville, N.S., via New Glasgow & Stelarton.

Ontario Electric Railways.

Brantford St. Ry.—We were officially informed on Feb. 16 that the directors had not considered the rumored extension of the line to Cainsville. (Dec. '98, pg. 271.)

The Brantford Courier says it has seen some letters which have recently passed between one of the projectors of the electric road between Hamilton & Brantford & a leading resident of Cainsville. The correspondence states that the project is in capital shape & that it is expected that a start will be made in time to have the road "open for the summer business." The plan is to run along the Stone Road through Cainsville & to put a steel bridge over the G.T.R. crossing at that point. The structure will consist of a span 40 ft. wide & 20 ft. high. If the bridge over the T. H. & B. is not found to be wide enough to leave a carriage way on each side of the rails special provision will also be made to get over that line in a safe manner. One letter says: "We have raised most of the capital required to start with on our present charter."

Cornwall Electric St. Ry.—The work of getting the plant in running order has been found by the Sun Life Assurance Co. to involve extensive repairs & renewals to the machinery, & it will probably be a week or two yet before the service is in first-class shape. A quantity of the property of the Co. not covered by the mortgage has been sold by the sheriff, including material, the carroussel & boats at the park, &c. Mr. Bradley, formerly of the Hull Electric Co., has been placed in charge of the line.

The Hamilton, Chodoke & Ancaster Electric St. Ry. Co. is applying to the Ontario Legislature to change its name to the Hamilton, Ancaster & Brantford Ry. Co., to increase its capital stock from \$100,000 to \$300,000, & to empower it to build from its present proposed terminus, at Duff's Corners, to the city of Brantford, & a branch line to Sulphur Springs, Ancaster Township.

Hamilton Radial Electric Ry.—At the recent annual meeting the following directors & officers were elected: President, A. Turner; Vice-President, W. A. Wood; other directors—J. Dixon, A. Zimmerman, J. Moodie, jr.; Treasurer, J. Moodie, sr.; Secretary, S. E. Malloch. It is said to be possible that the Co. may extend its line to Oakville this year.

Hamilton St. Railway.—At the recent annual meeting the following were elected: President, E. Martin; Vice-President, J. A. Bruce; other directors—W. Gibson, B. E. Charlton, I. Beer, W. J. Harris, F. W. Fearman.

The earnings of the Co. in 1898 were \$112,965.63, on which it paid the city 6%. The mileage is about 16 miles, on which it pays the City \$400 per mile a year. The payments for percentage & mileage aggregated \$14,310.10.

The Co. recently asked the City for a rebate of taxes on personality & realty of \$64,610. In 1898 the Co. paid taxes on an assessment of \$128,360, & the assessment for this year was reduced to \$63,750 by the Board of Judges. Under the judgment of the Board of Judges the Co. claims not to be assessable for \$50,000 personality. The application was refused.

London St. Ry.—Following are comparisons of the past 2 years' business:

	1898.	1897.
Car earnings.....	\$109,927.57	\$89,937.68
Miscellaneous revenue.....	\$4,184.23	\$2,434.86
Operating.....	\$114,111.80	\$92,372.54
Net earnings.....	\$18,146.52	\$42,914.01

Passengers carried.....	2,811,558	2,585,480
Car miles.....	1,074,302	944,343
Earnings per car mile.....	10.59	10.73
Earnings per passenger.....	4.00	3.92
Earnings per cap. of popu.....	2.95	2.66
Operating per cent. of earnings.....	57.7	57.6

The earnings for Jan., 1899, were \$8,194.38, compared with \$7,705.18 for Jan., 1898.

Earnings for Feb., \$7,391.28, against \$6,657.85 for Feb., 1898.

The Board of County Judges, appointed to hear the appeal of the Co. from the decision of the Court of Revision against the assessment of its property, has given judgment. The reductions made amount to \$202,000. The assessment on rails, poles & wires was \$136,780, divided in wards. By expert measurement it was found that No. 4 Ward was assessed for 6,560 ft. too much, which, at the rate of \$7,000 a mile, took \$8,750 off the original assessment, leaving the assessment \$128,030. The bridges were assessed for \$19,220, & the assessment was reduced to \$9,000. The assessment on that portion of the asphalt pavement laid by the Co. was \$22,817, & the cars were assessed for \$50,000. Afterwards the assessment was amended by adding the value of streets the cars run on, \$132,000, & the decision reduces the amount to \$33,000. The board fixed the assessment on rails, poles & wires, making for 18 miles \$108,000.

Metropolitan St. Ry.—A switch was recently put in by the C.P.R. on its North Toronto line, near Yonge St., with the intention, it is said, of connecting with this Co.'s line, so as to provide a through freight service to points north of Toronto to compete with the G.T.R. The Toronto City authorities, with their usual hampering policy, objected to the connection being made & detailed policemen to prevent it.

Niagara Falls Park & River Ry.—At the annual meeting Feb. 7 the following were elected: President, E. B. Osler; Vice-President, W. Hendrie; Secretary, R. A. Smith; other directors, R. B. Angus, H. C. Hammond, A. R. Creelman, S. B. Sykes. The Co. does not make public its report & the latest figures available are up to June 30, 1897, as follows: Length of line 13.68 miles. Ordinary share capital, authorized \$1,000,000; subscribed \$600,000; paid up, \$592,630. Bonded debt authorized \$690,000; issued \$600,000. Capital from other sources subscribed & paid up, \$706,638.41. Total capital subscribed, \$1,906,628.41; paid up, \$1,298,988.41. Floating debt, \$706,628.41 at 4 & 7%. Total cost of railway & rolling stock, \$907,539.19. The net earnings for the year ended June 30, 1897, were \$11,372.78. No dividend has yet been paid.

The Co. has sued the town of Niagara Falls, to recover \$124.42, paid as taxes on a \$6,000 assessment on roadway. The Co. claims that the property is a public highway, & therefore exempt.

The Co. is building in its shops at Niagara Falls, 6 large open motor cars, each having a seating capacity of 75.

The annual report of the Niagara Falls Park Commissioners, just presented to the Legislature, states that the Canadian Niagara Power Co., in pursuance of its agreement with the N.F.P. & R. Ry. Co., has installed an electrical plant in the railway power-house, which, it is stated, will furnish about 1,000 electrical horse-power in excess of what is needed for operating the electric railway—of which amount about 600 h.p. has already been put into practical use.

Niagara Falls, Wesley Park & Clifton Tramway Co.—The management of this horse car line has asked the Niagara Falls town council that it be allowed to change from horse to electric power on the present line & to build a branch down Bender avenue to Mowat gate of Queen Victoria Niagara Falls Park, & up Clifton Hill to Center street.

Here the route would change, & instead of following Victoria avenue, as at present, it would continue on Center street to Ellen street & on to Ferry street. A line would also be built out to Landy's Lane, & the right of way would be asked to Victoria & Culp streets, making a loop line to Falls View.

The Ottawa Electric Ry. Co.'s agreement, which expires in 1923, provides for no payment of percentage on receipts. A mileage rate of \$150 a mile per year for the first 15 years, & \$500 a mile for the second 15 years is paid on unpaved streets, & \$1,000 a mile for paved streets, with an initial bonus of \$1,000 a mile for any streets when paved.

Port Arthur-Fort William.—No action appears to have been taken by the Town of Port Arthur to carry out the requirements of the report made by W. Phillips for the Ontario Government, except to put the overhead construction in fairly good order. It is said the Port Arthur Council is holding off in the hope of making some new arrangement with Fort William or getting its act amended by the Legislature. It is contended the work required on the roadbed could not be done in any case in winter. (Dec. '98, pg. 273.)

The town of Port Arthur has been operating the line from Port Arthur to Fort William at a loss, & will likely adopt a new schedule of fares. The present rates are: Cash fares, 5c.; blue tickets, 6 for 25c.; morning & evening tickets, 8 for 25c.; school children, 10 for 25c. For one fare passengers are permitted to ride from end to end of the line—over 7 miles.

St. Catharines & Niagara Central.—D. S. Haines, who is the representative of the people now operating this line, says the roadbed has been extensively repaired already, & by July next the road from Niagara Falls to St. Catharines will be electrically equipped, & a splendid service in operation, with cars modern & up-to-date. The present roadbed will be retained this year, & next year many improvements will be made. Wherever possible the trestles will be filled in, & where this is not practical, steel trestles will replace the wooden ones. Through Merriton the road will run on the ground, doing away with the long stretch of trestle there, & the long curve in rear of the high school in Thorold will be done away with, & a direct line struck from the brow of the mountain. The idea is to get the road on the level as much as possible. Mr. Haines says the road will be running to Port Dalhousie by July 1, next.

Application has been made to the Niagara Falls, Ont., Town Council for permission to extend the line in that town to the Niagara River.

St. Thomas St. Ry.—J. E. Taylor has been appointed Manager. He was formerly connected with the Hamilton, Grimsby & Beamsville Electric Ry., also with the City & Suburban St. Ry. of Portland, Ore.

Toronto Railway.—The City has taken action against the Co. in connection with the overcrowding of the cars. The writ states that the claim is for damages for breach of agreement between the City of Toronto & the Co. providing for the operation of the street railways in the City, dated Sep. 1, 1891, & for a mandamus & injunction, declaration & interpretation as there set out. The City claims that the Co. has broken the terms of the agreement in that the Co. has from time to time overcrowded & still habitually overcrowds its cars & for an injunction to restrain the Co. from continuing to overcrowd the cars. The City claims that the Co. uses, in the operation of the system, cars which are not of the most approved design for service & comfort, as provided by the agreement, but which are dilapidated, worn out & dirty, & for an injunction restraining the use of such cars. The City claims that the Co. has neglected to furnish the City Engineer annually a statement of

tracks, cars & plants & appliances on hand, together with the value of the same, as provided by the agreement, & that special performance of the agreement be ordered by the Co. The City further claims that the Co. refused to give to & accept from passengers transfers, as provided; & the City claims an interpretation of the agreement & a declaration of the rights of passengers to be transferred from car to car on the system. The Co. has entered an appearance in the suit.

The gross earnings are as follows:—

	1899.	1898.	Increase.
Jan.	\$95,690.12	\$86,562.36	\$9,127.76
Feb.	91,860.30	82,402.19	9,458.11
			\$18,585.87

Quebec Electric Lines.

The Chateauguay & Northern Ry. Co. is applying for legislative authority to extend the time for commencing work & for power to sell its surplus electric power, to engage in electric lighting, to extend its railway to Berthier, by a branch line; & to own & operate hotels, restaurants, parks & places of amusement, & to increase its capital stock.

Hull Electric Co.—The Court of Review recently rendered judgment in the case of this Co. vs. the Ottawa Electric Co. & the Corporation of Hull intervenant. By this action the Co. plaintiff asked that the Ottawa Electric Co. be ordered to take away the posts placed by it in the streets of Hull, & it also claimed \$20,000 damages. The action was based on an exclusive privilege granted the plaintiff by a special by-law, afterwards sanctioned by the Legislature. The corporation of Hull having, by a resolution, authorized the Co. defendant to use the streets intervened in the case, protesting against the pretensions of plaintiff. The action was dismissed in the Superior Court, on the ground that the bill passed by the Legislature conferred upon the Hull Co. the exclusive privilege of selling electricity, & as such was ultra vires, being an infringement of the Dominion Parliament's exclusive right to regulate trade & commerce. In review the Court held that the by-law, as passed by the council, purely & simply conferred upon the Hull Co. the exclusive privilege to establish an electric system in the streets of the municipality, which did not necessarily imply an exclusive privilege to sell electricity, & as such it was valid & binding. For that reason the judgment of the court below must be reversed, & the Co. defendant must be condemned to remove its posts & pay \$200 damages.

The Montreal Island Belt Line Ry. Co. wants to extend its track from north of Duquette St. to the cotton mills, & has the support of the City Council in its application to the Railway Committee of the Privy Council in that behalf.

Montreal St. Ry.—The gross earnings are:

	1897-8.	1898-9.	
Oct.	\$133,419.69	\$116,093.09	\$17,326.60
Nov.	125,126.10	110,698.98	14,427.12
Dec.	127,678.00	113,029.33	14,648.67
Jan.	125,276.04	110,155.96	15,120.08
Feb.	113,838.02	102,425.99	11,412.03
			\$72,933.50

The City Surveyor has entered a number of suits against the Co. on account of the overcrowding of cars. General Manager Wanklyn admits that the cars are running irregularly, but says it is the fault of the city by-law more than the Co. The Co. has not enough cars, & cannot make up the deficiency at the moment, owing to the late fire at its shops, & to the clause in the by-law which prohibits it from buying cars built outside of Montreal. But for the latter provision it would buy the additional cars required at once. Forty cars are now being built & will soon be put into service, & 10 more will be put into service in the summer. As to the overcrowding of cars, Mr.

Wanklyn says that the overcrowding is to the Co.'s disadvantage, it being estimated that as much as \$800 a week is lost by conductors being unable to collect fares in overcrowded cars.

In regard to the extension of the Cote des Neiges line, Mr. Wanklyn says:—"This line is built to a point above Pine Avenue, & I cannot say at present that the Co. intends to build it any higher. The grade above Pine Avenue is very steep, & the Co. is convinced it would be unsafe under present conditions to continue it any further. It has been said the reason the Co. did not want to build the line to the city limits was because it would cost so much. Such a reason is a foolish one, as the cost would be but very small. The Co.'s only dislike to going to the top of the hill is simply on the score of safety. We have no doubt that the line would pay very well in summer time.

In the last annual report it was mentioned that a system of cast welding of the rail joints had been introduced which, judging from the results obtained elsewhere, was calculated to produce great benefit, & also to considerably reduce the expense of track maintenance. We are informed that nearly 1,000 of those joints were made last autumn, & so far the results have been thoroughly satisfactory, one joint only having broken during the severe winter weather. It remains, however, to be seen how they will stand the change of temperature in the spring.

Quebec Legislation.—A Quebec despatch of Feb. 14 says:—Few people have probably paused to contemplate the enormous interests involved in the legislation sought at Quebec this session by various electric railway concerns & in the opposition that is made to it. The array of legal talent upon the one side & upon the other the strong stand taken by the members of the House on either side of the question, & the keen character of the argument & of the lobbying that attends the slightest move in connection with the bills referred to, are undoubted indications of the vast interests that are at stake. The town of Longueuil possibly sees an opportunity of doing what the city of Glasgow does, & asks for power to build & operate & purchase or build all the rolling stock necessary for operating a single or double line of tramway, & to lease any railway already existing between Longueuil & St. Lambert; to acquire the lands necessary for constructing the tramway, stations & other buildings required, & to enter into any agreement necessary for running its cars over any other line of tramway to reach Montreal. On the other hand, a strongly worded petition against the powers asked by the town has been presented from residents of the territory between Longueuil & St. Lambert, who express the belief that the municipality cannot afford them an efficient service, & that the granting of the demand would simply shut them out from the benefits of a line likely to be constructed by a powerful Montreal company. Just what company the petitioners have in view is not made clear, but outside of the municipality of Longueuil there are likely to be two competing companies in the field on the south side of the St. Lawrence if present desires are gratified.

The Quebec, Montmorency & Charlevoix Ry.'s earnings for the last 3 months of 1898 were over \$79,000 & the operating expenses less than \$34,000. After deducting $\frac{1}{4}$ of the cost of removing snow in the winter, which is estimated at \$12,000, the net revenue for the 3 months was over \$42,000.

Sherbrooke St. Ry.—In reference to the press rumor that this line had been purchased by F. Thompson & Co., bankers, etc., Sherbrooke, we were informed on Feb. 15 that negotiations were in progress for the purchase of the property, but that nothing had been definitely decided. (Feb., pg. 61.)

It is said the Montreal & Southern Counties Ry. Co., which was incorporated by Dominion legislation in 1897 to build a railway operated by electricity or any other power except steam, from the northern limit of the county of Chambly to Sherbrooke, is intended to connect with the Sherbrooke St. Ry.

American St. Railway Association.—The annual meeting will be held in Chicago, Oct. 17-20 next. The subjects for discussion will be: Maintenance of car equipment—Modern street railway shops; their design, machinery & shop practice—Train service & its practical application—Construction & maintenance of street railway tracks—Investments in street railways; how can they be made secure & remunerative?

B.C. Electric Ry. Co.—The Vancouver City Council has granted leave for a double track extension on Davie Street to English Bay for 11 years on a percentage basis. Beginning this month, drawings will be made at the rate of £2,400 a year to redeem the registered bonds of 1897. Considerable additions are being made to the plant & equipment.

The Co. is having 6 motor cars built in the east.

The Gorge Line.—The Niagara Falls & Lewiston R. R. Co., otherwise known as the Gorge road, went into the hands of a receiver Feb. 16, on the application of a majority of the directors. Justice Childs granted an order appointing J. R. Megrue, of New York city, temporary receiver. All creditors are directed to show cause before G. G. Davidson, referee, in June, why the corporation should not be dissolved, as petitioned by the directors. In the schedules of the assets & liabilities filed the total assets are figured to be about \$1,125,000, & the liabilities about \$1,140,000. The principal assets are the construction account, \$537,801, & the value of lands & right of way \$532,295. The liabilities consist of notes, bonds, mortgages & smaller accounts. Capt. J. M. Brinker, one of the stockholders, & until recently President of the Co., said that the road did not make any money last year, & this fact, with heavy losses from damage suits, was responsible for the insolvency of the Co. It is said the Co. will be reorganized as soon as plan can be agreed upon.

Street Railway Mileage.—At the end of 1898 there were 673 miles of electric railways in Canada, against 510 in 1897. The no. of cars in 1898 was 1,711, against 1,245 in 1897.

Winnipeg Electric Street Ry.—At the recent annual meeting the following directors were elected: J. Ross, Sir Wm Van Horne, R. B. Angus, D. D. Mann, W. Whyte, F. M. Morse & A. M. Nanton.

It is said that, in consequence of recent fatal accidents, the Co. will equip its cars with fenders.

Another dynamo has been added to the Co.'s plant. The plant is also being improved by the addition of a vertical engine of the direct connected type, in the designing of which a number of novelties have been introduced. The engine is 30 ft. long, 15 ft. wide, 22 ft. high, & weighs 60 tons. The high pressure cylinder measures 13 ins. diameter, & 24 ins. stroke, the admission valve being of the pinion balance type, operated by a shaft governor. The exhaust valves are of the Corliss type, operated by a positive eccentric. The low pressure cylinder is 36 ins. in diameter & 34 ins. stroke. The valves on this cylinder are all of the Corliss type, the steam & exhaust being operated by separate eccentrics. The eccentrics & generator are driven from a reduced extension of the main shaft, by which system the eccentrics are reduced to the smallest possible diameter, thus reducing friction to a minimum, also reducing the distance between high & low measure cylin-

ders, & preventing all possibility of oil coming in contact with the generator. The fly-wheel is 15 tons in weight, & is designed with a solid rim and arms, cut separate at the centre & secured to a solid hub, by this means preventing internal strain. Its strength is 500 horse power; velocity, 150 revolutions a minute; initial pressure, 125 lbs. The engine, which represents \$10,000, stands on an iron base plate weighing about 8 tons.

TELEGRAPHS & CABLES.

Winnipeg Office C.P.R. Telegraphs.

On the evening of Jan. 26 the C. P. R. Telegraph Department at Winnipeg shifted its main office from the old quarters at 471 Main St. to the corner of McDermott & Main Sts. The interior of the building, which is a 4-story one, was entirely rebuilt & an extension added to the rear. The ground floor is occupied by the telegraph & ticket offices, the next 2 floors are divided up into offices & leased to outside parties. On the top floor is located the operating room & its adjuncts. On the ground floor the counter, partition & fittings are all quartered oak, the floor is laid with small tiles, the base & the tops of the counters & desks for customers are all of polished marble. The two offices are separated at night by a handsome metal iron gate. The lighting fixtures are arranged for both Auer & electric lights, & are of oxidized copper of a very handsome design. The ceiling is covered with pressed steel plates. It is really the finest office of any description in Winnipeg. Communication is maintained with the operating room by means of pneumatic tubes, the compressed air being supplied by means of a blower & electric motor in the basement. The messengers are located in the rear, having a separate entrance. The offices of B. S. Jenkins, Telegraph Superintendent, & Inspector S. Edwards, on the 3rd floor, are very tastefully furnished, & are connected by tubes & wires with the operating room & the public offices down stairs.

In the operating room the floor is of hard maple, polished & oiled. There are 9 quartered operating tables, providing space for 36 operators, equipped with 7 sets of duplex, 1 quadruplex, 2 half sets of single repeaters & 16 sets of single-line instruments. The tables are of white wood with cherry tops, & are cut so that a portion in front of each operator can be removed & placed at a lower level to permit of the use of a type-writer. All the operators in this office are expert type-writers, & the bulk of the business is received on that machine. Formerly the sound of the different instruments on each table was separated by means of glass partitions, & the instruments raised on small shelves, the top of the table being also cut in 4 parts so as to prevent it acting as a sounding board. This has all been done away with in the new office, the reading instruments (sounders) being placed in small boxes (resonators) elevated on an iron standard; these boxes have a curved top, & are open at the side next to the operator so that the sound is thrown out to him only, & does not become confused with that from other instruments. On the side of the resonators are brass straps for the purpose of holding received telegrams until the office boy collects them. Messages intended for transmission are hung in front of the operator on hooks supported by a brass standard; after being sent over the wire the messages are filed on a hook on the standard of the resonator, & are collected every half hour; they are then checked over carefully to see that they have been properly forwarded & sorted out in a set of pigeon holes.

The desk of the Chief Operator is placed on a raised platform beside the door, so that he

can oversee the whole of the operating room. Beside him is the cabinet containing the battery switches & motor-generators; next to this is the main switch case, which is extended up to the ceiling, forming a small room behind it, into which all the wiring of the office is concentrated. The outside wires are brought in through a window in 19 conductor cables; each conductor ends on a porcelain fuse block, to protect against any abnormal current which may be brought in the office by outside contact with electric light or power wires. These fuse blocks are connected by short wires with earth arresters, intended to intercept any heavy charge of lightning, & short cables connect the ground arresters with the main switch. By following this plan any changes made in the outside wires are straightened out by means of the short pieces between the fuse blocks & the earth arresters.

Each table is connected with a distributing board, by means of 2 cables of 7 conductors each. Underneath the tables these conductors end in a row of binding posts which are connected by short wires to the various instruments on the table. At the distributing board the conductors are arranged in rows of binding posts, one row for each table; these connections take up half of the distributing board. The other half is placed at right angles & contains similar rows of binding posts which are connected through cables with the local switch, main switch, lamp resistances, etc., etc., the terminals running in the same consecutive order at each end of all cables. Connection is made from the table cables by means of short wires bridged across the angle in the distributing board to the cables running to the switch or other desired connection. By the use of this distributing board all terminals are made permanent, & any changes that are required on the tables or switches are made by means of the short wires in the distributing board. The main switch is made specially for this office, all metal parts being separated from the wood work by non-combustible material. Connection is made from the various battery circuits, through a series of incandescent lamps placed at the top of the cabinet. The primary object of these lamps is to, electrically, lengthen out the lead to the battery, so as to avoid any chance of the same being short circuited. Incidentally the lamps are also an indication in case of 2 outside wires coming into contact with each other, or a wire becoming grounded, as they will light up if such happens within a distance of 50 or 100 miles, according to the nature of the wire. Normally the lamps do not show any light, as telegraph currents are not of sufficient quantity. Beside the main switch is the local switch, by means of which any two duplexes or single wires can be connected together in such a manner that they will work through. For instance, a duplex between Montreal & Winnipeg can be connected with a duplex between Winnipeg & Vancouver, so that the operators at Montreal & Vancouver work direct with each other. Over the local switch are a series of small lever switches which are used for the purpose of increasing or decreasing the force required on each duplex set. In the centre of the cabinet is the time transmitter, by means of which the time signals (transmitted daily from Montreal), are automatically given on all the wires radiating from Winnipeg. The usual testing instruments are placed on a cherry shelf in front of the switch.

Inside of the battery switch cabinet are placed 2 motor generators, transforming the 500 volt current down to 120 volts, for the purpose of charging the banks of main batteries. The other machine transforms the 500 volts to 7 volts, for charging the local batteries which are used for working the sounders, transmitters, etc.; these machines are practically noiseless. The face of the cabinet is provided with switches for chang-

Or Any Officer or Member of the Order.

ing the various banks of the battery from the charging circuit to the discharging circuits, etc. It is also equipped with automatic safety appliances, meters, etc.

The office is well lighted by windows on 2 sides, a light well on the 3rd, & a skylight in the centre, & presents a bright, cheerful appearance. Off the operating room is a small room for storing stationery & typewriters which are not in use, next to this are the women's toilet rooms.

Immediately in the rear of the operating room is the battery room. This is equipped with 301 small cells of chloride accumulator storage battery, divided into 7 equal banks. There are also 8 cells of a larger size working the sounders, 2 cells being in use while another bank of 2 are being charged, the remaining 4 cells are used for the purpose of extending the duplex circuits to the station, about 1 mile away. Although this room is only about 9x17 ft., this is sufficient space for double the plant now in use. In the old office the whole basement was filled up with gravity batteries, some 2,000 cells being required, while with the present plant at least double the number of wires can be worked. Next to this room is the men's cloak, lunch room & lavatories.

In the rear are the rooms of the C.P.R. Telegraphers' Institute. This is a small club formed amongst the operators, officered & run by themselves. There is a small reading room & bookcase, & a fair sized billiard room equipped with a combination billiard & pool table. The furnishing was done by subscription, the officials of the Co. assisting with contributions. It is the intention, as soon as funds warrant, to add a piano to the furniture.

The new office was fitted up & the transfer made under the personal supervision of the Co.'s Chief Electrician, W. J. Camp.

Great North-Western Telegraph Co.

On Mar. 1, the rate to Belgium and Holland was reduced to 25c. a word.

The Co. expects very soon to start gangs at work to make permanent repairs along the routes affected by the great sleet storm in December last, & lines will be put in better shape than ever before.

There is nothing new in regard to the proceedings instituted against the Co. by H. M. Morrow & W. A. Clark, which were fully detailed in our Jan. issue, pg. 29. The case has not been set down for hearing, & it may never go any further.

President Dwight says that the general increase in Canadian business has caused a marked improvement in the business of the G.N.W. Co. all over the country. People are busy, and in consequence are using the telegraph wires to a greater extent.

A line has been built along the Souris River extension of the Northern Pacific Ry. in Manitoba, & offices of the Co. will shortly be opened at Ninette, Dunrea, Margaret, Minto, Fairfax, Elgin & one or two other points. Poles along the route are planted 30 to the mile, with no. 9 gauge wire.

On Feb. 15 the rate to Havana, Cuba, was reduced to 30c. instead of 45c. a word. To Cienfuegos, Casilda & Tunas, Cuba, 20c. a word added to Havana rate. To Jucaro, Santa Cruz, Manzanillo, Santiago de Cuba, 25c. a word added to Havana rate. The Puerto Rico through rate is 75c. instead of \$1.17.

The following offices have been opened: Alton, Ont.; Anson, Ont.; Bamberg, Ont.; Jonquieres, Que.; Renton, Ont.

The following offices have been closed: Barnston, Que.; Cap Chat Light, Que.; Chaudiere Basin, Que.; Little Metis L.H., Que.; Muskoka Wharf, Ont.; Myrtle, Man.; Oakville, Man.; Port Elmsley, Ont.; Roberval

Hotel, Que.; Rockliffe, Ont.; Rosebank, Man.; Seeley's Bay, Ont.; Tyrconnell, Ont.

The Co. has recently entirely renovated its offices in Montreal—re-arrangement of space has been made & new fittings of a handsome pattern have been placed throughout the offices, the result being that there is probably not a more complete & handsome telegraph office in Canada. The Winnipeg office has also lately been refitted, & is in better shape than ever before. New counters & other fittings of the latest design have been put in, & the office presents a most attractive appearance.

C.P.R. Company's Telegraph.

The C. P. R. Co.'s telegraph has now reached Fort Steele, B.C.

The railway telegraph line is being extended from Robson, B.C., west towards Midway.

Owing to increased business, another through wire has been completed between Montreal & Toronto.

The following offices were opened Feb. 1: Cowan, Man.; Makinok, Man.; Estevan, Assa.; Alexandria Station, Ont.; Corunna, Ont.; Millbridge, Ont.

The following changes in rates to Cuba and Porto Rico, via Bermuda, took effect Feb. 15: From all points in Ontario & east of Cienfuegos, Casilda, & Tunas de Zaza, 50c.; Jucaro, Santa Cruz del Sur, Manzanillo & Santiago de Cuba, 55c.; Porto Rico, 75c. a word.

A second wire has been completed through the Crow's Nest Pass—from Swift Current, Assa., to Nelson, B.C. The erection of this wire now gives a first-class telegraph service to Fort Steele, Cranbrook, Wardner, Fernie, etc., besides giving a first-class alternate circuit to Nelson & other Kootenay offices.

The Postal Telegraph Co. has begun proceedings in the U. S. Federal Court for an alternate writ of mandate directed against the Union Pacific Co., to obtain rights of way for its lines along the Union Pacific Ry.

The Commercial Cable Co. now allows names of persons, streets or places in addresses or signatures of all cables to be charged at the rate of 15 letters or fraction thereof to a word, instead of 10 letters as heretofore.

The Western Union Co. has completed the construction of a second wire into Victoria, B.C., from Seattle, Wash. The new line follows the same route as the other, going from Victoria to William's Head, thence to Port Angeles and from there to Seattle.

The London Times says that as an instrument designed to further the unity & prosperity of the empire, the utility of the proposed Pacific cable will many times outweigh the trifling cost to the taxpayers. The scheme only waits the sanction of the Imperial Government to be at once put in operation.

The President of the Charlottetown Board of Trade, in his annual report for 1898, says: "The question of improved telegraphic communication between P.E.I. & the mainland is still under consideration, but owing to the absence from Ottawa of Sir L. H. Davies, who has the matter in hand, no improvement has yet taken place, but I feel assured that some important changes will be made in the near future."

U. S. Attorney-General Griggs upholds the right of a military commander to cut a cable within the territorial waters of an enemy without making his country liable for damages. The question rose upon the cutting, by Admiral Dewey at Manila, of the cable of the British Eastern Extension, Aus-

tralia, Asia & China Telegraph Co., which filed a claim with the State Department for \$36,000 damages. Attorney-General Griggs contends that under the law of nations there is no ground for claim for indemnity.

It is announced from Ottawa that the Dominion Government has decided to construct a telegraph line to connect the Yukon territory with British Columbia. A party of engineers has left to commence the work. The plan of the Minister of Public Works is to construct the line between Lake Bennett & Dawson City at once. Surveyors will at once proceed to examine the country northward from Quesnelle, B.C., which is the terminus of the present Government system, the old Cariboo line, & see how to connect with the line to Dawson. It is said the ministers have decided that the franchise for the telegraph line to Dawson is too valuable & too important from the standpoint of the national safety to be allowed to go into any but Government hands.

TELEPHONE MATTERS.

The Bell Telephone Company.

At the annual meeting, Feb. 23, the following report was presented:—

1,637 subscribers have been added during the year, the total number of sets of instruments now earning rental being 32,082. The Co. now owns & operates 343 exchanges & 340 agencies. 666 miles of wire were added to the long distance system in 1898; of these 326 miles are in the Ontario Department & 340 miles in the Eastern. The long distance lines owned & operated by the Co. comprise 17,233 miles of wire on 6,096 miles of poles. In July the Directors, acting under the power conferred upon them, offered to the shareholders, at par, 7,920 shares of new stock, in the proportion of 1 share of new for each 4 of old, all of which, with the exception of 160 shares, were promptly subscribed for. The 160 shares referred to consisted principally of fractions of shares & of certain shares for which the parties had unintentionally omitted to subscribe. It being the wish of the directors that all shareholders should share equally in any advantage to be derived from the new issue, it was decided to sell those 160 shares & divide the premium pro rata among those for whose benefit they were sold. This was done, & with satisfactory results. The new building in Quebec is practically completed, & the new apparatus is now being installed. The new building at London is progressing favorably, & will be occupied early in the coming summer.

city extends & new districts are opened up it will be necessary to erect poles if the residents of those districts are to be supplied with the service which they require. As the poles which we propose putting up on the streets mentioned in our application to the Council will be more than 45 ft. in height we respectfully request the consent of Council to their erection."

Tom Innitt: "What did the telephone girl say to you when she broke the engagement?" Jack Potts: "Ring off."

Application has been made for the incorporation in New Brunswick of the Tracadie Telephone Co., capital \$2,000.

An interim dividend on the ordinary shares of the British Columbia Telephones, Limited, has been declared at the rate of 8% per annum.

The Victoria & Esquimalt Telephone Co. is putting in a metallic circuit, replacing iron wires with copper & making other improvements.

The Union Telephone Co., Ltd., has been organized at Taylorville, N.S., with the following officers & shareholders: E. Archibald, President; H. C. Taylor, Vice-President; S. Lindsay, Sec.-Treas.; W. Bentley, A. J. Reid, J. Annand, P. G. Archibald.

A. Dickie, a large lumber operator at Ship Harbor, N.S., proposes to build a telephone line from that place to Musquodoboit Harbor, where it will connect with the Nova Scotia Telephone Co.'s system. The distance is about 18 miles. It is expected the line will be completed by June next.

The injunction which was recently granted to the Chesapeake & Potomac Telephone Co. in Washington against the general use of the telephone by the guests of a Washington hotel, has been made permanent. The judge ordered that the telephone must be used only for legitimate business of the hotel and for the private business of the manager. It might also be used for the convenience or accommodation of guests in sending for a wagon to call for their baggage, but not for other purposes, such as calling for stock

reports, ordering theatre tickets, making social or business engagements, etc. In the course of the opinion, the judge said that the hotel guest does not have a telegram sent free of charge, nor does he receive messenger service free, or the use of carriages without pay; why should he, then, expect to have the use & service of the telephone without pay?

Express Companies Items.

The Dominion Ex. Co. has opened an office at the foot of Moyie Lake, B.C.

A special circular of the Western Ex. Co. states that notes, drafts, accounts or bills in amounts of \$400 or under may be received for collection between all offices of this Co., & offices of Great Northern, Northern Pacific & Dominion Ex. Cos. Notes, drafts, accounts or bills in amounts of \$100 or under may be received & forwarded to offices of American, Canadian, National, Pacific, Southern, United States, except to common points of United States with Adams Express Co. only, & Wells, Fargo & Co.'s Express, except to exclusive offices of Wells, Fargo & Co. west of Salt Lake, Utah, Albuquerque & Deming, New Mexico. An outward prepaid charge of 10c. upon each item will be made. If not collected there will be no additional charge.

The irregularities in the accounts of Sec.-Treas. Metcalf, of the Canadian Expressmen's Mutual Benefit Association, have not affected the status of the Association. According to a circular recently issued, "the Association proposes to pay every claim in full, & shall endeavor to do so without putting the members to the expense of an extra assessment; but should it be found necessary to do so, we trust that each & every member will pay the same & stand loyally to our Association. Under the management of E. Allen, President, & W. T. Murphy, Sec.-Treas., we feel satisfied that this Association shall prosper, & on their behalf, we appeal to every member to retain his membership, endeavor to get acceptable employees to become members, & success is assured."—Express Gazette.

GALENA OIL CO., Franklin, Pa.

CHAS. MILLER, President.

GALENA OILS are the Standard Lubricating Oils of the World.

GALENA OILS are used on nineteen-twentieths or ninety-five per cent. of the total railway mileage of the United States, Canada and Mexico, and their use is being carefully considered by the leading railway managers of Europe.

GALENA OILS run the fastest trains of the world, and delays are unknown, except when due to mechanical defects, or other well known causes over which the oil has no influence.

RAILWAYS & CANALS.

Annual Report of the Department.

The annual report of the Department of Railways & Canals for the year ended June 30, 1898, has been issued. Following is a summary of the report of the Deputy Minister & Chief Engineer.

The number of railways in actual operation, including the 2 Government roads, the I.C.R. & the P.E.I.R., was 146: some of these, however, are amalgamated or leased; making the total number of controlling companies 84, not including the Government railways. The number of companies absorbed by amalgamation is 34, & the number of leased lines is 33.

The number of miles of completed railway was 16,870, an increase of 183, besides 2,248 miles of sidings. The number of miles laid with steel rails was 16,622, of which 553 was double track. The number of miles in operation was 16,718.

The paid-up capital amounted to \$941,297,037, an increase of \$19,439,805. The gross earnings amounted to \$59,715,105, an increase of \$7,361,829, & the working expenses aggregated \$39,137,549, an increase of \$3,968,884 compared with those of the previous year, leaving the net earnings \$20,577,556, an increase of \$3,392,945. The number of passengers carried was 18,444,049, an increase of 2,272,711, & the freight traffic amounted to 28,785,903 tons, an increase of 3,485,572. The total number of miles run by trains was 50,658,283, an increase of 4,977,432. The accident returns show 5 passengers killed.

The Government expenditure on railways prior to & since 1867 amounts, on capital account, to \$123,551,091.77 (including a payment of \$25,000,000 to the C.P.R. Co.), & for railway subsidies charged against the Consolidated Fund the further sum of \$17,619,222.11, making a total expenditure of \$140,834,731.29. In addition there has been an expenditure since Confederation for working expenses of \$73,029,631.74, covering the maintenance and operation of the Government roads, or a grand total of \$213,863,363.03; all of which, with the exception of \$13,881,460.65, has been expended on railways during the past 31 years. This does not include an annual subsidy of \$186,600 to the Atlantic & Northwest Ry. Co. for 20 years from July 1, 1889, nor interest at 5% on \$2,394,000, payable to the province of Quebec for the line from Quebec to Ottawa, which has been transferred to the Public Debt. The revenue derived from the Government roads during the same period amounts to \$64,510,650.18.

Canadian Pacific Railway.—Of the \$579,255.20 awarded to this Co. in 1891 by the arbitrators in respect of transferred works in British Columbia, and to be expended by the

Co. under Government supervision in certain specified directions, the total value of the work executed up to Nov., 1898, is \$579,022.53, which includes the expenditure, \$202,675.20, prior to the date of the award, leaving still to be expended \$233.67.

It should be noted that for the year ended on the 30th June, 1898, the Company had under traffic in Canada 6,334 miles of railway, including leased lines, & 36 miles over which it has running powers. Its gross earnings were \$25,470,796.18 (as against 6,314 miles of railway, & earnings \$21,242,638.75 the previous year). The total expenditure for working expenses was \$14,684,790.65, making the net earnings

JAMES OSBORNE,
GENERAL SUPERINTENDENT WESTERN DIVISION, C.P.R.

\$10,786,005.53, an increase of \$2,120,167.20 over the net earnings of the previous year.

The construction of the Crow's Nest Pass Ry., being considered a necessity for the successful development of the mining interests of B.C., Parliament granted a subsidy of \$11,000 a mile in aid of it. Under the act the C.P.R. Co. undertook the work of construction & entered into a contract, breaking ground July 15, 1897, since which the works of construction have been vigorously prosecuted. The length of road under contract is: Lethbridge to Kootenay Lake, 290 miles; Kootenay Lake to Nelson, 54 miles; total, 344 miles. The supervision of the location of the line has evidently been entrusted

to competent hands, as the ground has been carefully selected & as good alignment as the physical features of the country will admit of obtained. The maximum grade is 1%, or 52⁸⁰/₁₀₀ a mile, the severest curves being 10 & 12 degrees, except in one instance, where a 15 degree curve has been introduced. The work of construction has so far been confined to the section between Lethbridge & Kootenay Landing, 290 miles, over which the track laying was completed on Oct. 8, 1898, & at this date of writing the line over this section is in safe condition for public traffic. A train transfer landing has been constructed on Kootenay Lake at Kootenay Landing, so that cars with their loads can be transferred without transshipment from that point to Nelson, which will greatly assist mining operations through the Kootenay district. The amount of subsidy paid up to Nov. 1, 1898, is \$2,162,190.

It is only proper here to note that amongst the various works & undertakings of the Co. for the substantial improvement of its railway in the directions of steel bridge construction, the formation of solid embankments & the adaptation of the most recent appliances to its rolling stock in order to secure safety & comfort to its passengers & employees, it has now equipped with self couplers 8,456 freight cars, & has fitted 6,601 freight cars with automatic brakes.

Government Railways in Operation.

—The lines maintained by the Government are: The Intercolonial, the Windsor Branch (maintained only), & the Prince Edward Island Rys. The gross earnings of all the Government roads for the fiscal year were \$3,313,847.10, an increase of \$253,772.72. The gross working expenses were \$3,577,248.88, an increase of \$399,979.27. The net loss on the operations of the year was \$263,401.78. These figures include \$70,000 rent, paid for the extension of the I.C.R. into Montreal.

Intercolonial Railway.—In Mar., 1898, the operations of the I.C.R. were extended to Montreal by means of leases obtained from the G.T. & Drummond County Ry. Cos., making an addition of 169.81 miles to the operation of the Government line, its length being 1,314 miles instead of 1,145. During the fiscal year there was an addition of \$252,756.80 to capital account expenditure, making the total expenditure chargeable to capital, on the whole road as amalgamated under the act of 1891, \$55,668,913.95. The additions made during the year included \$56,651.93 for increased accommodation at Halifax, \$93,943.08 for increased accommodation at Montreal, \$19,820.48 for the extension to deep water at North Sydney, & \$65,510.92 on rolling stock.

The gross earnings of the year amounted to \$3,117,669.85, an increase of \$251,641.83, & the working expenses (exclusive of \$70,000 rent paid for the extension to Montreal)

Winnipeg.

NEXT ANNUAL MEETING at Winnipeg, Oct. 13, 1899.

to \$3,257,648.51, an increase of \$331,679.84,
making the excess of expenditure \$139,-
978.66, or, including the rent mentioned,
\$209,978.66.

Comparing the earnings with those of the
previous year the passenger traffic produced
\$1,053,864.64, an increase of \$74,859.07; the
freight traffic \$1,857,740.06, an increase of
\$170,689.74, & the carriage of mails & ex-
press freight \$206,065.15, an increase of \$6,-
093.12. The earnings per mile were \$2,594.-

53, an increase of \$91.45. These figures are
based on an average mileage of 1,201.63 in
1897-98, & an average mileage of 1,145 in
1898-97.

The number of passengers carried was
1,528,444, an increase of 26,754 in through &
local traffic, & 1,434,576 tons of freight were
carried, an increase of 138,548 tons. Of flour
987,408 barrels were carried, an increase of
139,707. Of grain 1,551,372 bus. were carried,
an increase of 457,873; of this, 8,000 bus.
was for shipment at Halifax. Lumber
showed an increase of 10,738.091 superficial
ft., the total carried being 254,093,816 ft.
There was an increase of 17,219 in the num-
ber of live stock, of which 89,301 were car-
ried. 369,949 tons of coal, a decrease of 13,-
413, were carried. Of raw sugar, none was
carried. Of refined sugar, 26,434 tons, an
increase of 5,714, were carried, of which 15,-
445 was for points west of the road. 8,330
tons of fresh fish, an increase of 622 tons, &
5,005 tons of salt fish, a decrease of 875 tons,
were carried. Of ocean borne goods to &
from Europe via Halifax the aggregate was
26,220 tons, an increase of 6,064. Of this,
18,633 was local traffic.

In the winter of 1897-98 the removal of snow
& ice entailed an expenditure of \$58,370.90,
about \$25,000 more than the cost the previous
year. The permanent way & all structures
& works are in good order.

The train mileage (or number of miles run
by trains) of the year was 3,955,009, an in-
crease of 175,726. The cost per train mile
was 82.37c., 4.95c. higher than in the previous
year. The working expenses per mile of rail-
way amounted to \$2,711.02, an increase of
\$155.59 a mile.

The Windsor Branch is 32 miles long, ex-
tending from Windsor Jct., on the I.C.R., to
Windsor. It is operated by the Dominion
Atlantic Ry. Co., which pays all charges in
connection with the working of the traffic, $\frac{2}{3}$
of the gross earnings being allowed the Co.,
the Government taking the remaining $\frac{1}{3}$, &
assuming all costs of maintenance of the road
& works. This arrangement is carried out
under an agreement dated 1892, which ex-
tends, for a further term of 21 years, ar-
rangements similar to those made in 1871.
All charges for superintendence & supervision
of maintenance of works are borne by the
Government; the duty of supervision being
performed by the chief officers of the I.C.R.
The gross earnings of the Government ($\frac{1}{3}$ of
gross receipts) were \$37,226.64, a decrease
of \$3,376.59. The expenses of maintenance
were \$18,181.63, an increase of \$7,360.59,
leaving the profit to the Government \$19,-
045.01. The road has been maintained in
good order.

Prince Edward Island Railway.—The
total cost of the road & equipments charge-
able to capital account at the close of the
fiscal year was \$3,768,107.26; there being an
addition during the year of \$17,541.88 on ac-
count of new works, including the shortening
of the line between North Wiltshire & Col-
ville & a survey for a branch from South
Port to Murray Harbor.

The gross earnings were \$158,950.61, & the
working expenses \$231,418.74; the expendi-
ture in excess being \$72,468.13. Compared
with the previous year, the gross earnings
increased \$5,507.48. The railway carried 126,-
511 passengers, an increase of 4,021, produc-
ing \$63,734.71, an increase of \$1,039.54. Of
freight there was carried 57,539 tons, an in-
crease of 5,388, producing \$75,845.60, an in-
crease of \$5,972.94. The earnings from mails
& sundries were \$19,370.40, a decrease of
\$1,505. Compared with the previous year,
the working expenses were less by \$9,069.16.
The train mileage was 252,894, a decrease
of 1,135 miles. The cost per mile run by
trains was 91.51c., a decrease of 3.16c.; &
per mile of railway \$1,101.99, a decrease of
\$43.20 per mile. The road, with its buildings

& rolling stock has been maintained in a satis-
factory condition.

Canals.—The expenditure charged to
capital account on the original construction
& the enlargement of the several canals of
the Dominion up to June 30, 1898, was \$72,504,-
401.85. A further sum of \$15,067,096.31 was
expended on the repairs, maintenance &
operation of these works, making a total of
\$87,571,498.16. These figures are the aggre-
gate expenditures on specific canals & do not
comprise certain items charged to "Canals in
general." The total revenue derived, includ-
ing tolls & rentals of lands & water-powers,
amounted to \$11,710,240.08. The expenditure
for the fiscal year was: On construction &
enlargement, \$3,207,249.79, & \$624,755.96 for
repairs, renewals & operation, making a total
of \$3,832,005.75. The net revenue for the
fiscal year was \$407,662.81, an increase of
\$22,882.28. The net canal tolls were \$344,-
057.13, an increase of \$22,429.80, & the rents
were \$44,050.39, a decrease of \$549.25. The
expenditure on canal staff & maintenance,
repairs & renewals amounted to \$624,755.96,
a decrease of \$8,520.20; & the net receipts
amounting as above to \$407,662.81, the amount
of expenditure in excess of receipts was \$217,-
093.15, compared with an excess expenditure
the previous year of \$248,495.63.

The following features of the principal canal
traffic during the season of navigation of 1897
will be of interest:—On the Welland Canal,
1,274,292 tons of freight were moved, a de-
crease of 5,695 tons; of which 824,485 tons
were agricultural products, an increase of
31,123, & 181,817 produce of the forest. 1,050,-
093 tons passed eastward & 224,199 west-
ward; 1,244,750 were through freight, of
which 1,026,458 passed eastward. Of this
through freight Canadian vessels carried 345,-
977 tons, an increase of 4,847, & United
States vessels 898,773, a decrease of 3,692.
The total freight passed eastward & westward
through this canal from U.S. ports to U.S. ports
was 564,694 tons, a decrease of 88,519 com-
pared with 1896. The quantity of grain pass-
ed down this & the St. Lawrence canals to
Montreal was 560,254 tons, an increase of 99,-
205 compared with the previous year: of this
89,659 were transhipped at Ogdensburg as
against 461,049 carried down in 1896, of
which 77,355 were transhipped at Ogdens-
burg. The further quantity of 43,023 tons of
grain passed down the St. Lawrence Canals
only, to Montreal, making the total 603,277
tons. The rate of toll on grain for passage
through the Welland (giving free passage
through the St. Lawrence canals) was 10c. a
ton.

On the St. Lawrence canals 1,231,365 tons
of freight were moved, an increase of 117,675;
of which 813,638 were east bound through
freight, & 23,831 west bound through freight;
746,537 were agricultural products, 331,620
merchandise, & 94,496 forest products.
Seven cargoes of grain, aggregating 2,324
tons, were taken down direct to Montreal
through the Welland & St. Lawrence canals.

On the Ottawa River canals the total quan-
tity of freight moved was 562,370 tons, an in-
crease of 60,324, of which 551,700 were pro-
duce of the forest. On the Chambly Canal
352,136 were moved, an increase of 7,201, of
which 237,653 were the product of the forest.
On the Rideau Canal 77,276 were carried, an
increase of 3,969, 47,010 being the product of
the forest. On the St. Peter's Canal 67,093
were carried, an increase of 1,585, of which
50,013 were merchandise. On the Murray
Canal 13,231 passed, an increase of 175, &
5,467 of this were the product of the forest.
On the Trent Valley Canal 36,141 were moved,
of which 35,294 were product of the forest.

On the Sault Ste. Marie Canal the total
movement of freight was 4,947,063 tons, an
increase of 369,664, carried in 4,268 vessels,
the number of lockages being 2,604. Of
wheat 17,924,802 bus., & of other grain

3,253,405 bus. were carried; 1,093,456 barrels of flour, also 3,572,854 tons of iron ore, & 7,799,156 ft., b.m., of lumber; all these items show a considerable decrease. The total traffic at this point, accommodated by the 2 canals, the Canadian & U.S., amounted to 18,986,689 tons, an increase of 1,730,266, carried in 17,080 vessels, a decrease of 1,497. The total quantity of wheat carried was 55,931,779 bus., a decrease of 7,532,097, & of other grain 24,968,136, a decrease of 2,747,129. Of lumber the total was 802,240,156 ft., b.m., an increase of 113,366,356.

As having an interesting bearing on the question of canal versus railway transport of grain from the west, it may be noted that whereas grain & peas passed down to Montreal through the St. Lawrence canals to the extent of 560,254 tons, an increase of 64,386 over the previous year, the quantity carried to Montreal via the C.P. & G.T. Rys. amounted to 228,586 tons, an increase of 74,869. The quantity of grain carried to tide-water on the New York State canals was 569,362 tons, a decrease of 183,677, while the quantity carried by the railways of the State to tide-water amounted to 4,132,740 tons, an increase of 267,980. Of the total freight carried by the canals & railways of the State of New York, respectively (amounting in 1897 to 43,711,512 tons—less by 44,539 than in 1896), the proportion carried by the canals has fallen steadily from 68.9% in 1859 & 47.0% in 1869 to 8.3% in 1897. The results which may follow on the approaching completion of the enlarged system of Canadian canals remain to be seen.

The Department is strenuously endeavoring to secure the completion of the enlarged canal systems on the River St. Lawrence to such extent as to admit of their use during the season of 1899. Emphasis is laid on the fact that though the dimensions of the enlarged locks are: length 270 ft., width 45 ft., with 14 ft. of water on the sills, the length of the vessels to be accommodated is limited to 255 ft.

G. T. R. SEMI-ANNUAL MEETING.

The ordinary general half-yearly meeting was held at the City Terminus Hotel, London, Eng., Mar. 29, when the following report was presented:—

The following summary shows a comparison of the ½-year's revenue account with that of the corresponding ½-year ended Dec. 31, 1897:—

Dec. 31, '97.		Dec. 31, '98.
£2,247,151	Gross receipts	£2,140,579 17 10
1,434,804	Deduct—	
	Working expenses, including taxes, being at the rate of 66.71%, as compared with 63.84% in 1897.....	1,427,999 14 ..
812,347	Net traffic receipts	712,580 3 10
16,013	Add—	
	Received from the International Bridge Co.	1,030 12 9
5,570	Interest on Toledo, Saginaw & Muskegon bonds.....	4,741 15 7
3,088	Interest on bonds, etc., of Central Vermont Ry.	3,087 10 8
64,821	Interest on securities of controlled lines & on St. Clair Tunnel bonds acquired by the issue of G. T. 4% debenture stock	64,781 3 6
18,397	Balance of general interest account	20,138 3 3
£920,236	Net revenue.....	£818,259 9 7

Following are the net revenue charges for the ½-year:—

Rents (leased lines)	£ 73,474 8 3
Interest on debenture stocks & bonds of the Co.	438,102 4 6
Interest on debenture stock & bonds of lines consolidated with the G. T. Co.	71,955 .. 4
Interest on Michigan air line bonds.....	7,750
	590,281 13 1

Amount advanced to Chicago & G. T. Co. under traffic agreements towards payment of interest on its bonds, ½-year to Dec. 31, for which interest coupons are held.....14,555 11 7
Amount advanced to Detroit, Grand Haven & Milwaukee Co. towards payment of interest on its bonds, under agreements, ½-year to Dec. 31.....3,880 12 8

Leaving a surplus of

£609,417 17 4
208,841 12 3
£818,259 9 7

The surplus of £208,841 12s 3d, added to the balance from last ½-year of £2,271 3s 11d, makes £211,112 16s 2d, available for dividend.

The directors recommend the declaration of the ½-year's dividend on the 4% guaranteed stock, amounting to £104,395 17s 6d, & a dividend of 3% on the 1st preference stock, amounting to £102,504 18s 0d, leaving £4,212 0s 8d, to be carried forward to the next ½-year's accounts.

GROSS RECEIPTS.—This table exhibits a comparison of receipts for the ½-years ended Dec. 31, 1898 & 1897.

	1898.	1897.	Increase.	Decrease.
	£	£	£	£
Passengers.....	581,429	619,788		38,359
Mail & Express.....	104,632	110,583		5,951
Freight & Live Stock	1,388,711	1,480,391		97,680
Miscellaneous	65,808	30,380	35,419	
	2,140,580	2,247,151		106,571

The increase of £35,419 in the miscellaneous receipts arises from the additional rental received from the Wabash Co. in respect of running powers granted over the G. T. line between Windsor & the Niagara Frontier, & from the rental received from the Dominion Government for the use by the Intercolonial Ry. of the line between Ste. Rosalie & Montreal.

The decrease in the passenger & freight & live stock receipts is largely attributable to the deviation of traffic consequent on the above-mentioned running arrangements for which compensation is obtained in the additional rentals received from those Cos. included in miscellaneous receipts; the passenger receipts have also been adversely affected by the reduction in local passenger fares, which, however, were restored on Nov. 28 last to their normal basis.

TRAFFIC STATISTICS.

	Half-year, Dec. 31, 1898.	Half-year, Dec. 31, 1897.	Increase.	Decrease.
Passengers carried.....	3,833,611	3,641,761	191,850	
Average fare per passenger	3s. 0½d.	3s. 3d.		1½d.
Tons of freight and live stock.....	4,756,205	5,136,328		380,123
Average rate per ton	5s. 10d.	5s. 9½d.		1½d.
Earnings per train-mile	59.92d.	59.61d.		3½d.

THE WORKING EXPENSES, including taxes, amounted in the ½-year to £1,428,000, or 66.71% of the gross receipts, as compared with £1,434,804, or 63.84%; a decrease in amount of £6,804, but an increase in the proportion to the gross receipts of 2.87%.

This table exhibits a comparison of the revenue expenditure, excluding taxes, as now classified, for the ½-years ended Dec. 31, 1898 & 1897.

Description of Expenditure.	1898.	1897.	Increase.	Decrease.
Maintenance of way & structures.....	397,100	413,130		72,560
Maintenance of equipment.....	11,413	11,113		300
Conducting transportation.....	730,247	780,114		49,867
General expenses.....	5,117	5,117		
Total.....	£1,143,877	£1,009,574		134,303
Percentage of gross receipts.....	65.24	60.31		4.93

It will be seen from the above statement that the amount charged in the past ½-year's accounts for maintenance of way & structures was £72,560 in excess of the expenditure in the corresponding ½-year. A large amount of additional ballasting was done during the ½-year at an extra expense of £12,932, & in continuation of the policy indicated in the last ½-year's report of gradually improving the line, an increased amount of £61,405 for renewal of bridges & culverts has been charged, of which £30,805 was on account of the revenue proportion of the expenditure for the reconstruction of the Victoria Jubilee Bridge, & of the cost of renewing the bridges between Montreal & Portland, & on the Southern Division. The remainder of the additional expenditure was incurred on account of the renewal of several bridges on other portions of the line, indispensable for the prompt & economical conduct of the traffic. The reduction in the expenses for conducting transportation is a satisfactory feature in the accounts of the past ½-year.

THE TRAIN MILEAGE of the ½-year compares with that for the ½-year ended Dec. 31, 1897, as follows:—

	1898.	1897.	Increase.	Decrease.
Passenger.....	3,270,604	3,237,813	32,791	
Freight	4,758,402	5,136,328		377,926
Mixed trains.....	514,519	598,000		83,481
Total	8,543,525	9,048,134		474,609

ROLLING STOCK.—The stock of cars has been increased during the ½-year by the purchase of 750 box freight cars of 60,000 lbs. capacity, & 250 double-deck stock-cars, & the construction in the Co.'s shops of 250 refrigerator cars, the cost of which, amounting to £123,054, has been charged to capital account. The reduction of £26,140 in the amount paid during the ½-year for the use of cars belonging to other companies, is partly attributable to the additional equipment recently provided.

Thirteen engines have been sold or broken up, 18 passenger cars & 527 freight cars have been broken up, & 2 first-class & 6 second-class cars have been converted into boarding cars. Two passenger engines were constructed in the Co.'s shops. Seven passenger & 126 coal & flat cars were also built in the Co.'s shops during the ½-year, at the cost of revenue, in part replacement of cars out of service.

There remained at Dec. 31, 1898, 3 locomotives in excess, & 34 passenger & 405 freight cars short of the official stock. To replace this deficiency in the stock of cars there was at the end of the ½-year £88,733 10s. 11d. at the credit of car renewal fund, & there was also £28,118 13s. 6d. at the credit of locomotive renewal fund.

CAPITAL ACCOUNT.—The total outlay on capital account amounted for the ½-year to £205,133 16s. 4d., of which £123,054 was expended in increasing the equipment of the Co. by the construction in the Co.'s shops & by purchase of 1,250 new freight & cattle cars. The remaining expenditure mainly consists of £26,039 for necessary additions & improvement to the rolling stock, & £46,186

for additional sidings & other new works required for the accommodation of the traffic.

RENEWAL OF BRIDGES.—An amount of £30,805, being the proportion of the expenditure chargeable to revenue for the reconstruction of the Victoria Jubilee Bridge & of the cost of renewing the bridges between Montreal & Portland & on the Southern Division, on the basis mentioned in the last report, has been included in the maintenance of way charges for the past ½-year. There was an amount of £33,853 10s. 11d. standing at the debit of renewal of bridges suspense account on Dec. 31, 1898. The directors are glad to report that trains commenced to run over the double track of the Victoria Jubilee Bridge in Dec. last. The completion of the bridge & of the roadway, footpaths & approaches has been retarded by the severity of the weather, but it is expected that all the works in connection with the new structure will be finished during the current ½-year.

CHICAGO & GRAND TRUNK RAILWAY.—The gross receipts for the ½-year to Dec. 31, 1898, amounted to £373,555, against £338,320 in 1897, an increase of £35,235. The working expenses were £299,355, against £299,995, a decrease of £640; the net profit being £74,200, against £38,325, an increase of £35,875. The net revenue charges for the ½-year were £88,755, against £87,792 in 1897. There was, therefore, a deficiency in meeting the net revenue charges in 1898 of £14,555, as compared with a deficiency for 1897 of £49,467, being an improvement, compared with the corresponding ½-year of £34,912. The deficiency of £14,555 is payable by the G.T. Co. under traffic agreements. The number of passengers carried during the ½-year was 622,847, against 575,416, an increase of 47,431, or 8.24%, & the passenger train receipts, including mails & express receipts, were £115,068, against £110,747, an increase of £4,321, or 3.9%. The quantity of freight moved during the ½-year was 1,005,054 tons, against 925,569 in 1897, an increase of 79,485, or 8.59%, & the receipts from this traffic were £258,175, against £227,226 in 1897, an increase of £30,949, or 13.62%.

DETROIT, GRAND HAVEN & MILWAUKEE.—The gross receipts for the ½-year to Dec. 31, 1898, were £106,379, against £117,073 in 1897, a decrease of £10,694; the working expenses were £72,492, against £81,838, a decrease of £9,346; leaving a balance of £33,887, against £35,235, & showing a decreased net revenue of £1,348, compared with the corresponding ½-year of 1897. The net revenue charges for the ½-year were £37,768, against £37,409 in

1897, so that there was a deficiency in meeting the net revenue charges of £3,881 as compared with a deficiency of £2,174 for the corresponding period of 1897. This deficiency of 3,881 is payable by the G.T. Co. The number of passengers carried during the ½-year was 330,357, against 333,781, a decrease of 3,424, or 1.03%; & the passenger receipts, including mails & express receipts, were £51,153, against £50,120, an increase of £1,033, or 2.06%. The quantity of freight moved was 285,202 tons, against 307,857 in 1897, a decrease of 22,655, or 7.36%; & the receipts from freight traffic were £54,318, against £58,759 in 1897, a decrease of £4,441, or 7.56%.

The directors have the satisfaction to record that the negotiations with the C.P.R. Co., to which reference was made in the last ½-year's report, resulted in an agreement embracing the settlement of all points at issue between the two companies. The new agreement concluded Nov. 22, 1898, provided for the re-establishment of interchange traffic facilities, via North Bay, & for the re-adjustment of rates & fares in connection therewith on a satisfactory basis.

It was announced at the last ½-yearly meeting that an arrangement had been virtually completed with the Committee of Bondholders of the Consolidated R.R. of Vermont, & other parties interested in that Co. That agreement with certain modifications has since been acknowledged in the new charter granted Nov. 16, 1898, to the Central Vermont Ry. Co. by both houses of the Vermont State Legislature. So soon as the legal procedure of the Courts under the decree of foreclosure & sale dated Feb. 1, 1899, will permit, the re-organization of the Central Vermont Ry. Co., as constituted in the new Act of Incorporation, will be completed, & the agreement between the two companies definitely settled & submitted in due course for the approval of the proprietors.

The retiring Directors at the forthcoming meeting are Sir C. Rivers Wilson, J. Price, G. Allen, & J. A. Clutton-Brock, all of whom are eligible, & offer themselves for re-election. G. B. Newton, one of the auditors in London, & W. Ramsay, one of the auditors in Canada, also retire, & offer themselves for re-election.

ENGINEERING DEPARTMENT.—The Chief Engineer states that on the G.T.R. system east of the Detroit & St. Clair rivers, & on the Detroit & Michigan Air Line division, west of these rivers, the charges for maintenance & renewals during 1898 were \$473,969.16 greater than in 1897. Of this, \$324,169.95 was for repairs

and renewals of bridges, exclusive of the Victoria Bridge; the remaining \$149,799.21 was divided in various proportions among the other items of expenditure, except superintendence and labor for repairs of roadway, which showed a decrease.

The bridge expenditure is high, & must continue to be so, until the light structures which were built when the railway was made, & for some years afterwards, have been renewed in a form strong enough to meet present requirements, with a reasonable surplus of strength for further probable increase in weights of rolling stock & car loads.

The masonry of the piers of the Victoria Bridge was finished April 2, 1898, & the trusses of the last span were so far completed on Aug. 19 that they became self-supporting. On Dec. 13 the first train passed over the second or new track, & the bridge, as a double-track structure, was brought into service. A good deal of work remained to be done at the end of the year, but it was of a character that would not appreciably interfere with the running of the trains. The carriage and footways, & their approaches, are not yet finished, & will not be until the opening of spring. The total expenditure on the work during 1898 was \$845,642.20.

Sidings have been more or less re-arranged & greatly improved at 41 stations. Their aggregate length has been increased 10¼ miles.

New offices for the Motive Power Department, & a freight shed, have been built at Montreal, & a station at Merriton. Round-houses, each of which will hold 30 locomotives, are in course of erection, one at Sarnia & one at Port Huron, & are well advanced towards completion.

The materials used for repairs of main tracks & sidings were:

80-lb. new steel rails in main tracks.....	26,462 tons.
Partially worn rails in branch lines and sidings.....	24,074 "
New ties.....	1,591,426
Ballast.....	343,523 cubic yds.

The Co.'s permanent way & works have been carefully maintained & are in good condition.

MOTIVE POWER.—The Superintendent of Motive power gives these figures:

Half-Year Ended	Dec. 1898.	Dec., 1897.
Total expenditure.....	\$2,082,913	\$2,157,521
Train mileage.....	8,573,525	9,048,134
Expenses per mile—	cents.	cents.
Train.....	24.29	23.84
Engine.....	19.56	19.81
Car.....	1.50	1.40

The decrease in expenditure was \$74,608, or 3.5%, with a decrease in miles of 474,609 or

McGill University Lecture.—In the course of the annual university lecture recently delivered in Montreal, Prof. R. B. Owens, chief of the Electrical Department, said: "By the introduction of electric traction, not only has the sanitary conditions of our cities been improved, but healthy country homes have been substituted for the overcrowded tenement. Electric traction is not dangerous at higher speeds than is possible with horses, & the small cost of electric operation permits of low fares being charged. The effect of rapid transit on urban architecture is also plainly seen. The question is often asked, Will electricity eventually supersede the locomotive on the present steam railways? I may reply that careful estimates show no economy of electricity over steam for handling heavy freight traffic where the number of trains operated per day is small, but for passenger service, where trains must be operated at frequent intervals on small headway, the advantage is with electricity, & it is probable that because of the smaller cost, as well as increased speed, such cities as New York, Baltimore & Washington will be connected by through lines in the near future."

Toronto, Hamilton & Buffalo Ry.

In our last issue we gave copious extracts from a prospectus issued in New York offering \$1,250,000 1st mortgage gold bonds of the Co., payable July 1, 1940, interest payable bi-annually. There were also embodied in the prospectus letters from C. M. Depew, Chairman of the boards of the New York Central & Hudson River R.R. Co., & of the Michigan Central, & from Sir Wm. Van Horne.

Mr. Depew says:—The construction of the T., H. & B. Ry. was promoted by the New York Central & Hudson River R.R. Co., in connection with the C.P.R. Co., the Michigan Central R.R. Co. & the Canada Southern R. Co., as a connecting link between the C.P.R. & the Vanderbilt railway systems. It was expected that its principal traffic would be derived from interchange business between these systems, but it was also foreseen from the beginning that the territory local to the road would supply important & valuable business. At the outset of the enterprise careful calculations were made on behalf of the contributing companies by experienced engineers & traffic men as to the ability of the road to earn the interest upon its capitalized cost, & these calculations warranted the belief that as soon as the road was in full operation it would without trouble take care of its own fixed charges; but to guard against a contingency of a lack of remunerative business in times of depression, the 4 promoting companies agreed to guarantee the payment of the interest accruing upon the bonds in any ½ year by contributing, if necessary, up to 25% of their entire gross earnings upon the traffic delivered to and received from the T., H. & B. R. Co. in that ½ year by each of these companies. This possible contribution was considered more than sufficient to insure the payment of the interest under any circumstances that could be anticipated. During the first 14 months of the operation of the road, its own earnings, beyond the cost of operation, were entirely expended in construction & betterments, & the entire interest

upon the bonds for that period was promptly & readily made up by the contributing companies. Since Aug. 1, 1898, the T., H. & B. R. Co. has fully earned its interest, & the guaranteeing companies have no expectation of being called upon to make up a deficiency hereafter. The capital stock of the T., H. & B. R. Co. is distributed so that 51% of it is owned by the Vanderbilt lines, & is voted, on their behalf, by the N.Y.C. & H.R.R. Co.; 19% is voted by the C.P.R. Co. & 30% is owned & voted by others. The board of directors consists of 7 members, of whom 4 represent the interest of the Vanderbilt lines & 1 represents the C.P.R. Co. I think the facts briefly set forth above will indicate to you very clearly that the two great railroad systems to which I have referred are fully committed to friendly relations with the T., H. & B.R. Co., & that their interests are such as to insure their financial support under all circumstances up to the full limit expressed in the agreement of July 9, 1895.

Sir Wm. Van Horne says:—In reply to your inquiry as to my views on the situation & prospects of the T., H. & B. Ry. as affecting its ability to meet the interest on its bonded debt, I beg leave to say that as the connecting link between the New York Central, Canada Southern & Michigan Central railways on the one hand, & the C.P.R. system on the other (the latter system now embracing about 9,500 miles of railway), and with a traffic contract securing to the T., H. & B. all of the traffic interchanged between the Vanderbilt lines named & the C.P. systems, to the extent that it can be legitimately sent that way, & with an agreement on the part of all these lines to contribute 25% of their earnings on the traffic so interchanged in any ½ year towards making good any deficit which may occur in that ½ year in the interest on the bonds of the T., H. & B. R. Co., its position ought to be perfectly safe, & I so regard it. In addition to the through traffic assured to it by the traffic contracts referred to, the T. H. & B. R., traversing as it does one of the richest districts in Canada, commands a large & valuable local traffic. The ownership of 70% of the stock of the T.,

H. & B. Co. by the Vanderbilt interests & the C.P. Co. together should be a strong additional assurance.

Edward Sweet & Co. inform us the bonds were taken up at the subscription price, viz., par & interest, but that they are not at liberty to mention the names of the purchasers to anybody.

Irondale, Bancroft & Ottawa Ry.

A writ has been issued by Beatty & Co. solicitors, Toronto, on behalf of certain shareholders in the Irondale, Bancroft & Ottawa Ry., against J. H. Plummer, A. D. Benjamin, H. S. Mara, Z. A. Lash, the Trusts Corporation of Ontario & the Bank of British North America, to prevent the sale of bonds of the road which are held by the first-named defendants to the Bank of British North America. The writ is based on two clauses in the charter of the Co., which provide that every director of the road must hold at least 5 shares of stock therein, & that at least 4 directors, bodily present, shall be necessary to a quorum at any meeting, even where proxies are invoked. The statement of claim sets forth that at a so-called special general meeting of shareholders, held April 24, 1894, it was resolved to bond the road for \$15,000 a mile on those portions of it constructed or under construction. On Jan. 11, 1895, a meeting of directors was held in Toronto, at which it was decided, pursuant to instructions given at the earlier meeting of shareholders, to bond the road for 30 miles & to appoint the Trusts Corporation of Ontario trustees for the issue of the bonds. At this meeting 4 were present, C. J. Pusey, C. H. Williams, L. B. Holland, & R. G. Kingan, but it is alleged that Mr. Holland was not, & never had been, a director, & did not become a shareholder until long afterwards. Subsequently, at a meeting held again in Toronto, on Aug. 13, 1897, the President, C. J. Pusey, was authorized to enter single-handed into whatever agreement he thought proper in connection with the sale of the bonds. At this meeting C. J. Pusey, G. H. Williams, L. B. Holland, & F. C. Jones were present,

The following leading railroads of Canada are using Page fencing in quantities of from 1 mile to 100: Canadian Pacific; Grand Trunk; Intercolonial; Lake Erie & Detroit River; United Counties; Canada Atlantic; St. Lawrence & Adirondack; Michigan Central; Manitoba & Northwestern; East Richelieu Valley; } Toronto, Hamilton & Buffalo; Thousand Islands; Crow's Nest Pass.

For further particulars send to the Page Wire Fence Co., Ltd., Walkerville, Ont.

but it is alleged that neither of the latter two was a director or shareholder. On Sep. 1, 1897, Mr. Pusey entered into negotiations for advances on the road, which were made by the defendants. Incidentally notes were given which total \$103,500, & which fall due Sep. 1, 1899. Other advances have also been made which amount to \$33,600. The Bank of British North America holds these notes, & will claim payment of them. It, however, wishes to buy the \$450,000 bonds issued by the Co. 4 years ago. The plaintiffs wish to have the bonds declared invalid, on the ground that authority given for their issue was not sufficient according to the terms of the charter. They also wish to prevent the transfer of the same to the Bank of British North America, or in any event to permit it only in such an amount as will cover the notes held by the bank.

An Up-to-date Atlas.

Rand, McNally & Co.'s enlarged Business Atlas & Shippers' Guide for 1899, which is the 29th edition, consists of 425 pgs., 20 x 14 ins. Among the new features is a commercial map of the U.S. on a large scale, in 3 sections, showing only railways and important towns. There are also large scale maps of all states & territories in the U.S., in most cases each state or territory being given two full pages. These maps show in detail the entire railway system—the different railways being distinguished by different figures, with a ready reference index giving express company doing business over each line, & accurately locating all islands, lakes, rivers, mountains, counties, parishes, cities, towns, post-offices, railway stations, villages, etc., together with complete reference maps of all countries with marginal index, the maps being printed from type-lettered plates, which produce the clearest typographical effect of any known engraved plates. There are also guide maps, showing the streets, transportation lines, & public buildings of the large cities in the U.S.

Canada is well represented by 9 large maps of British America, British Columbia, the Northwest Territories, Manitoba, the Maritime Provinces, Ontario, Quebec & the cities of Montreal & Toronto. That they are up-to-date is evidenced by the fact that last year's railway construction is given, including in British Columbia the Crow's Nest Pass line; in Manitoba, the C.P.R. Stonewall & Pipestone branch extensions; the N.P. Souris Valley branch, the Lake Manitoba Ry. & Canal Co.'s extension, & the Manitoba & Southeastern, while in Ontario the Pembroke Southern is given. The only suggestion we can offer for the improvement of the Canadian section of the work is, that in future editions two full pages, instead of one, be given to the Maritime Provinces, so as to show them on a larger scale.

Although this work has been in our office but a few days, we have already found it of great value, & have tested the accuracy of the maps to our entire satisfaction. It is simply indispensable for transportation offices & will be found valuable in every business office. Having once used it we would not be without it on any consideration. It is published by Rand, McNally & Co., of Chicago; price, \$7.50 in full canvas binding, & \$10 in half-leather.

The Railway Diary & Officials' Directory for 1899, published by McCorquodale & Co., London, Eng., price 1s., maintains the reputation of preceding editions, which is really all that need be said about it. In addition to the diary, there is a very complete directory of railway directors & officials in Great Britain, with copious details of traffic returns, accounts & dividends—the whole forming a convenient book of reference.

Railway Statistics for Year Ended June 30, 1898.

In this table the minus mark (—) before figures in the net earnings column shows that there was a deficit in the operations of the line to the extent of the figures given. Where (E) appears after the name of a railway it signifies that it is an electric line. The figures given for net earnings of the Intercolonial do not include the \$70,000 rent of the Montreal extension, so that the actual deficit is \$209,978.66. The Drummond County figures are for the 8 months ended Mar. 1, 1898. The earnings of the Fredericton & St. Mary's Ry. Bridge Co. consist of tolls on trains run by the Canada Eastern Ry. The St. Clair tunnel receipts consist of tolls on passenger cars, freight cars and new locomotives hauled. The figures are confined to lines in Canada and do not include any mileage operated in the U.S.

"Sirkarka Hookum."

Here is a good story from India. Scene, a railway station on the main line of the East Indian Railway. A train from Delhi stops; a tester is going round with his hammer striking the wheels. An officer of the Royal Engineers who has been watching him from a carriage window says:—

"Why do you beat the wheels like that?"

Answer—"Sirkarka hookum." ("It is the order of the authority.")

Officer—"But what is the use of so striking the wheels?"

Answer—"Khodar jani. Hum i-sa thees burrs-si Kurthani. Sirkarka hookum." ("God knows! I have been doing this for thirty years; it is the order of the authority.")

A Kipling Poem.

Several years ago F. D. Underwood, now General Manager of the Baltimore & Ohio R.R., & recently of the Minneapolis, St. Paul & Sault Ste. Marie Ry., named two stations in the upper peninsula of Michigan "Rudyard" & "Kipling," one being in an agricul-

tural country & the other in an iron ore district. On Mr. Kipling hearing of this he sent Mr. Underwood his photograph with the following lines on the back:

"RUDYARD" AND "KIPLING."

"Wise is the child who knows his sire,"

The ancient proverb ran,
But wiser far the man who knows
How, where and when his offspring grows,
For who the mischief would suppose
I've sons in Michigan?

Yet am I saved from midnight ills,

That warp the soul of man;
They do not make me walk the floor,
Nor hammer at the doctor's door;
They deal in wheat and iron ore,
My sons in Michigan.

Oh, tourist in the Pullman Car

(By Cook's or Raymond's plan),
Forgive a parent's partial view;
But, maybe, you have children too—
So let me introduce to you
My sons in Michigan.

RUDYARD KIPLING.

Chignecto Ship Canal.—N. A. Belcourt, M.P. for Ottawa, who has recently been in England, said in an interview on his return: "I was very sorry to find the bad impression created in London by that most unfortunate Canadian scheme, the notorious Chignecto Ship Canal. Everywhere about the city the unfortunate thing would be met. It was something like Banquo's ghost, it would not down. I know of nothing which has so much hurt Canadian interests in Britain as this project. I don't know what, if anything, the present Government can do to compensate the people who invested in the scheme, but if anything can be done consistent with our means, I would strongly support any measure having that object in view, because it is bound to hamper & hinder Canadian affairs in London."

The Bonaventure Station Restaurant. Montreal, has been taken over by the Canada Ry. News Co., which has for some years leased the restaurant privileges at the Toronto Union, & at a number of G.T.R. stations, & which can be depended on to give a first-class service. A number of alterations have been made, including the providing of an up-to-date bar, & a handsome news & cigar stand.

C.P.R. Earnings & Expenses.

The gross earnings, working expenses, net profit & increases or decreases over 1898, from Jan. 1, 1899, are as under:

	Earnings.	Expenses.	Net Profit.	Increase or decrease.
Jan. \$1,864,570.36	\$1,247,036.50	\$617,533.86	\$101,006.27+	
Feb. 1,753,392.82	1,153,631.34	599,701.48	176,034.12+	

\$4017,084.18 \$2,400,717.84 \$1,017,235.34 \$777,040.50
Mileage increased to 6952.
+ Increase. - Decrease.

Approximate earnings for Mar., \$2,098,000, against \$2,050,000 in Mar., 1898, an increase of \$48,000.

SUBSIDIARY LINES.

DULUTH, SOUTH SHORE & ATLANTIC.
Approximate earnings for Mar., \$160,007, compared with \$139,007 for corresponding period, increase \$24,810.

Net earnings for Jan., \$51,849, against \$35,060 for Jan., 1898.

MINERAL RANGE, HANCOCK & CALUMET.
Approximate earnings for Mar., \$26,720, compared with \$23,919 for corresponding period, increase \$2,801.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE.—Approximate earnings for Mar., \$336,523, compared with \$311,427 for corresponding period, increase \$25,096.

CANADIAN PACIFIC RY. STEEL TANK ELEVATOR, FORT WILLIAM, ONT.

2,200,000 acres, of which 370,130 had been sold to the end of 1898. The expenses per acre sold in 1898, exclusive of taxes, were only 10c. an acre, an almost nominal figure, much to the credit of the management. 1898 started with a debit to profit & loss account of \$5,535.65. This was wiped out & 1899 started with a credit balance of \$12,231.39.

The following directors were re-elected:—Sir Wm. Van Horne, President; E. B. Osler, Vice-President; R. B. Angus, J. Burns, W. Hendrie, W. B. Scarth, T. G. Shaughnessy, T. Skinner, Lord Strathcona & Mount Royal.

Grand Trunk Earnings, Expenses, &c.

The following statement of earnings supplied from the Montreal office, includes the G.T. of Canada, the Chicago & G.T., & the Detroit, Grand Haven & Milwaukee Rys.:

The Shedden Forwarding Co., Ltd., has been incorporated under the Dominion Companies Act with a capital of \$700,000, the incorporators being R. Mackay, J. Beattie, H. Paton, D. Macmaster, Montreal, & C. MacKenzie, Toronto.

Liability for Crossing Accident. In the Ontario Court of Appeal in the recent case of Henderson v. Canada Atlantic Ry. Co., it was held that as the defendant had failed to give the statutory warning near crossing, by which the plaintiff's horses, which had been driven close to the line, were frightened, the plaintiff should recover. The court held that damages for mental shock were recoverable.

Canadian Pacific Railway Land Sales.

	Acres.	Amount
	1899	1898

The officials report business as much more brisk with the opening of spring. The Moose Mountain district, which is being opened up by the extension of the Pipestone branch of the C.P.R., is one about which many inquiries are being made.

CANADA NORTHWEST LAND CO.

For the past 4 or 5 years the lands of this Co. have been managed by C.P.R. Land Commissioner Hamilton, the Winnipeg office of the Co. being in the C.P.R. Land Department. The report presented at the annual meeting in Toronto Mar. 29, shows the farm land sales for 1898 to have been 71,640.03 acres for \$383,051.88, against 38,994.07 acres in 1897 for \$210,549.99. The original purchase by the Co. from the C.P.R. comprised

RAILWAY FINANCE, MEETINGS, &c.

Brockville, Westport & Sault Ste. Marie.

Notice is given of application to the Dominion Parliament to incorporate a company to acquire this line from any purchaser & to operate it.

Calgary & Edmonton net earnings for Feb., \$9,201.58, against \$18,824.71 in Feb., '98.

Canada Atlantic.—A special general meeting of shareholders will be held in Ottawa, May 1, to consider & sanction a deed amalgamating this Co. with the Ottawa, Arnprior & Parry Sound Ry. Co. On May 22 application will be made to the Governor-General-in-Council to sanction an agreement entered into between the two companies for their amalgamation, when all persons may appear & be heard. Application will be made to the Dominion Parliament this session for an act to confirm the deed of amalgamation between the two companies & to incorporate them into one corporation under the name of the Canada Atlantic Ry., & to give certain powers as to the issue & redemption of bonds, &c.

Caraguet.—It is said 600 shares of this N. B. Ry. were recently sold for \$10.

Cobourg, Northumberland & Pacific.—Application will be made to the Dominion Parliament this session for an Act extending the time for the commencement & construction of the line to the 31st days of Dec., 1901 & 1903 respectively; to validate the issue of stock & bonds issued by the Co., & for other purposes.

Drummond County.—Conservative papers say the arrangement between the Dominion Government & this Co. will be brought up again at this session of Parliament, & that an effort will be made to secure parliamentary consent to the purchase of the line.

The Columbia & Western Ry. Co. is applying to the Dominion Parliament for authority to issue 1st mortgage bonds on its main line & branches, not exceeding \$35,000 a mile, & for other purposes.

Dominion Atlantic.—Receipts for Feb., \$35,348, against \$27,580 for Feb., 1898. Receipts Jan. 1 to Feb. 28, \$77,638 against \$60,715 for corresponding period.

Grand Trunk.—A Montreal despatch says: This Co. has taken an action in warranty for \$22,500 against J. J. C. Thompson, contractor, of Hamilton, Ont. The suit arises out of one

taken by G. P. Magann, contractor, of Toronto, against the Co. for the same amount. Magann alleged that he had some 75,000 ties around Wiarton, Ont., which were delivered to the company by Thompson in fulfilment of an arrangement with Magann. The Co. claims that it had a contract with Thompson, who was to supply the quantity of ties mentioned, & that he did so, & received payment for all but some 25,000. The action taken by the G.T.R. is to protect itself against loss in the litigation between the two.

J. Bicknell, Toronto, has issued a writ against the G.T.R. Co. on behalf of the Niagara Falls International Bridge Co. & the Niagara & Suspension Bridge Co., to compel the issuance of annual passes to the directors of both bridge companies over all railway lines using the bridges. The companies are respectively the Canadian & U.S. owners of the single arch steel bridge spanning the Niagara River below the falls. Under an agreement made in 1855, the G.T.R. leases all rights of way over the bridge for \$59,000 annually. In the agreement the issuance of annual passes to the directors is stipulated, & passes over the G.T.R. annually provided. The directors of the companies claim, however, that the stipulation covers all other railways using the bridges under sub-leases from the G.T., & by this action expect to compel the G.T. to procure passes from their sub-lessees for the plaintiff directors. There are 20 directors in the 2 companies, & the railways over which passes are asked are the Lehigh Valley, New York Central, Michigan Central, Rome & Watertown, & several minor lines. The suit has been set down for trial at Ottawa on June 19.

Great Northern.—Application will be made to the Dominion Parliament this session for an act amending the several acts incorporating this Co. extending the time for the completion of the railway, changing its name, ratifying agreements made for the purchase or lease of connecting lines, authorizing the issue of bonds, debenture stock & other securities required to carry out the conditions of such purchase for lease, authorizing the construction & working of branch lines & of grain elevators, warehouses, hotels & wharfs, & the building & operating of steamboats & steamships on navigable waters touched or reached by the railway & its connecting lines, & for other purposes.

The Great Northwest Central Ry. Co. will apply to Parliament this session for amendments to the act it secured last year. Among the amendments asked is to repeal the provision which declared all issues of new bonds under the act to be void, unless 10 miles of the westerly extension were completed by Dec. 31, 1898, also to extend from Aug. 1, 1899, to Aug. 1, 1900, the date for the completion of an extension of 20 miles.

A London, Eng., cable of April 1 says the affairs of the Co. are to be investigated by the Court of Chancery in England in a suit brought by Messrs. Codd & Armstrong, plaintiffs for the shareholders, v. Delap, Charlebois, G. M. Clarke et al, defendants. The claim involves the ownership of the shares, & covers the history of the road from 1883. Justice North will preside. Efforts to dismiss the action have entirely failed.

The Hudson's Bay & Yukon Railways & Navigation Co. will apply to Parliament this session for an act amending the act incorporating the Co. by authorizing it to construct wagon roads to be operated as stage & mail routes along, connecting with, or near to the proposed railway lines, to enter into agreements for amalgamating with or leasing from other companies, or for transportation purposes, to construct telegraph & telephone lines, to carry on the business of general traders including business connected with the fishing industry, to issue special bonds or debentures, to mortgage the revenues, to guarantee the revenues therefrom & otherwise to extend the powers of the Co., to extend the time for construction of the railways & works of the Co., & for other purposes.

Kingston & Pembroke.—Notice was recently given that this Co. would on Mar. 30 last, be prepared to pay the interest due on 1st preference bonds.

Kootenay Ry. & Navigation Co.—Application has been made to the London, Eng., Stock Exchange Committee to appoint a special settlement in and to grant a quotation to the £480,000 5% debenture stock.

Lehigh Valley.—It is stated in New York that J. Pierpont Morgan has now absolute control of the Lehigh Valley R. R. Company. Since Mar., 1897, he has held an option on a block of 150,000 shares of stock, belonging to the Packer estate. The right to purchase this stock has been exercised & \$3,000,000,

the cash covering the transaction, has been paid to the trustees of the estate in Philadelphia by Drexel & Co.

The Newfoundland Ry. contract came up in the British House of Commons recently, when Colonial Secretary Chamberlain, in reply to questions of regard to R. G. Reid's contract with Newfoundland, said that to have disallowed or delayed it would have been a tremendous interference upon the part of the Imperial Government with a self-governing colony, & either course would have brought the colony into bankruptcy, for which he would have been held responsible. Although he shared largely in the opinion in regard to the financial unsoundness of the contract, possibly he might be mistaken & the government of the colony might be right. Its government, however, had made a painful admission that it was incapable of efficiently carrying out large operations, which were handed over to a contractor, whom he believed to be competent & successful.

Qu'Appelle, Long Lake & Saskatchewan net earnings for Feb., \$290.53, against \$89.55 in Feb., '98.

Quebec Central. Traffic receipts Feb., \$26,983.40; increase over Feb., '98, \$4,823.28. Traffic receipts Jan. 1 to Feb. 28, \$54,113.01, increase over corresponding period \$7,649.07.

Temiscounta.—The Quebec Court of Appeal has confirmed the judgment of the Court of Review in the case of A. R. Macdonald, ex-District Superintendent of the I.C.R., vs. C. Riordan & the estates of E. D. Boswell & J. J. Macdonald, in which the plaintiff claimed \$193,000 as due him out of the construction of the Temiscouata Ry. Judge Ouimet, in the Superior Court, in the first instance gave a judgment favorable to the plaintiff, but this judgment was reversed by the Court of Review. The Superior Court held that Macdonald, having been one of the promoters of the railway, was entitled to enter into the covenants which he had. The judgment of the Court of Review reversing the judgment of the Superior Court was based on the illegality of the agreements in question. The Court held that the plaintiff, by entering into these agreements was guilty of an act which is declared by Parliament to be a misdemeanor, & that these agreements are in consequence unenforceable. This latter judgment has now been confirmed. Counsel for Macdonald applied for leave to appeal to the Imperial Privy Council, which was granted.

Wabash.—An influential director of this Co. says that the floating debt still stands at

the amount printed in the last annual report—\$400,000. The failure to reduce this obligation is on account of the heavy expenditures that have been made by the management in improvements on the property, including large additions to the equipment. The amount paid to other companies for hire of cars is being considerably reduced, but the item will not be completely extinguished, as the Co. always has to pay sums of money of varying amounts to the palace car companies & for the use of refrigerator cars. Nearly \$1,000,000 has been disbursed since June 30, 1898, for these improvements, which include 1,500 coal cars & 1,500 box cars. The large increase in operating expenses is on account of the fact that the Co. has over 250 miles of new road to handle, the section from Buffalo to Detroit. In addition to the equipment mentioned, a number of new engines have been purchased. Operating expenses have been swelled by the large aggregate of first payments for this equipment, but hereafter disbursements will be made monthly. Since 1889 the Wabash has expended for equipment, including new engines & rolling stock, an aggregate sum of \$6,418,000, which has been charged to operating expenses.

C.P.R. ANNUAL MEETING.

At the annual meeting in Montreal, April 5, as usual the attendance of shareholders was small, & the greatest possible unanimity prevailed, the irrefragable J. Morrison being the only one who caused the slightest departure from the usual routine. When he looked round the board room at noon & noted the paucity which marked the attendance, he asked if such indifference was not criminal. One of the directors having remarked that the chief thing to be considered was the dividend, Mr. Morrison replied that dividends were only one of the things which should be regarded—the good management was to be considered, primarily, & that it seemed a waste of time to prepare such an elaborate report as that which had been submitted to the shareholders if there was no one to criticize it. "Well," said Mr. Matthews, laughingly, "we depend on you, you know, Mr. Morrison." "I will do my best," was the reply.

President Sir Wm. Van Horne, who occupied the chair, in moving the adoption of the report for 1898, which was published in full in our last issue, said:—"The annual report deals so fully with the year's operations of the Co. that it seems hardly necessary to

supplement it with any remarks on this occasion beyond a reference to the measures which will be submitted for your approval relating to the Minneapolis, St. Paul & Sault Ste. Marie Ry., the so-called Soo Line, the most important of your subsidiary lines. These measures were not fully stated in the report, because the details were not definitely settled at the time it was issued. The Soo Co. can hardly be said to be in default to you in its interest obligations. The deficits which your Co. has been called upon to make good have been entirely due to expenditures for equipment, terminal facilities & general improvements such as are incident to a new & growing property; indeed, the expenditures for equipment & terminal facilities were almost entirely made at the instance of your Co., with the object of improving the joint earnings. The total advances to the Soo by your Co. amount to \$1,431,663, while the expenditures for equipment, terminal facilities & general improvements during the years in which these advances were made, foot up \$1,748,041; but as our accounts stand, the advances of interest charged against our income account appear to have been \$963,846, & for other purposes, as shown in the balance sheet, \$467,817. The Soo Co. has coming due in the immediate future certain interest bearing obligations which were outstanding at the time your Co. became interested in that property, & it is necessary to provide for these, & at the same time provision should be made for all the floating obligations of that Co., & also for additional equipment & facilities required at once as well as for some years to come. It is proposed that the Soo Co. shall issue second mortgage bonds to the extent of \$5,000,000, the interest on the bonds to be guaranteed by your Co. It is only intended that \$3,500,000 of these bonds shall be guaranteed & disposed of in the immediate future; & the remainder are to be held subject to the control of your Co. for the possible later requirements of the Soo Co. This arrangement will enable the Soo Co. to devote its net earnings to the payment of its interest charges, & at the same time to repay in annual instalments the interest which has been advanced by your Co. Its improved earnings justify the belief of your directors that it will not only be able to do this, but to make a return on its capital stock, of which your Co. holds more than one-half. The arrangement is fully set out in the resolution which will be submitted for your approval, & in the agreement with the Soo Co., which will be laid on the table."

Mr. Morrison said he was not sure the Soo line would pay back to the C.P.R. all the moneys which the latter had advanced, but was assured by the President that the arrangements made for the issue of debentures to the amount of \$5,000,000, was, among other things, for the purpose of repaying the C.P.R. Suppose, however, that the Soo Co., as a matter of fact, did not pay the C.P.R. back, would the Soo line revert to the former? asked Mr. Morrison. To this Sir William replied that the Soo line was practically a part of the C.P.R. at present, both as to its stock & its management.

Mr. Morrison wanted to know how the Duluth, South Shore & Atlantic Ry. was doing, & the President replied that they were confident that in the near future the line would be self sustaining. This line was also an integral feature of the C.P.R. System.

Then Mr. Morrison started in to criticize the book-keeping of the Co. He said a conglomerate mass of figures had been presented, which was mystifying to a degree. He did not charge that anything was wrong, but he wanted simplicity; he did not want that figures should be thrust backwards & forwards so that their right relation could not be easily ascertained. It would be better for the President himself, better for the officials, & better for all concerned if everything were plainly stated, so that all could understand Mr. Morrison went into particulars to show in what respect he considered the figures misleading, though not intentionally so.

Sir William rather thought that the bookkeeping was tolerably clear, & they were rather chary of changing their system, though doubtless Mr. Morrison was competent to give them some enlightenment on the point. He thought, however, that anybody

interested in the affairs of the Co. could understand what the figures meant.

Mr. Morrison said that doubtless it was better to continue an old error than to start a new one, but he reminded the President that for the want of a nail the shoe was lost, for the want of a shoe the horse was lost, & for the want of a horse the rider was lost, & he expressed the conviction that with respect to a certain item of \$1,400 which had not been accounted for, that Sir William never put his hand into his own pocket & produced it. Mr. Morrison stepped up to the table, report in hand, &, approaching the President in familiar conversational style, asked where was this million, or what had been done with that surplus—to the huge amusement of the meeting, including the President himself.

The report was then unanimously adopted.

AYLMER BRANCH.—The President submitted & explained an agreement between the Co. & the Hull Electric Co., providing for the sale of the Aylmer Branch to the latter Co., & for the interchange of traffic between

the two lines, & it was resolved that the agreement dated Jan. 9, 1899, between the C.P.R. Co. & the Hull Electric Co., providing for the sale to the latter Co. of the Aylmer Branch of the C.P.R., extending from Hull to Aylmer, for \$100,000, & providing also for the permanent interchange of traffic between the two companies, be & the same is hereby approved, ratified & confirmed.

STONEWALL & PIPESTONE BRANCHES.—It was resolved that, whereas the Co. has applied to the Dominion Parliament at its present session for an act authorizing the Co., amongst other things, to construct & operate a railway from or near the north terminus of its Stonewall Branch to Foxton, Man., thence northerly & north-easterly to the west shore of Lake Winnipeg between Gimli & Arnes; & also a railway from a point on the one last named, in a direction generally north-west to the east shore of Lake Manitoba between Marsh Point & the north boundary of township 25; & also a railway from a point at or near Reston, on the Co.'s Pipestone Branch, thence

pendent not exceeding in the aggregate \$20,000 a mile thereof, & at the same rate for any portion of a mile, bearing interest at the rate of 4% per annum, payable at the times & places & in the same manner as on the stock heretofore issued, provided that if the Co. issue bonds creating a lien on the said railways or any portion or portions thereof, then the amount of consolidated debenture stock which may be issued as aforesaid in respect thereof shall be diminished to the extent of the amount of such bonds.

COLUMBIA & WESTERN RY.—A lease in perpetuity of the C. & W. R. to the C.P.R. Co. of its property & franchises was submitted & explained, & it was resolved that the lease submitted to this meeting dated July 12, 1898, whereby the C. & W. R. Co. demises in perpetuity to this Co. with the option of purchase, the lessor's railway from Rossland to Midway, B.C., by the route therein described, & the branches therefrom whether constructed or to be constructed, be & the same is hereby approved, ratified & confirmed; the yearly rental being an amount equal to the interest on the capital of such bonds as the lessor may from time to time issue, such capital not at any time to exceed the maximum limit of \$35,000 for each mile of the railway & branches which shall then have been completed, or be under contract to be completed, & such interest, not exceeding 5% per annum payable 1/2-yearly, to be guaranteed by his Co., by way of rental.

MINNEAPOLIS, ST. PAUL & SAULT STE. MARIE RY.—The following resolution relating to an agreement with the M., S. P. & S. S. M. R. Co., providing for extended traffic arrangements & for the guarantee by the C.P.R. Co. of the interest on an issue by that Co. of 2nd mortgage bonds, was submitted & the agreement having been

C. P. R. STATION AND HOTEL, PLACE VIGER, MONTREAL.

in a general westerly direction to the Moose Mountain District, thence westerly & north-westerly to or near Regina, with power to issue in aid of the construction & equipment of the said railways or any one or more of them, or any part thereof, bonds which will be a first lien & charge thereon, with the same effect as if the same were being built by the Co. as a branch of its railway within the meaning of section one of Chap. 51 of the statutes of 1888, or in lieu of such bonds consolidated debenture stock conferring on its holders equal rights in all respects & a rank pari passu with holders of such consolidated debenture stock as the Co. has been heretofore authorized to issue; therefore the shareholders do hereby resolve, that if the said Parliament do pass an act empowering the Co. to issue consolidated debenture stock for the purpose of aiding the construction or the construction & equipment of the said railways, or any one or more of them, or any part or parts thereof, then for that purpose the Directors may issue consolidated debenture stock of the Co. to such amounts as they deem ex-

plained & laid on the table, the resolution was adopted, viz.: Whereas, this Co.'s Board of Directors consider it advantageous to enter into an agreement with the M., S. P. & S. S. M. R. Co., hereinafter called the Soo Co., for a further working arrangement on the terms & conditions set out in a draft thereof now submitted to this meeting, & whereas the agreement provides, amongst other things, for interchange of traffic between the said companies & the division of earnings & other matters relating to such traffic, as therein more particularly set forth, & that the Soo Co. shall make an issue of its corporate bonds to be denominated 2nd 4% fifty year gold bonds to an aggregate of \$5,000,000, or its equivalent in sterling money, & shall secure the payment of the same by a second mortgage to the Central Trust Co. of New York as trustees of all its railways & other properties therein described, & that this Co. shall guarantee the payment of the interest on the bonds at the rate of 4% per annum, payable 1/2-yearly; all of the said bonds to be executed by the Soo Co. & delivered to the trustees, after which the pro-

thereof, viz., \$3,500,000, or its equivalent in sterling money, is to be in the first instance certified by the trustees & delivered back to the Soo Co. for issue, the proceeds thereof to be applied approximately as follows, that is to say: For terminal yards & facilities at Minneapolis, increased accommodation at divisional & intermediate points, permanent bridges & general additions & improvements, \$950,000.00; for redemption of interest bearing securities coming due, & for payments on account of rolling stock equipment already purchased, & for additional equipment estimated to be required, \$1,675,000.00; for payment of floating debt incurred for additions & improvements to the property, including amount advanced by the C.P.R. Co. for that purpose, but not including amount advanced by that Co. on account of interest on bonds which will be distributed over a term of years, \$875,000.00; total, \$3,500,000.00. The remainder of the said bonds, namely, \$1,500,000, or its equivalent in sterling money, to be afterwards certified by the trustees from time to time in such amounts as the Soo Co., by resolution of its Board of Directors may direct, the written concurrence & approval of this Co. having been first obtained; provided that the remainder of the said bonds or any part thereof shall not be disposed of, or the proceeds thereof applied, except as this Co. shall from time to time first authorize & approve of in writing; now therefore it is resolved that the shareholders do hereby approve of the transaction embodied in the said agreement, & do authorize the Board of Directors to cause the said agreement to be executed on behalf of this Co. under its corporate seal & the signa-

tures of such of its officials as they may appoint for that purpose, & from time to time to do whatever may be necessary in order to carry out & give effect to the terms thereof.

CAPITAL EXPENDITURE.—The President submitted & explained estimates approved by the directors of proposed capital expenditure to be incurred during the current year on construction & improvement account; & it was resolved that the shareholders hereby authorize expenditures on capital account during the current year, as recommended by the directors, as follows:

Improvement permanent way.....	\$1,150,979
Additional station yard & terminal facilities.....	788,187
Completion of air brake & automatic coupler equipment.....	305,010
Branch lines to mines in connection with Crow's Nest Line (as required).....	300,000
Rolling stock (as required).....	1,000,000
	\$3,544,176

SOLICITING ON TRAINS.—The following by-law, passed by the Board of Directors, was submitted & approved; by-law 76, "The C.P.R. Co. hereby enacts as follows: Any person who does any of the following acts without the written consent of the Co. in or upon any passenger car of the Co. or in any station or premises occupied by the Co. shall be & is hereby subjected to a penalty not exceeding \$40, that is to say: Advertising, soliciting custom or canvassing for any hotel, lodging house, restaurant, or other like places; or soliciting the transportation of passengers or baggage or selling or exhibiting for sale any goods, wares or merchandise; & if any person while on any passenger car continue to do any of the said acts after being forbid-

den by the conductor, then he may be put off the train in the same way as a passenger who refuses to pay his fare may be."

The following directors were re-elected by unanimous vote: Lord Strathcona & Mount Royal, Sir Wm. Van Horne, R. B. Angus, T. G. Shaughnessy, E. B. Osler, Sir Sandford Fleming, Sir Geo. Kirkpatrick, Gen. S. Thomas, G. R. Harris, W. D. Matthews, Hon. D. MacInnes, T. Skinner, J. W. MacKay. At a subsequent meeting of the Board, Sir Wm. Van Horne was re-elected President & T. G. Shaughnessy, Vice-President, & the following were appointed the executive committee: Sir Wm. Van Horne, T. G. Shaughnessy, Lord Strathcona & Mount Royal, R. B. Angus.

The Central Vermont Sale.

The sale of this line at St. Alban's, Vt., Mar. 21, placed the principal railway of the State of Vermont definitely & decisively under the control of the Grand Trunk. W. Wainwright, General Assistant, & R. S. Logan, Secretary to the General Manager of the G. T. R., were present & witnessed the purchase by E. H. Baker, of Boston, on behalf of the purchasing committee, in the interest of the bondholders, for the purpose of carrying out the reorganization agreement of Nov. 29 last. Mr. Baker's bid was the only one made. It was \$7,000,000, the upset price named by Judge N. M. Wheeler of the U. S. court in the decree ordering the sale of the property.

After the sale, the President of the road, Governor E. C. Smith, did not care to speak

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd-numbered sections along the Main Line and Branches, and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$3 to \$4 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$3 per acre.

Lands in Northern Alberta and the Lake Dauphin District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below; the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.
160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.
160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.
160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.
160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.
160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

Railway Station Names, Street Car Route Signs, Express, Telegraph and Telephone Office Signs, Semaphore Arms, Switch Targets and Advertising Signs of every description of size and color made to order.

Railway, Steamship and Ferry Signs

For doors, etc., 23 x 3½ inches, blue letters and border on white ground, carried in stock with following lettering.

Waiting Room	Ladies' Toilet	Private Office	Dining Room
General Waiting Room	Men's Toilet	Freight Office	Lunch Room
Ladies' Waiting Room	Baggage Room	Ticket Office	Smoking Room
Men's Waiting Room	Agent's Office	Telegraph Office	No Admittance

The following are carried in stock, size 10 x 2½:—

Men Women Exit Fire Escape

Railway numbers for bridges, mile posts, signal houses, etc.; single figures on plates 8½ in. high.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

in detail of the road's future, but expressed the opinion that the road was now placed on a basis which would be to the benefit of all interests concerned. He said General Manager Hays, of the G. T. R., was a brilliant railroad man, & that Vermont interests would be well looked after under the reorganized management.

Attorney C. M. Wilds, who has practically had charge of the reorganization, was asked what effect a protest made by the New York Central interests against the sale would have upon the situation, & replied as follows: "Mr. Young, who presented the objection to the sale, represents bondholders holding about \$316,000 of bonds made by the Ogdensburg & Lake Champlain R.R. Co. & guaranteed by the Central Vermont R.R. Co., which are in default. These bondholders have contested their rights in court & their principal grounds of objection, as well as the protest that the New London Northern lease is not subject to the mortgage, & that the second mortgage is not valid, have already been passed upon in court adversely to the contentions of Mr. Young's clients. The other grounds of objection were to the sale of various parcels of land acquired since the mortgages were executed, & which were

The close relations which have hitherto existed for many years between the C. V. & the G. T. will be perpetuated. The interchange of traffic between the two roads will be provided for by traffic agreement. What change there will be in the management is not at present disclosed. All conflict between the security holders has been adjusted & the litigation over the C.V.R. is practically concluded."

In reply to a question regarding the policy of the new management regarding improvements & the quality of service to be expected by the people of Vermont, Mr. Wilds said:—"Some weeks since the court authorized the receivers to purchase 5,000 tons of steel rails, which when laid will complete the relaying of the main line with 75 lbs. rails. Most of the wooden bridges have been replaced with iron structures, & it is expected that the remainder will soon give place to new bridges. The

of their bonds in the stock of the new company for defaulted interest. These old bonds, by the way, are now selling in Boston at 94. The second mortgage bonds were generally held as collateral security, & their holders will receive new bonds for the face of their loans. The sale of a railway at auction is unusual in Vermont, but the mortgages having provided for a sale in the event of default, Judge Wheeler thought that the foreclosure proceedings should be completed by such a sale of the property. It was sold as a single parcel, & the conveyance by the master will be direct to the new company.

Mr. Baker, of the purchasing committee, made a number of interesting statements with reference to the bondholders. He said the bondholders were over 1,300 in number, & it seemed that nearly all of them had called upon him at his office. The bondholders were widely scattered, being located in various parts of the country. All of the bonds except about \$40,000 were represented in the purchase of the C.V.R.

At a session of the U.S. Circuit Court at Brattleboro', Vt., Mar. 28, a hearing was had in the Central Vermont receivership case on petition of the American Loan & Trust Company, for an order confirming the sale of the

TRACK ELEVATION AND FLOOR PLAN, C. P. R. STATION, NEW WESTMINSTER, B.C.

claimed not to be covered by the mortgage. These parcels of real estate are of small value. It is expected that the confirmation of the sale will promptly follow, & that upon the return about the middle of April of Mr. Hays, who is now abroad, & who is one of the corporators of the Central Vermont Ry. Co., the new company, chartered at the last session of the Vermont Legislature, will be organized & that the receivers will turn over the property to the new corporation about May 1. The G. T. R. Co. is to guarantee the payment of interest on the new bonds, which will be issued to the amount of \$12,000,000, & it will own something more than two-thirds of the entire capital stock of the new company, which will be \$3,000,000. It will, therefore, be able to name the directors of the new company, although three of the board are to be chosen on the nomination of the bondholders.

somewhat radical improvements in management inaugurated on the G.T.R. since Mr. Hays took the management warrants the prediction that the future management of the C. V. under the controlling influence of the G.T. will not be lacking as to efficiency & satisfaction to the public. It will be operated under its new charter as a Vermont institution."

Turning to the subject of the action of the bondholders Mr. Wilds said that less than 1/3 of the entire issue of bonds of both classes had failed to come into the reorganization, the entire balance of the bonds being represented by Mr. Baker, the successful bidder at the sale. The first mortgage bondholders will receive new 4% bonds in exchange for their holdings of the old bonds & interest at the rate of 4% per annum since Feb. 1, 1898. This interest has already been advanced by the G.T.R. They also receive 8% on the face

road by the special master, whose report has been filed, & after such hearing the prayer of the petition was granted & an order entered accepting & confirming the master's report & confirming the sale to E. H. Baker & H. B. Day.

The C.V.'s main line runs from Windsor, Vermont, to Rouse's Point, N.Y., 158 miles. There are 3 branches, between Montpelier, Jct., & Montpelier, Vermont; between Essex Jct. & Burlington, Vermont; & between Swanton Jct. & Province Line, Que., making a total mileage of 178. The Montpelier & White River R.R., from Montpelier to Williamstown, Vt., is 13 miles, & there are 318 miles of leased lines, making the total length of lines operated 510. The leased lines are—Burlington & La Moille Valley, 26 miles; Missiquoi Valley, 28; Montpelier & Vermont Jct. 23; Stanstead, Shefford & Chambly, 43;

Montpelier & White River Line. 40; New London, Northern 121; Brattleboro' & Whitehall, 35. In passing from Windsor to Brattleboro' the C.V.R. uses the tracks of the Sullivan County R.R. from Windsor to Bellows Falls, & of the Vermont Valley R.R. from Bellows Falls to Brattleboro'. The C.V. Co. was formed by a consolidation in 1891 of the Central Vermont, the Vermont & Canada, & the Montpelier & White River R.R. Companies. In Mar., 1896, E. C. Smith & C. M. Hays were appointed receivers in a suit in equity brought by the G.T.R. Co. In April, 1896, default was made on interest due under the lease of the Ogdensburg & Lake Champlain R.R., & shortly afterwards default was made in rental due to the Rutland R.R. Co. The latter road was surrendered to its owners in May, 1896. The Ogdensburg & Lake Champlain R.R. was turned over to a separate receiver in Mar., 1897. Suits in foreclosure proceedings were brought under both of the consolidated Vermont R.R. Companies' mortgages. The C.V.R.'s net earnings for the year ended June 30, 1897, were \$705,139.04.

Canadian Pacific Betterments, Etc.

St. John, N.B., Terminals. In reference to the rumor quoted in our last issue to the effect that the Co. had in contemplation the construction of a large extension or addition to the terminal facilities at West St. John, at a cost of about \$150,000, we were officially informed on Mar. 11 that nothing had been definitely decided, though steps had been taken to decide upon the best location for a deep water coal wharf should one be required.

Eastern Lines.—Among the principal works to be done this year on the lines east of Lake Superior are the erection of a roundhouse & turn table at McAdam, N.B., & of a passenger station at Joliette, P.Q., the completion of the double track between Western Jct. & St. Anne's, Que., the improvement of the coal & engine handling facilities at Havelock & Smith's Falls, Ont., the providing of additional siding room at Havelock & Toronto Jct., the completion of the bridge over the Grand River at Galt, Ont., the reduction of the grade in its vicinity, the erection of a passenger station at Woodstock, Ont., the putting in of compressed air plants at the principal terminal & divisional points, & the providing of additional crossings at a number of points. In addition to the foregoing a large number of bridges will be replaced with permanent work, either by filling or with masonry & iron, & there will be considerable ballasting done, principally on the St. John, N.B., section, between London & Windsor,

Ont., & on the Lake Superior section. Improvements contemplated to the Montreal terminals include a freight delivery yard at Mile End, the re-arrangement & enlargement of Outremont, Hochelaga & Place Viger yards, & additional freight shed room at Place Viger station.

Fort William-Winnipeg Double Track.—As stated in our last issue an engineer will go over the line between Fort William & Winnipeg this year & prepare an estimate of the cost of double tracking throughout. When the double tracking will be done will depend altogether on the traffic. If there should be a rapid increase in the acreage under cultivation, by reason of a large increase in immigration which would also mean an increase in other traffic besides wheat, a double track will become a necessity. (Mar. pg. 71.)

Rat Portage.—It was stated in our Feb. issue that provided satisfactory arrangements could be made with the Town Council, it was probable a handsome station would be built, & that a considerable sum would be spent in remodelling the divisional yard. It is understood that the arrangements have been concluded & that the work will go on.

Winnipeg Station.—Local papers have had a good many items recently alleging that the Co. has been purchasing land for the erection of a larger station & possibly on a new site altogether. So far no decision has been come to & the rumors are mere talk.

Crow's Nest Pass Railway.—Manager Whyte, of the Western Lines, went over this line on a recent trip of inspection which extended to the Pacific Coast. On arriving at Vancouver he said:—"I came west through the Crow's Nest Pass. Trade is busy through there. Parts of the lines in that section are not completed, & I was looking specially over those. There is more traffic almost than the road can accommodate, & the arrangements that have been made for shipping goods through to Nelson work well. All stuff from the east bound for Kootenay points is now sent in by way of the Crow's Nest line." Questioned as to when the line would be completed from Kootenay Landing, its present terminus, to Nelson, he replied that he preferred to say nothing. The general idea is that this work will not be done this year.

At the recent annual meeting of the Co. the expenditure of \$300,000 was authorized to be made as required for branch lines to mines in connection with the Crow's Nest Pass line. Nothing definite appears to have been decided yet in this connection, but the building of a branch to Fort Steele has been considered. There is a good deal of speculation in East Kootenay as to the route which

will be chosen for this branch, Cranbrook, Fort Steele Jct. & Wardner, all being mentioned as possible starting points. The people at Fort Steele seem to feel satisfied it will go their way & on to Windermere, eventually joining the main line at Golden, & that a branch will be run to the North Star mine.

Columbia & Kootenay Branch.—A considerable sum will be spent this year in filling trestles & improving the alignment.

Columbia & Western.—In the purchase of this line from F. A. Heinze, the C.P.R. Co. acquired the narrow gauge line between Trail & Rossland, the physical characteristics of which make it of more than ordinary interest. It is 13.8 miles in length, & rises 2,360 feet from Trail to the Le Roi mine, the average rise per mile being 171 feet. The grade on tangents is 4% curves, being compensated .04 per degree, making it one of the greatest inclines in the world. There are 38 curves 25°, & 6 of these contain 180 degrees of curvature each. There are 2 switch-backs, so that the line is a succession of loops & switch-backs, which is made doubly apparent on account of the fact that Rossland & Trail are only 4½ miles apart as the crow flies. The track was laid with 28 lbs. steel, on 6 ft. ties, so that the Co. is compelled to build practically a new line between these points, in the work of standardizing this line, which they started in August last, completing the grading & bridging last fall, but on account of the early winter, it was impossible to lay the track, which of necessity had to lay over until this spring, when everything will be in readiness, so that the new track can be substituted for the old & traffic not interfered with, which will be done by laying a narrow gauge rail between the standard rails, & thus allow both standard & narrow gauge trains to operate on the new track. By this method the change in the gauge will be made without any interference with traffic.

The Co. is removing all the 25° curves, taking out the present tiger switch-back, & providing for a single loop at the upper switch, & a complete spiral at the lower switch, as well as filling all the bridges except 6, which have been strengthened to carry safely the heavy engines, which are to handle the Rossland traffic, when this work is complete. In addition to standardizing this line the Co. is making many marked improvements & extensions, the most prominent of which are, 1st, the extension to the Center Star & War Eagle mines. This branch is ½ a mile in length, crossing the Center Star Gulch with a bridge 600 ft. long and 130 ft. high. In the construction of this line valuable ore deposits were discovered on the Idaho & Center Star mining claims.

AMHERST, NOVA SCOTIA.

2nd, the new Rossland terminal & station buildings, which will be located on the Nickel Plate Flat, half-way between the centre of the City of Rossland & the Red Mountain Ry. station. The buildings will consist of a passenger station, a freight station & a 2-stall engine-house. The entire work will be finished about June 1.

A correspondent of the News Advertiser, Vancouver, writing from Midway, B.C., Mar. 14, respecting the line from Robson to Midway, which the C.P.R. Co. is building under the C. & W. R. Co.'s charter, says: "On parts of the line just above Midway men are working night & day at grading, so it is evident that it is intended to complete the grade between Boundary Falls & Midway (where occurs the heaviest work west of the summit of the divide between the North Fork of Kettle River & Boundary Creek) as expeditiously as is practicable. Yesterday the C.P.R. survey party, which, under the direction of G. G. Odell, has for several months past been engaged in surveying the projected branch line from Midway up the main Kettle River & thence up the West Fork to Beaver Flat, returned to Midway. It is understood the men are required for work on the branch lines from several of the Boundary Creek mining camps to the main line at the summit."

On returning from a recent inspection trip over the Western lines Manager Whyte said that although he did not go over the Robson-Midway line, he had a long talk with the engineer in charge & learned that work is being carried on very satisfactorily. Some delay was caused in the work on the big tunnel west of Robson by the severity of the weather, the water used to drive the compressor plant which works the steam drills being frozen. Of the 30 drills on the ground only 2 could be operated. This, however, will not delay the completion of the line as a switchback is being constructed & will be used until the tunnel is completed.

In a recent interview in Winnipeg, after returning from a trip to British Columbia Traffic Manager Kerr, of the C.P.R. Western Lines, is reported to have said: "The railway is now being built through the Boundary Creek district from the Columbia River at Robson in a southwesterly direction to Cascade, west to Grand Forks (now called Columbia) thence taking a sharp curve up north, then down again to Midway, west to Rock Creek & from there northwest to Penticton & up along the Okanagan Lake to Vernon where it joins the branch from Sicamous Jct., thus forming a complete circle around West Kootenay."

We are inclined to think that Mr. Kerr has been misreported or else that he intended to refer to what may be done, rather than to what is under way. At present the line from Robson to Midway is all that is under construction, though possibly the line may be extended to Rock Creek this season. Nothing has been done about the extension to Penticton. It was expected it would have been built by Mackenzie, Mann & Co., under the Vancouver, Victoria & Eastern charter, but their contract with the B.C. Government was cancelled at the recent session of the B.C. Legislature & although the B.C. Government took power to enter into another contract no intimation has been given that such action has been taken. As to rail connection between Penticton & Vernon, by building along the east side of Okanagan Lake, we do not think anything is likely to be done for some time at least, certainly not in the near future.

Branch to Republic.—Rumors have been afloat to the effect that the C.P.R. Co. will build a branch from the Robson-Midway line to cross the International Boundary, & run down the San Poil Valley to the new mining camp at Republic, Wash. No official confirmation of the rumors is obtainable.

Smelting Works.—It is announced that the C.P.R. Co. will commence this spring the

construction of a large reduction plant in the Boundary Creek region of B.C. This scheme is in the line of the general policy of the Co., to give to the miners in this section of B.C. the benefit of the lowest possible smelting charges on all classes of ores, thus placing them, as regards the cost of reduction, upon the same footing with the miners of the older camps in the U.S. At Trail this has been already accomplished by the establishment of charges of \$7 a ton (and, in some cases, even less) for the treatment of refractory ores requiring roasting, & containing a high percentage of silica & alumina, while running very low in copper. It may be doubted whether more favorable rates are offered to miners of such ores even in Colorado or Montana.

Arrowhead to Kootenay Lake.—A survey is being made for this proposed extension, but nothing has been decided in regard to construction.

Nakusp & Slocan Branch.—Some B.C. papers have stated that a large sum is to be spent on this line this year. We are informed that nothing has been included in the estimates for this, & only ordinary maintenance work will be done this year.

New Westminster.—The illustrations on pg. 111 show the track elevation & ground floor plan of the stone & brick station which is to be built on the site of the one destroyed by fire last year. It will be 90 x 40 ft., 2 stories high, & with stone filling on the river side will cost about \$40,000. The architect is E. Maxwell, Montreal. Work has been started on it. The 25 ft. railway reserve is to be filled in & protected with cribbing on the river side. The present track will be moved over several feet towards the water front, & a siding will be laid beyond for the accommodation of the wharves, etc.

Vancouver Terminals.—Tenders were recently asked for 40,000 cubic yards of rock filling required at the Vancouver wharves. When at Vancouver recently Manager Whyte said that the work of filling in all the docks & wharfage extensions laid out in detail & presented to the City Council a year ago, would be gone right on with & he expected to see a large increase of trade in consequence.

It is said the plans for the extension of the Hotel Vancouver are elaborate, & embrace a 7 story addition towards Howe St. which will make the hotel the largest on the whole Pacific Coast.

The Minneapolis, St. Paul, & Sault Ste. Marie will probably build new freight terminals at Minneapolis in the near future. The plans have not as yet been fully perfected.

The Mineral Range built 9 miles of road last year from Boston, Mich., southeast & southwest to Arcadian Mine, & from Grosse Point, on Portage Lake, northwest to Dollar Bay, leaving a gap of 4 miles between the 2 lines to be completed this year. Work is now in progress on this gap, & it will be completed by July 1.

Grand Trunk Betterments, Etc.

The Work of 1898.—General Superintendent McGuigan states that 255 miles of steel rails, of the standard 80 lbs. weight, were laid during 1898. Over 400 miles of the road were greatly strengthened & improved. Sixty-six miles of new track, & 20 miles of sidings intended for the use of manufacturing establishments, were laid. 85 light iron, steel & wooden bridges were replaced by steel structures of the best & most modern description, their total length being 21,236 ft., or 116 ft. in excess of 4 miles. The number of running feet embraced in this achievement includes the 25 spans, or 6,592 ft. of the Victoria Jubilee Bridge, but does not include the splen-

did new structure spanning the Niagara gorge. Other bridges were likewise looked after, & the G.T. record for 1898 also shows that 35 wooden pile bridges & trestles, possessing a total length of 2,361 ft., as well as 10 overhead wooden waggon bridges, the whole being 1,108 ft. long, were completely rebuilt, most of these being on the branch lines.

The G.T. laid during 1898 1,759,833 cross ties, an increase over 1897 of 500,000. 312 miles of ballasting has also to be placed to the credit of the road for this period, 262 having been done with gravel, & the remaining 50 with cinders, the latter being considered excellent material where the line passes over wet land, or where drainage is difficult. 61 wooden, stone & pipe culverts were renewed in stone during the year, while fine new buildings of all kinds went up all along the lines. Sixteen stations, 8 freight sheds, 2 coal chutes & 12 motive power buildings were erected, while 60 stations, 9 freight sheds & 9 motive power structures were remodelled, painted & repaired during the same time. Eleven of the 16 new stations were built in Ontario & Quebec, 1 in Maine, & 5 in Michigan.

Victoria Jubilee Bridge. It is frequently asked if provision has been made for an electric car service across this bridge, connecting with the south shore, & opening up all the districts & municipalities in this region to prompt communication with the metropolis. The interest in this question is not confined to the proprietors, who naturally look for an enhancement of values. It extends to several corporations & syndicates, who see in such opening up great possibilities for future expansion & profit. Charters have been obtained for operating electric power along the south shore as well as throughout the Eastern townships. The question hitherto has been the connection across the river. It may be said that the G.T.R. management, while alive to the question, has not made any provision for an electric service at present. This is a matter which will, in the near future, be the subject of negotiation with all the parties interested, & doubtless electric cars will run across the reconstructed bridge with advantage to the districts of country to be served, as well as profit to those who are willing to invest their money in the project of placing a gridiron across a stretch of country which has hitherto been cut off from vital connection with the city. The new bridge, however, will be opened without such service, & it may take some time before arrangements can be made for its introduction. Those who have noticed the laying of wires below the rails & who believed that electricity was virtually an accomplished fact are a little sanguine—signal wires are being laid to make connection with either shore. Electricity will doubtless come in time, as an influential official recently remarked; but it cannot be immediately arranged for.—Witness.

Montreal Offices.—The directors have approved of the plan of the new general offices as submitted by the architect, who has received instructions to proceed at once with the letting of contracts, & it is expected that the foundation will be commenced early in May. In so far as possible local firms will be preferred, but it is claimed there are several features in connection with the building which can only be supplied in the U.S. Nevertheless, the large features of the work will be offered to local contract & the disbursement of over \$500,000 will be an encouraging feature at the beginning of a new season. When once the work is commenced, it will be proceeded with with the utmost energy, but it is not expected the building will be finished before Sept., 1900.

Western Division. For some time the management has contemplated laying a double track between Port Huron & Chicago, & there is a possibility that the work may be

commenced this season. Engineers have been employed for a considerable period surveying the line & estimating the cost of the additional track, & are still working at the surveys & estimates.

It is said a branch will be built from Port Huron, Mich., south to the Jenks Ship Building Co.'s yards if sufficient business is guaranteed.

Surveys are said to be in progress for a new line from the west into Battle Creek, Mich., to avoid a steep grade.

Place Viger Station, Montreal.

The subject of the enlargement of the old Quebec Gate Barracks station yard, & the building of a combined station & hotel, was first taken up by the City Council of Montreal & the C.P.R. Co. in 1893. Several sites were proposed, & finally it was arranged that the City should expropriate the block bounded by Craig, Berri, Notre Dame & Lacroix sts., should sell the buildings thereon, & hand over to the Co. the vacant ground, comprising a total area of 208,450 ft., inclusive of parts of streets in the block.

The City also agreed to erect a bridge to carry Notre Dame st. & a part of Lacroix st. over the new yard, & to subscribe \$150,000 towards the cost of a building not less than 4 stories high to be used as a station & hotel, on condition that the Co. should spend not less than \$350,000 on the building & its appurtenances, & should cede to the City several valuable properties comprising an area of 184,836 ft. By Nov., 1895, the City had acquired the entire block & had removed all the buildings therefrom, except a fire station at the corner of Notre Dame & Lacroix sts. In Jan., 1896, the Notre Dame st. bridge was completed. In May, 1896, the deed was passed conveying the new block to the Co., & the properties above mentioned to the City.

The surface of the new block was very irregular, being at an elevation above city datum of about 64 ft. next Notre Dame st., & 29 ft. adjoining Craig st.

As the level of the new yard is about 34 ft., the excavation amounted to about 75,000 yards, exclusive of the excavation required for the erection of the bridge under Notre Dame st. & part of Lacroix st. In July, 1896, the Co. began the erection of the new freight shed in the old Quebec Gate Barracks yard, now called the Barracks yard, & work was commenced on the station building in Aug., 1896, & was carried on continuously until Aug. 15, 1898, when the station was opened for traffic. The hotel was opened a few days later.

The new yards being at right angles to the tracks which led to the old station, it was necessary to lay out the new tracks oblique to the new station in order to provide a sufficient length of straight track next the station. These tracks are shown on the plan on pg. 107. At present track no. 1 leads past the

stores building & the end is used for repairs. Tracks nos. 2 & 3 are for baggage & express cars, which are, in the future, to be loaded opposite the baggage & express platforms, & pulled out & coupled to front of outgoing trains a few minutes before train time. At present, however, the baggage is taken on trucks up to baggage cars at their place in front of trains. Tracks nos. 4 & 5 are for passenger car storage. Nos. 6, 7 & 8 are outward passenger tracks, & nos. 9, 10 & 11 are inward passenger tracks. Tracks nos. 12 to 17, both inclusive, are for delivery of freight direct from cars to trucks. These are all the tracks in the new Place Viger yard.

There are at present no passenger tracks in the old yard, now called the Barracks yard. Tracks nos. 1 & 2 of this yard are for freight delivery from cars into the lower storey of the old station building, which is to be used for freight storage, while the space below Notre Dame st. bridge, next the old station, is being closed in & connected with the old building by four 8-ft. doors, & will be used for delivery of freight to trucks. The top storey of the old station, at the level of Notre Dame st., is fitted up as offices for the Division Engineer & his staff, the Superintendent of Terminals, the Roadmaster, & the Stationery Department & stores. It is proposed to put in an intermediate floor between the two storeys above mentioned for freight storage. Tracks nos. 3 & 4 are for unloading freight direct from cars into trucks, nos. 5 & 6 are for storing cars of freight for delivery to city, & no. 7 is for freight delivery direct from cars to trucks. Tracks nos. 8 to 16, both inclusive, are for delivery from cars into freight sheds. No. 17 is for car storage, no. 18 is for freight delivery direct from cars to trucks, & nos. 19 & 20 are grain elevator tracks.

There is a complete system of water, steam & air pipes laid across the entire head of the Place Viger yard, the pipes also extending from the head of the yard for about 210 ft. between tracks 5 & 6, for about 350 ft. between tracks 7 & 8, & for about 670 ft. between tracks 9 & 10, & between tracks 11 & 12. These pipes are laid from 5 to 6 ft. below base of rail, & are enclosed in a wooden box of 2-inch plank. At the head of the yard, between each pair of tracks, and also at intervals of about 100 ft. along the lines of pipes between the tracks above described, there are vertical shafts, $2\frac{1}{2} \times 2\frac{1}{2}$ ft. clear inside, rising to the level of the top of the rail, made of 3-in. plank. Stand pipes for water, steam & air, with the usual rubber pipe connections, are set in these shafts. The boxes in which the pipes are laid have a grade of $2\frac{1}{2}$ ins. per 100 ft. towards the head of the yard, so that any water collecting in them may drain off into a 10-in. pipe running under the station building opposite the end of track 4.

The platforms between the tracks have an umbrella-roof covering the full width of the

platforms, supported on a single row of cedar posts along the centre line of the platforms. This arrangement of the posts is much more convenient than the double row adopted by some railways, as it does not interfere with passengers getting on or off trains, & as it separates the passengers coming from or going to trains on either side of the platform. These covered platforms are lighted by an incandescent lamp between each pair of posts.

The station & hotel building is the early 16th century style of French Renaissance. The exterior face of the walls, up to the sill of the first floor windows, is of pick-faced, grey Montreal limestone, plainly treated. The remainder of the exterior face is of Glenboig firebrick of buff color with dark mottling, the quoins, heads, string courses, etc., etc., being of Montreal grey limestone. There is a covered portico, 16 ft. wide, on the Craig st. face, extending along the entire length of the main building, having a stone colonnade in front, & being approached by five stone steps running the whole length of the portico. The roof of this portico is used as a promenade during the summer. The roof of the entire building is of slate with copper flashing.

The whole of the work was carried out under the supervision of the Co.'s Chief Engineer, P. A. Peterson, J. P. O'Leary being inspector of works. We are indebted to Mr. Peterson for the foregoing description, which was written by H. Irwin. A plan of the yards & a view of the station & hotel building appear on pages 107 & 109.

The Crow's Nest Pass Railway.

Some interesting particulars about this line are given in a report made by the Government Superintending Engineer, G. R. L. Fellowes, under date of Dec. 1 last, as follows:—

The railway was given under contract to the C.P.R. Co. to be constructed & equipped for a subsidy of \$11,000 a mile, from Lethbridge to Nelson, the total amount of subsidy not exceeding \$3,630,000. The line was to be opened for traffic on or before Dec. 31, 1898, as far as the south end of Kootenay Lake, there providing train transfer facilities, without transshipment, not later than that date, from that point to Nelson, B.C., the service to be kept up until the balance of the road to Nelson was completed & put in operation for public traffic, the contract allowing the Co. until Dec. 31, 1900, to complete it.

The section of road to Kootenay Lake will be in safe condition to be opened for traffic before the close of the present month; it is equipped with rolling stock sufficient for the requirements of the traffic. Car loads of freight have already been carried from the south end of Kootenay Lake to Nelson, B.C., by water in transfer barges & steamers, thereby giving the public a traffic service before the expiration of the time limit named in the contract.

F. E. Came, 17 Place d'Armes Hill, Montreal

The contract specifies that steel rails of a minimum weight of 56 lbs. per lineal yard are to be used for track. The 56 lb. rails have been introduced on the prairie sections & on the river bottoms, where tangents & light curvature occur, the balance of the road-bed is completed with a percentage of 60 lb. rails & fully 26% of the whole 288¾ miles is laid with rails weighing 73 lbs. to the lineal yard.

The truss bridges of large spans on this line, both for through & deck spans are of the Howe truss, of the C.P.R. standard, built of wood, the splicing of the lower chord members being of steel plates. Over the Kootenay River, which is navigable for steamers, an iron swing bridge has been erected over the north channel, which I consider gives ample provision for the passage of craft navigating these waters. The trestle bridging is well designed & of the C.P.R. standard, where necessary rows of piles driven from the mud sill of the embankments, 30 & 45 ft. out, which are framed into the deck system, having diagonal sill braces to ensure greater rigidity.

The position of the culverts, both box & beam, have been well chosen, the structures being strong, well put together & of sound material, in some cases stone is used, & in others cedar & Douglas fir timber. They are similar in design to those in a like country on the main line of the C.P.R.

The surfacing & ballasting of the road has been well advanced from Lethbridge to Jaffray station at the 173½ mile. From this point to Kootenay Lake the road is about half ballasted. At present a large force of men, steam shovels & working trains are employed in completing the work.

Such of the buildings for sectionmen's houses & stations as are built, are roomy, of neat design & suitable for the traffic, & conform to the requirements as specified in the contract. Tanks of the C.P.R. standard design, of a capacity of 40,000 gall. each, have been erected at suitable points between Lethbridge & Kootenay Lake, excepting at Cranbrook, a divisional station, & at Sirdar, at which two points water for the present is being supplied by temporary tanks.

The road-bed throughout is of a solid, substantial character & well built. The embankments have settled down, & become consolidated, which naturally has lessened the original width at formation level; the Co. is now bringing these up to the contract width.

The cuttings have been formed of the widths called for by the contract, but the earth cuttings are now being further widened. In earth cuttings the character of the material largely governs the pitch of the slopes. In gumbo, or running clay, the slopes have been taken out at a flatter angle than 1½ to 1, & to give greater stability to the road-bed, & prevent disturbance of the track, 12 in. sheet piling has been driven at the foot of the slope on the upper side of the cuttings; not only has this been done, but in through cuttings of this material a base of broken rock over the full width of the bottom of the cuttings has been laid in, over 3 ft. in thickness, which has given most satisfactory results. Cemented material has been met with in many of the cuttings, from the Crow's Nest Lake station westward, in such cases a slope of less than 1½ to 1 has been adopted, which appears to meet all requirements, as they are standing well. In some of the cuttings east of the Crow's Nest station, a firm, dry & compact soil is found, in such cases the slopes have been taken out at less than 1½ to 1, & so far they have stood well. In other cuttings between Lethbridge & Macleod a cemented material is found which is so hard & compact that blasting had to be resorted to. As the specification calls for a slope of 1½ to 1, I am, until I have had an opportunity to fully satisfy myself of the sufficiency of these slopes as taken out, re-

taining part of the subsidy to cover the cost of flattening these slopes, if it should be found necessary after a year's experience.

The contract limits the maximum grades to 106 ft. to the mile, but I am pleased to be able to report that the Co. has succeeded in keeping the maximum down below 60 ft. to the mile, which is very satisfactory. Owing to the mountainous character of the country & its general configuration, curves of 10°, 12°, and in one case 14°, had to be introduced, & I see no way in which it could, at reasonable cost, have been avoided.

The Co. at present has 3 steam shovels employed in ballasting, widening cuttings & filling in trestles, which are being served by the necessary trains.

Surveys have been made of the balance of the line subsidized, from the south end of Kootenay Lake to Nelson, but the final plans of location have not yet been filed in the Department, as a revision of the location is in contemplation with a view of reducing the severity of the curves in some cases as now laid out.

C.P.R. Fort William Elevators.

The illustrations on page 105 show the four mammoth elevators erected by the C.P.R. Co. at Fort William, Ont. The following description of them recently appeared in the *Marine Review*:—The Co. began the consolidation of its various interests at Fort William in 1890. Previous to that time its local works were located at West Fort William, & the chief offices & the port for the transshipment of all freight from lake to rail was at Port Arthur. The business had not been greatly developed, however, before the officials of the Co. perceived the natural & economic advantages offered by the Kaministiquia river for the concentration of the entire business on Lake Superior, & a well-defined policy was soon after mapped out for the process of centralization by means of the erection of mammoth elevators, the construction of good docks, etc. Beginning with the spring of 1891 all lake freight & passengers were landed on the wharves of the Kaministiquia, & Fort William was made the connecting point between lake & rail—the northwestern terminus of navigation. All the works & business of the Co. formerly carried on at the west end & Port Arthur were thus brought together at Fort William, where over \$1,000,000 had already been expended in improvements.

Improvements since undertaken have brought the total up to fully \$2,000,000. The 4 elevators alone have entailed an expenditure in excess of \$1,000,000. The elevators, which are the largest in Canada, are designated A, B, C, & D. The 3 first mentioned are each 325 ft. in length by 90 ft. in width, & all are equipped with the latest improved type of machinery. Capacities are as follows:—A, 1,200,000 bus.; B, 1,300,000; C, 1,250,000. The 4th elevator, D, is the new steel tank structure, & has a capacity of 1,500,000 bus., bringing the aggregate up to 5,250,000 bus. as the capacity of the 4 elevators.

The steel tank elevator was erected in 1897-98, & is the first & only elevator of this unique design in Canada. It consists of 24 cylindrical steel storage tanks 60 ft. in height. Eight of the tanks are each 58 ft. in diameter, while the diameter of each of the remaining 16 is 29 ft. They are absolutely fire & damp proof, & have been rendered impervious against rats, insects, etc. The main building, which is of structural steel, contains modern machinery for cleaning, separating, weighing & transferring grain from cars to tanks or vessels. The shipping capacity is 40,000 bus. an hour, & the unloading capacity 400 cars a day. The elevator has attracted considerable attention by reason of the fire-proof arrangement which obviates the necessity of insurance & the very excellent plan for the separation of the stor-

age department from the machinery for handling & weighing the grain.

Other facilities of the C.P.R. are in keeping with the completeness of the elevator equipment. For the storage of package freight delivered by the steamship lines there are 2 sheds, each 500 ft. in length. The company also has an unbroken line of more than 4,000 ft. of docks. The coal docks alone have a river frontage of 1,200 ft., & upon them are landed annually more than 150,000 tons of coal.

The prospects for the future of Fort William as a grain shipping port are of the brightest. During 1895 there was shipped from Fort William 10,587,866 bus. of wheat; during 1896, 12,689,000, & during 1897 17,600,000. Of the quantity of the latter year 12,928,000 bus. were shipped for export by way of Buffalo, the bulk of it in U.S. bottoms, while 2,000,000 found its way to the seaboard via Montreal. The figures for 1898, 9,218,000 bus., show a falling off, but the loss was due to temporary conditions.

A very complete description of the steel tank elevator, with an illustration showing how it will appear in its completed condition, when its present capacity will be doubled, appeared in our issue of April, '98, pg. 37.

Surveys, Construction, Betterment, &c.

Canada Atlantic.—The Ottawa shops are expected to be completed in May, when the manufacture of cars will be commenced. A large amount of machinery is already in position. Provision is being made for running electric cars on the track between the Chaudière & the shops.

In reply to a recent enquiry as to whether the Co. would build from Coteau to Montreal, President Booth said he would in all probability double-track the present road first. "It will next summer make Montreal one of the greatest grain-shipping centres in the world," he added.

Canadian Northern.—This is the new name of the Lake Manitoba Ry. & Canal Co. The line, which was built last year to Cowan, 51.8 miles from Sifton Jct., is to be extended to the Saskatchewan River this year, & W. Mackenzie recently stated he expected it to be completed to Hudson's Bay by the end of 1901. Mr. Mackenzie also stated that from the best information he could obtain he thought Hudson's Straits were open about 5 months in the year. In referring to this Commander Wakeham, who was in charge of the last Government expedition to Hudson's Bay, thinks 3½ months the extreme limit.

Superintendent Hanna reports that a considerable number of settlers have already gone into the Dauphin district this season. (Feb., pg. 40.)

Coast Ry. of Nova Scotia. The first section of this line, from Yarmouth to East Pubnico, 31 miles, is being operated. Last season the 2nd section of 20 miles from East Pubnico to Barrington was graded to Atwood Brook, 17 miles, structures built & ties distributed. During the winter the stone required for the uncompleted masonry on this section was cut & delivered on the sites of the structures, which are incomplete only for about 3 miles, & are principally box culverts, there being only one bridge of 60 ft. span. We are officially informed that if weather permits work will be resumed about May 1 on the completion of the 2nd section, & that in all probability work will be carried on beyond Barrington. The 3rd section of 30 miles between Barrington & Lockport has been surveyed & the timber taken off, & surveys have been made for part of the line between Lockport & Halifax. A stone wharf, 250 ft. long & 60 ft. wide, has been built at Barrington, to which 150 ft. of pile wharf will be added. When the line is completed to Barrington a steamer will run between Barrington & Hal-

... sailing at shore ports. It is said the Co. will survey a branch from Liverpool north to Calcutta, 25 miles. It is intended to change the name of the Co. to The Halifax & Yarmouth Ry. Co. (Nov., '98, pg. 238.)

Edmonton Bridge.—We are officially informed by the Dominion Department of Public Works that a contract has been let by the Department for the construction of the superstructure of this bridge, which will be used by the Edmonton District Ry. to make connection between South Edmonton & Edmonton. A full description & illustration of the bridge appeared in our issue of Dec., '98, pg. 261.

Edmonton District.—One of the directors informs us that until the legislation asked for at this session of the Dominion Parliament is disposed of, there is no definite information to be given. He says surveys have been made, & that preparations are being made for building the line from South Edmonton to Edmonton, & that in all probability the line will be built to Athabasca Landing this year.

Reference was made in our Feb. issue to the work done in respect to a reconnaissance survey from Edmonton towards the Yukon under the Department of Railways. Following is a portion of the report:—Between the junction of the Parsnip & Finlay rivers & Hudson's Hope, Peace River runs between 2 ranges of mountains which have an elevation of between 3,000 & 4,000 ft. above the level of Peace River. The peaks of some of the mountains are bare of vegetation. Mt. Selwyn is the highest point of the eastern range along the rivers, & has an elevation of 6,240 ft. above sea-level. It was ascended by the chief of the expedition, who succeeded in reaching the summit, where he obtained a wide spread view of the surrounding country, presenting to him a grand panorama of mountain peaks capped with snow the year round as far as the eye could reach. Peace River has a fall of about 1½ ft. per mile on an average from the junction of the Parsnip & Finlay to the canyon, & presents no serious obstacles to navigation, with the exception of the Parle Pass & Finlay Rapids, where it is necessary to portage supplies & other freight. Peace River Canyon, which is about 24 miles long,

presents the appearance of a large canal cut through the mountains by the river, the walls of the canyon being 100 to 400 ft. high. It has taken ages to make the channel through which it runs at the present time, the old bed of the canyon being clearly seen over 150 ft. above the river where it now runs. The proof of this is seen in a series of deep wells cut in the solid rock by whirling boulders caused by the eddies of the river, being similar to such wells on the level of the river as it runs now. These wells are 15 to 20 ft. deep, & from 2 to 4 ft. in diameter, their walls being worn smooth & polished by the constant rubbing of the boulders as they turned for centuries. Three miles from the mouth of the canyon there is an island which presents at a distance the appearance of a large ship of war of the old wooden pattern, with its numerous port-holes. This island stands about 30 ft. out of the river, having been cut out in this peculiar way by the river in the years gone by. The fall of the river through the canyon is about 270 ft. in 23 miles, & there is a series of rapids from its mouth to Hudson's Hope. Navigation, although dangerous, is not impossible at certain times of the year to expert boatmen; but there is nothing to be gained by attempting to go through.

Great Northern of Canada.—The rumor published in our Mar. issue, pg. 82, to the effect that a contract has been let for the completion of the 88 miles of this line to be built between Shawenegan, Que., & Hawkesbury has been confirmed. A contract has been made between the Co. & the Great Northern Construction Co., composed of New York, Boston & Quebec people, to whom all subsidies, bonuses, cash subscriptions & a portion of the bonds will be transferred. Bonds have, it is announced, been placed by J. McNaught, of New York, & H. H. Melville, of Boston, for a sufficient amount to complete the line. The Construction Co. has given a contract for the execution of the work to Ross, Barry & McRae, of Toronto, who are well known in connection with C.P.R. and other contracts. The work is to be completed by July 31, 1900. There will be numerous bridges; 3 will be of considerable size; 2 steel

viaducts will each be about 1,000 ft. long & from 140 to 150 ft. high. The bridge over the Ottawa River at Hawkesbury, including the crossing of the canal & trestle approaches, will be about 3,200 ft. long. The character of the line is to be first-class in every respect, the bridges to be of steel of the strongest specification, & the track is to be laid with 70 lb. steel rails. The rails & fastenings for the whole line have already been purchased. The contract includes the erection & equipment of workshops & carshops in Quebec city. The 88 miles now contracted for includes the section between Shawenegan & Montcalm, near Joliette, 53 miles, on which some work has been done, & 35 miles between St. Jerome & Grenville, on the Ottawa River. Between Montcalm & St. Jerome, 28 miles, the G.N. is already in operation, so that the building of the 88 miles will make a continuous line from the Ottawa River to Shawenegan. From Shawenegan the G.N. is already built east 22 miles to St. Tite. From St. Tite eastward to Riviere a Pierre Jct., 33 miles, the Lower Laurentian Ry. is in operation, & from Riviere a Pierre Jct. to Quebec, 58 miles, the Quebec & Lake St. John Ry. is in operation. The Lower Laurentian Ry., as well as the G.N. Ry., is operated by the Q. & L. St. J. Co., so that the whole line between Quebec & the Ottawa River will be under the one management. E. A. Hoare, C.E., Quebec, is Chief Engineer for the Co., & McCarthy & Shanley are engineers for the contractors. (Mar., pg. 82.)

For the information of the Railroad Gazette, New York, which speaks of this line as a Nova Scotia road, we may mention that it is entirely within the Province of Quebec. At Hawkesbury it will connect with the Canada Atlantic Ry., giving another route between Ottawa & Quebec.

It is the intention of the Co. to erect a grain elevator at Quebec with 1,000,000 bus. capacity. It will probably be located between the Customs House & the Point A'Arcy wharf, where there will be splendid loading facilities.

Great Northern, U.S.A.—Surveys, said to be in the interest of this Co., are being made for a line from Moscow, Wash., northwest via

GEO. J. MAULSON,

195 Lombard St. WINNIPEG

Davenport, along Hawk Creek & the Columbia River to Hell Gate, & thence north along the San Poil River to the new mining region at Republic. The line would be about 100 miles long.

The Co. is about to give Duluth another great elevator that will be far ahead of the one of 3,000,000 bus. capacity previously built, as the new structure will be of steel, & its capacity will be 6,000,000 bus.

Intercolonial.—During the past fiscal year 19½ miles laid with 58 lb. steel rails were taken up & replaced with 67 lb. rails, & 6½ miles laid with 67 lb. worn rails were taken up & the rails cut & relaid on various parts of the line. 650,135 ordinary ties & 120 sets of switch ties were renewed. 103,166 cubic yards of ballast were placed on various parts of the line where necessary. 42½ miles of barbed & woven wire fence were erected, replacing pole fence & old barbed wire fence. Extensive repairs were made to the old fences on all parts of the line. 7,062 rods of snow fence were renewed in the Central & Northern Divisions.

It is said the Minister of Railways has decided to build a 1,000,000 bus. grain elevator in Montreal, & that the funds will be asked for at this session of Parliament.

Interprovincial Bridge, Hull to Ottawa.—Work is proceeding satisfactorily on the piers. The masonry will be gone on with as soon as the water lowers, & it is expected the superstructure can be put on next fall, by the time the extension of the Pontiac & Pacific Jct. Ry. is completed to Hull. A contract has been let for the superstructure.

Inverness & Richmond.—The prospects for this Nova Scotia line going on this year are very favorable. For some time past P. Ryan & R. H. Bowes, of Toronto, have had an option on the charter from Oakes, Grey & Wheaton, & as stated in our last issue, negotiations have been going on for the sale of this option to Mackenzie, Mann & Co., which have been closed. The I. & R.R. Co. was incorporated by the N.S. Legislature in 1887 to build a line from the Straits of Canso, at or near Port Hawkesbury, to Cheticamp, a distance of about 100 miles, by way of Port Hood, Mabou, Broad Cove & Margaree, with a branch from or near Mabou to Wyecogmah, thence to connect with the I.C.R. at or near Orangedale. For the 1st 58 miles to Broad Cove mines, the Dominion Parliament has voted a cash bonus of \$3,200 a mile, the N.S. Legislature has voted a similar amount, & the County of Inverness has voted \$1,000 a mile. The 58 miles have been surveyed. Some time ago about 15 miles from Port Hawkesbury north were partially graded, & some men have been at work since July last to comply with the Act. It is said Mackenzie, Mann & Co. have secured options on about 60 square miles of coal fields in Inverness county, in the neighborhood of Port Hood, Broad Cove & Chimney Corner, & that they will go extensively into coal mining, shipping the coal to Quebec, Montreal & New England ports, from Cheticamp, at the north end of the line, & from Hastings & Cariboo Cove on the south. (Mar., 98, pg. 82.)

Kootenay Ry. & Navigation Co.—In a memorandum issued from the London, Eng., office of this Co., some references are made to the lines which have been acquired by it. Speaking of the Kaslo & Slocan, it says the capital for its construction was found largely through President Hill, of the Great Northern (U.S.A.) "At Kaslo, the K. & S. Ry. connects with the steamers of the International Navigation & Trading Co., which ply from that point to Nelson, where connection is made with the Spokane Falls & Northern R.R. running to Spokane, at which point the Great Northern & Northern Pacific roads are met. But a considerably shorter & more inexpensive connection with the U.S. roads is offered by the building of 53½ miles of railway from

the southern end of Kootenay Lake (whither the steamers would then run instead of to Nelson) to meet the G.N. at Bonner's Ferry & the N.P. at Sandpoint. This road would run along the valley of the Kootenay river, avoiding any steep gradients or sharp curves or danger of washouts, all of which are difficulties encountered by the Spokane Falls & Northern road. A Co. known as the Bedlington & Nelson R.R. Co. has been formed & incorporated by Canadian Act of Parliament to own & operate so much of the line as lies in Canadian territory, whilst a U.S. Company has been formed to own & operate so much as lies in U.S. territory. During last spring a large engineering force was engaged on the location of the line under N. D. Miller, a chief engineer of the construction of the Great Northern road. A close estimate has been received from him, & he places the approximate cost of construction, equipment, buildings, etc., at £240,000 for the entire work."

J. F. Stevens, who is associated with Foley, Bros. & Co. in the contract for the line between Kootenay Lake & Bonner's Ferry, says rapid progress is being made with the work all along the route, including the bridge & trestle at Bonner's Ferry.

Rumors have been in circulation to the effect that the Privy Council has granted the application of the Nelson & Bedlington for running powers over the Crow's Nest Ry., from Creston to Kootenay Landing, but up to the time of writing (Apl. 14) no decision had been given.

Kootenay & Northwest.—It is stated that C. R. Watson, C.E., & staff left Golden recently for Cranbrook, B.C., to start the survey of this line & work north. The K. & N. Co. was incorporated by the B.C. Legislature in 1898 to build from Golden south along the Columbia River Valley to Canal Flat, thence along the Kootenay River Valley to Cranbrook, also from or near Golden, north through the valleys of the Columbia, Canoe, Fraser & Parsnip Rivers, to the valley of the Liard River, to the northerly boundary of B.C., or to Teslin Lake. The incorporators were L. Hirsch, A. J. Douglass & A. E. Mitchell Innes, of London, Eng., & it is believed the charter was obtained in the interest of the Great Northern (U.S.A.)

Lake Erie & Detroit River. There is nothing new to report respecting the proposed extension of this line from Ridgeway to St. Thomas, Ont. The by-law passed by St. Thomas ratepayers granting a bonus of \$20,000 for the extension has been quashed on the ground that the law had not been complied with, the sinking fund not having been mentioned in the by-law. A bonus of \$7,000 granted by the village of Aldborough is also being attached.

Manitoba & Southeastern. Arrangements are being made for an early start from La Broquerie, to which point the line was built from St. Boniface, 46 miles, last season & it is expected to build to the International Boundary and thence through Minnesota to the mouth of Rainy River, this year.

Michigan Central.—A 3rd truss is to be put on the cantilever bridge over the Niagara River, the truss to be carried by another tower bent and masonry work on each side. The truss is to be placed between the 2 already in position & will strengthen the bridge very much, as is rendered necessary by the increased weight of rolling stock. Work has commenced on the excavations for the foundations.

The new station at Courtright is a frame building, 24 x 62 ft., with spreading eaves 12 ft. high. The room is decorated Gothic, & altogether the building has a very up-to-date appearance.

The Toronto, Hamilton & Buffalo is taking steps to secure right of way for a spur line to the blast furnace. (Mar., pg. 73.)

Railway Appointments, &c.

Canadian Pacific.—F. W. Jones, Assistant to Manager Whyte, of the C.P.R. Western Lines, resigned his position at the end of Mar. to accept the Secretary-Treasurership of the Columbia River Lumber Co., with headquarters at Golden, B.C. Mr. Jones, who has been in the C.P.R. Co.'s service since boyhood, went to Manitoba in 1886 as Private Secretary to W. Whyte, on the latter's appointment as General Superintendent of the Western Division. Subsequently he became Chief Clerk in the General Superintendent's office, & on the creation of the position of Manager, in 1897, he was appointed Assistant to the Manager, with special charge of the operation of the Western Division, in which position he showed marked ability, serving the Co. with zeal & energy, & becoming very popular with the public. On his retirement from the service the railway men & the citizens of Winnipeg presented him with \$1,000 & a \$300 silver tea service as practical testimony of the esteem in which he is held. The Columbia River Lumber Co., of which W. Mackenzie, of Toronto, is the principal stockholder, is among the largest lumber concerns in B.C., having mills at Golden, Beaver, Moberly & Tappen Siding.

On Mar. 30, Manager Whyte issued a circular announcing the appointment of J. Osborne as General Superintendent of the Western Division, with headquarters at Winnipeg, from April 3. Mr. Osborne arrived at Winnipeg Mar. 30, accompanied by his Secretary, G. Graham. On leaving Montreal Mr. Osborne was given an enthusiastic send off at the Windsor St. Station by his colleagues in the general offices. Mr. Osborne, whose portrait appears on the 1st page of this issue, entered the railway service in 1874, the following being his record:—Oct., '74, to July, '83, in Mechanical Department, G.T.R.; July, '83, to July, '86, in Mechanical Department, C.P.R.; July, '86, to Sept., '87, Chief Clerk, Vice-President's office, C.P.R.; Sept., '87, to Oct., '90, Car Accountant, C.P.R.; Oct., '90, to June, '92, Superintendent Car Service, C.P.R.; June, '92, to April, '96, Superintendent Car & Fuel Service, C.P.R.; April, '96, to Mar., '99, Assistant to Vice-President C.P.R. In April, '95, he was elected President of the International Association of Car Accountants.

Vice-President Shaughnessy recently stated that no one would be appointed to succeed Mr. Osborne as Assistant to the Vice-President. It is however, the general impression in C.P.R. circles in Montreal that some other appointment will be made to relieve Mr. Shaughnessy of some of the work he now handles, & it is persistently rumored that the Passenger Traffic Manager, D. McNicol, will receive promotion.

J. D. Chipman, heretofore Travelling Freight Agent, has been appointed City Freight & Passenger Agent at Halifax, N.S. C. S. Phillips having resigned the City Passenger Agency. D. Sutherland, City Cansassing Agent at St. John, succeeds Mr. Chipman as Travelling Freight Agent.

D. Willard, having resigned as Division Superintendent of the Minneapolis, St. Paul & Sault Ste. Marie to take the Assistant General Managership of the Baltimore & Ohio, has been succeeded at Minneapolis by F. C. Batchelder, C. P. Eckels succeeding the latter at Enderlin, N.D.

H. M. McGregor, Travelling Passenger Agent, has been transferred from San Francisco to Alaska.

A report that L. A. Hamilton, Land Commissioner at Winnipeg, was about to retire, has been denied by Asst. Land Commissioner Griffin. Mr. Hamilton is travelling abroad.

W. H. Forrest, on retiring from the Vancouver freight agency recently, was presented with \$100 by the Co.'s employees & with \$100 by local merchants.

Grand Trunk.—David McCooe has been appointed General Roadmaster, Eastern Division, vice S. J. Pegg resigned. Office, Bellevue Station, Montreal.

J. Foley, who has been appointed Roadmaster of the 2nd district, as mentioned in our last issue, was section foreman for 18 years on the G.T.R. at Whitby, & 1 year in charge of extra gang on the middle division.

A. G. Allison, Chief Dispatcher at Bellevue, Ont., resigned recently after 39 years service, 35 of which he served as Train Dispatcher.

Intercolonial.—A press despatch from Quebec about the middle of Mar. stated that District Superintendent Ouellette, of the Montreal & St. Flavie District, with headquarters at Riviere du Loup had been suspended, & that General Superintendent Price was looking after his duties. Enquiry of I.C.R. officials has failed to elicit a reply, & we therefore give the report as a rumor, being unable to verify it.

J. W. Wallace has been appointed Traveling Auditor.

W. K. Reynolds has been appointed to write up the advertising matter for the line.

Mainly About People.

Sir Wm. Van Horne is about to take a holiday trip to California.

Vice-President Shaughnessy returned to Montreal Mar. 17 from Europe.

Dr. J. S. Smith, a brother of Lord Strathcona, died in Edinburgh recently.

R. B. Angus, of the C.P.R. directorate, & Jas. Ross, of Montreal, are in Europe.

D. A. Waterman, Treasurer of the Michigan Central, died at Yonkers, N.Y., Apl. 2.

General Manager Hays, of the G.T.R., arrived in Montreal Apl. 16 from his European trip.

Lord Strathcona is to receive the honorary degree of LL.D. from the University of Aberdeen.

Mrs. E. Tiffin, wife of the C.P.R. District Freight Agent at Toronto, has gone to California.

President Sir C. Rivers Wilson is expected to arrive in Canada shortly for his annual inspection of the G.T.R.

Mrs. McGuigan, wife of the General Superintendent of the G.T.R., has gone to California on a health-seeking trip.

H. B. Darnell, of the C.P.R. service in Japan, underwent an operation in Toronto General Hospital last month.

H. Garden, C.E., has been engaged on the survey for the proposed C.P.R. branch from Arrowhead to Kootenay Lake.

J. W. Fraser, Inspector of supplies & building material on the G.T.R. between Chicago & Toronto, died in London, Ont., recently.

M. Cleary, late of the Toronto, Hamilton & Buffalo Ry., has been appointed Superintendent of construction work for the Pittsburg Western Ry.

H. W. D. Armstrong, C.E., has returned to Toronto after running a survey for the Manitoba & Southeastern Ry. through Minnesota to Rainy River.

Michael Dwyer, a resident of Port Arthur, Ont., for 25 years, formerly a contractor on the C.P.R., & afterwards road commissioner for the Ontario Government, died recently.

R. A. Carder, formerly of the International Line, has been appointed Travelling Passenger & Freight Agent of the Dominion Atlantic Ry., with headquarters at 228 Washington St., Boston, Mass.

W. Stitt, of the C.P.R. Passenger Department, Winnipeg, left Los Angeles, Cal., in the middle of March, intending to spend some time in San Francisco, Victoria & Vancouver before returning to Winnipeg. His health is much improved.

E. C. Hawkins, Chief Engineer & General Superintendent of the White Pass & Yukon Ry., has been promoted to the position of General Manager, having complete charge of the engineering & construction departments, in addition to his work in the traffic branch.

H. C. Flockton, for many years the traffic representative of the G.T.R. in London, Eng., recently resigned to take the managership of the Lake Bennett & Klondike Navigation Co. at Victoria, B.C. He has been succeeded at 22 Leadenhall St., London, by J. R. Ion, formerly of the Allan Line and latterly with the Hamburg-American Packet Co.

A. B. Stickney, who was first General Superintendent of the C.P.R. at Winnipeg, & started the construction of the line west from there in 1881 & is now President of the Chicago & Great Western Ry., has written extensively on railway matters during the last few years. The latest product of his pen is "A Western Trunk Line Railway Without a Mortgage," in which he deals with the finances of the C. & G.W.R.

A joint circular issued by J. W. Blabon, Western Traffic Manager of the Great Northern (U.S.A.), & C. Shields, Vice-President of the Spokane Falls & Northern, announces that C. G. Dixon, in addition to his duties as General Freight & Passenger Agent of the S. F. & N.R., is appointed Commercial Agent of the G.N. Ry. at Spokane, in charge of freight & passenger business. H. A. Jackson is appointed Contracting Freight Agent of the G. N. R. & S. F. & N. Ry. at Spokane, under the direction of C. G. Dixon.

Lord Mount-Stephen has taken Lord Curzon's house in Carlton Gardens for the London season. It is probable that Lady Mount-Stephen will take her place among the great entertainers, being very popular, very clever, a favorite with the Duchess of York, & now a very rich woman, while Lord Mount-Stephen is both hospitable & generous. Lord & Lady Mount-Stephen were among those present to meet Prince & Princess Christian & Princess Victoria of Schleswig-Holstein at a dinner given by the Marquis & Marchioness of Lansdowne at Lansdowne House recently.

ELECTRIC RAILWAYS.

British Columbia Electric Railways.

B. C. Electric Ry. earnings and expenses for January:

	1897-8.	1898-9.	Increase.
Gross Earnings.			
Railway—Vancouver branch	\$4,467	\$5,538	\$1,071
Victoria	6,399	6,737	338
Westminster	4,688	5,484	796
Lighting—Vancouver	9,040	12,888	3,848
Victoria	5,536	7,222	1,686
Gross earnings	\$30,130	\$37,869	\$7,739
Working expenses	\$20,131	\$23,860	\$3,729
Net profits	\$9,999	\$14,009	\$4,010

Aggregate Gross Earnings from April 1 to Jan. 31....\$246,446 \$345,698 \$99,252

Aggregate Net Profit from April 1 to Jan. 31.....\$77,581 \$140,496 \$62,915

The aggregate gross earnings and net profit for 1897-98 are from April 15 only.

Traffic Superintendent Arnold, of the Vancouver branch, has retired, being succeeded by D. A. Shiles, heretofore Superintendent of the Westminster branch, who now combines the superintendency of the Vancouver & Westminster branches, with headquarters at Vancouver.

General Manager Buntzen & Mrs. Buntzen left Vancouver Mar. 21 for England, where they will spend a few months, Mr. Buntzen's health having been rather poor lately. While in England he will consult with the directors in reference to the extension of the Co.'s service & its affairs generally.

The Co. is making great improvements on the line between Vancouver & Westminster, the entire road bed is being re-gravelled & the track made quite safe by the filling in of all trestles. All dangerous trees along the line are being removed, to prevent their being blown down on the track. There will be placed on the through line two improved passenger cars, somewhat larger than the present ones, and capable, when the line is improved, of making the trip between Vancouver & Westminster in half an hour.

The city of Vancouver has given the Co. 11 years lease of Davie St., on which the Co. is building about a mile of track to English Bay, using 56 lb. T rails. The Co. will also build, this season, a line from English Bay along Denman st. to connect with its present line on Georgia st. Further on, it is going to erect a car barn on nine 25 ft. lots, purchased on Westminster Avenue, between Barnard & Prior sts., & will build a larger power-house on the joint site of the present power-house & car barn, & place therein direct connected machinery, at a total outlay of about \$100,000, which will give a modern & efficient station. The City Council wants the Co. to extend its lines in the east end & on Mount Pleasant, & the matter will be considered by the directors shortly.

THE RECOGNIZED LEADING..... LIMITED
RAILROAD AND STEAMSHIP PRINTING
HOUSE OF CANADA
FOR ESTIMATES AND SAMPLES, ADDRESS
RICHARD SOUTHAM, MANAGER, TORONTO

To the Land of Sunshine.

Take the Sunshine Route from Chicago to Los Angeles, San Francisco and other points in California, and escape the rigors of winter in the East and North.

Pullman Tourist Cars for first and second class passengers leave Chicago every Saturday at 2 o'clock p.m. via the Chicago, Milwaukee and St. Paul Railway to Kansas City, thence to California via the Atchison, Topeka and Santa Fe Railway—a real Sunshine Route.

This is the earliest afternoon train leaving Chicago for the West after arrival of morning trains from the East, thus avoiding tedious delay.

The Sunshine Route is essentially the best and most patronized through car-line for men, women and children. Every attention paid to the needs of passengers en route.

Send for a Sunshine Route time-table folder. It costs nothing.

Address A. J. Taylor, Canadian Passenger Agent, 8 King Street E., Toronto, Ont.

BURN

E. B. EDDY'S

MATCHES

A Government Tramway.—During the recent session of the B.C. Legislature some of the members petitioned the Government for the construction, as a provincial work, of an electric tramway from Vancouver to Steveston, on the Fraser River, & up the south side of Lulu Island, a total distance of about 17 miles, the cost of which was estimated at \$145,000, exclusive of right of way & bridging. No action is likely to be taken on the matter before the next session of the Legislature, if even then.

Maritime Provinces Electric Lines.

Bedford Electric Co.—Since the issue of the original prospectus of this Co., a summary of which was given in our last issue, pg. 91, its scheme has been considerably enlarged. The capital is to be increased from \$250,000 to \$2,500,000, & it is proposed to build 3 lines of railway instead of 1. The 1st is projected from the Three Mile House, west of Bedford, running through Bedford northeast about 5 miles to Waverly; then south about 12 miles on the north side of Halifax Harbor to Dartmouth. The 2nd is to be from the same starting place west through the head of St. Margaret's Bay, Chester & Mahone Bay to Lunenburg, 56 miles. The 3rd is to be from the same starting point along Kempt Road, & into Halifax. Power for the railways, for sale as electric energy, & for the operation of a pulp mill is to be obtained at St. Margaret's Bay, 18 miles from Halifax. The Co.'s agent, now in London, Eng., is very confident of success in raising the necessary capital there.

Moncton Electric St. Ry.—The M.E. St. Ry. Heat & Power Co. is applying to the New Brunswick Legislature to change its name to the Moncton St. Ry. Co.; to authorize the extension of the railway to Shediac; to authorize the City Council of Moncton & the County Council of Westmoreland to exempt the Co. from taxation; to authorize the Co. to lease from the city of Moncton the gas & electric light works, & to authorize the City Council to lease the works upon receiving the approval of the electors. It is believed that people interested in the Halifax Electric Tramway are prepared to take hold of the Moncton line if the legislation above outlined is secured, & if the desired arrangements can be made with the City Council.

St. John, N.B., Ry.—Prof. Hesse, organist of the Roman Catholic cathedral at Providence, R.I., who received injuries last July while on a runaway car on this line, necessitating the amputation of his left foot, has secured a verdict of \$25,000 damages against the Co.

Ontario Electric Railways.

Belleville Traction Co.—It was recently reported that this property had been sold for \$85,000, & that a line would be constructed to the cemetery & a loop line over the hill to the G.T.R. On Mar. 27 we were officially informed that a sale had not been made, but that possibly it would be within a short time.

Cornwall St.—The bondholders, the Sun Life Insurance Co., recently offered to put the tracks in proper order & build up the roads between the tracks & for 18 ins. on either side, provided the Corporation would keep the roadway in repair for 5 years. The council has so far taken no action on the proposal, & the feeling appears to be against accepting it. J. M. Taylor, who is managing the line for the bondholders, has made arrangements with the Shedden Co. to handle freight over the line on similar terms to the old contract. A contract has been secured for carrying the mail between the post-office & the G.T.R. station. A quantity of machinery has arrived & another car has been put on the line. The

equipment, etc., is being generally overhauled & improved.

Guelph St.—This Co. has recently installed a 110 kilowatts 6 pole railway generator in its power house.

Hamilton.—J. Patterson, of the Cataract Power Co., is, it is said, the moving spirit in a plan to consolidate all the radial roads in the neighborhood of Hamilton, & to acquire the street railway franchise there. For some time a local stock broker has been getting options on stock of the St. Ry. Co. Some of the principal stockholders in the Cataract Co. are in control of the Hamilton Radial Ry. The plan is to get control of these companies, to build a line to Guelph, a fast electric freight line to Niagara Falls, to make Hamilton a fruit centre; also, to establish a big cold storage warehouse. At first it was said the enterprise was projected by local capitalists, but the impression is gaining ground that the syndicate which has secured the Buffalo & Niagara Falls electric lines is behind the Cataract Power Co. in the matter, & that the idea is to connect the system of electric railways in & around Hamilton with the Niagara Falls system, also to connect the Hamilton Radial with the electric line at Mimico so as to reach Toronto.

Hamilton & Caledonia.—A bill is before the Ontario Legislature to grant power to construct an electric line from Hamilton to Caledonia, with an extension to Cayuga & Selkirk. A similar scheme has been in contemplation for some time—not exactly by this route. One scheme was by a road from Brantford to Hagersville & Selkirk, with loop to Cayuga. The purpose is to furnish an outlet for the agricultural products of Haldimand to market, also to introduce more root & small fruit growing on the farms of Haldimand which are particularly so adapted. Besides this, near Selkirk is one of the most beautiful natural summer resorts, Hoover's Point, to be found along the lake. The Private Bills Committee of the House passed the clause giving power to run on Sundays, but there will be a fight on this in the House on the third reading.

Hamilton, Chedoke & Ancaster.—The Private Bills Committee of the Ontario Legislature has passed this Co.'s bill to increase the capital stock from \$100,000 to \$300,000, to extend the line to Brantford, & to change the name to the Hamilton, Ancaster & Brantford Electric Ry. Co. A proposal to use steam as well as electricity, or compressed air, was struck out. The Co. also asked the right to run on Sunday, & agreed to a compromise on the basis that if the Sunday clause in the Hamilton & Caledonia Ry. Co. bill went through the House it should hold good in this bill as well.

Hamilton, Grimsby & Beamsville. Provincial Engineer McCallum, who inspected this line recently under instructions from Judge Street, in the suit of the township of Saltfleet vs. the Co., has made his report, which, strange to say, appears to please both sides. The township solicitor says it goes against the Co. on nearly every point. The Co.'s solicitor says it shows the road is in good workable condition, & that the defects pointed out by Mr. McCallum are such as could be found on every railway. Considerable complaint was made about the condition of the farm crossings, respecting which Mr. McCallum reports that if the present grades of the railway were approved by the township engineer, the Co., with two or three exceptions, has reasonably complied with the by-law, though many of the crossings could be much improved. Planking has not been provided at the crossings as called for, & the surface has not been kept an inch above rail level. Telegraph & telephone wires had not been properly protected from connecting with the trolley wires. The roadbed in Saltfleet

township was not in good repair between the rails & 15 ins. outside, more ballast was required & many of the ties were worn out.

Formerly the Co. issued 1,000 miles books for families, & 500 miles books for one person, at 1c. a mile. Last fall, when the trouble between Saltfleet township & the Co. commenced, the Co. discontinued selling these books to Saltfleet residents. Now the sale of the books has been withdrawn altogether & new books have been issued, each good for 400 miles & for families for \$5 each, or 1¼c. a mile. These are sold to anyone, irrespective of residence.

The Co. is removing its repair shop from Grimsby to Hamilton.

Hamilton St.—There appears to be a good deal of friction between this Co. & some of its employees. A city by-law provides that the motormen & conductors shall work only 60 hours a week, & shall be paid 15c. an hour. It is said the men have to work longer hours & only get 13½c. an hour.

Ingersoll to Woodstock.—S. R. H. Ickes, of Harrisburg, Pa., has been in these towns with a view of connecting them by an electric railway, the power house to be erected midway at Beachville.

The London St. Ry. Co. has a bill before the Ontario Legislature embodying agreements between the Co., the city of London & the townships of London & Westminster. A clause in the agreement with the township of Westminster, fixing the taxes of the Co. at \$75 for 28 years, was withdrawn when before the Private Bills Committee, because of the opposition of the city, on the ground that about a third of the part of the railway in question was about to become part of the city.

The Co. is adding to the power house machinery.

A plan to provide seats for the motormen is said to be under the consideration of the management.

Metropolitan.—This line starts from immediately north of the C.P.R. track at Yonge st., in North Toronto, & runs to Bond Lake, 18 miles north. The track of the Toronto Ry. goes to within a few feet of the Metropolitan's starting point on the south side of the C.P.R. track, but there is no connection between the two electric lines. Lately the C. P.R. started to put in a switch at North Toronto, with the apparent intention of connecting with the Metropolitan, but the connection has not yet been made. President C. D. Warren, of the Metropolitan, says the Co.'s plans are to extend the straight northern branch out Yonge st. as far as Newmarket, passing through Aurora, & to cut across country north-westerly to Schomberg. After the system has been pushed out to these points the Newmarket line will be carried to Roach's Point, on Lake Simcoe, & the spur line to Schomberg will extend farther north-westerly to Tottenham. The new power-house is erected at Bond Lake, to which point the Co. succeeded in carrying the line last fall, & but for the early cold weather the tracks would have been laid much farther. At Bond Lake it is expected that the new & modern plant of 1,000 horse-power will be in position during April. Surveys have been made to Newmarket on the north, which point for the time being will be one of the termini. The north-west extension survey has been made to Schomberg, a distance of 15 miles from Bond Lake. The reason that the line is cut across country at an angle of about 45 degrees to Yonge street is that it is a territory supplying greater facilities for the construction of the road, & it is shorter, being but one side of a triangle, which otherwise would have to be traversed on two sides, i.e., the other route taken would have to be from Schomberg to Newmarket east, & then south to Bond Lake. The next surveys to be made will be north from Newmarket to Roach's Point, 18 miles,

& north-west from Schomberg to Tottenham, some 3 miles.

Truck company has bought all the Bond Lake property, comprising 200 acres, which it intends using for picnic & camp grounds. The lake is from 50 to 60 ft. deep, & is 150 ft. above the level of Toronto.

As soon as frost is out of the ground sufficiently so men will be started on construction, while in the meantime preliminary work is being done. In order to obviate possible objection of any municipality to the construction of the line through its territory, the Company secured an act, whereby the whole of Yonge st. north of the C.P.R. tracks was placed in the control of the County of York, so that there is no possible difficulty with regard to the extension of the line to Roach's Point, the northern terminus of Yonge st. & Lake Simcoe. It is expected that with ordinarily good weather the line will reach Aurora by May 15, & that Newmarket will be connected with before May 24. The north-west spur will, it is thought, be completed before Sept. 1. The same general kind of cars which are operated by the Co. now will be used all over the line except that they will be single. The President says that with 1 motor the Co. could put on 8 or 10 trailers if there were as good streets to travel on as those in Toronto, & that there were 2 cars coming which would be capable of hauling 25 loaded freight cars over any ordinary grade.

The Co. looks for large excursion parties to Bond Lake, which point can be reached by the new system in an hour, starting at the C.P.R. tracks. The Newmarket trip can be made in 1½ hours, a person can get to Aurora in 1¼ hours, & the time occupied in getting to Schomberg will be but 1½ hours. At present it necessitates half-a-day's travel to reach Toronto from Schomberg, for people have to drive either to Aurora or Kleinburg, which alone takes 3 hours, before a train is reached. The line, it is estimated, can be operated with 20 or 30 men. When this system is completed the places along it & benefiting therefrom will be: Deer Park, Davisville, Eglinton, York Mills, Lansing, Willowdale, Newtonbrook, Thornhill, Langstaff, Richmond Hill, Elgin Corners, Jefferson, Bond Lake, Oak Ridges, Aurora & Newmarket. On Schomberg branch: Eversley, Kettleby, Pottageville, Lloydtown & Schomberg. President Warren says the general trade of Richmond Hill has increased 35% since the electric line has been built through there, & he expects that the other towns when reached will take just as great a stride forward. It cost \$150,000 to build the road to Richmond Hill.

The Co. has let a contract to the Westinghouse Co. for the power transmission plant. It is proposed to have the freight traffic provided for by cars equipped with motors, & also by electric locomotives. The distance is too great for the operation of the railway from a single power-house, & consequently a second power-house will be provided, which will receive its power in the form of alternating current from the first power-house. The generators in the central power-house or generating station at North Toronto, will be two 275 kilowatts machines, both of which will be adapted for supplying either alternating or direct currents. The direct current will pass

directly to the trolley lines for supplying the cars near the generating station. The alternating current will be raised in pressure by four 125 kilowatts, step up transformers to 15,000 volts. The current required for transmitting the power at this voltage is so small that comparatively thin wires can be used for transmitting the power to the sub-station near Aurora, some 15 miles away. Here the pressure will be reduced, & the alternating current passed through rotary converters, which will deliver a direct current to the trolley line. The cars & locomotives will be equipped with the most modern type of apparatus, & the whole will constitute one of the model plants of Canada.

Ottawa Electric Ry. Co.—The application to the Ontario Legislature to allow this Co. to operate cars on Sundays, the people having voted in favor thereof, caused a hot fight before the Private Bills Committee of the Ontario Legislature Mar. 8. The Mayor & other Ottawa officials appeared in support of the measure & a deputation from the Lord's Day Alliance opposed it. The bill passed by a vote of 34 to 13.

Work is progressing favorably on the extension the Co. is making to its power house at the Chaudiere. A force of 20 men are at work blasting & carting away the rock. The drill & hoists in operation are worked by steam. About 25,000 cubic yards of rock will be removed, deepening the cut 35 ft. Six 50-in. water wheels will be put in place, & a 1,500 h.p. dynamo operated direct from them. This is to furnish a duplicate source of power for the running of the system. The building containing the machinery will be beneath the street level & constructed entirely of concrete & iron. The work, which will entail an outlay of \$60,000, is expected to be completed by June.

Owen Sound & Georgian Bay St. Ry. Co.—Notice is given of the intention of C. Eaton & others, of Owen Sound, to apply for incorporation under this title under the Ontario Companies Act, with power to construct & operate a street railway line in the municipalities of Owen Sound, Sarawak, Derby & Sydenham. The capital is to be \$95,000, & C. & P. Eaton, W. Tayler & J. & J. H. McLaughlin are to be the first directors. The plans contemplate a line extending from the foot of Poulett st. hill along that thoroughfare to Division st., thence across the river to Stephen st. & along that thoroughfare & Bury rd. to the Pottawamie river bridge at Terrace st., where the road will cross to Brookholm & extend along the Bay Shore road to McLaughlin Park. Another line will run from Division st. hill down through the town & along Water or River st. to the C.P.R. station, continuing up Russell & and along Bay st. to the Cement works, where the line will end for the present, though the Squaw Point Park may ultimately be served by this line. It has not been decided whether the electric power will be generated by steam or water power.

Port Arthur-Fort William.—The Ontario Legislature has refused the application of the town of Port Arthur to be allowed to raise the fare on its electric railway to Fort William from 5 to 10c. The people of Fort William petitioned almost unanimously against the change, contending that the line was allowed to enter the limits of Fort William, in spite of

the determined opposition of that town, that the object of the construction of the line was to capture the trade of Fort William, a new & growing town, & enable workmen employed there to live in Port Arthur, & that the railway has retarded the growth of Fort William. It is contended that the line is now helping to build up Fort William at the expense of Port Arthur, the tables being turned, therefore the people of Fort William object to an advance in fares. They say the railway was forced on them under the terms of an Order in Council & that that order should not now be varied for the benefit of Port Arthur. (Mar., pg. 92.)

St. Thomas.—The contract for conveying the mails between the railway-stations & the post office has been given the electric railway company. Collections from the street letter boxes will also be made from the cars.

Toronto Elevated Ry. Co.—E. A. Macdonald's application for the incorporation of a company under this name has been summarily rejected by the Ontario Legislature.

Toronto Railway. The gross earnings are:

	1899.	1898.	Increase.
Jan.	\$95,699.12	\$86,592.36	\$9,106.76
Feb.	91,800.30	82,402.19	9,458.11
			\$18,564.87

The bill introduced in the Ontario Legislature by T. Crawford, M.L.A. for West Toronto, to regulate the over-crowding of street railway cars, & which was especially directed against the Toronto Ry. Co., its last clause making it apply only to cities whose population at the last census was over 100,000, has been thrown out on the ground that it should have been introduced as a private bill instead of as a public one. The Speaker said that had it not been for the last clause, he would have held that it was a public measure. He held that any citizen of Toronto had the right to introduce a private bill for the same purpose.

E. A. Macdonald's bill to amend the contract between the Toronto Ry. Co. & the City has been unanimously thrown out by the Private Bills Committee of the Ontario Legislature. The bill provided for restrictions upon the building & extension of lines; that transfers should be given from day to night cars; that the design of cars should be fixed by the City Engineer, or other official designated by the Council, & that the Co. be liable to a penalty of \$10,000 for disregarding an approved plan; that the Council shall regulate the number of passengers to be carried in cars; that the Co. or its servants be liable to a fine of \$50 for violating the by-law; that any ratepayer might bring such an action; that the City Engineer shall fix the time-table; that for contravention thereof a penalty of \$10,000 might be exacted from the Co. The City Solicitors were present, but having had no instructions, took no part in the discussion. W. Mackenzie & his solicitor were also present. The committee, without entering into details, voted down the legislation.

The Co. has ordered a 3rd large generator of the direct connected type, similar to the 2 already in operation. It will have a capacity of 850 kilowatts, operating at 85 revolutions a minute.

Argument in the appeal of the Co. against the decision of the Police Magistrate, took place Mar. 8 at the General Sessions, To-

ronto. The formal conviction made by the Magistrate imposed a fine of \$5 upon the Co. for running trolley car 528 without a proper vestibule for the protection of the conductor. J. Bicknell, who appeared for the Co., read the statute empowering any city to pass a by-law compelling electric railway companies to provide their cars with vestibules sufficient to protect motormen & persons in charge of the car from exposure while engaged in operating the cars. He contended that the words "persons in charge of the car" meant persons in charge of the car in the same capacity as motormen; that at the time the statute was passed the word "motormen" was new, & that the statute was intended to cover all such persons as might operate the cars, whether they were called motormen, engineers, drivers, controllers, or by any other name. He further contended that the conductor was not intended to be covered by the statute; that he was not in charge of or operating the car within its meaning, & that the Co. therefore had not committed any breach of the by-law. He also contended that the liability at the most was to provide for proper & sufficient vestibules for protecting the operators of the car, & unless it could be shown that the present vestibules were improper or insufficient for such protection, no offence was committed. He also contended that the Toronto Ry., by crossing the G.T.R., the C.P.R. & the Toronto Belt Line Ry., became a railway for the general advantage of Canada, & that therefore, the Co. was liable only to put vestibules on its cars when ordered by the Railway Committee of the Privy Council, J. S. Fullerton, Q.C., & W. C. Chisholm, who appeared for the City of Toronto, contended that the statute & by-law were sufficiently wide enough to include conductors; that they were persons who were entitled to such protection as motormen, & that the Legislature when using the words "motorman & persons in charge of a car" must have included persons of a different class from motormen, & that the other class intended to be covered must be conductors. The argument was lengthy & exhaustive, & judgment was reserved.

The Solicitors for the City of Toronto have served upon the Solicitor for the Co. a statement of claim, comprising 27 pages of type-written matter, in the overcrowding case. The gist of the statement of claim is that the Corporation seeks an injunction restraining the Co. from overcrowding its cars. The Corporation also desires an order restraining the Co. from using the old trailers purchased from the City. It also asks that the Co. shall be compelled to furnish transfers from day cars to night cars. The defence of the Co. has not yet been put in.

Manager Keating says it is the intention of the Co. to extend the west branch, which goes to Long Branch now, but before any lines can be laid, of course, the consent of the county authorities has to be given. Regarding this proposal the York County Council is willing to allow all necessary extensions, but the Peel County Council has yet to be heard from. If there is no objection, Mr. Keating would favor extending the line to Oakville, but at least he thinks the rifle ranges should be connected with the city for the convenience of the many soldiers going to & coming from the butts. Mr. Keating has asked Peel County Council for the privilege required, the obstacle being the Etobicoke river, over which there is a regular traffic bridge already built. The Co. will be willing to strengthen the present bridge to allow the line to pass over safely, or if this is not satisfactory it will construct a bridge of its own. The Peel authorities have acknowledged the receipt of the Co.'s letters, but no definite answer regarding the consent has been received. As soon as it is known that there is no objection to the proposed scheme the survey will be

made, & the work of constructing this valuable line will be gone on with. However, it is not the Co.'s intention to proceed with the initial steps till it is assured that the whole scheme can be carried out.

An eastern radial to run as far as Oshawa is also one of the probable new lines. Already the survey as far as Highland Creek has been made; this the Scarboro' Co. had done last autumn, while the municipal authorities' sanction has been granted as far as that point. There is a fine level country from Highland Creek to Oshawa, & it is thought there will be no objection offered to the projection of the line thus far. The largest places on the line would be Oshawa & Pickering, both of which would certainly profit by the electric freight & passenger communication with Toronto. Mr. Keating has had estimates of the probable traffic prepared, which show that these lines would be of immense value to the towns & villages which they would touch.

Toronto Suburban St. Ry.—A contemporary recently stated that a new agreement had been entered into between the town council of Toronto Junction & this Co., extending the franchise for 23 years from Sep. 1st last, the Co. agreeing to extend its lines to Cooksville or Woodbridge in 2 years, & to reach both places before the expiration of the present franchise. We were officially informed on Mar. 8 that the foregoing was incorrect, and that the negotiations between the Co. & the town were then still pending.

Quebec Electric Railways.

Hull Electric Co.—Wright county council has passed a resolution, asking the Dominion Government to grant a permit to this Co. to build a bridge across the Ottawa river, from Hull to Bank Street, Ottawa.

Montreal Island Belt Line.—This Co. will apply to the Dominion Parliament for an amendment to its act of incorporation to alter its bonding sections, increase its bonding powers, extend its powers concerning branch lines, change its name, & to enable it to purchase the franchise & powers of the Chateaugay & Northern Ry. Co.

Montreal St. Ry.		The gross earnings are:	
	1898-9.	1897-8.	Increase.
Oct.	\$134,116.69	\$145,093.69	\$17,349.00
Nov.	123,246.10	110,068.48	11,195.12
Dec.	127,075.80	113,000.33	14,048.67
Jan.	125,276.04	110,155.96	15,120.08
Feb.	113,838.02	102,425.99	11,412.03

\$720,335.50

The Co.'s bill before the Quebec Legislature met with a good deal of opposition in the Legislative Assembly, but went through early in Mar. without any material amendments. Among its principal provisions are the granting of power to increase the capital from \$5,000,000 to \$1,000,000 & the right to cross over the St. Lawrence River to St. Lambert, & to extend its lines towards Longueuil & Verdun.

The City Council wants the Co. to pay percentage on its total gross earnings, including the earnings derived from the car service in suburban municipalities outside the city. This the Co. refuses to do, & it is said the matter will go into court. From 1892-3 to 1897-8 inclusive, the Co. paid the City \$256,007.52 percentage, the largest payment being \$58,951.37 in 1897-98. The City claims some \$36,000 more. The clause in the by-law on which the City bases its claim reads:—"The Co. shall pay to the City annually from Sep. 1, 1892, upon the total amount of its gross earnings arising from the whole operation of its railway, either with cars propelled by electricity, or with cars drawn by horses, 4% of its gross earnings up to \$1,000,000; 6% of its gross earnings from \$1,000,000 to \$1,500,000; 8% of its gross earnings from \$1,500,000 to \$2,000,000; 10% of its gross earnings from

\$2,000,000 to \$2,500,000; 12% of its gross earnings from \$2,500,000 to \$3,000,000; 15% of its gross earnings above \$3,000,000."

Since 1892 the City has done all the work of cleaning the tracked streets of snow, the Co. paying \$1,650 per mile of track towards the cost. In 1898-9 the Co.'s payment for this was \$59,730.

Plans for a car shed for the Co. on Upper St. Denis street have been completed. It will be located a little north of the C.P.R. tracks, & will be built of corrugated iron with a steel frame, & will be 250 ft. long & 100 ft. wide. It will provide accommodation for about 72 cars, & is chiefly designed for the storage of winter cars during the summer, & summer cars during the winter.

The Co. is testing a street car recorder, similar in principle to the ticker used in brokers' offices to record the fluctuations of the stock market. By attaching the instrument to any line a record is shown at the Superintendent's office, & it can then be seen how many cars pass a given point in a given time.

Daily press rumors predict that the Co. will absorb the gas & electric companies & run the electric railway, lighting & power business of all as one concern. The Co.'s management denies any knowledge of such a scheme.

The Quebec, Montmorency & Charlevoix Ry. Co. proposes changing the existing steam railway system from Quebec to Cap Tourmente, 30 miles, into an electric system. In addition it proposes to construct a branch line, parallel to the existing line but on top of the cliff & alongside of the public road, between Quebec & Montmorency Falls, 7 miles. With this object in view the Co. has let a contract for the necessary cars, which will be somewhat similar to the ordinary steam railway cars, 55 ft. long & equipped with four 50 h.p. motors & air brakes manufactured by the Westinghouse Co. & speeded for 50 miles an hour. The additional generating plant required at the Montmorency Falls power house will consist of one 600 K.W.A.C.D.C. generator with converter, switchboard, etc., complete, & at the sub-station which it is proposed to build at St. Anne de Beaupre, one 200 K.W. rotary transformer with converter, switch board, etc., complete. This will all be supplied by the Westinghouse Co. The Q., M. & C. Co. already operates the street railway in Quebec City by electricity.

Since the foregoing was written we have been informed that the changes between Quebec & Cap Tourmente will undoubtedly be made this year, & if there are no undue obstructions in purchasing the right of way for the branch line between Quebec and Montmorency Falls, it also will be built this year. All the work will be done by the Co. itself, & the contracts for rails, ties, timber & other material have been placed. The cars will be somewhat similar to those used by the Detroit & Ypsilanti Ry., & each will have four 50-h.p. Westinghouse motors, with controllers, air brakes, etc. The generators, rotary transformers, etc., for generating the current at the power house at Montmorency Falls, & at St. Anne de Beaupre, will also be of Westinghouse manufacture. The water wheel, which will be required to operate the generators under 195 ft. head, has not yet been ordered.

Sherbrooke St.—Nothing further has transpired respecting the negotiations for the sale of this road to F. Thompson & Co., & it would appear that the deal has not been closed. No change has been made in the directorate or management, & it is said no extensions will be made this year. (Mar., pg. 92.)

Consolidation of Electric Lines.

The New York Evening Post of Mar. 21 says: "The purchase & control of the Buffalo & Niagara Falls electric railways, in the interest of the International Traction Co. was

consummated to-day, the syndicate paying cash for the purchases, & the sellers accepting the offered terms. The International Co. was recently formed by a number of capitalists interested in the development of electric energy from Niagara Falls, which is already in considerable use in Buffalo & adjacent territory. The International Co. will be used to combine these companies, & will purchase power from the Niagara Falls Power Co. The terms on which minority stockholders may come in will be announced later in the week.

A Buffalo despatch of Mar. 22 says: "It is stated that, as a result of the Pan-American project, extensive improvements will be made this summer on the shore property on the Canadian side of the river, including the construction of an electric railway from Fort Erie to Point Albino, 13 miles, & from Fort Erie to Chippewa, from which point an electric road runs along the Canadian side of the river to Queenston, affording one of the most glorious views that can be secured of Niagara Falls, the whirlpool & other portions of the beautiful, historic river. The road will have a branch line to Fort Erie race track, & the company will run a system of trolley cars from Fort Erie to the grove at Erie beach, extending east to the upper part of the beach, which is extensively occupied during the summer months by well-known Buffalonians, who have their country homes on the south shore. The trolleys may be extended as far as Crescent Beach. New York capitalists are back of the enterprise, & will expend, it is said, about \$265,000 in equipping the trolley lines. It is also said that the road to Fort Erie Beach will be in operation by July 1. The Chippewa branch will not be completed until some time in the autumn."

We gave full particulars of the companies going into the amalgamation in our Mar. issue, pg. 89. Speaking of the matter the Street Railway Review says: "All the railways of the city of Buffalo, the lines connecting that city with Niagara Falls & Lockport, the electric road of Niagara Falls & the Niagara Falls Park & River Ry. on the Canadian side, all fall into the possession of a syndicate capitalized at \$25,000,000. While there is yet much believed to be back of the plans of the syndicate, it is known that it is proposed to retire all the stock bought with an issue of new bonds, while there will also be a new issue of preferred & common stock. The companies consolidated are the Buffalo Ry. Co., the Buffalo Traction Co., the Buffalo, Bellevue & Lancaster Ry. Co., the Buffalo & Niagara Falls Electric Ry. Co., the Buffalo & Lockport Ry. Co., the Niagara Falls & Suspension Bridge Ry. Co., & the Niagara Falls Park & River Ry. Co. But in addition to these electric roads the new syndicate becomes the possessor of two of the great Niagara bridges, one of them the fine new upper steel arch, owned by the Niagara Falls & Clifton Suspension Bridge Co., & the other the sus-

pension bridge now in course of erection across the Niagara gorge at Lewiston. These bridges will afford crossings for a belt line about the gorge, while the possession of the Buffalo & Niagara Falls road gives trackage facilities from Buffalo to the falls on the New York side. As the Niagara Falls Park & River Ry. controls a franchise for a line from Fort Erie to Chippewa on the Canadian side, it will be seen that the new company has all the rights for a belt line skirting the Niagara River on both shores from Lake Erie to Lake Ontario. Much of the stock of the several railway companies was bought below par, but it is understood the stockholders of the Buffalo Ry. Co. will receive par. Also that about 75c. was paid for stock of the Buffalo & Niagara Falls road, about 50c. for the Buffalo & Lockport road, & about 40c. for the Niagara Falls Park & River Railway. The amounts involved in the purchase of the various interests are about as follows: Buffalo Ry. \$15,215,000, Buffalo Traction \$3,858,000, Buffalo & Niagara Falls Ry. \$2,250,000, Buffalo & Lockport Ry. \$1,500,000, N.F. Park & River Ry. \$1,000,000, Lewiston & Queenston Heights Bridge \$285,000, a total of \$24,108,000. This is exclusive of the property of Niagara & Clifton Bridge Co., the bonds of which Co. are out to the extent of about \$400,000, & are understood to be equally divided between Canadian and U.S. capitalists."

The International Traction Co. has filed articles with the Secretary of State at Trenton, N.J., amending its original articles of incorporation, increasing the capital stock from \$85,000 to \$15,000,000. B. W. Franklin, President, & Chas. McVeagh, Secretary, signed the papers. The office of the Co. is 60 Grand street, Jersey City, N.J. L. J. Hayden & W. H. Blain are also connected with the International Traction Co. J. P. Morgan & Co., New York, are reported in charge of financing the consolidation of the various street railways. A new mortgage will be made for \$30,000,000, of which \$11,000,000 at 4% will be issued, & the remainder devoted to improvements & retiring prior liens. Reports are that J. P. Morgan & Co. recently issued a call to subscribers for the payment of 80% of their subscriptions.—Railroad Gazette.

On Mar. 31 we were officially informed in regard to the organization of the International Traction Co. that while more than 2/3 of the stock of each of the constituent companies had been secured & delivered, no steps had been taken towards consolidation further than the reorganization of the boards of directors & officers of each of the constituent companies on the U.S. side. Similar steps will

be taken soon in regard to the Niagara Falls Park & River Ry. & the Canadian companies owning the two bridges involved.

Announcement is made that the Buffalo Traction Co., under date of Dec. 1, 1898, gave a mortgage for \$2,345,000 to the Metropolitan Trust Co., New York as trustee, to secure 5% gold bonds. The deed was signed by President E. G. S. Miller. Secretary Bissell is reported as stating that the mortgage is in the interest of the Traction Co., & has nothing to do with the consolidation now taking place in Buffalo.—Railroad Gazette.

Liability to a Motorman.

At the recent spring assizes in Toronto, W. Downs sued the Toronto Ry. Co. for \$5,000 for injuries received while performing his duties as a motorman on one of the Co.'s cars last year on Carlton Street, when it was being repaired. He was driving a motor car, & seeing a piece of asphalt on the tracks slowed up. It was less than the size of obstacles which it was common to run cars over, but he was aware that the rear motor box hung lower than it should. He thought the car would run over the obstacle, as it was not more than 2 ins. in height, but kept the brake tight & his hand to the regulator in order to stop at a moment's notice. The front motor box crossed the asphalt, but the rear one caught it & jolted the car so that he was thrown forward, & had to liberate the brake, which came round & hit him with such force as to render him unconscious. He was obliged to stay in bed for 6 weeks, & had not been able to do any work since. Medical evidence was produced to show that he was permanently disabled, & was at the time of the trial suffering from lung trouble as a result. Downs claimed that the Co. was to blame for having permitted a car to be run with a motor box so near the track, & that if the car had not been defective the accident would not have happened. He swore he had notified the repairer at the stables of the defect 2 days before the accident happened. When Downs became strong enough to get out after the accident, he signed a deed of release to the Co., & received \$65. Because of this the judge took the case from the jury & non-suited the plaintiff, giving him power to go to the Divisional Court in order to determine whether the deed of release does not fall under the Workingman's Compensation Act, sec. 10. The Act stipulates that an employee cannot be compelled to sign a deed of release; if he is, the deed cannot be held valid. With the deed

New Map of the Dominion of Canada,

existing the judge explained that it was useless to go on taking evidence, unless it was shown that it was invalid. J. Bicknell appeared for the Co.

Mixed-up Information.

"NIAGARA FALLS, ONT.—Many improvements & repairs, according to report, are to be made on the Niagara Falls Park & River Ry. as soon as the frost is out of the ground. W. Phillips, Manager, has submitted a report of inspection of the road to the Government, & the improvements are ordered on his suggestion."

The foregoing, from the Railroad Gazette, New York, is altogether incorrect. Mr. Phillips, being Manager of the N.F.P. & R. Ry., would hardly be likely to make an inspection of it for the Government, nor has he made any report on it to the Government. As stated in our issue of Dec., '98, pg. 273, Mr. Phillips was appointed by the Ontario Department of Public Works to inspect the Port Arthur-Fort William electric railway, & suggested certain things as necessary to be done, which the Government has ordered.

The Gorge Road.—Early in Feb. the control of the Niagara Falls & Lewiston R.R. was sold to New York parties, & J. R. Megrue, of New York, was elected President, succeeding J. M. Brinker, of Buffalo, who built the road. After a careful examination of the affairs of the Co., it became evident that the mode of operation must be thoroughly reorganized, & that a considerable expenditure will be needed for repairs & improvements, for which bonds must be issued. The road has done a fair amount of business, carrying over 240,000 passengers during 1898. The expenses of operation & maintenance are large, & the management has not been economical. On the petition of the directors Mr. Megrue has been appointed Receiver for the property, & has opened an office in Erie County Bank Building, Buffalo. Messrs. Mott, Sprague, Brownell & Marcey are counsel for receiver & G. A. Ricker is engineer. The operation of the road was stopped on Feb. 14 owing to the shutting down of the Niagara Falls Hydraulic & Manufacturing Co., which furnish power, & will be resumed in the spring after the road has been thoroughly overhauled & put in first-class condition.—*Electrical World.*

Receiver Megrue has appointed C. W. Taylor, Superintendent; G. Garland, Auditor, & W. L. Marcey, Attorney. No announcement has yet been made as to whether the Gorge Line is to pass into the hands of the International Traction Co., which has recently acquired other lines in the vicinity of Niagara Falls & Buffalo, but that would appear to be its manifest destiny. Large quantities of rock & other debris have fallen on the track this winter, & considerable money will have to be spent on it before traffic is resumed.

The Receiver informs us that the work to be done includes a careful cleaning of the banks, the alignment of the roadbed & the erection of some bridges. He hopes to resume operations about May 1.

The Electrical Trades Directory & Handbook for 1899, published by The Electrician Printing & Publishing Co., London, Eng., price 10s., shows a great advance in the extension of the directorial division of the book, & in the large additions made to the handbook division. The latter additions include very complete & elaborate sheet tables giving technical data & statistics relating to electricity supply for lighting power & traction in all parts of Great Britain, & a sketch map, diagrams, &c., complete this statistical information up to Feb., 1899. The capital expenditure up to Dec. 31, 1898, is given of the principal electricity supply undertakings.

International telegraphs and data relating to the telephone are also included, & it is claimed, & we think with justice, that the book is as perfect & complete as such a work can possibly be made by great care & attention to the details of compilation & arrangement. The great development in electrical industries is shown by the increased bulk of the book, which comprises some 1,500 pages, care having been taken to omit everything that is not of a purely electrical character. The biographical division contains sketches of the careers of over 300 prominent electricians, & more than 60 of these sketches are accompanied by a recent portrait. All divisions of the book are of an international character, rendering the publication of great value to an important & rapidly-extending industry. The chief new features of this edition are an increased bulk of 80 pages, the sheet tables largely extended, a very full directory of directors of electrical companies & electric traction data & statistics.

Birmingham, Eng., Tramway.—At a meeting of the Birmingham City Council Mar. 7 it was decided by a vote of 60 to 1 to take over the street tramway & operate it as a department of the municipal service at the expiry of the lease to the Co., of which Jas. Ross, of Montreal, is President. The lease has but a short time to run, & the plant will at its close be taken over at a valuation G. C. Cunningham, formerly City Engineer of Toronto, is managing the railway for the Co. Since it passed into the hands of the Co. the trolley has been introduced, & it is believed that a fair profit will come to the Co. from that change.

TELEGRAPHS & CABLES.

The Laying of the Atlantic Cable.

By A. E. Morrison of the Anglo-American Telegraph Co., Charlottetown, P.E.I.

As soon as the fact was established that a telegraph could be constructed by the aid of electricity, the attention of discoverers in Europe & America was turned to the invention of some insulating substance by which wires could be enveloped & buried in the earth. It was not deemed practicable to place them in the open air upon poles, from the fear that they would be constantly broken by accident, or from malicious motives, & it was supposed necessary to insulate them from the atmosphere. The first insulating substance used being hemp or cotton saturated with asphaltum tar, a plough was invented for the purpose of opening a trench in the earth for burying the wires, but on account of the expense & the difficulty of obtaining anything like good insulation, the idea of laying them underground was abandoned. Still the fact was apparent to all, that perfect insulation or something approaching it was imperatively demanded for crossing wide rivers. For this purpose copper wire covered with cotton yarn dipped in asphaltum tar, and the whole enclosed in a lead tube was used.

In 1847 a person in New York designed a submarine cable, the covering of which was to be glass, in the form of a ball & socket joint. The object was to get something which would unite both strength & flexibility, & at the same time furnish the best insulation. I do not know whether he ever had any of this cable manufactured, but he endeavored to get some of the telegraph people to engage in the manufacture of it. It is probable, however, that nothing was done about it, for about this time gutta percha was discovered & was applied to submarine telegraphing at once, it proving to be one of the best insulators known. In 1849 an experimental gutta-percha covered wire, 2 miles in length, was submerged in the sea off Folkestone Harbor, one end being connected with a wire leading to London, &

the other with a telegraph instrument on board a steamship, communication was maintained during the day, until the wire was collected in. The success of this experiment led to an attempt to lay a submarine cable across the English Channel between Dover & Calais in 1850. It consisted of a copper wire covered with gutta percha, unprotected by any outside coating. But after a few hours the communication thus established was abruptly stopped. A fisherman took up part of the cable on his trawl, & cut off a piece which he bore in triumph to Boulogne, where he exhibited it as a specimen of rare seaweed with its centre filled with gold! This accident caused the attention of scientific men to be directed to the discovery of some mode of preserving submarine cables from similar casualties, & a suggestion was made that the wire insulated with gutta percha should form a core or centre to a wire rope, so as to give protection to it during the process of laying down as well as to guard it from vessels' anchors & the rocks. In 1851 another cable was laid between Dover & Calais, & this idea adopted. It contained 4 conducting wires, and was protected by an armor of 10 iron wires. In 1852 the first ocean cable in America was laid across the Straits of Northumberland, between Prince Edward Island & New Brunswick. In 1853 cables were laid between Dover & Ostend, a distance of 80 miles, between Oxford Ness & Holland, 120 miles, & between Scotland & the north of Ireland.

In 1852 a project was started in Newfoundland to run a line of steamers between Galway & St. John's in connection with a telegraph to Cape Ray, where a submarine cable was to be laid to Cape Breton, & thence by means of another cable to Prince Edward Island & New Brunswick. A company was formed by F. N. Gisborne, who started to construct a road from St. John's to Cape Ray, over a barren tract of 400 miles, & succeeded in laying the Prince Edward Island cable on Nov. 21, 1852, but he was not successful in a similar attempt to connect Newfoundland with Cape Breton. Meanwhile, the company became involved in pecuniary difficulties, & Mr. Gisborne, in 1854, proceeded to New York, where he hoped to find money to enable him to carry out the scheme. He met C. W. Field & laid his plan before him. Mr. Field listened with attention, & thought over the project. To lay these cables so as to connect Newfoundland with New Brunswick & to run a line of steamers from St. John's to Galway would shorten the time of receiving news in New York from Europe 4 or 5 days, but if a cable could be laid in these seas the great Atlantic might be spanned. Mr. Field terminated his reflections that night by an eminently practical measure. Ere he retired to rest, he sat down and wrote two letters, one to Lieut. Maury, author of the Physical Geography of the Sea, as to the practicability of laying the cable, & to Professor Morse in regard to the scientific possibilities. Replies from both gentlemen reassured him, & he proceeded to form a company. He put down the names of 10 of the principal capitalists in New York, & proceeded to unfold to each in succession his project. He called meetings of these gentlemen at his house, & after full discussion & consideration, it was resolved to form the New York, Newfoundland & London Telegraph Co.

Mr. Field entered into an agreement with Mr. Gisborne for the purchase of the Newfoundland Co., & proceeded to Newfoundland to obtain from the Legislature an act of incorporation. After some little delay the Legislature with only one adverse vote granted valuable privileges to the Co., giving a monopoly of telegraph rights in Newfoundland for 50 years. The Co. also obtained from the Prince Edward Island Legislature the exclusive rights of landing cables on the coast.

ASSESSMENT SYSTEM.

THE BEST FRATERNAL BENEFIT SOCIETY IN THE WORLD

THE SPLENDID RECORD OF THE I. O. F.

Cost to Join the I.O.F.

(For \$1,000 Mortuary Benefit.)

Initiation fee (minimum).....	\$1 00
Certificate fee.....	1 00
Registration fee.....	1 00
Medical Examination fee.....	1 50
Total minimum cost.....	\$4 50

(For more than \$1,000 Mort. Benefit.)

" " \$4,000 " " "	9 00
" " \$5,000 " " "	10 00
Sick benefits, when required, cost extra.	

Benefits given by the I.O.F.

- 1.—**Social and Fraternal Privileges** of the Court Room.
- 2.—**Free Medical Attendance** by Court Physician where not dispensed with by Court by-law; also trained nurses in certain cases.
- 3.—**A Sick Benefit** of \$3 to \$5 per week, subject to provisions of the Constitution and Laws of the Order; optional, and when taken cost's extra.
- 4.—**A Total and Permanent Disability Benefit** of one-half of face value of policy, with exemption from further payment of premiums or Court Dues.
- 5.—**An Old Age Benefit** consisting of exemption from payment of premiums and Court dues after age 70.
- 6.—**An Old Age Disability Benefit** of one-tenth of face value of policy payable yearly for ten years, on being declared totally and permanently disabled by infirmities of age after the seventieth birthday.
- 7.—**An Old Age Pension** payable during disability, which may be taken as a substitute for the Old Age Disability Benefit.
- 8.—**A Burial Benefit** of \$100 at death of a Pensioner.
- 9.—**A Funeral Benefit** of \$50 at death of a member enrolled in Sick and Funeral Benefit Department.
- 10.—**The Mortuary Benefit** of \$500, \$1,000, \$2,000, \$3,000 \$4,000 or \$5,000.

The first step in the great enterprise was the connection of St. John's, Nfld., with the telegraph lines already in operation in Canada & the U.S., & Mr. Field was despatched to England to order the necessary work to be done. He entered into a contract for a cable to be laid across the Gulf of St. Lawrence from Newfoundland to Cape Breton. The first attempt to lay it in Aug., 1855, was not successful. Another contract was made, which was executed in the following year.

Then came the ocean work, & Mr. Field was authorized to go to Europe and ask the financial aid of Great Britain. He secured the services of J. Brett, Sir Chas. Bright & others, & organized another company. The lobbying necessary in Washington nearly discouraged him, for he encountered far more opposition there than in England, but the measure passed the Senate by one vote, & after a risky passage in the House received the President's signature Mar. 3, 1857. The next question which arose for consideration was how the cable was to be laid. The Great Eastern, then known as the Leviathan, alone could embrace it within her gigantic hold, but then the vast fabric had never been tried, she might prove a failure. It was determined that the responsibility should be divided & the burden entrusted to two vessels of smaller dimensions. The British Government placed at the disposal of the Co. the battle ship Agamemnon, & the U.S. the steam frigate Niagara. It was decided that the Niagara should land the shore end at Valentia, & pay it out till her cargo was exhausted midway; the Agamemnon was to take up the tail & carry it on to Newfoundland. On Aug. 5, 1857, the shore end was secured in the little cove selected for the purpose in Valentia. On the 7th the squadron sailed, & the Niagara commenced paying out the cable very slowly, but on the 11th the cable broke & was lost in 2,000 fathoms of water 280 miles from Valentia. This loss proved fatal to the first attempt to lay the Atlantic Cable.

Nothing daunted by the failure Mr. Field started off at once for England & urged the immediate renewal of the enterprise, but it was resolved to postpone it to the following year. All was ready for the expedition before the time indicated & the directors & the public looked with confidence to the result. Instead of landing a shore end at Valentia it was decided that the ships should proceed together to a point midway between Valentia & Newfoundland, there splice the cable & turn their bows east & west & proceed to their destination. On June 10, 1858, the Agamemnon & Niagara left Plymouth, but scarcely had they set out when a violent storm separated the vessels. The overloaded Agamemnon, strained & cracking in the gale, heeled over & threatened every moment to sink in the trough of the sea; she escaped & finally rode safely to the rendezvous in the midst of the ocean. The Niagara passed through the dreadful ordeal with less danger & difficulty. The ships met on June 25 in the midst of the Atlantic. The next morning they spliced the cable; it however became foul of the scraper on the Niagara & broke. A second splice was immediately made, & the vessels started, but after going a short distance the cable broke. On June 28, the third splice was effected. The Agamemnon had paid out 146 miles of cable, when the upper deck coil became exhausted, speed was slackened in order to shift the cable to the lower deck when suddenly it snapped. The vessels returned to Ireland for new supply of cable, & on July 29th the ships once more met in mid ocean, spliced the cable, & sailed away from each other, the Agamemnon for Valentia & the Niagara for Newfoundland. But they were never separated, the busy cable still bound them together, & at length on Aug. 7, a thrill of wonder shot through the two continents when it was told they were bound to-

gether by electric thought, & the first message that came over the cable gave glory to the Most High & promised peace on earth & good will to men. The first public message that came over the cable was from the Queen to the President of the United States, his reply & others followed, but the cable broke down on September 3.

For seven years the cable slept almost forgotten, they were years full of political convulsions & fatal disorder. The reign of peace on earth & good will to men which had been so fondly promised by the first message over the cable seemed to have faded for ever, for the United States was threatened with destruction. In the tumult of the rebellion the cable & its projectors sank into neglect, & when at length the war was ended few believed that the proposed plan would ever be renewed. The public had lost its interest in the Atlantic cable, & looked with coldness upon a project that had once aroused its highest enthusiasm. Amidst such disappointments Mr. Field & his courageous associates in 1865 had renewed their telegraph company, provided a new cable, & gallantly prepared to brave the dangers of the sea. The cable was more perfect than any former one, & its greatly increased weight & size would have made the question of stowage a very embarrassing one, had it not been for the existence of the Great Eastern, there being no two ordinary ships afloat that would be capable of containing in a form convenient for paying out the great bulk presented by 2,300 miles of cable of such dimensions. On July 15 the Great Eastern left the Nore carrying 7,000 tons of cable. On the 17th she came up with the str. Caroline, which had the shore end on board, & took her in tow. Next day the tow rope broke, & the Caroline ran for Valentia Harbor, & the Great Eastern passed inside the Skelleg, stood in close to Valentia light, & sent a boat ashore. After firing a gun to announce her arrival, she steamed for Berehaven in Bantry Bay, & anchored inside the Island on July 19. Here she lay preparing for her great errand, whilst the Caroline was laying the shore end of the cable in Foilhumorum Bay, in Valentia. On July 22 the bight of the cable was shipped from the Caroline to the Great Eastern. The next morning was exceedingly fine, & the Great Eastern proceeded at the rate of 6 knots an hour. When 84 miles of cable had been paid out, a fault occurred, & the whole staff was aroused. The engines on deck were got ready to work the picking up apparatus at the bows. The operation of picking up proceeded all day & all night. After 10½ miles of cable had been hauled in, to the joy of all on board the fault was discovered. After a detention of some 12 hours the paying-out machinery was again put in action, & the cable glided out rapidly astern. About half a mile of cable had been paid out, when suddenly all communication between the shore & the ship ceased. The news spread from end to end of the ship, which again lay in restless quiet on the waters. Again the wearisome energy of the picking-up apparatus was to be called into play, but the index light reappeared on its path in the testing room, & the weary watchers were gladdened by the light of the beacon of hope once more. As the sea was calm & the cable ran out so beautifully, the speed of the ship was increased, & it looked as if there was really no limit to the velocity at which the process could be conducted under favorable circumstances. Every eye in the ship was watching the turning of a single wheel, every ear was listening for a single sound. The Great Eastern was now near a fatal spot. Somewhere below her lay the bones of two Atlantic cables, & as Mr. Field was watching on the tank the sound of the wheel suddenly stopped, the cable broke, & was lost in the deepest part of the ocean. The still shining Atlantic had swallowed up the expiring cable

1,062 miles from Valentia, 606 miles from Newfoundland. There around lay the placid Atlantic smiling in the sun, & not a dimple to show where lay so many hopes buried. After brief consideration it was resolved to make an attempt to recover the cable. The grapnels were brought up to the bows & secured to wire rope & thrown over, & whistled through the sea a prey to fortune. All life died out in the ship, & no noise was heard except the dull grating of the wire rope over the wheels at the bows. After 2,500 fathoms, or nearly three miles of rope had been paid out, the grapnel reached the bed of the Atlantic, & set to the task of finding & holding the cable. All through the night's darkness the grapnel groped along the bottom, as the wind drifted the Great Eastern. At 6 a.m. she swayed gradually, & turned her head towards the wind. It began to be seen that there was some agency working to alter the course of the ship. The machinery was set to work to pull up 2,500 fathoms of rope, the operation was of course exceedingly tedious. As the shackle & swivel of the eleventh length of rope, which would have made a mile on board were passing the machinery, the head of the swivel pin was wrung off by the strain, & 1,400 fathoms of line, with grapnel attached, rushed to the bottom of the Atlantic, carrying with it the bight of the cable. The Great Eastern hung about the spot 9 days, & made 3 more unsuccessful attempts to recover the cable. The wind & sea were rising, as if anxious to hurry her from the scene. She struggled against the helm for a moment, as though she yearned to pursue her course to the west, then bowed her head to the angry sea, in admission of defeat, & moved slowly to meet the rising sun. Early on the morning of Aug. 17 the Great Eastern came in sight of land, & soon steamed into Crookhaven to communicate with the telegraph station at that solitary spot. Ere noon the news of the safety of the ship relieved many an anxious thought, silenced many a tongue & pen, & dissipated many a gloomy apprehension. Her return was a subject of national rejoicing, every newspaper in the kingdom contained articles on the topic. The energy, skill & resolution displayed in the attempt to recover the cable was admitted & praised on all sides.

By this time Mr. Field's health & fortune were so impaired that his friends supposed he would abandon the project. But after a short period of recuperation he put forth a paper, in which he asserted that although the expedition had been unsuccessful in carrying the cable across the ocean, it was by no means a failure. He organized the Anglo-American Telegraph Co., with a capital of \$3,000,000, & raised the money in less than 3 months. The new cable was completed & put on board the Great Eastern in June, 1866. The shore end was successfully laid, & made fast to the cable on the steamer, & she left Valentia on July 15. For 14 days the cable was paid out over the enormous drums, & on July 27, 1866, the enormous hull of the Leviathan was discerned by watchers on the Newfoundland coast, & with guns firing & bunting floating, with a trail of wire 2,000 miles behind her, the Great Eastern steamed majestically into the harbor of Heart's Content, & dropped her anchor in front of the telegraph office, all safe, all well. A salute of 21 guns from the Great Eastern, H.M.S. Terrible, Niger & Lilly, with hearty cheers from the ships & people on shore, announced the complete success of the first object of the expedition, that of laying & landing the new cable of 1866.

The squadron having done its work with the cable of 1866, left Newfoundland a few days afterward, & proceeded to search for the lost cable of 1865, & on Sept. 1 it was raised by the Great Eastern, spliced to the remaining portion, & the whole landed in Newfoundland, & thus terminated, so far as cable laying & picking up were concerned, the practical work

of the Atlantic Telegraph Expedition of 1866, & the success of the great enterprise was doubly assured.

The Northern Telegraph Route.

Now that all eyes are turned to the gold fields of Cariboo, Omineca, Cassiar, Klondike, & the Atlin district, perhaps a few particulars relative to the past, present & prospective future telegraph facilities in the far North might be of interest. There is probably no better known or more respected citizen of British Columbia than J. B. Leighton, he being foremost among the pioneers, having settled in the interior of B. C. in the early sixties, was one of the first operators in the country, & is at present known to all as the Superintendent of the B. C. Express Co., which operates a line of stages & transacts a general express business from Ashcroft to Barkerville, 285 miles, with connections to all the principal mining camps between the two above towns. He was an operator along this road in early days (between the sixties & seventies). In conversation with Mr. Leighton, recently, the facts which form the foundation of this article were obtained.

In the spring of 1865 the Collins Overland Telegraph Co., virtually the Western Union Telegraph Co., which already had a direct wire from San Francisco to Portland, Seattle & Swinawish, with cable connection via San Juan Island to Victoria, Vancouver Island, realizing the importance of more speedy communication with Europe, commenced operations at Swinawish to construct an overland line to the mother country across Behring Strait and Russian territory, the route being via Matsqui, thence northeast over the Cariboo trunk road to Quesnelle. It crossed the Fraser River at this point & followed up the right bank for 80 miles, where it left the river, & striking out in a northwesterly direction over a wide, well cleared right of way, reached Telegraph Creek 400 miles north of Quesnelle. While operations were being pushed with all possible speed overland with a force of about 500 workmen, extensive operations were also being carried on by water. Large ocean-

going steamers were speeding north loaded with telegraph construction material for Fort Wrangel, where it was transferred to river steamers, & rushed forward with all possible speed up the Stikine River to Telegraph Creek points.

Now that the telegraph trail & Telegraph Creek are famous as the shortest & most direct overland route to the Yukon district via Ashcroft it may be well to mention that the trail was made, & it & the creek derived their name from these construction operations. During the seasons of 1865 & '66 the Co. constructed & had under successful operation 900 miles of first-class wire offices located at Seattle, Swinawish, Matsqui, New Westminster, Chilliwack, Hope, Yale, Lytton, Cache Creek, Clinton, Eighty-Three-Mile House, One-Hundred-&-Fifty-Mile House, Soda Creek, Quesnelle & Fort Stager.

Before operations commenced in 1867, word was received of C. W. Field's successful laying of the Atlantic cable, which put a stop to further operations, the Co. having expended \$3,500,000, which was a dead loss. The cable proving a success the Co. made a present of the entire line & property on hand to the B.C. Government. B.C. was at that time a Crown colony. The telegraph was worked as far north as Quesnelle, under the name of the B.C. Telegraph Service. The 400 miles constructed north of Quesnelle were abandoned, & remains up in places until this day.

R. Borland, of the One-Hundred-&-Fifty-Mile House, who was over the telegraph trail last summer, informs me that miles of wire is now upon cottonwood trees 60, 80 & 100 ft. in height at different places along the route, it having gotten in this condition through trees falling across the wire & tearing it down from the insulators & dropping it across the limbs of small cottonwood trees, which in the course of over 30 years had attained their present height & carried the wire up with them. In several places where the wire has been twisted around trees huge knots have grown & the wire is imbedded in the trees. The Indians have also constructed swings for their children, & hammocks for themselves with considerable of the fallen wire in their camping grounds.

It is an interesting spectacle to pass over the telegraph trail & note the acts of nature on the deserted wire. Mr. Boland tried in numerous places to shove poles over, as a test of how they were lasting in the ground after so many years. He was unable to accomplish it. This gives the reader some idea of the kind of material the Collins Co. used in constructing this wire.

At different points along Telegraph Creek & the Stikine River there are huge piles of material & thousands of coils of wire corded up, all a dead loss. In 1868 private parties constructed a line, as a speculation, between Quesnelle & Barkerville, 60 miles, at a cost of \$10,000, which, from a financial point of view, notwithstanding the fact that the receipts of the Barkerville office were \$1,500 a month, proved to be a failure. Those who complain of exorbitant telegraph rates of the present day should have lived in Barkerville between 1868 & 1870. The rate in those days for a 10-word message between Barkerville & Victoria, about 600 miles, was \$3.50, & 20c. for each additional word. The rate of to-day is 50c. & 4c. In 1870, the first Cariboo boom having terminated, & the throb of life having died out, capital withdrawn, etc., the telegraph no longer a paying proposition, the entire line was abandoned.

F. H. Lamb, now Superintendent of the Western Union service at San Francisco, was, in the sixties & seventies, Superintendent of that Company, Portland to Victoria, & District Superintendent of the B.C. Telegraph Service until its abandonment.

At this time, 2 operators, formerly employees of the line—Mr. Yates, of Soda Creek, & Mr. Hughes, of Clinton—undertook to keep that portion between their respective towns, 131 miles, open, & maintain it at their own expense. They were fairly successful for about a year, when Mr. Yates died & Mr. Hughes removed to a ranch near Kamloops, where he still resides. This, once more, left the line a dead letter.

In 1871, when all public works were taken over by the Dominion Government, the Cariboo telegraph line once more received attention, & was opened up for operation through

ADVERTISING

ON THE

CANADIAN PACIFIC RAILWAY.

The exclusive privilege of advertising in the Stations, Ticket Agencies and Hotels of the CANADIAN PACIFIC RAILWAY, and on that Company's buildings, premises, telegraph poles and fences, is controlled by THE ACTON BURROWS COMPANY.

The franchise embraces the whole of the C. P. R. System, including all branches and leased lines, comprising 7,178 miles of railway, 690 stations, and a number of ticket agencies and hotels.

Advertising on the C. P. R. is like every department of that Company's service, modern, up-to-date and reliable.

FOR RATES AND FURTHER PARTICULARS APPLY TO

The Acton Burrows Company,

29 Melinda St., Toronto, Canada

BRANCH OFFICE :

197 Lombard Street, Winnipeg—S. A. Erskine, Resident Agent.

to Barkerville, & has since been continuously & successfully under the operation of the Department of Public Works of Canada, under the name of the Dominion Government Telegraph Service.

R. B. McMicking was the district superintendent to succeed Mr. Lamb, & held the position until 1879, when he resigned to accept the management of the telephone service of Victoria. He was succeeded by J. Wilson, who still holds the office.

In 1895 a branch wire was run from Ashcroft to Lillooet, 62 miles. Ashcroft is at present the relaying point for business between the outside world & points on the Barkerville & Lillooet lines. The Barkerville line is destined to become an important factor as the connecting link between the north & the rest of the world.

C. A. Sherr is joint manager at Ashcroft for the C.P.R. Telegraph & Dominion Government lines. The telegraph agents for the Government are: C. A. Labourdais, 111-Mile House; R. M. Cornell, 150-Mile House; S. T. Hall, Soda Creek; C. H. Smith (who claims the honor of having sent the first message over the Lillooet extension), Quesnelle; Mrs. A. Bowron, Barkerville; J. Stone, who is somewhat of a pioneer himself; in 1870 he was a marine officer in the British navy; opened an office at the English garrison on San Juan Island on Western Union wires. He also closed this office in 1872, as the ownership of the island was settled, and the British forces evacuated. It will be recalled that the U. S. & Great Britain jointly occupied San Juan Island for a considerable length of time, when, in 1872, it was decided one or the other must pull out. The matter was left to arbitration, the Emperor of Germany being chosen as arbitrator & awarded the island to the U.S. Mr. P. Cummings represents the Government at Pavilion, on the Lillooet extension, & Mr. S. A. McFarlane holds forth at Lillooet.—R. M. Cornell, in the Railroad Telegrapher.

The Late Captain Trott.

Capt. S. Trott, for many years commander of the cable str. Minia, died at the Royal Palm Hotel, Miami, Fla., Mar. 11. He went to Florida to recuperate his failing health about 4 weeks ago, accompanied by Dr. Dorman & Chief Steward Satterley of the Minia & a nurse. The remains have been taken to England for interment.

Capt. Trott was born in Sussex, Eng., in 1832. He started a seafaring life at the age of 17 as an apprentice, & at the age of 27 was in command. He began his career in the cable service by taking charge of the str. Faraday in 1874, & continued as her commander until 1880. During this time he laid the French & Direct Cables, & made some remarkable repairs, which showed him to be a man of rare ability. He astonished the world when in midwinter of 1876 he sailed from London to Nova Scotia, repaired the Direct Cable in a gale of wind & a blinding snow storm, & was back in the Thames again inside of 35 days. As he steamed up the river on his return the marine population who had seen him go to sea were amazed & cheered him lustily. He repeated this great feat the same year in 31 days. Seven unsuccessful attempts having been made to repair the Atlantic cables in winter, at large expense to cable companies, it was considered absolutely impossible to pick up cables during the months from Oct. to May. Capt. Trott, however, proved such an idea was altogether erroneous. His achievements naturally attracted the attention of that able manager & director, H. Weaver, of the Anglo-American Co., & the command of the Minia being vacant in 1880, Capt. Trott's services were secured by him.

During the summer of 1888 he sailed from England to repair the Anglo-American Co.'s

French cable in mid-Atlantic, on the same day the str. Scotia sailed to repair the Direct Cable, also in mid-ocean. Much interest was felt at the time as to which ship would finish first, but Capt. Trott completed his work 3 weeks before the Scotia & according to the published reports the costs of these Direct Co.'s repairs made by the Scotia footed up to \$290,000, while the similar ones effected for the Anglo-American Co. by the Minia did not exceed \$110,000. This is to be taken as the criterion of the rapidity with which the king of cable repairers did his work.

It has been said of him that he knew the bottom of the Atlantic & the position of every cable as well as a cabman knows the streets of a city, & that on one occasion being aware that a steamer, in laying one of the Atlantic cables, having been compelled during a storm to abandon a length of cable worth many thousand dollars, & happening to be in the locality one day several years afterwards, it occurred to him that it would be but little trouble to recover it. He therefore stopped his ship, picked up the cable, & resumed his journey within an hour. On arriving in port he presented the cable to the company to which it belonged, declining to accept any remuneration for his work.

Capt. Trott was a man of positive views & a strict disciplinarian, but just, kind hearted, thoroughly honorable, & esteemed by all who enjoyed the privilege of his acquaintance.—Telegraph Age.

The Yukon Telegraph Line.

H. Bostock, M.P. for Yale & Cariboo, believes the Dominion Government should amplify the project looking to the establishment of telegraphic communication between the Yukon district & the outside world by constructing a line from Dawson to Quesnelle, to connect with the Government telegraph between that point & Ashcroft on the C.P.R. It is now proposed to string a wire from Bennett to Dawson. Connection will be established at Bennett with the line of the White Pass & Yukon Ry., terminating at Skagway, & communication will be had between these points & Vancouver & Victoria by steamer. Mr. Bostock holds that this is a mistake, & he will endeavor to impress the Government with the wisdom of his view. The distance between Quesnelle & Dawson is about 1,200 miles, & the cost of stringing a wire between these points would in round numbers be \$600,000, adopting C. R. Hosmer's estimate of \$500 a mile. Though the amount is large, it is the opinion of Mr. Bostock that the expenditure would be justified. The local advantages would be great, because the settlements along the way, such as Hazelton & Telegraph Creek, would be brought into communication with the outside world & their development advanced. The delay involved in the steamship voyage from Skagway to Vancouver or Victoria would be avoided, an all-Canadian line of communication would be established, & Dawson City would be brought into immediate communication with Ottawa, which would greatly facilitate the good government of the district. It is likely that an enormous investment of British capital will be made in the Yukon, & the interests of the country, as well as of investors, would be materially advanced by establishing a direct connection between Dawson & London.—Globe.

Wireless Telegraphy.

A London cable says: "Great interest was excited at a recent meeting of the Society of Electrical Engineers, by Signor Marconi's wireless telegraphy demonstration. He sent a message from one end of the hall to the other by means of a small apparatus. He said that

operations which had been in progress daily for months between the South Foreland & the lightship at the East Goodwins showed that on no single occasion had communication been interrupted, despite all sorts of bad weather. Messages between the Queen at Osborne & the Prince of Wales on the royal yacht had been transmitted, in some instances, for a distance of 8 miles overland. Intervening hills, although 300 feet higher than the vertical wire at Osborne, offered no obstacle. During his lecture Signor Marconi received a note conveying the permission of the French Government to establish his system between Folkestone & Boulogne. Signor Marconi states that vertical wires, rising to a height of 114 ft., will be sufficient to insure communication between the two coasts."

A later cablegram says: "Marconi's wireless telegraphy will shortly be applied to all the lightships around the British coasts. Its value was strikingly demonstrated in this connection by the sailing ship Elbe, which went ashore on Goodwin Sands in a fog. On the East Goodwin lightship is a wireless telegraph system. The crew telegraphed to the South Foreland lighthouse by this means, & as the lighthouse is in telegraphic communication with coast towns, tugs & lifeboats were soon proceeding to the ship's assistance. This is the first occasion since the installation of the system that its practical use has been put to the test, & it proved highly successful."

Commercial Cable Company.

The annual meeting of the Commercial Cable Co. was held Mar. 6. The balance sheet & accounts for 1898 were approved. The net traffic earnings from cables & land lines (Postal Telegraph Co.) amounted to \$2,024,500.95, an increase of \$107,409.83. Out of the balance to the credit of revenue account there has been set aside \$450,000 to the various reserves. The reserve fund now amounts to \$3,037,103.43. The following directors were elected:—J. W. Mackay, J. G. Bennett, G. G. Howland, W. Jay, G. G. Ward, Sir W. Van Horne, E. C. Platt, Lord Strathcona & Mount Royal, C. R. Hosmer, T. Skinner, C. H. Mackay, A. B. Chandler, D. Clarke. The directors met & elected the following officers:—J. W. Mackay, President; G. G. Ward, Vice-President & General Manager; C. R. Hosmer, Vice-President; A. B. Chandler, Vice-President; C. H. Mackay, Vice-President; E. C. Platt, Treasurer; A. Beck, Secretary; J. O. Stevens, Assistant Secretary.

Telegraphing & Telephoning at Once.

On the matter of simultaneous telegraphing & telephoning on a single wire on the Great Northern Ry., U.S.A., C. P. Adams, Superintendent of Telegraph of the system, recently wrote to this effect: "Owing to other matters I find I shall be compelled to postpone all further experiments in this line for the present. The wire on which we are now working the simultaneous telegraph and telephone apparatus is known as the St. Paul & Great Falls circuit, being a no. 9 iron wire, & the distance between the two points, Carman, Minn., and Larimore, N. D., is 53 miles. There are also on the same line of poles 6 to 8 wires the entire distance, but notwithstanding this the telephone has in every way given satisfactory results. There are, of course, many detailed matters which will have to be remedied in order to make it entirely practical for everyday use, particularly in the matter of signaling, which no doubt can be done in a number of ways. The method used by me in this experiment is that laid down by Van Rysselberghe for a single wire circuit, in which I am using graduating coils, condensers, etc."—Telegraph Age.

The telegraph companies will hereafter count "percent" as 1 word instead of 2 as formerly.

The Dominion Public Works Department is calling for tenders for the construction of a telegraph line from Spence's Bridge to Nicola, & from Kamloops to Nicola Lake.

The Commercial Telegraph Construction Syndicate, Ltd., was registered in London, Eng., Feb. 20th, with a capital of £5,000, to adopt an agreement with Hon. J. Roche, M.P., & to subscribe for or otherwise acquire & hold any shares, stock, or securities in the Northern Commercial Telegraph Co. incorporated in Canada.

The Michigan Supreme Court has decided that the Western Union Telegraph Co. is responsible for failure to promptly transmit & deliver a telephoned telegraph message, through which failure the complainant suffered a loss. The complainant had telephoned to the operator to send a message to Chicago directing a step in a wheat deal. The message was not delivered. The company claimed that the operator had no authority to receive the message by telephone, & that in so doing he was acting as an agent for the complainant; but the court held that the use of a convenience like the telephone should not be entirely at the risk of the patron.

Telephone Matters.

J. J. McGaffigan, St. John, N.B.; W. Ferguson, J. Young & P. Arseneau, Tracadie, & J. P. Sherry, Memramcook, are applying for incorporation as The Tracadie Telephone Co., Ltd., with a capital of \$2,000.

C. J. Milligan, St. John, N.B., gives notice of application to the Dominion Parliament for an Act authorizing the construction & operation of telephone lines from or near River du Loup, Que., to Sackville, N.B., & branch lines from the main line to other points in Quebec & New Brunswick.

The Columbia Telephone Co. is said to have let a contract for the construction of a telephone line from Trail to Camp McKinney, B.C. The line will run from Trail to the International Boundary line, where it will connect with the Spokane & B.C. Telephone Co.'s line to about 1½ miles below Cascade, where it will commence again, running through Cascade, Grand Forks, Niagara, Phoenix, Greenwood, Anaconda, Boundary Falls, Midway & Rock Creek to Camp McKinney, taking in all the mining camps of the Boundary Creek district. Exchanges are to be established at Trail, Rossland, Cascade, Grand Forks, Greenwood, and Republic. The line will be completed by July 1.

A London cablegram says an engineer named Germain, in the French Ministry of Posts & Telegraphs, has an invention which he claims will revolutionize the telephone. By an ingenious adaptation of the telephone wire the microphone is made to develop & intensify the vibration received so that it is unnecessary to place the receiver to the ear or stand with the mouth close to the transmitter, & conversation is easily carried on between two persons, both of whom may be several yards distant from the instrument. It is said the invention has been several times officially tested & pronounced a complete success. It is familiarly known as "high speaker."

The first experimental telephone line erected in Canada was from the residence of Prof. G. Bell's father in Brantford, Ont., to the residence of Rev. T. Henderson, in the same city. The first working any distance was one set up in 1875 by Prof. G. Bell between Paris & Brantford. The battery was in Toronto, some 60 or 70 miles from Paris. The first commercial telephone was established in

Hamilton in 1877.—Johnson's First Things in Canada.

The Financial Secretary of the British Treasury recently asked for a credit of \$10,000,000 to enable the Post Office Department to establish a telephone system in London. In explaining the proposal the Globe says that under the new law the Post Office Department will own & operate all municipal telephone systems by 1911, & by that time it will, as an act of fairness, buy up all the stock of the National Telephone Co. London is to have special treatment at once under the Swiss system of charging for telephones. In Switzerland the State owns the telephones. The subscriber pays \$20 for the 1st year, \$13.75 for the 2nd, & afterwards \$7.75 a year, & at the rate of \$1 per 100 calls. This charge according to calls is borne by the person calling, not by the one who is called. As the British Postmaster-General makes the subscription £3 a year, probably the calls will be less than a cent each. The Swiss system is designed with special regard for the convenience of the general public. Messages can be sent by non-subscribers from call offices & delivered to non-subscribers by express messengers; but persons who wish to save the journey to a call office to despatch a telephone message, or to receive it direct instead of by a written message, can secure a private telephone in their house or office on payment of the stipulated annual sum. For all messages actually sent, subscribers & the public alike pay the same fixed toll, smaller if the message is a local one, larger if it travels over the trunk wire; the price for all distances over trunk wires being the same. Each message sent by a subscriber is numbered, & an account against him is kept. It follows, under this system, that every telephone can be used by the general public instead of being confined to the actual subscriber, with the result that in many towns every shop or place of business which has a telephone becomes in practice a public call office. The National Telephone Co. owns 96,000 miles of wire, & the value placed on its entire plant is £3,000,000. That is the Government's estimate of the sum required to put the public telephone system in healthy operation. The work of absorption will be accomplished through the municipalities. In London the area to be treated as a unit covers 634 square miles, & possesses 19,000 public wires, one-fifth of the wires in the country. After its plant is brought under the control of the Postal Department the same course will be followed in other large cities.

Among the Express Companies.

T. E. Foard has been appointed Route Agent of the Western Ex. Co., with temporary headquarters at Sault Ste. Marie, Mich., vice L. L. Stenseth assigned to other duties.

The road houses built by the Arctic Ex. Co. between White Horse & Dawson City, Yukon, have, it is said, been transferred to the Bennett Lake & Klondike Navigation Co.

General Manager Stout has issued the rules & regulations of the Dominion & Western Express Co.'s in very complete form. In the revision many important changes & additions have been made.

Money orders issued by the Western Ex. Co. will be cashed by the Southern Ex. Co. at Havana, Cuba, & such orders may be sold at domestic rates. Money orders issued by the Southern Ex. Co. at Havana, Cuba, will be redeemed by agents of the Western Ex. Co. & accounted for in the usual way.

The express business on the Spokane Falls & Northern Ry. system has been taken over by the Great Northern Ex. Co., & the Northern Pacific Ex. Co. has withdrawn & closed all its offices. Among the offices opened by

the Great Northern Ex. Co. are the following in British Columbia:—Kaslo, Nelson, Rossland, Sheep Creek, Waneta, Ymir. The N.P. Ex. Co. had 17 offices, so there are 11 less under the new arrangement.

Money orders are now issued at all offices of the Dominion Ex. Co., payable in Havana, Cuba, at rates charged for orders payable in the U.S., & such orders will be redeemed by Southern Ex. Co. Money orders issued by the Southern Ex. Co. at Havana, Cuba, will be redeemed by agents of the Dominion Co., & accounted for in the usual manner. Adams Ex. Co.'s Money Orders may be cashed by agents of the Dominion Co., & orders may be sold payable at all offices of the Adams Ex. Co.

The Alaska Pacific Ex. Co. gives notice of the following marine insurance rates:—From Dawson City, Yukon, or other intermediate express offices, to offices in British Columbia or the U.S., on Puget Sound, on gold dust, money, bullion, coin, etc., 1%. Between offices on Puget Sound & ports touched by steamers operated by the Co. in Alaska, not north of Lynn Canal (Juneau, Sitka, Skagway, Wrangle, etc.) on treasure, gold dust, bullion, coin, currency, etc., ¼ of 1%. Between last-named points, on merchandise, ½ of 1%.

The Dominion Express Co. gives notice that notes, drafts, accounts or bills, in any amount, may be received for collection, to be returned at the special rate, between all points on this Co.'s lines & the lines of Canadian Ex. Co. in Canada and the U.S. To & from offices of Western, Great Northern & Northern Pacific express companies a limit of \$400 will apply. To & from offices of American, National, Pacific, Southern, U.S. & Wells, Fargo & Co.'s express companies the limit in amount of such collections is \$100, except to exclusive offices of Wells, Fargo & Co. located west of Salt Lake, Utah, Albuquerque & Deeming, New Mexico, charge classification card rates, these special rates do not apply.

The Alaska Pacific Ex. Co. has arranged to send a dog team into Dawson City, Yukon, in charge of special messengers, leaving Skagway about April 1, & is prepared to accept in transfer from connecting companies at Seattle, & carry through to destination any light express matter. The rates for this special trip will be:—On merchandise, \$5 a pound; minimum charge \$2.50. On money, specie, etc., 5%; minimum charge \$2.50. On franked letters (when enclosed in the Co.'s regular franked envelopes) \$1 each. All charges must be prepaid by the shipper. A deposit will be required from irresponsible parties to cover duty. Duty will be assessed at the frontier port, & will average about 35%.

Effective Mar. 15, Dominion & Western express companies will be regarded as one company in the interchange of business, & charges will be made as follows:—On business between common points where the through service can be performed by any one company, one graduate on the through or aggregate rate, lowest through rate by any transfer point to govern. On business between exclusive offices, from a common point to an exclusive office, from an exclusive office to a common point & between common points where two or more other companies make the competing line, charge a graduate for Dominion & another graduate for Western Ex. Co., but not exceeding the through charge of such competing companies. The Dominion Ex. Co. will not advance the charges of an intermediate company on business that can be transferred by the originating company direct to the Western Ex. or to Dominion Ex. Co. The Dominion Ex. Co. will not advance charges on business for its exclusive offices, originating at common points with Western Ex. Co.

Crow's Nest Pass Railway Location & Construction.

By J. L. Davidson.

The construction of the Crow's Nest Ry. was notable, from an engineering standpoint, for at least two features, the celerity of construction & the skill shown in overcoming serious obstacles. To build a road through the Rocky Mountains, with a maximum grade of 1%, seems well-nigh impossible, yet this has not been exceeded, & the railway is the best which crosses the mountains.

Location was commenced in April, 1897, at Lethbridge, Alberta, & since preliminary lines had been run in 1892-3, there was a good idea as to the general route to be followed. Starting from Lethbridge, it ran to Fort MacLeod, thence to Pincher Creek, following the middle fork of Old Man River to the summit of the Rocky Mountains, down Michel Creek to Elk River, thence to Kootenay River, to Cranbrook & to Moyie Lake, along Moyie Lake, down Moyie River to Goat River Summit, down Goat River to Kootenay Flats, round the west side of Kootenay Lake to the Narrows, & down the Narrows to Nelson; in all, a distance of 290 miles.

Location was carried on from 5 or 6 different bases; westward from Lethbridge, starting in April; westward from Elk River to Kootenay River, starting in May; westward from Wardner to Moyie Lake in May; down Moyie River from the foot of Moyie Lake to Goat River Summit, starting in July; from the summit westward to Kootenay Flats in Nov., & from Kootenay Flats round the lake to Nelson in April, 1898. All the location proper was finished in March, 1898, although a good deal of re-location was going on during construction.

On leaving Lethbridge it is about a ½ mile to St. Mary's River, where there is about 3 miles of trestle-work. A fly-line was run down along the side hill to the flats, so that the steam pile-drivers could be working below, as well as above. Three tracks were run along the course of the road, 1 outside of the trestle-work, & 2 inside. The steam pile-driver, driving the outside sloping piles, came first, followed by the one driving the upright piles. The 1st pile-driver was on 2 flat cars, 1 on each track, & was shifted from side to side as the piles were driven. With the upright piles the driving was done at the rear end of the cars, as the piles were driven in between the tracks. In the meantime, material was brought along on the track outside, a steam timber derrick putting it in place for the pile-driver. Pile-drivers were at work up above from the east end of the bridge. In this way the trestle was constructed in remarkably quick time. Temporary work was constructed under the span by means of decks, the decks being brought

along already made up. One deck was laid on top of another till the necessary height was reached; the span was then placed in position, & the temporary work taken away.

The line crosses the valley, swings around a 10° curve on the trestle, & follows along the coulees. Very heavy cuts are encountered here; one, after the slopes being taken out, was 120,000 cubic yards. A trestle, 900 ft. long, is next, with a 200 ft. span. Heavy cuts again intervene, & 6-mile coulee bridge is reached. Piles were driven to a height of 40 ft., & then decks of 15 ft. were strung across on the temporary work, & pulled up into position. A cable was stretched across

JOHN FOY,
Manager Niagara Navigation Company.

the coulee, block & pulley were attached to the cable, & the bents placed in position one by one. It was impossible to locate around the hogs backs that jutted out from the side hill, so that it was necessary to have trestles & heavy cuts.

Eight-mile coulee trestle is next reached; this is 600 ft. long & 110 ft. high. The piles were driven to a height of 50 ft. There is a 15-ft. deck & bents up to grade here. After passing through a very heavy cut, a trestle 900 ft. long on a 3° curve was constructed in the same manner as the one above mentioned. Heavy cuts & fills with a few small trestles were encountered till 16-mile coulee trestle

was reached. This is 800 ft. long & 133 ft. high, with 200 ft. span. The temporary work consisted of 3 decks for the span, 35 ft. each, the bents being 15 ft. apart.

The line now comes out on the rolling prairie, & no difficulty is encountered to MacLeod, 37 miles. The road then follows up the Old Man River, & crosses Pincher Creek, 22 miles distant, with a trestle 1,200 ft. long & 122 ft. high, with a span 250 ft. long. It then follows the south side of Old Man River, with a rising grade, till the south fork of Old Man River is crossed. This bridge is 840 ft. long, & 135 ft. high, 2 spans of 150 ft. each, piles 30 ft. & decks of 15 ft. bents; temporary work for spans, 15 ft. bents 15 ft. apart for 70 ft. in height, then 30 ft. deck to span. The road then winds in and out along the south bank of the Old Man River, & the foot-hills of the Rockies are soon reached. Heavy rock cuts are encountered now. A trestle was erected on a 4° curve over a dam, but the whole side hill, 1,200 ft. across, started to move toward the river; the trestle had to be abandoned, a lower grade taken, & a fill was made instead of trestling. It was necessary to keep ballasting this, as the grade kept sinking. The cause of this, from all appearances, is that there is loose material embedded in the hollow, the sides & bottom of which are solid rock.

The entrance of the pass is made at 92 miles. In the mountain division trestling & culverts are of the greatest importance, as they are used in very great numbers. The trestles consist of single deck trestles up to 40 ft.; on soft material piles are used & on hard ground mud sills are used. The standard trestles run up to 110 ft., with diagonal bracing on all over 2 decks. The culverts employed are box, pile & open; box culverts are the most used culverts in a mountainous country, & on this road are used in great numbers. Where there is a fill in a drain a culvert was put in, unless the water could be drained along the side of the dump. If there is a small stream the size is generally 3 x 3 ft. Box culverts vary in size from 2-4 ft. in width, & from 2-5 ft. high. Sometimes it was necessary to put in a double box culvert; these are generally 4 x 4 ft. Some of these on this road are over 100 ft. long. Open culverts are generally pile culverts, & are from 6-14 ft. in width. Mud sills used on hard ground. Open culverts are used up to a height of 5 ft. for spans of 12-14 ft. Eight stringers are used.

The line follows up and crosses the Old Man River with a single span. In 3 places the course of the river was changed, as a much better location was to be had by this change. There is a steady rise in the grade, heavy cuts & fills are now the order. Crow's Nest Lake is next reached at 100 miles from Lethbridge. Very heavy rock cuts are encountered along this lake, with grade still going up. The divide or summit of the

Winnipeg.

NEXT ANNUAL MEETING at Winnipeg, Oct. 13, 1899.

Canadian Marine Engineers' Association.

HONORARY PRESIDENT, O. P. St. John, Toronto;
PRES., H. Parker, Toronto; 1st VICE-PRES., A. J. Wood-
ward, Toronto; 2nd VICE-PRES., D. F. Campbell, To-
ronto.

COUNCIL, T. W. Good, W. Harwood, R. Binch, To-
ronto; P. J. Carr, Port Dalhousie; J. E. Kane, King-
ston.

TREASURER, H. Brownley, Toronto; SECRETARY, S.
A. Mills, Toronto; GUARD, H. Bowler, Toronto; AUDI-
TORS, D. L. Foley, Toronto; E. J. O'Dell, Owen Sound,

Rockies is reached at a distance of 105 miles,
which is passed at an elevation of 4,434 ft. Summit
Lake is next reached, only a few hundred feet from
Crow's Nest Lake, but the latter is drained to the east
by the Old Man River, & Summit Lake is drained to the
westward by Michel Creek.

By the contract with the Government 100
miles were to be finished by January 1st, 1898.
They were finished Dec. 13, 1897. There being
no wagon road west of Crow's Nest Lake, it was
necessary for the Co. to have one. It was started in
July, 1897, from Crow's Nest Lake, & from Kuskano-
ok in Sept., these met on Moyie Lake in Nov. Over
200 miles of wagon road were built in 4 months.
The location being nearly all complete to Kootenay
Flats, contractors were put in all along the line from
Crow's Nest Lake to Kuskanook by Jan. 1, 1898. Store-
houses were built on an average of 25 miles apart in
the mountain divisions. Supplies were rushed in from
MacLeod and from Nelson to Kuskanook, & in the
centre from Jennings, Mont., by Kootenay River to
Wardner. Mail service was established along the line,
and by Feb. between 6,000 & 7,000 men were employed
on the line.

On leaving the summit the grade begins to
fall steadily, heavy rock cuts and fills are very
numerous here, at $4\frac{1}{2}$ miles from the summit the
line enters the loop. A long narrow hill juts out
from the side hill, which is between the main fork
and south fork of Michel Creek. A tunnel was
located here, which was to have been 1,100 ft. long,
but this had to be abandoned. The construction of
the tunnel was first started at the east end, & about
40 ft. had been taken out when the whole side hill
began to cave in, and the casing of the tunnel
began to sink; this will finally be made an open
cut. Location was then made down the north side
of Michel Creek, but this was impossible unless a
greater grade be used. The location was then started
at the eastern end of the tunnel, down along the
side hill, heavy gumbo cuts & fills & sharp curves of
 10° & 12° being mostly used till the nose of the hill
is reached, which is about $1\frac{1}{2}$ miles from the
abandoned tunnel. The line turns on a 20° curve
around the nose of the hill, coming out of a 40 ft.
gumbo cut on to a trestle 55 ft. high, which is also
a part of the curve; special permission had to be
given here for the 20° curve, as no greater than
 12° is allowed. The reason the trestle was erected
here was that the dump could not be made owing to
the steep side hill, & the material would slide down
the side hill to the dump below.

On rounding this curve the line follows up
the east side of the south fork of the Michel Creek
for 3 miles; sharp curves & heavy cuts & fills are
numerous. At the end of the loop the line turns
on a 10° curve, crosses the south fork of the Michel
Creek, & follows down the west bank of the creek;
sharp curves & heavy gumbo cuts are very numerous
here. The grade is still dropping steadily. The
south fork is again crossed, & the line follows down
the east bank of the creek, & comes out of the loop
at the bottom of the hill it went in on, some 350 ft.
below. The track laying machine had great difficulty
here in laying the rails, as the soft gumbo dumps
kept sinking, & the machine was derailed every
few hundred feet. The line follows down the main
creek to Elk River. The main Michel Creek is
crossed with a single span 150 ft. long. The line
follows down Elk River to Coal Creek (140 miles
from Lethbridge). Here is situated Fernie, which is
a divisional point, a branch 4 miles long has been
built up Coal Creek to the coal mines. The grade
of the latter runs as high as 3%.

Coal Creek is crossed with 160 ft. span, the
line follows down the east side of Elk River for
17 miles, & crosses at a distance of 157 miles.
The first location line that was run kept along
the east side hill of the river, &

crossed 3 miles below the present crossing; this
location necessitated 2 tunnels, 1 on each side of
the crossing, & after crossing the line kept 4-6
miles south of the present line. On crossing the
river a 78,000 cubic ft. gravel cut is the first
heavy work encountered, & a 945 ft. trestle on a
 4° curve. Heavy rock and earth cuts are met
with, & heavy fills. Rock Creek is crossed with
a high trestle, & Sand Creek with 100 ft. span.
Heavy earth cuts & fills are encountered every
few hundred feet. Kootenay River is next reached;
the line follows along the east bank for 13 miles;
heavy earth & rock cuts with 2 trestles, one 110 ft.
standard, & 70 ft. trestles, till Kootenay River
crossing is reached. This bridge consists of 4
spans & a 180 ft. steel arch swing. Before the
rails reached this bridge piles were driven, &
temporary bents put in place; the stringers were
run across, & all was in readiness for steel swing.
The steel swing was brought along on the
construction train, & put up in 11 days. The
1st train crossed the Kootenay bridge July 29,
1898.

From Wardner west to Kuskanook the
dump was all completed but 12 miles on Aug.
15, 1898, a distance of 112 miles. Kootenay
River crossing is one of the lowest points on the
line, having an elevation of 2,400 ft. On the west
side of the crossing there are heavy rock cuts &
fills. Wardner is reached, which is 188 miles
from Lethbridge. The line follows up the west
bank of the Kootenay River for 6 miles, with a
rising grade. The work to the Isidor Canyon is
alternately light & heavy. The work in the canyon
is very heavy. Rock cuts & heavy fills; there are
also a large number of sharp curves. The grade is
still rising till the summit of the canyon is
reached, here heavy rock cuts are again en-
countered, with heavy fills. The grade begins to
drop till Cranbrook is reached; this is the next
divisional point, a distance of 210 miles.

From here there is a branch located to the
North Star Mine; this branch runs north, &
crosses the St. Mary's River at the St. Eugene
Indian Mission, which is 5 miles north from
Fort Steele, & then runs in a north-westerly
direction to the North Star hill. This will tap
the west part of the Fort Steele mining district.
From Cranbrook to Moyie is down grade, & the
work heavy. Palmer's Bar Creek is crossed with
trestle on a 4° curve. Moyie River is crossed with
a single span. Heavy rock & earth cuts are now
encountered till Moyie Lake is reached; this lake
is 10 miles long, & the narrows between is 1 mile
long. The grade along this lake is level at 3,000
ft. A tunnel 650 ft. long in solid rock on the
East Lake was the heaviest piece of work. Two
tracks were laid with a switch at the outer end.
Horse cars side dumping were used to draw the
blasted rock out. Work was started from both
ends, so that the construction was done in
remarkably quick time. The rock cuts are very
heavy along this lake, very little of which was
needed for fills. The grade is only 14 ft. above
the level of the lake at low water, & 6 ft. at high
water.

The line now follows down the Moyie River
for about 22 miles. A great deal of piling was
done on this section, as there were numerous
marshy meadows. Irishman's Creek is crossed
with a single span. The work is not very heavy
till about 5 miles from Goat River Summit,
where the grade begins to rise. Very heavy cuts
& fills are encountered; the line follows along
the north side hill, & swings around in a north-
westerly direction, leaves the valley of the Moyie
& follows up Summit Creek to Summit Meadow,
the elevation of which is 2,860 ft. The line follows
down the centre of the meadow, & it was necessary
to pile the greater part of this. The line now
follows Kid Creek, the grade begins to fall, &
work becomes very heavy, & sharp crosses have
to be used in great numbers. The line keeps to
the west side of Kid Creek. A mile

ref. to locomotive locomotive magazine June 1899

SCENES ON THE WHITE PASS AND YUKON RAILWAY.

ref. to locomotive locomotive magazine June 6. '99

& a half from the summit the line enters the loop on Carrol Creek, & winds up along the south side hill for $\frac{3}{4}$ of a mile. Very heavy rock cuts & fills are encountered. The line then crosses Carrol Creek on a 12° 30' curve, the angle of the curve being 228° 110 ft. Standard trestle is used here with a 150-ft. span. The cuts on both sides of the crossing are very heavy: 70,000 cubic yards of rock on the south side, 55,000 on north side. The line follows down the north side of Carrol Creek, & swings around on a 12° curve, & follows the valley of Kid Creek once more. Heavy cuts & fills are encountered. Kid Creek runs into Goat River, & the line follows down the west side hill of Goat River. The heavy work continues, & Goat River Canyon is reached. Very heavy cuts are met with; two especially heavy ones, one on each side of the crossing, 62,000 & 53,000. The river is crossed with a single span 200 ft. long, at a height of 165 ft. above the river bed. The walls of the canyon are solid rock, and nearly perpendicular.

The approaches of the bridge were all in readiness for the span, & as soon as the rails arrived at the bridge, work commenced at once on the span, it being brought along on the construction train. The span was completed in eleven days.

The line now follows down the east side of the valley, & passes on the right of Duck Lake. Duck Creek is crossed with a trestle & 70-ft. span. The work along the lake is heavy, rock cuts being the main feature. Another branch of Duck Creek is crossed with a span, & the work is heavy till the Kootenay River is again reached, after its wanderings in Montana and Idaho. The river comes out on what is known as Kootenay Flats, & is divided into 3 branches. To cross this flat $4\frac{1}{4}$ miles of trestlework were necessary, with 3 bridges, with 3, 2 & 4 spans respectively, &

1 steel arch swing bridge of 200-ft. span. Temporary bents were driven, & the piles for the abutments; then stringers were strung across. These bents on the trestlework appeared to be much higher than they need be; this is on account of the height to which the water rises; at high water Kootenay Lake rises 38 ft.

The work ceases at the end of this trestle, but the charter and contract extends to Nelson, the Co. having 2 years' time from Oct., 1898, to build this in. The work around the west side of Kootenay Lake & the Narrows is the heaviest work on the line, being solid rock, & will cost on an average \$35,000 a mile. The distance is 53 miles. There is a transfer slip, which is used to transfer the cars from the line to the boats; this is very long, owing to the great height to which the water rises on Kootenay Lake. Barges are used to carry the cars across the lake; these are towed by the steamer. The cost of the road was heavy. The first 100 miles cost, on an average, about \$14,000, the second 100 about \$13,000, & the third 100 about \$19,000 a mile.

The foregoing paper was read by Mr. Davidson before the Engineering Society of the School of Practical Science, Toronto, by the kind permission of the officers of which it is here produced.

Surveys, Construction, Betterment, &c.

The Atlantic & Lake Superior Ry.'s large bridge at Bonaventure has collapsed, & traffic is suspended.

No information is forthcoming as to what, if any, construction work will be done this year.

Brandon & Southwestern.—It is said the promoters recently made application to the Manitoba Government for the usual Provincial aid of \$1,750 a mile for this line, between

Brandon & the International boundary. It is possible a grant may be given for a portion of the distance, probably that lying south of the Northern Pacific's Souris River branch, but it is hardly likely that the whole line will be bonused, as the feeling seems to be that there is no pressing necessity for the northern portion of the line. The promoters are reported to have stated that the Dominion Government has promised \$3,200 a mile, subject to the ratification of Parliament this session. It is not known who are behind the figurehead promoters, but the general impression is that they are backed by the Great Northern (U.S.A.) which has a branch to Bottineau, N.D., within about 12 miles of the International Boundary, & near to the southern point to which the B. & S. W. is projected. (Jan., pg. 11.)

Canada Atlantic.—The trestle work at Arnprior is to be filled up to track level.

Canadian Northern.—It is expected that the portion of this line from Cowan, the end of last year's construction, to the Saskatchewan River, will be put under contract almost at once, & that that distance will be completed this year. (April, pg. 115.)

Central Ontario.—At the recent session of the Ontario Legislature this Co. was granted a cash subsidy of \$3,000 a mile for 21 miles, to assist it in extending from Ormsby, 5 miles from its northern terminus at Coe Hill. Whether the extension will be gone on with this year depends on the action of the Dominion Parliament as to granting a Dominion subsidy. If this be given, we are informed the Co. will immediately start to extend from Ormsby via Bancroft to either Barry's Bay or Whitney, on the Canada Atlantic Ry. The distance from Ormsby to Barry's Bay would be about 60 miles, & to Whitney about 75. Bancroft is about 20 miles from Ormsby, & it is not likely work would be carried beyond there this year.

The Northey Gas or Gasoline Engine.

In Connection with Pumping Machinery for Tank Duty.

Railway Officials will find the Northey Engine to be a marked improvement over steam or other forms of power for this duty. It is simple of construction, and easily managed, necessitating only the turn of a fly-wheel to start, while it can be going at full speed in a few seconds and be shut down on the instant. Needs no engineer to look after it, the station hands can do all that is required, while it will run for hours at a time with little or no attention. The Engine is compactly built and of the best materials; it uses either gas or gasoline for fuel, and its safety and economy with either have proved it to be the most satisfactory power in the market.

We will cheerfully send Booklet and every information upon request.

The Northey Mfg. Co., Limited, ¹⁰³²KING ST. SUBWAY, Toronto, Ont.

J. D. Evans, Trenton, Ont., is the Co.'s Engineer, & will have charge of the work. G. Collins is General Superintendent & Secretary of the Co. (Feb., pg. 39.)

Central of New Brunswick.—It is reported this line, which now extends from the I.C. R. at Norton, to Chipman, 45 miles, will be extended to Fredericton this summer, that a preliminary survey has been made, & that the final survey will be started at once. When this road is finished it is said it will materially assist in opening up of coal mines.

Coast Ry. of Nova Scotia.—Grading was resumed on this work in April, & is being pushed forward with all the men available. Townsend & Co., contractors, have advertised, asking for 500 men & 150 teams. A small force of Italians has arrived from Boston. With this exception all men employed are likely to be local. The balance of the

port, with the hope of opening to Shelburne before the end of the season.

The Provincial Engineer, in reporting on this Co.'s work, says the contract with the Government was made in Sep., 1896, & provided that 90 miles be in operation by Oct. 1, 1898, by which time only 31 miles, from Yarmouth to East Pubnico, were actually completed, 20 miles from East Pubnico to Barrington being under construction, & the 39 miles from Barrington to Lockeport having been surveyed & timber cleared off. He continues: "Early in the season 2 parties were in the field engaged on preliminary surveys between Shelburne & Halifax, & continued to survey during the summer. Further than a look over the plan & profile, which was afforded me in the Co.'s office at Yarmouth, the result has not been submitted. From what I could then observe & from my knowledge

tion in the Co.'s office in Halifax. The Government survey establishes a route without an objectionable feature, whilst the Co.'s survey shows a line that is below the standard of any railway in this Province respecting grades, although excessive in the cost of construction." (April, pg. 155.)

The Dominion Eastern Ry. Co. contracted in May, 1898, with the Government of Nova Scotia for the construction of a line from the Nova Scotia Steel Co.'s railway at or near Sunny Brae, to run via Melrose, Country Harbor Cross Roads & Country Harbor, to or near Guysborough, distance throughout not to exceed 76 miles. Work was to commence before July 17, 1898, & to be continuously & vigorously prosecuted; the first section of 30 miles was to be in operation before Dec., 1898, & the whole in operation by July 1, 1901, & in default the Co. to forfeit all claim to the

HYDRAULIC FILLING ON THE CANADIAN PACIFIC RAILWAY.

This is a view of the Mountain Creek Trestle, near the summit of the Selkirk Mountains, showing the sluice box fastened on the side of the trestle. A very complete description of this work appeared in our Dec., '98, issue, pg. 69.

masonry work of the Pubnico-Barrington section will only take a few weeks to complete & is under way. 2,500 tons of rails have been bought, to be delivered by June 1. A contract has also been given out for the rail fittings, angle-bars, bolts, spikes, etc., for delivery by June 1. Ties sufficient for the Pubnico-Barrington section are on hand at different points along the line of the road in operation, & with a large force of men the track laying can be very quickly completed. The ballast pit near Pubnico has been surveyed & cross-sectioned, & rails are on the site for ballast pit tracks. Townsend & Co. are preparing to sub-let contracts for fences & station buildings; but will perform the balance of their contract without sub-letting.

The management hopes to open the line to Barrington sometime in July, & to push construction work forward to Shelburne & Locke-

port of the route followed, I could see that the information conveyed by the survey, for the first 16 miles westerly from Halifax, created a wrong impression respecting the cost of construction & the cost of the traffic operation over the railway, if constructed. On making known my views to some Halifax gentlemen who have, in the interests of trade & progress, been urging upon the Government the desirability of more vigorous prosecution of the construction of the Coast Ry., means were placed at my disposal to make such surveys as I considered necessary. After a careful examination of the ground, such surveys as were considered advisable were made under the supervision of my Assistant, Mr. McCell, C.E. We are now prepared to show that a much more favorable line can be had between Halifax & St. Margaret's Bay than that represented by the plans now on exhibi-

subsidy. The Co. made a preliminary survey of the line throughout, & submitted a number of plans. The Provincial Engineer reports that no material progress has been made to satisfy the conditions of contract; a few men, 5 or 6, have been doing some work at Sunny Brae, but no satisfactory progress has been made.

Great Northern. Ross, Batty & McRae will sublet the contract for the 88 miles to be built between Shawenegan & Hawkesbury. They will build the substructure of the Hawkesbury bridge themselves.

Great Northern (U.S.A.)—The Railroad Gazette having stated that at a meeting of officials of this Co., held in Vancouver, B.C., recently, maps of the section between Vancouver & New Westminster were gone over, & the question of building a line between the two cities from the south side of the Fraser

River was thoroughly discussed, President Hill writes that there is no truth in the report that the Co. contemplates building a line between the cities named.

A B.C. correspondent writes: "Engineers of the Great Northern are locating a line into the Lardeau & Trout Lake district to tap them. It is said this is a scheme of Mr. Hill to extend the Bedlington & Nelson Ry. up to the east side of Kootenay Lake, to ultimately connect with a line in the Trout Lake district. The C.P.R. does not view this intrusion with favor, & has decided to offset it by losing no time in building into the country itself. Mr. Hill has shown himself so active that the C.P.R. will lose no more time in checkmating him."

Great Northwest Central.—We are advised that Engineer Dancer is out with a party surveying a line east from Rapid City, Man., in the interests of this Co., which, it is said, intends building an extension from Rapid City eastward towards McGregor, Portage la Prairie, or some other point on the main line of the C.P.R. This line if built would occupy the territory between the main line of the C.P.R. & the Manitoba & Northwestern Ry., over which the Northern Pacific has been preparing to build an extension from Portage la Prairie. The G.N.W.C. now starts from the main line of the C.P.R. at Chater, one station east of Brandon, & runs nearly due north to Rapid City, & thence to its terminus at Hamiota. The eastward extension spoken of would give a very direct line from Hamiota eastward, & would considerably shorten the distance to Winnipeg.

Intercolonial.—In answer to a recent question in the House of Commons, as to whether contracts had been entered into for the supply of 5,000 tons of steel rails for the I. C. R., & 1,000 tons for the P. E. I. Ry., the Minister of Railways replied that tenders had been asked & the contract given to F. E. Came, of Montreal, who was the lowest tenderer, at \$19.25 per ton, delivered, but Mr. Came declined to enter into a contract. Subsequently the Government entered into an arrangement with the Illinois Steel Co. & the Cambria Steel Co. to supply 5,000 tons each at \$20 a ton delivered. Neither of these companies were among the original tenderers.

Rhodes, Curry & Co., Amherst, N.S., have secured the contract for building the grain elevator at St. John, N.B. It is said the price is about \$175,000.

The Dominion estimates for 1899-1900 contain the following items. For purpose of comparison the 1898-99 items are also given.

	1899-1900	1898-9.
Original construction.....	\$ 2,000	\$ 2,000
Increased accommodation at		
St. John.....	445,000	250,000
Strengthening iron bridges.....	100,000	50,000
Excavating roof, Morrissey		
Rock Tunnel.....	3,000
Drop pits.....	6,000
Enlarging engine houses.....	15,000

Inverness & Richmond.—No definite announcement has been made as to when construction will be gone on with, but it is understood that financial arrangements to that end are in progress. The Co. has a Dominion subsidy of \$3,200 a mile for the 53 miles from Port Hawkesbury to Port Hood & Broad Cove. The County of Inverness has voted \$1,000 a mile for 100 miles, & the County of Richmond has voted \$1,000 a mile for the 6 or 7 miles which will be within its borders, on condition that the line runs south to Cariboo Cove, and connects with the I.C.R. The Nova Scotia Government has not made any grant, but it has the power to do so to the extent of \$3,200 a mile by Order-in-Council.

Kingston & Pembroke.—A start has been made replacing the wooden bridges over streams with iron structures.

Kootenay Railway & Navigation Co.—We are officially advised that construction on the Bedlington & Nelson Ry., & the Kootenay Valley Ry. is being pushed to completion with all possible haste & that it should be completed by the end of Aug., possibly earlier. (April, pg. 117.)

Manitoba and Northwestern.—Considerable work will be done this season, including the strengthening of bridges, making them permanent by filling in approaches and renewing abutments; also ballasting the line. Large quantities of ties are being floated down the rivers to be accumulated at Minnedosa & Birtle, & distributed from there over the line.

Manitoba & Southeastern.—A contract has been let to Neil Keith for the completion of this line, from La Broquerie, to which point it was built last year, to the International Boundary, some 50 miles. When in Winnipeg recently W. Mackenzie said he hoped to be able to reach Rainy River by fall, but of this he could not speak with positiveness, as there might be difficulties of engineering & other contingencies to contend with that had not yet presented themselves. The line had been located to the river, & the connecting link from the east had also been located for the greater part of the distance, & it was his Co.'s intention to have the line in operation to the head of navigation just as soon as possible.

H. Baxter, C. H. Childs, C. E. Sanford, E. W. Hawley & D. W. Knowlton have been incorporated in Minnesota with a capital of \$1,000,000 as the Minnesota & Manitoba R.R. Co. to build the portion of this line which runs through Minnesota between the International Boundary & Rainy River. (Apl., pg. 117.)

Midland of Nova Scotia.—Contracts have been let for the superstructures of the bridges between Windsor & Truro. There will be a bridge of 5 spans of 220 ft. & a 34-ft. lift draw over the Shubenacadie river, & two spans of 120 ft. & a 34-ft. lift draw over the St. Croix River. There will also be 9 spans, plate & lattice girders, 30 ft. to 100 ft. openings. It is expected track laying will commence in June, & that the line will be opened for traffic this year. (Mar., pg. 72.)

In reporting on this line, Provincial Government Engineer Murphy says the work is being conducted in a very satisfactory manner. Work throughout last season was vigorously prosecuted. There have been no complaints respecting payment for wages or for materials. Evidently, the works have not been carried on with the object of completing short lengths to enable the Co. to draw subvention on 10 mile sections; operations extend throughout, & payments are being promptly made as they proceed. The line is favorably located for heavy freight traffic. It begins & terminates at about the same level, just above the littoral of the Bay of Fundy. Its greatest elevation is on the summit of the water shed dividing the Kennetcook & Five Mile Rivers, & that is only 145 ft. above tide. Of the 57 miles in its extent, 22 will be operated on level rails; there is no heavy gradient anywhere on the line. The curvature is also very favorable. Beginning within the station ground of the Dominion Atlantic Ry. at Windsor, the route follows the St. Croix River, crossing it at 3¼ miles. It follows the Hibert River Valley from the 5th to the 8th mile. It follows the Kennetcook River from the 11th to the 34th mile, and from thence descends the valley of the Five Mile River to its confluence with the Shubenacadie River at the 41st mile, thence along the foot hills bounding the river to near Black Rock; from here it runs through Clifton, following the Salmon River to Truro.

Musquodoboit.—This project, so long advocated & so frequently urged upon the consideration of both the Federal & Nova Scotia Governments, for constructing a line from Dartmouth through the settlements of Waverley, Meagher's Grant, Little River, & Upper & Middle Musquodoboit, has been again re-

vived. The branch line, recently constructed, from Dartmouth to Windsor Junction, follows nearly the same route as that formerly laid down by the promoters for the Musquodoboit Ry. to follow, & thereby contributes to shorten the length & reduce the cost of the present enterprise. In 1898 the N.S. Legislature incorporated the Musquodoboit Ry. Co. to build a line from or near Windsor Jct., on the I.C.R., easterly by the Musquodoboit Valley, 40 miles to near Parker's Corner, or from Dartmouth easterly to Musquodoboit Harbour, thence up the valley of the Musquodoboit to Parker's Corner. The Co. has also power to extend the line to Halifax, Dartmouth, or to other points approved by the Governor-in-Council. The Government agreed to defray the cost of the engineering for a survey, the Co. to pay for such ordinary labor as might be required. The Co. expressed its desire to select the line of route & the intermediate

From the 25th to the 48th mile, the profile shows a rough rugged surface, that would be expensive to construct a line through, & expensive to operate traffic over, owing to heavy gradients. However, considering the greater length of $25\frac{1}{2}$ miles so favorable for construction & operation, with the gradients reduced to our normal standard, the alignment on the whole, taken all in all, should not be condemned or pronounced impracticable. W. Yorston, C.E., was in charge of the survey. After the plans & reports on the survey were submitted, some persons interested suggested a deviation of route to obtain lighter work & easier gradients at one or two points. The request for further examination was complied with, & F. A. Creighton, C.E., was authorized to proceed with any survey for a diversion of the line they wished to make. Improvements in any preliminary survey can always be effected. No engineer can assert that he has absolutely

the survey has not been all that we could wish, yet it serves a good purpose by representing to the promoters the class & character of the line they may expect over the route they have selected, & it gives some data for making a close estimate of the probable cost. Still more, it indicates the necessity for further reconnaissance. It may yet be considered advisable to adopt a more easterly route from Dartmouth to connect with the Valley of the Musquodoboit River, although a longer one, & thus avoid the range of high ground that trends across the route surveyed over. The problem is:—which course is the most advisable, over the hills with steeper gradients yet practical route, or around them with a longer line but one more favorable, to construct & less expensive to operate?"

Newfoundland.—During the past year there has been completed the Placentia branch from Whitbourne, N.F., to Placentia, 27 miles;

THE PRESCOTT ELEVATOR CO.'S ELEVATOR AT PRESCOTT, ONT.

This elevator, built in 1895, is 280 ft. long & 72 wide, with a storage capacity of 1,000 bus. The depth of water at the front is 20 ft., & at the sides, where barges are loaded, 14 ft.

points to be connected along its course; and the survey made last year followed its direction. It commenced at Upper Musquodoboit & proceeded via Little River & Wise's Corner to a point on the Dartmouth Branch of the I.C.R., as near as practicable to Windsor Junction.

Provincial Government Engineer Murphy reports on it as follows:—"For the first $25\frac{1}{2}$ miles, from Upper Musquodoboit to Wise's Corner, a very favorable location is available; the work of construction would be light & the traffic operation could be cheaply conducted. In the next $3\frac{1}{4}$ miles, between the $25\frac{1}{2}$ and the 29th mile, there is an ascent of 274 ft., 1 mile of which would require gradients of from 90 to 100 ft. per mile. This $3\frac{1}{4}$ miles of heavy gradient is a very objectionable feature; but it may be improved by increasing the length. From here to the Junction with the Dartmouth Branch the maximum inclination at any place need not exceed 1.50 per 100, or 79.2 per mile.

laid down the best line of location over a broken, undulating country. One thing is clear in this respect. A summit of 370 ft. above Musquodoboit river has to be approached & crossed in a distance of 6 miles, 270 ft. of which has to be overcome in a distance of $3\frac{1}{2}$ miles. We may obtain easier gradients by winding about the slopes of the hill-sides, which is necessary & desirable in making the ascent, but the summit has to be reached all the same, & it takes the same mechanical power to get over it whether in the long or short way. Still there is the very material difference that we can, with the power at command, carry on traffic with greater ease & with greater economy over moderate inclines than we can over heavier gradients. If the Musquodoboit Ry. is to be a competing line for heavy traffic, the gradients over which the traffic is to be moved should not exceed those of the other lines that may enter into competition with it. Although the result of

the Brigus & Carbonear branch, from Brigus Junction to Carbonear, 38.34 miles, & the Tilton & Carbonear branch, from Whitbourne to Tilton, 15 miles. In addition to these the main line is completed from St. John's east across the island to Port aux Basques, 548 miles. The proprietor is at present building the Burnt Bay branch from Quinette north to Burnt Bay, $9\frac{1}{4}$ miles. He proposes soon to build an extension from Dunsmere to St. John's at the west end terminus, some 9 miles. Of this $6\frac{1}{2}$ miles is to be completed in 1899.—*Railroad Gazette.*

Northern Pacific. For some time past the settlers west of Portage la Prairie, Man., between the main line of the C.P.R. & the M. & N.W.R., have been agitating for the construction of a railway from Portage la Prairie to Rapid City. In our Feb. issue, pg. 35, we gave particulars of 2 notices of application to the Manitoba Legislature to incorporate a company to build from Portage la Prairie

northwesterly & westerly between the lines of the C.P.R. on the south & the Manitoba & Northwestern & the Great Northwest Central on the north, to near Hamiota, thence northerly & northwesterly to or near Birtle, thence northerly to the north boundary of the Province; & a branch running from the main line, in range 18 or 19 west, to Brandon. It is said this application is in the interest of the N.P.R. It is also said that at a recent meeting of the N.P. directors it was decided to build at least a part of these proposed lines this year, for which it is expected that the Province will give a cash bonus of \$1,750 a mile. In addition to building from Portage la Prairie to Hamiota, it is said the N. P. Co. also proposes to build a short branch from Portage la Prairie northerly to Clandeboye Bay, or some other point on Lake Manitoba.

But if a recent report from Winnipeg is well founded there is likely to be a race for possession of the above mentioned territory. It is said the C.P.R. is surveying a line from its main line at McGregor, 22 miles west of Portage la Prairie, to Rapid City. This would make an almost air line between Portage la Prairie & Rapid City & would leave no room for any other line to get business. The impression is gaining ground that the Great Northwest Central will be merged in the C.P.R. system, & if so the projected line from McGregor could connect with it at Rapid City. C.P.R. officials disclaim any connection with the survey referred to, mention of which will be found under the head of the G.N.W. Ry., on page 134.

The N.P. Souris River branch, which was built last year from a point on the Brandon branch, 3 miles from Belmont, is likely to be extended this year to the C.P.R.'s Souris River branch, which it is likely to strike at Hartney or between there & Lauder. This branch will undoubtedly be pushed on further west, though perhaps not this year. (Feb., pg. 40.)

Nova Scotia Southern.—It is said J. J. Taylor, C.E., is about to start a survey for this line from Shelburne via Liverpool to New Germany on the N.S. Central Ry. The Co. was incorporated by the N. S. Legislature in 1888 as the Annapolis & Atlantic Ry. Co., the name being changed to the N.S. Southern in 1894. By the Dominion Subsidy Act of 1892 a subsidy, taking the place of one previously granted, was authorized for 75 miles from Sand Point, Shelburne Harbor, to Annapolis Royal and to a junction with the N.S. Central at or near New Germany, the subsidy limit being \$240,000.

Ontario and Rainy River.—The rock work on the contract for the first 20 miles from Stanley west, on which work has been proceeding all winter, is nearly finished, & the contractor is building camps to open out the whole work remaining on the contract as soon as frost is out of the ground. The pier & abutments for the bridge across the Kaministiqui River are all but completed, & a large quantity of timber & ties has been taken out. No decision has yet been come to as to whether the line will run south or north of Shebandowan, but the survey to determine this is being pushed. West of the height of land 3 parties are locating along the Atikokan & Seine Rivers. Soundings have been made across Rainy Lake to determine the depth & description of bottom, & several crossings of Rainy River in the townships of Worthington & Attwood have been surveyed & sounded to determine where the best crossing is to be had. Further examinations of crossings are being made near the mouth of the river.

At Rat Portage it is rumored that Rainy Lake will be crossed at Squall Point, & that the line will continue through Indian Reserve B. 18, on a line with the northern boundary of the township of McIrvine, thence northerly & westerly, through the townships of Carpenter & Dobie, to the township of Attwood, near Beaver Mills, passing 2½ miles north of Fort Frances. It is also rumored that Rainy River will be crossed, & connection made with the Manitoba & Southeastern extension in Minnesota, near Beaudette River.

The Ontario Legislature has voted the Co. a cash bonus of \$4,000 a mile for the whole line from Stanley to Rainy River, about 280 miles. It also has a Dominion subsidy of \$3,200 a mile for 80 miles, this to be increased to a further subsidy of 50% on so much of the average cost of the mileage subsidized as is in excess of \$15,000 a mile, the whole subsidy not to exceed \$6,400 a mile. It is understood the Co. is now seeking Dominion aid for the whole 280 miles, & that it wants \$6,400 a mile irrespective of the cost of construction. (Mar., pg. 72.)

It is expected contracts for 80 miles, beyond the 20 already under construction, will be let this month, to be completed this year.

Orford Mountain.—The Quebec Legislature has extended the time for the completion of this line from Kingsbury to Richmond until Dec. 31, 1902. The present line, from Eastman to Kingsbury, was built in 1892. On the route of the proposed extension the St. Francis River will have to be bridged at a cost of some

\$75,000. The management is not prepared to make any statement as to when work will be gone on with.

Ottawa & Gatineau Valley.—It is doubtful if the proposed extension from the present terminus at Gracefield, 60 miles from Ottawa, to Maniwaki, 28 miles, will be gone on with this year. (Feb., pg. 40.)

Ottawa & New York.—On Apr. 22 the Chief Engineer advised us that the work of completing the bridge over the north channel of the St. Lawrence, at Cornwall, had not been started.

Work has started on the reconstruction of the south channel bridge which collapsed with such fatal results last fall. A Cornwall correspondent says:—"It is now generally known that the cause of the disaster was that too many chances were taken, & that the nature of the bottom was not fully & thoroughly ascertained before loading it with the tremendous weight involved in a concrete & stone pier & a span of steel. The investigations in the north channel go to show that the action of the current for unnumbered years has scoured the clay thoroughly, & the piers are standing on a solid rockbed. But in the south channel the same thing did not occur, as the current is much slower. When the cribs for holding the concrete were anchored on the site of piers nos. 2 & 3 a diver was sent down, who tried the bottom with a crowbar & maul to an extent that was considered satisfactory, & the sub-structure was begun & ended on that information. Subsequent investigations developed the fact that there was only a thin crust of hard bottom, 18 inches or so, & under it a mass of blue clay, the shifting nature of which caused the collapse of the pier & bridge. It was also found that pier no. 3, although it appeared all right, was in such a condition that it would be unsafe to trust it, & it will have to come down & be rebuilt on a plan dictated by recent experience. The depth of blue clay at the site of the piers is variously estimated at from 20 to 30 ft., & the contractors will have to go down until they get bed-rock, & this they purpose to do by the pneumatic process, which is in brief the sinking of an air-tight chamber, in which the work of excavation is done by men furnished by compressed air. There is about 30 ft. of water in the channel, & the current runs at the rate of about 9 miles an hour. To protect the caissons it is proposed to drive piles above them & make a breakwater. This is a plan that has not yet been tried in the St. Lawrence. The reconstruction of pier no. 2 will first be undertaken, & it is expected it will be com-

Esplanade East, Foot of Sherbourne Street, -:- TORONTO.

pleted in July. The pulling down & rebuilding of pier no. 3 will take until Oct. The shore span will be erected as soon as pier no. 2 is ready, & the other will only be the work of a few weeks. The removing of the debris will be gone on with at once. It is expected the bridge will be open for traffic by the end of the year. (Feb., pg. 40.)

It is said the Co. will erect shops in Ottawa East as soon as litigation over the expropriation of the land is determined. The building will comprise roundhouse, car sheds & general repair shops.

Prince Edward Island Ry.—See under head "Intercolonial Ry.," on pg. 134, respecting rails, etc., for this line.

The Dominion estimates for 1899-1900 provide \$10,000 to shorten main line by removal of curves, against \$15,000 in 1898-9.

The Provincial Government is prepared to enter into an arrangement with the Dominion Government for the building of a bridge for railway & vehicles across the Hillsboro River at Charlottetown. If the Dominion Government will build the bridge the P.E.I. Government will pay \$12,000 annually towards the interest on its cost. The bridge would be a toll bridge, & would serve for the proposed branch of the P. E. I. R. to Murray Harbor. In the House of Commons, May 1, Mr. Martin, M.P., made a strong speech in favor of the construction of this branch. Sir Louis Davies said he was not without hope that the Government would make some proposition on the subject this session, but he was not prepared to promise anything definite. Mr. Macdonald, M.P., advocated the construction of a short branch to Elmira.

Pontiac Pacific Jet.—Work is about to commence on the extension of this line from Aylmer to Hull, Que., about 8 miles. The line, which will run between the Ottawa River & the Hull-Aylmer Electric Ry., will render the P. P. J. independent of the latter & enable it to connect in Hull with the Interprovincial Bridge, now under construction. It is expected to complete the extension by Sep. (Feb., pg. 40.)

Quebec Bridge Co.—We are officially informed that 7 tenders for the erection of this Co.'s bridge, either cantilever or suspension, have been received. The services of Theodore Cooper, consulting engineer, New York City, have been secured for a thorough investigation of all the tenders & designs, which is now well under way, & the Board is waiting for his report before awarding the contract. It is expected work will start at the beginning of summer. The Secretary advises us that the city of Quebec is pledged by a recent statute to a grant of \$500,000 towards the bridge, that a subsidy of 33 1/3% has been promised by the Dominion Government, & that nothing can now defer the execution of the enterprise. The rapid rise in price of metal makes it urgent to proceed at once with the work. (Mar., pg. 73.)

Rutland-Canadian. It is stated that rapid progress is being made on the line which is to connect the Rutland road with the Canada Atlantic Ry., and that the line will be ready for traffic by Dec. 1. (Mar., pg. 73.)

St. John Valley River Ry.—It is said J. E. McIntyre and other New Yorkers have secured the charter for this line, which is projected to run along the south side of the St. John River from Fredericton to Woodstock, N.B., paralleling the C.P.R. line on the opposite side. It has been surveyed, more than half the right of way secured & about 5 miles

graded. The only name so far mentioned except J. E. McIntyre is G. A. Evans, who is trustee for the syndicate. A local paper says: "Much interest centres in the purchase to see in what connection it is to be operated. The line alone would hardly pay, but it may offer a new outlet to St. John for either the I.C.R. or G.T.R. via the Temiscouata road & the continuation of the St. John Valley line from Fredericton to St. John, about 70 miles, through a well-settled country." It is said construction will be started this spring.

Thunder Bay, Nipigon & St. Joe.—Some of our U.S. contemporaries were rather previous in stating that contracts had been let for work on this line, & that the Co. was in the market for equipment. So far the Co. has only been incorporated by the Ontario Legislature, no subsidy has been given it and no work will be done this year at least. (Jan., pg. 13.)

Toronto, Hamilton & Buffalo. Barton Township Council having refused the application of this Co. for permission to build its spur line on Trolley St. to King St., from which point right of way to the Hamilton Blast Furnace would have been purchased, is

MICHIGAN CENTRAL CANTILEVER BRIDGE, NIAGARA.

believed to have blocked the building of the proposed spur. (Apl., pg. 117.)

White Pass & Yukon. The last advices report grading completed 30 miles from Skagway to near Log Cabin, B.C., & track laid for 26 miles. (Mar., pg. 68.)

James Bay.—The Ottawa, Arnprior & Parry Sound Ry. passes some 4 miles south of Parry Sound, making its Lake Huron terminus at Depot Harbor. The people of Parry Sound have been trying for some time to get the O. A. & P. S. to build a branch to the town, but without success. It is now said that arrangements have been made with the James Bay Ry. Co., by which it will build the link as part of its line, thus making the start required by its charter, & that pending further construction of the James Bay line north & south the link will be operated by the O. A. & P. S. Ry. The work will be heavy, there being a good deal of rock.

L. A. Hamilton, Land Commissioner C.P.R., Mrs. & Miss Hamilton, who have been spending several months in Europe, are expected to return to Canada about the end of May.

A Yukon Pole Railway.

E. G. Tilton, of Victoria, President of the Miles Canyon & White Horse Tramway Co., writes regarding his road, which is probably the most northerly on this continent, being in latitude 62°. This Co., which was incorporated by the Dominion Parliament in 1898, was formed for the purpose of providing safe & speedy transit of goods around the obstructions to navigation at White Horse Rapids & Miles Canyon on Lewes River, one of the large tributaries which, in conjunction with the Hootalinqua & Pelly rivers, form the Yukon River. A route on the west side of Lewes River running from the entrance of Miles Canyon to the foot of White Horse Rapids affords the shortest & most accessible route to the Klondike, its entrepôts being Skagway & Dyea, on Lynn Canal, Alaska. There were several steamers traversing this route last summer, & ten or a dozen more are building on Lake Bennet to be ready for this season's traffic.

The White Pass & Yukon Ry. now building from Skagway to Lake Bennet is expected to be completed by the opening of navigation, & then travellers can make the journey from Skagway to Dawson by rail & steamer in 4 or 5 days. The trip two seasons ago, when the gold seeker had to take his outfit along either on sleds or by packing over the trails, & in a skiff or on a raft down the lakes & rivers, consumed months of time & was very difficult, & accompanied with much labor & often danger & disaster, particularly at the canyon & rapids, in which many wrecks occurred in the attempt to chute them, & frequent drownings occurred. The tramway was finished before the opening of navigation last year, & was operated during the entire season, as it will be again this season. Its length is about 4 1/2 miles, & its alignment & gradients easy & favorable. Leaving the landing it ascends about 70 ft. to a bench which follows the river almost to the foot of the rapids; almost the entire distance on tangents, with a steady down grade of nearly 1%. The road is of 3 ft. gauge. The rails are of wood hewed out of black pine timber, which grows plentifully along the right of way, & is strong, tough & durable. Eventually it is hoped to replace

this temporary track with light steel rails. For the present, however, the wooden track serves the desired end very satisfactorily. Construction was necessarily expensive, as laborers' wages were \$7 a day, & supplies cost 50c. a pound to freight in from Skagway. This year, however, owing to the White Pass & Yukon Ry., & steamers on the lake, freighting is 80% lower. The rolling stock consists of 30 cars & 50 heavy horses.—Railroad Gazette.

The Niagara Cantilever Bridge.

In our last issue, pg. 117, we mentioned the improvements about to be made to this Michigan Central bridge. The Railway Age says it was erected in 1883, & has required but little attention since outside of painting. But in recognition of the increasing weight of the rolling stock of the road, & in order to have accommodations with ample leeway for a further increase, the Co. is about to strengthen the bridge by the addition of another truss, which is to be run through the centre of the structure from shore to shore. Between the piers or abutments on the Canadian side & on the U.S.

side, a pier is to be constructed, on which will rest the bent that will support the new truss. This truss will practically be the same as the present trusses, & is expected to add to the strength of the bridge at least 50%. The iron will be placed during the coming summer. The work will naturally progress slowly, as there will be a great deal of field work to be done in placing the new iron. In advance of the construction of the new piers, the foundations of the old piers on both sides of the river are being carefully examined to learn their condition. On the U.S. side a diamond drill has been at work some weeks, & it has been ascertained that the foundation is in good condition, being of a boulder formation. At this point the river is rapid, & the various currents wash with some force about the shore near the base of the abutments, & it was to learn what effect this wash has had that the drill was set to work. A similar examination will be made on the Canadian side, where men are now at work stripping the rock. The current in front of the Canadian piers runs straight by, & has not the whirl that it has on the U.S. side. The work will probably consume all summer & fall, & its completion will give the M.C.R. as strong a bridge across the Niagara gorge as any of the structures there. The cantilever is a double-track structure, & its tracks are nearly 250 ft. above the water. See illustration on pg. 137.

Grand Trunk Betterments, Etc.

General Superintendent McGuigan says about 300 miles of new steel rails will be laid this year. The small gaps in the stretches of double track between Toronto & Montreal will be filled in, making double track throughout.

The completion of the Victoria Jubilee Bridge has been somewhat delayed, owing to the difficulty in procuring material. It is expected that the date of the formal opening will be announced very shortly. At first there will only be train service over the bridge, no accommodation having yet been provided for foot passengers or vehicles.

In the construction of the general office building in Montreal, red granite will be used for the base, which will be 9 ft. high; this will be followed by grey granite to the top of the 1st floor, above which Wallace, N.S., blue stone will be used. The estimated cost of the building is now placed at \$500,000. A large number of contractors are preparing to tender.

A Montreal despatch of May 15 stated that the management had decided to build a second bridge over the Niagara River between Black Rock, N.Y., & Fort Erie, Ont., that plans were being prepared in the Chief Engineer's office, & that it was expected work would be commenced this year. We are officially informed that there was no foundation whatever for the despatch. The Niagara Falls & International bridges give the Co. all the facilities of that character that it has any possible use for.

Canadian Pacific Betterments, Etc.

Windsor St. Station, Montreal.—The Co. has now acquired nearly the whole of the property on the south side of Osborne St. from the station building to Olivet Baptist Church, & a part of this is to be used for the extension to be built on Osborne St., which will make the frontage of the building on that street about 325 feet, & will increase the floor space from 50,404 to 102,131 ft. The extension will form part of the main building, & will follow the original design closely & will be of the same material, Montreal limestone. There will be two entrances for passengers on Osborne St., & the station yard will be so extended as to permit the laying of more tracks if that should be found necessary. There are at present 4 tracks in use. The Baggage Department, which has suffered the most from congestion, is to have its space trebled. Passengers will have their baggage checked in sight of the ticket office, the location of which is to be changed in order to make it more central. The Baggage & Customs departments will be accommodated on the

ground floor, as well as the Baggage Master's office, with new elevator. The upper floors of the present & new structure are to be laid out as follows: On the 1st floor will be the Manager of the Eastern Lines & his staff, the telegraph office, the Superintendent of Car Service & staff, the Superintendent of Hotels & staff, the General Baggage Agent & staff, the Paymaster & Treasurer & staff, the Cashier & one of the heaviest & most perfect burglar-proof safes in Canada. On the 2nd floor will be the General Superintendent & staff & the Accountant's office, also a large fire-proof vault of steel construction, 21 by 9 ft. On the same floor will be the board-room, the President & Vice-President, with their assistants, the Secretary, the Comptroller, the General Passenger Department, the Passenger Traffic Manager, the solicitors, the Superintendent of Steamship Lines, the Freight Traffic Manager, the General Freight Agent, the General Freight & Claim Department, while room for two large fire-proof vaults has also been provided on the same floor. The whole of the 3rd floor will be occupied by the Comptroller's staff, while a good part of the 4th will also be used for the same purpose, the remainder being taken up by the offices of the Chief Engineer & draughtsmen. Here, likewise, is placed the cement testing-room, the Chief Engineer's assistant & other rooms. On each floor there will be large lavatories, & very high-class plumbing will be used. The walls of all the corridors on each floor will be finished in marble, the floors are to be in mosaic, & the entire building fire-proof throughout. On the ground floor there is to be a large smoking-room, with men's lavatory facing on Donegana St., all fitted up in the most approved manner. In the basement will be storage vaults, baggage store-rooms, kitchen & pantries, an audit office for conductors & porters, & store & supply rooms for sleeping cars, hotels, & news agents. The whole will be lighted by prismatic lights. It is expected work will be commenced at an early date.

Heavy Rails.—The Co. has ordered for immediate use 50 miles of 100-lb. rails, to be laid

Arrowhead to Kootenay Lake.—A big fight is on between the C.P.R. & the Great Northern (U.S.A.) for the trade of the Lardo-Duncan districts of B.C. The Arrow Lake branch runs from the main line at Revelstoke along the east side of the Columbia River to Arrowhead, 77 miles. For some time past the C.P.R. has had engineers at work surveying a route for an extension of the branch to the north end of Kootenay Lake, it being understood the line would run from Arrowhead northeasterly up Fish River to Fish Lake, thence southeasterly to Trout Lake, along the west side of that lake, & along the Lardo River to or near Lardo or Argenta on Kootenay Lake. A short time since the survey parties stopped working at the Arrowhead end & went round by way of Nelson to the north end of Kootenay Lake, where they started to run northwesterly to connect with the surveys previously made from Arrowhead southeasterly. General Superintendent Marpole & Division Engineer Cambie visited the district a few days later, Mr. Marpole announcing that construction would begin from Kootenay Lake as quickly as possible & this was followed up by a contractor starting for the north end of the lake with a force of men. The Kootenay Ry. & Navigation Co., which is understood to be backed by the Great Northern (U.S.A.) has a charter for the Kaslo & Lardo-Duncan Ry. & has been making surveys for it from Kootenay Lake into the Duncan & Trout Lake districts. A strategic point in the route is the Duncan Pass & to prevent the C.P.R. getting possession the K. & L. D. Ry. Co. obtained an interim injunction stopping the C.P.R. from proceeding with construction through the Pass. The C.P.R. followed suit by getting an interim injunction restraining the K. & L. D. Ry. Co. from interfering with the C.P.R. men, or from trespassing on the right-of-way claimed by the C.P.R. in the Duncan Pass. The result is that the Pass is tied up, both companies being prevented from working in it until May 30, or until a motion is made by either side to dissolve the injunction.

Sicamous.—A large force is at work on the station-hotel building, & the stone foundation is about completed. (Mar., pg. 72 & 75.)

Westminster-Vancouver Loop Line.—The plan here given shows the route likely to be adopted for this line, which will probably branch from the main line about 1½ miles

from the Vancouver terminus, turn south & east, cross over the bridge which separates Burrard Inlet from the Fraser Valley about half-way between the two cities, & reach the bank of the Fraser River about a mile below Westminster. The length of the new line will be about 12 miles, & from Vancouver to West-

minster Jct., via Westminster, will be 22¾ miles. The present main line via Port Moody is 16¾ miles from Westminster Jct. to Vancouver. It is understood work will not be started on the loop this spring, & there is no definite information as to when it will be gone on with. (Feb., pg. 42.)

Vancouver Terminals.—The plan on pgs. 144-145, which is on a scale of 400 ft. to 1 in., shows the improvements being made on the Vancouver water-front. The wharves have already been extended 500 ft. easterly & additional warehouses erected. In the near future the wharves will be extended 1,000 ft. still farther to the east to join the Co.'s Abbott St. Wharf. All the Co.'s wharves are to be made permanent by sea walls in front & earth filling behind, which will extend to the shore, thus giving the Co. an esplanade in front of the town about ¾ mile long by 400 ft. wide, on which it is intended to lay a network of sidings with an engine-house, &c., so that ordinary trains, either passenger or freight, will not need to cross the town to the False Creek yard. The Co. has agreed to give a flag station at the east end of the town, near the sugar refinery. Under the agreement with the City, which gives the Co. exemption from taxation for a considerable period, on property actually used for railway

purposes, the Co. undertakes to expend \$700,000 on terminal buildings, wharfage, &c., by the end of 1906. The terminal buildings will be completed this year, but the wharves & water-front improvements will probably not be fully constructed for several years, the work being done gradually as increasing trade requires it. (Apl., pg. 113).

Minneapolis, St. Paul & Sault Ste Marie Ry.—The Railway World, Philadelphia, says:—"It is suspected that the chief object of the Soo Line in deciding to raise \$5,000,000 by an issue of 2nd mortgage bonds, is to get sufficient money to extend its line to Bismarck & possibly, into Montana, with a view of establishing a connection with the C.P.R. at some far western point, the real scheme being to more closely parallel the Great Northern than by the present Soo-Pacific route."

As a matter of fact the Soo line is already within about 40 miles of Bismarck, N.D., its Bismarck extension, which leaves the main line at Hankinson, 215 miles northwest of Minneapolis, having been completed 173 miles to Braddock, N.D. The completion of the extension to Bismarck would not require much expenditure. Sir Wm. Van Horne's explanation of the reason for the issue of the mortgage bonds referred to will be found in our Apl. issue, pg. 108.

Great Northern Railway of Canada.

The annual meeting was held at Quebec May 12. Following are extracts from the report:

The number of passengers carried during the year on the whole system was 185,851, compared with 153,669 in the previous year, & the freight 263,021 tons as against 199,459.

Several mills have been built during the year & are giving an increasing traffic in sawn lumber. The new pulp mill at Chicoutimi has furnished a large quantity of freight during the year, & its capacity is now being increased 50%. The paper mills at Grand'Mere were completed & put into operation in Dec. last. This is the largest industry of the kind in Canada, & furnishes the line a large traffic.

The Shawenegan Power Co. has given contracts for the development of its water power at Shawenegan Falls, which will be completed this year. This will give a large freight busi-

IF time has a commercial value; promptness secures business; immediate information is required; an answer is wanted, and wanted quick; you are not in business for exercise:

Baldwin Locomotive Works.

SINGLE EXPANSION AND COMPOUND LOCOMOTIVES.

Broad and Narrow Gauge Locomotives; Mine and Furnace Locomotives; Compressed Air Locomotives; Steam Cars and Tramway Locomotives; Plantation Locomotives; Oil Burning Locomotives.

Adapted to every variety of service, and built accurately to gauges and templates after standard designs or to railroad companies' drawings. Like parts of different engines of same class perfectly interchangeable.

Electric Locomotives and Electric Car Trucks with Approved Motors.

Burnham, Williams & Co., Philadelphia, Pa., U.S.A.

ness in moving material during construction, & a much larger traffic in handling the output of these industries when they are completed. The works of the Jacques Cartier Power Co. on our main line are well advanced & will be completed in Aug. next.

The completion of the G. N. R. is now assured, contracts having recently been given for the construction of the gap of 88 miles required to make the connection between the Quebec end of the line & the Canada Atlantic system at Hawkesbury, Ont. The line is to be finished by July 31, 1900. To assure the G. N. Co. to secure the necessary capital, the directors agreed on Nov. 3 last to extend for a further period of 20 years the contract entered into Jan. 24, 1893, for sharing the traffic between Parry Sound & Quebec.

The Quebec Government has not yet come to a decision as to the granting of a land subsidy for the construction of a railway from Lake St. John to James Bay, a distance of 380 miles, although additional explorations made last year confirm the reports of previous explorers as to the great value of this great country, as regards timber, soil & minerals, & also as to climate. In the meantime the Ontario Legislature has voted a large subsidy, both in money & land, towards the construction of a railway from a point in that Province to James Bay. Should the Quebec Government see fit to give such aid as will ensure the building of a line from Lake St. John, its construction must necessarily give great additional value to the G.N.R. property.

The progress of the colonization movement to the Lake St. John district has continued during the past year in a very satisfactory manner. During the year 1,322 new settlers & their effects were transported by the railway free of charge. About half of these came from the U. S., & of the remainder quite a considerable proportion came from Nova Scotia & Ontario. In addition to these, 201 agricultural delegates, representing 90 parishes, visited the country to report as to its advantages. The movement is now becoming so considerable that better arrangements & accommodation for the new settlers, on arrival at Lake St. John, are necessary. Representations have been made to the Federal Government that in order to provide these additional facilities the present colonization subsidy should be increased. This negotiation is still in progress.

The report & statements having been adopted the following were elected directors: F. Ross, G. Lamoine, T. A. Piddington, E. Beaudet, J. T. Ross, Hon. P. Garneau, G. Moir, Hon. J. Tessier, E. Hanson, & F. W. Ross, in addition to whom the non-elective members of the board are Hon. S. N. Parent, Mayor of Quebec, Judge Gagne, representing Chicoutimi, & A. Robitaille, M.P.P., named by the Quebec Government.

Manitoba & Northwestern Ry. Lands.

A meeting of the holders of the coupons entitling vendors of bonds to land rights certificates to be issued by the Committee of the first mortgage bondholders of this Co. which was appointed in June, 1893, was held in London, Eng., April 28. Major E. F. Coates, who occupied the chair, said the business before them was important, seeing that they had to decide whether they should select their lands themselves or sell their rights to a firm which had made an offer for them. The present position was that the trustees held, on behalf of the bondholders & the land certificate holders, land warrants for 193,828 acres, besides a reversionary interest in the amount of land which was held by the Manitoba Government against the loan originally made to the railway. As to the land warrants in the possession of the trustees, these entitle the holder to select land in a certain reserved district

along the M. & N. W. line & further on in the Northwest Territories. The cost of selection would be considerable, & in addition, emigrants would have to be found to farm the land, & in many cases it would be necessary to make advances to the settlers. If, therefore, they did not care to provide working capital of, say £10,000, their only course was to enter into the proposed agreement for the sale of their land warrants. Before going further he had to explain that he was a member of the firm of Coates, Son & Co., the representatives of the Canadian firm (Osler & Hammond) who had made the offer. Roughly speaking, the proposal was to purchase the land warrants held by the trustees for the 193,000 acres already referred to, & the reversion of anything that might be got from the Manitoba Government in respect of the land that they held, for £20,500. Any land certificate holder or bondholder was to be at liberty to retain his present rights to the extent of 75%, the purchasers stipulating that they should find at least 25% of the necessary working capital of the company which would be formed on the other side to select & deal with the land. Out of the £20,500 there were two deductions to be made. One was a commission of £500 to his firm for negotiating the sale & giving a guarantee for its being carried into effect, & the other was about £400 to pay certain expenses incurred by the trustees. The remaining balance of about £19,500 would give the bondholders or certificate holders £3 11s.%, & that, added to what they received last year, would make a total return of 90% in respect of their old bonds. He concluded by moving a resolution authorizing the trustees to enter into the requisite agreements for carrying into effect the proposed sale. Mr. Ballance seconded the motion. S. Gardner, a member of the committee of bondholders, & others expressed themselves as favorable to the proposition. In reply to Mr. Chester, the Chairman gave further particulars as to the purchase scheme, & added that the amount of the original offer was only £15,000. The resolution was carried with one dissentient. A meeting of the 1st mortgage bondholders was afterwards held, Colonel Grey (one of the trustees) presiding, at which a similar resolution was passed. Some objection was raised, however, to the validity for voting purposes of certain endorsed bonds, & it was understood that the matter would be left to the decision of the Court, to which the results of both meetings have to be reported.—Canadian Gazette.

Canadian Yukon Railway Suit.

Chancellor Boyd heard evidence in Ottawa April 13, in the suit of the Alberta Ry. & Coal Co. vs. Mackenzie & Mann, to recover \$105,246 damages for breach of contract to purchase rails, plates, spikes, bolts, locomotives & cars for the Canadian Yukon Railway. When the Senate threw out the Yukon bill last year Mackenzie & Mann asked the Alberta Co. to cancel the order, which request was refused. The witnesses for the plaintiff were Assistant Engineer McNab, of the G.T.R.; Engineer Mountain, of the Canada Atlantic; President Galt, of the Alberta Ry., & H. Josephs, agent for plaintiff, who obtained the order from defendants. There was, in the first instance, a verbal arrangement between Mr. Joseph & Mr. Mackenzie; this was followed by a writing, of which the following is a copy:

"MONTREAL, Jan. 31, 1898.

"Messrs. Mackenzie & Mann, Toronto.

"DEAR SIRS,—As agreed verbally with Mr. Mackenzie, we have on behalf of the Alberta R. R. Co., sold you the following to be delivered as soon as possible, f.o.b., Lethbridge, N.W.T.:

"80 miles of 28 lbs. steel rails with plates, spikes and bolts at.....\$20 per gross
"4 Locomotives at.....\$3500 each

"100 Coal cars at.....\$150 each

"4 Cabooses at.....350 "

"The whole to be subject to inspection at Lethbridge. Terms: Cash on Nov. 1, 1898. Kindly state if this is satisfactory. We wired you on Saturday asking how many 35 lbs. rails you would be prepared to take on the same terms, if the Alberta Company would deliver same on July 1.

"Yours truly, H. JOSEPH & Co.

"Correct with the exception of the cabooses, which is not to be considered a sale, it being our option whether we take them or not.

"Yours truly, WM. MACKENZIE."

The rails, &c., are quoted at "per gross." This probably meant gross ton, as the invoice read "per ton."

The evidence showed that there was no further interview between Messrs. Joseph & Mackenzie in regard to the contract. Chancellor Boyd held that the contract was an indivisible one, and that the writings showed that there was divergence in regard to the cabooses, and that the proposal made by Mackenzie that there should be an option on them was not assented to by the plaintiff, so that the whole contract was not expressed in the writings, and this being required by the Statute of Frauds, Sec. 17, the writings in this case were not sufficient to satisfy that section. The Chancellor also held that "80 miles of rails" meant 80 miles of single rails, not 80 miles of track. The action was dismissed, but without costs, as the defence of the statute was not put on the record until the trial.

Grand Trunk Earnings, Expenses, &c.

The following statement of earnings supplied from the Montreal office, includes the G.T. of Canada, the Chicago & G.T., & the Detroit, Grand Haven & Milwaukee Rys.:

	1899	1898	Decrease	Increase
Jan.	\$1,006,281	\$1,019,131		\$12,850
Feb.	1,814,141	1,911,188		96,047
Mar.	2,186,359	2,048,970		137,389
April	6,061,843	6,002,417		59,426
	\$7,999,617	\$7,558,232		\$322,024

The following figures are issued from the London, Eng., office:

GRAND TRUNK RAILWAY.

Revenue statement for Mar., 1899:

	1899	1898	Increase	Decrease

RAILWAY FINANCE, MEETINGS, &c.

The Alex. Gibson Ry. & Mfg. Co. has filed at the Department of State, Ottawa, a duplicate of the instrument of sale, dated Mar. 29, from the Canada Eastern Ry. Co. to this Co., ratified & approved as required by the statute of 1898.

Calgary & Edmonton net earnings for Mar., \$10,193.68, against \$21,310.33 in Mar., '98.

Canada Eastern.—There are no recent developments in regard to the rumored purchase of this line by the Government, to form part of the I.C.R. system. It is said the Minister of Railways is in favor of the purchase. The New Brunswick Legislature has passed a resolution recommending the purchase. (Mar., pg. 65).

Canadian Pacific.—On May 3, for the first time C.P.R. stock sold over par in London, sales being made at 101½, & in Montreal at 99¼. This was 9 points over any figure reached since the road was inaugurated. The lowest points the stock reached was in 1895, when the dividend was passed, & the common stock sagged off to 33. On two occasions it has been down to 35. In 1893 the highest for the common stock was 90¼, & the lowest 66. In the following year the 2 extremes were 73½ & 56. During the following 2 years the lowest was 33, & the highest attained was 62¾. In 1897 the stock ranged between 46½ & 82. In 1898 the lowest was 72, & the highest 90½. There is a good deal of talk of an increased dividend, & 5% per annum is spoken of. The dividend on com-

mon stock has run all the way from 5% to nothing. The first year of the 5% dividend was 1884, & this was followed by the same dividend in '90, '91, '92, '93 & '94. In 1883 the dividend on the common stock was 2½%, & in 1895 it was 4%. In 1886 & in 1889 it was 3%, while in 1896 & 1897 it was 2½%. Last year it was raised to 4%.

Columbia & Western.—This Co., now controlled by the C.P.R., recently applied to Parliament to extend its bonding powers on the line from Robson to Penticton & branches from \$25,000 to \$35,000 a mile, on the ground that the construction would cost much more than was estimated at first. Some of the western members opposed the application, contending that the line would not cost as much as the Co. asserted. An affidavit from Chief Engineer Peterson was put in supporting the Co.'s statements, & the Co.'s Solicitor stated the cost of the line would average nearer \$41,000 a mile than \$35,000, but that the Co. hoped to convert its land subsidy from the B.C. Government of 20,000 acres a mile into a cash bonus of \$4,000 a mile. The Minister of Railways stated, on the authority of the Deputy Minister & Chief Engineer of the Department, that he did not think the Co.'s estimate excessive, & that portions of the work would cost \$150,000 a mile. The Co. withdrew the application for an extension of bonding powers between Midway & Penticton, & the Committee, by a vote of 61 to 14, passed the bill giving the increase asked for for the line between Robson & Midway, & intervening branches.

Columbia & Kootenay Ry. & Nav. Co.—At the annual meeting at Vancouver, B.C., April

THE BARRETT TRACK JACK.

Recommended as a standard by the

Road Masters' Association of America.

These Jacks are made with Malleable Iron Frames, Steel Pawls, Machinery Steel Bearings and Pivots, forged Steel Rack. The wearing parts are removable and readily renewable at slight expense. The rectangular base gives great lifting strength and fits into close quarters better than other shaped stands. Adaptable to either high or low set loads.

The Barrett Jack is the safest, best and strongest known to the railroad world to-day.

Lifting capacity, 10 to 15 tons.

26, the following were elected:—President, H. Abbott; Vice-President, J. M. Browning; other directors, T. G. Shaughnessy, I. G. Ogden, W. F. Salisbury; Secretary, J. D. Townley. This line, which runs from Nelson to Robson, B.C., 27.70 miles, with an extension to the mouth of the Kootenay River, 0.80 miles, & a branch from Slocan Jct. to Slocan City, 32 miles, was leased to the C.P.R. Aug. 22, 1890, for 999 years, & all the bonds issued by the Co. are registered in the name of the C.P.R.

Central Ontario.—The annual meeting was held at Trenton, May 17. Following is the official list for the current year:—President, S. Burke, Cleveland, Ohio; Vice-President, H. S. Johnson, Cleveland, Ohio; General Superintendent & Secretary, G. Collins, Trenton, Ont.; other directors, C. W. Bingham & H. P. McIntosh, Cleveland, Ohio; G. G. Allen, Akron, Ohio; T. G. Blackstock, Toronto; Chief Engineer, J. D. Evans, Trenton, & Treasurer, R. H. Spencer, Trenton.

The Chignecto Marine Transport Ry. Co.'s annual meeting will be held in London, Eng., June 7.

Dominion Atlantic.—The annual meeting was held in London, Eng., Mar. 30, F. Tothill, President, in the chair. In referring to the operations of the year he indicated how adversely business had been affected by the Spanish-American war, which had influenced both passenger & merchandise traffic. The report & statements of accounts to Dec. 31, 1898, were submitted & adopted. The retiring directors & the Co.'s auditor were re-elected. A resolution was passed authorizing the directors to issue an additional sum of not exceeding £100,000 4% 2nd debenture stock of the Co. like to the existing £250,000 2nd debenture stock, & to be in all respects entitled to rank equally therewith. The proceedings terminated with the usual vote of thanks to the chairman, etc.

Earnings for 3 months to Mar. 31, \$111,188; increase over corresponding period \$10,976.

Grand Trunk.—The London Financial Times says:—"There is another way besides traffics by which the G.T. will benefit & that is by improved credit. The Tyler administration left it at a very low level—The Co. actually found it no easy task to issue 4% debenture stock at 80, but under the existing board the Co.'s credit has greatly improved, & it never stood higher than at present. Whilst a few years ago it had to pay 5, the Co. can now obtain as much as it is likely to require at less than 4%, so that the conservatism of the new administration has been to some purpose, particularly as in the next few years the Co. has large amounts of obligations falling due, which it will now be able to renew on extremely good terms. By this means £4,000 will be saved this half-year, and in 1900 a further £20,000 will be saved on the Chicago & Grand Trunk, 6% bonds falling due on Jan 1 next. From every point of view the present position of the Co. looks promising, & within the next few months we expect to see quotations considerably higher."

C. H. Hunter, formerly G.T.R. City Ticket Agent at Detroit, recently sued the Co. there to recover deductions of 2½% in his salary, which had been made monthly since about 1890, & paid into the G.T. Superannuation & Provident Fund Association, with headquarters at Montreal. To draw anything from the fund an employee of the Co. must have been in its service until he is 55 years old. Then he receives an annual allowance for the remainder of his life, equal to ¼ of his then salary. Mr. Hunter was relieved from duty by the Co. some months ago, & was thereby barred from realizing anything on the money paid into the Association, not having reached the age of 55. Judge Degraw gave judgment for the amount claimed.

The Great Northern Ry. Co. (U.S.A.) has issued a circular to stockholders announcing the decision of the directors to increase its capital stock \$15,000,000 for the purpose of acquiring all the bonds, debentures & capital stock of the Spokane Falls & Northern, the Nelson & Fort Sheppard & the Columbia & Red Mountain, aggregating \$9,776,200, & 75,000 shares of the capital stock of the Eastern Ry. of Minnesota. Stockholders of record of May 20 are offered the opportunity to subscribe pro rata at par for new stock. Shareholders will be entitled to subscribe for new stock at the rate of 1 share for each 5 shares of their present holdings. Books close May 20 & reopen May 22. The subscription price of new stock will be payable June 22. In accordance with these plans the Co. has filed amended articles of incorporation in Minnesota, increasing its capital stock \$15,000,000.

Gross earnings for 9 months to May 31, \$19,308,270; increase over corresponding period \$2,031,460.

On May 1 the Co. paid a quarterly dividend at the rate of 7% per annum.

Great Northwest Central.—The impression has prevailed for nearly a year past, that this Manitoba line was passing into the possession of the C.P.R., & it is now said that it has been purchased by Vice-President Shaughnessy & R. B. Angus, of the C.P.R. directorate, from Mr. Delap for \$550,000, Delap to settle all outstanding claims. T. G. Mathers, of Winnipeg, one of the solicitors for the Receiver, stated in a recent interview that the Receiver had not been notified of any change in ownership & added: "The road has probably had more litigation than any other road in America. It was built by means of English money furnished by Messrs. Delap & Curzon & was first known as the Souris & Rocky Mountain Ry. Mr. Delap has sunk probably \$550,000 in it, & A. Charlebois, the contractor, was nearly ruined in building it. It runs from Chater to Hamiota & was intended to go on to Battleford. The first few years of its operation it lost heavily, but since H. F. Forrest assumed its management in 1893 it has paid all running expenses & laid away a surplus of \$25,000 which is now in the courts to the credit of the road. When Mr. Forrest took it over it was in a very dilapidated condition; thousands have been spent in repairs & it is now in first-class shape. For a 50-mile road that is not a bad record."

Inverness & Richmond.—The Nova Scotia Government has agreed to give this Co. a cash bonus of \$4,000 a mile for 100 miles of its line from Port Hastings, on the Strait of Canso, to Cheticamp on the west shore of Cape Breton. For the first 58 miles to Broad Cove mines there is a Dominion grant of \$3,200 a mile, which it is said the Co. will endeavor to get increased to \$4,000 a mile, & the county of Inverness has voted \$1,000 a mile & free right-of-way. The people of Richmond county want the line extended from Port Hastings some 12 miles easterly to Cariboo Cove, where there is a splendid harbor, & the Council has voted \$1,000 a mile & free right-of-way therefor. It is now felt certain that construction will be gone on with this year. W. Z. Earl, C.E., was recently put in the field to make a location survey. The Co. has passed under the control of Mackenzie, Mann & Co. (Apl., pg. 116.)

Irondale, Bancroft & Ottawa.—There was a slight inaccuracy in the statement in regard to this Co. in our last issue, pg. 102. The Bank of B. N. A. holds the \$450,000 of bonds from Benjamin as collateral to notes & for other reasons & wishes to sell them, not to buy them as we stated.

Kingston & Pembroke.—A shareholders' meeting is called for May 27, to confirm the acts of the directors, in calling in the old stock & debentures, & issuing new stocks & bonds, & paying the interest & the liabilities of the

Co., all under the legislation of 1898, & for other purposes.

Lake Erie & Detroit River.—The Ontario Court of Appeal has sustained the judgment of Judge Rose quashing the by-law of the city of St. Thomas, granting a bonus of \$20,000 towards the extension of this Co.'s line from Ridgeway, (Apl., pg. 117).

Michigan Central.—The report for the year ended Dec. 31, 1898, shows gross earnings were \$14,046,149, an increase of \$349,000 over 1897. This increase was entirely in freight, passenger earnings having decreased \$143,000, due to a less number of passenger miles, the decrease in passengers moved 1 mile having been 9,899,567; the total movement was 144,595,752 passenger miles. This decrease was in through travel. The local passenger movement actually increased nearly 3,000,000 passenger miles, but the through fell off almost 13,000,000 passenger miles, or 36%. The average rate per passenger per mile increased from 2.175c. to 2.225. Considering the trolley competition, we should have supposed the local business would have declined rather than the through business. As it is, the cause of the change is left to conjecture. The freight movement showed a gain of 131,552,000 ton-miles & the total movement was 1,665,158,000 ton-miles. The rate fell off from 0.616c. to 0.597. The operating expenses & taxes were \$10,546,000, & the increase over the preceding year was \$296,000. The net earnings were \$3,500,000. After paying fixed charges there was a net revenue of \$4.40 a share, out of which a 4% dividend was paid, & \$70,000 was set apart for building a second track between Ypsilanti & Dexter, leaving a balance of \$4,734. The cost of all betterments & additions to property, excepting this \$70,000 & a further item of \$14,438, was charged to operating expenses. The item of maintenance of way & structures increased somewhat over the preceding year, while the item of maintenance of equipment decreased; but in neither case was the change important.—Railroad Gazette.

The old board has been re-elected, comprising C. Vanderbilt, F. W. Vanderbilt, E. D. Worcester, C. M. Depew, W. K. Vanderbilt, H. B. Ledyard, S. F. Barger, A. Pond & F. S. Winston.

The Montreal Incline Ry. wants the city to extend its lease of the Mount Royal Park Incline Ry. for 25 years, while the City Council appears disposed not to make an extension of more than 5 years, which the Co. it is said will not accept. The Co. is willing to sell out to the city for about \$45,000. The original capital was \$25,000, the actual cost of the main ascension. When the lower extension was made, 5 years ago, the capital was doubled, since which no dividend has been paid, the former dividends having been 4 or 5%. The revenue is about \$7,000 a year, & the running expenses, not including repairs & depreciation, \$4,000. Since dividends have been stopped the surplus revenue has been put into repairs & additions.

New York, Ontario & Western.—The following report was recently sent out from New York: "The G.T.R. will acquire the New York, Ontario & Western. The deal was consummated while General Manager Hays, of the G.T. was in England recently. English capital, represented by Jos. Price, is influential in O. & W. affairs, & as Mr. Price is also Vice-President of the G.T., a combination of the two interests would not be at all surprising. The proposed alliance is said to include some building on the part of the O. & W. from Oneida Castle to Cape Vincent, on the St. Lawrence, & if necessary, the construction of a line to parallel the Rome, Watertown & Ogdensburg division of the New York Central from Central Square to Suspension Bridge where the G.T. would be reached, while at Cape Vincent it would be

necessary to resort to a cable ferry service across the St. Lawrence to Kingston. The projected combination is said to be the result of the disinclination on the part of the New York Central interests to take over the Ontario & Western as a tide water line for its Beech Creek property, & if the plan is consummated it will give the G.T. a direct line from Chicago to New York city."

We are advised that there is no truth in the report as to the purchase of the N. Y., O. & W. by the G.T.

The Northern Pacific has declared a quarterly dividend of 1¢ payable June 5.

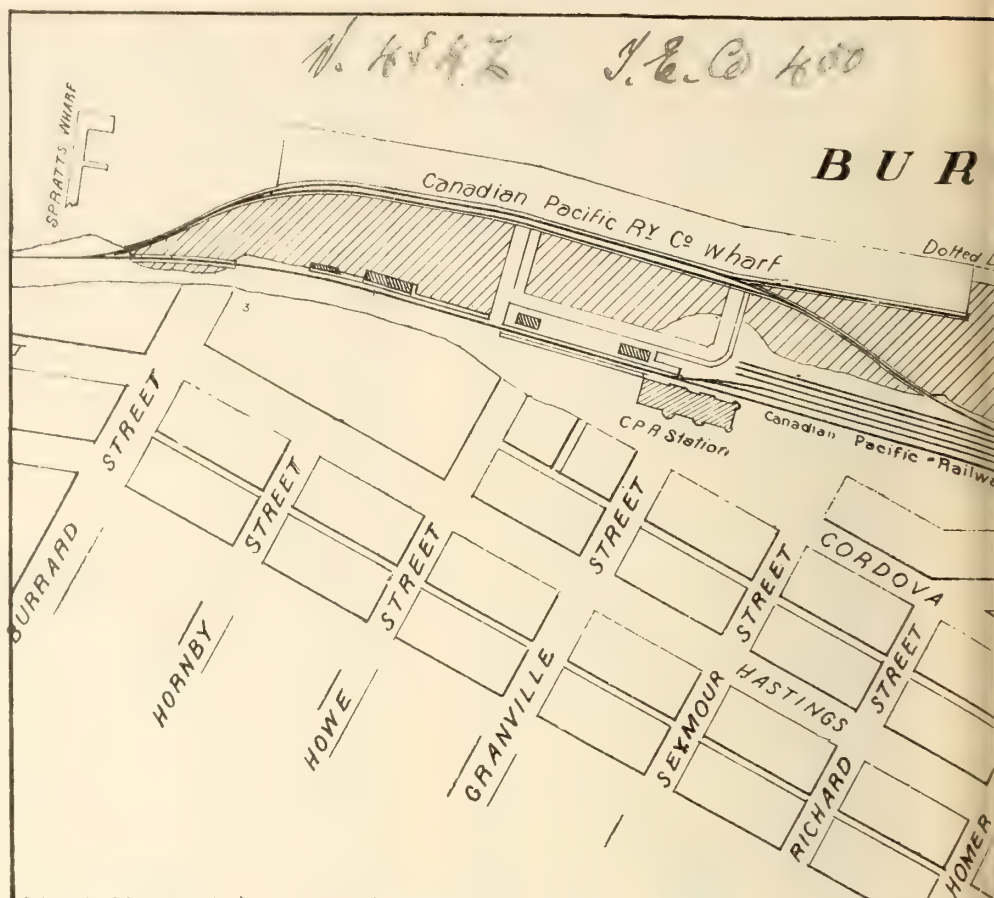

The Winnipeg Tribune recently published a statement, said to emanate from St. Paul, Minn., that offers had been received, it was believed from Mackenzie, Mann & Co., for the purchase of the Northern Pacific lines in Manitoba. The Tribune asserts it is in a position to say that overtures have been made, as reported, & the management of the N.P. is credited with taking the ground that unless the Manitoba Government facilitates it in further extensions, the lines will be sold, as it is held they must be extended to become profitable.

Ontario & Quebec.—The ½ yearly interest due June 1, on the 5¢ debenture stock will be paid on that date by Morton, Chaplin & Co., London, Eng., & the interest for the same period on the common stock of the Co. at the rate of 6% per annum will be paid on the same date at the Bank of Montreal, London, or at the office of Morton, Chaplin & Co., at the option of the holder. The debenture stock transfer books closed in London & in Montreal May 2, & the common stock transfer books closed in Montreal on the same date. The books at both places reopen June 2.

The Ontario & Rainy River Ry. Co. is applying to the Dominion Parliament for an Act authorizing it to acquire the railway, property & rights of the Port Arthur, Duluth & Western Ry. Co., & for all necessary powers in reference thereto.

Ottawa & New York.—General Manager Gays denies the report that this line will be sold to the G.T.R. & says there is no truth in it.

Port Arthur, Duluth & Western.—The Master-in-Ordinary, Osgoode Hall, Toronto, gives notice that tenders will be received up to Aug. 3, for the purchase of this line. This is merely a legal formality, the Toronto General Trusts Co. having some time since disposed of the line to Mackenzie, Mann & Co. See under head "Ontario & Rainy River Ry." above.

VANCOUVER WATER FRONT, SHOWING IMPROVEMENTS.

Qu'Appelle, Long Lake & Saskatchewan.—Net earnings for Mar. \$2,806.76, compared with \$494.47 in Mar., '98.

Quebec Central.—Traffic receipts for Apl. \$41,708.09. Increase over Apl., '98, \$6,431.96. Aggregate traffic receipts Jan. 1 to Apl. 30, \$126,384.16. Increase over corresponding period \$9,466.61.

The coupon due on the income bonds is now payable at the rate of 1¼% for 1898.

Spokane Falls & Northern.—The \$225,000 of 6% gold debentures of 1897 have been called for redemption at the Chase National Bank at par with accrued interest, interest to cease after July 1.

Toronto, Hamilton & Buffalo.—Annual meeting at Queen's Hotel, Toronto, June 6.

Toledo & Detroit Shore Line.—C. H. Haskell is quoted by the Railway World as saying that the right of way has been obtained, & the road will be built this year. A contract has been closed for a passenger station in Toledo near the centre of the city. Other roads now using the Union Station will be likely to seek the privilege of running their trains into the new one, owing to its central location. The new road is designed to be more of the character of a terminal line between Detroit & Toledo, affording a number of road advantages & facilities of great value they have not been able to secure. For years the Lake Shore & the Michigan Central have had a monopoly between Toledo & Detroit, & defeated every attempt made to break it, but

with the Shore Line in the field & paralleling them, they will not be able to dictate to either shippers or the roads dependent upon them for privileges. It will let the G.T.R., & possibly the C.P.R., into Toledo, & it is said to be well understood that the road will be used also by the Hocking Valley, the Ohio Central, the Wabash & perhaps the Cincinnati, Hamilton & Dayton & the Pennsylvania.

A despatch from Toledo recently stated that in closing a deal for terminal site the Shore Line people had stated that the G.T.R. & the C.P.R. were interested in the line. We are informed that the G.T.R. has no financial interest in the project. In the event of the line being built the G.T.R.'s relations with it will probably be as friendly as they now are with the existing lines between Toledo & Detroit.

Vancouver, Victoria & Eastern.—W. Mackenzie is reported to have stated in Ottawa recently that Mackenzie, Mann & Co. will proceed against the B.C. Government to recover damages for the cancellation of the contracts respecting the construction of this & other projected lines.

Winnipeg & Hudson's Bay.—During 1898 the Province of Manitoba paid \$12,821.72 to the holders for interest on bonds of the Province issued in 1886 in aid of the Winnipeg & Hudson's Bay Ry. & Steamship Co., which makes the indebtedness of this Co. to the Province \$255,986.66 for the principal, & \$153,781.26 for interest, or a total, exclusive of compound interest, of \$409,767.92. Nothing has been paid by this Co. on account of principal or interest since these bonds were issued. An arrangement has now been entered into between the Government of Manitoba & the Winnipeg & Great Northern Ry. Co., whereby the Province has received from the said Co. 256,000 acres of the land grant within the Province in full settlement of the claims of the Province in respect of the said bonds & interest in aid of the Winnipeg & Hudson's Bay Ry. & Steamship Co.

Central Vermont Reorganization.

At a meeting of directors April 21 the following directors were elected: C. M. Hays, Montreal; J. Bell, Belleville, Ont.; E. H. Fitzhugh, Toronto; E. C. Smith, St. Albans; David D. Rantlett, St. Albans; J. W. Stewart, Aldace; F. Walker, Rutland; W. S. Webb, Shelburne; J. C. McCullough, Bennington; E. H. Baker, Boston; S. F. Kilmer, New York; C. M. Wilds & H. B. Day, Boston. The directors elected these officers: Chairman Executive Committee, C. M. Hays; President, E. C. Smith; Vice-President & General Manager, E. H. Fitzhugh; Clerk & Treasurer, R. H. Ingram; Auditor, M. M. Reynolds. Subsequently G. B. Reeve, General Traffic Manager of the G. T. R., was also appointed General Traffic Manager of the C. V. in charge of through traffic with headquarters at Montreal, & J. Pullen, heretofore Division Freight Agent of the G. T. R. at Hamilton, Ont., was appointed General Freight Agent at St. Albans.

E. H. Fitzhugh was born in Danville, Mo., in 1853, & entered the car department of the St. Louis, Kansas City & Northern at St. Louis in 1872. He rose gradually until 1879, when he held the position of Chief Clerk in the office of the General Superintendent. In that year the road was absorbed by the Wabash, & Mr. Fitzhugh entered the employ of the latter. In 1889 he was made Master of Transportation of the western division of the road, with headquarters at Moberly, Mo. In December, 1895, he came to Canada with Mr. Hays, & for about 6 months acted as his Secretary in Montreal. On the reorganization of the divisions of the G. T. R. in July, 1896, Mr. Fitzhugh was appointed Superintendent of the Middle Division, with headquarters in Toronto.

In an interview on the day of the meeting above referred to Mr. Hays said: "The reorganization of the C. V. property has been

unique in character, in that the relations between all interests have been adjusted satisfactorily & the property has been put on a sound financial basis without an assessment made on any class of security holders—the only instance of the kind known in modern railway organizations. We think the C. V. never had such a board of directors as that which met to-day, as regards men of experience in railway affairs & men of high standing & character. There was Gen. J. G. McCullough, formerly Chairman of the board of the Erie, & now President of one of its most important lines. There was Col. Walker, Chairman of the board of the Atchison, Topeka & Santa Fe & one of the leading railroad men of the U. S. There was Mr. Day, of R. L. Day & Co., one of the largest & most prominent banking firms of Boston. We had Mr. Baker, who is with the well known Boston firm of Lee, Higginson & Co., & who is a member of the executive committee. We had Dr. Seward Webb, who is now the chief railway man of Vermont, & various other men of high standing in railway circles.

"The G. T. interest is represented by Mr. Bell, our General Solicitor, who has been with the Co. for 40 years, & by Mr. Fitzhugh, who has been elected Vice-President & General Manager of the C. V. Mr. Fitzhugh is a native of Missouri, & the greater part of his railway experience was gained on the Wabash in different capacities, particularly in the transportation & operating departments. He has been with me in charge of the middle division of the G. T. during the past 2 years, his jurisdiction covering some 1,200 miles of railway. The new Clerk & Treasurer was formerly Assistant Comptroller of the Louisville & Nashville, & at one time he was Assistant to the General Manager of that road.

"As to the financial condition of the C. V. road, the new corporation will take possession of the road without a dollar of indebtedness & with money in the treasury. During the receivership the earnings have been expended in betterments & improvements to the property. With the new rails bought by the receivers this spring we will have all the main lines laid with the heavy rail & all the important bridges have been rebuilt & brought up to the present standard; so that we consider the securities of the Co. a first class investment & we hope to make them rank in value with those of any other Vermont railroad property."

"The policy of the management will be to operate the property as a strict business proposition. We shall expect to give the public good, prompt & efficient service, & keep fully abreast of the times in everything that goes to make the property a first class road in the estimation of the public. Our idea in making the directorate so largely Vermont in its character is to correct any impression that might exist that the road was to be managed by what has been called an 'alien' corporation. The question of the future operation of the property must be dealt with as the situation develops. No radical change will be made in the existing order of affairs so far as pertains to the operation of the road. The relations of the G. T. with the Santa Fe have been of the most friendly character, & the election of Col. Walker to the directorate of the Central Vermont will not tend to impair those relations. With a car from Boston running over the C. V. & the G. T. to Chicago it is possible for the passenger to step from one car to another at the latter point & go over the Santa Fe road to San Francisco with but one change of cars."

At one minute after midnight of May 28 possession of the railway & property of the C. V. R. R. Co., branches & leased lines was transferred by receivers C. M. Hays & E. C. Smith to the C. V. Ry. Co., in accordance with a decree of the U. S. Circuit Court. Mr. Fitzhugh at once took charge, & since then the

following appointments and announcements have been made:

The office of General Superintendent is abolished & heads of departments are to report to the Vice-President & General Manager. F. W. Baldwin, heretofore General Superintendent, is appointed Superintendent, Northern Division. Office at St. Albans. D. McKenzie is appointed Superintendent, Southern Division. Office at New London, Conn. H. R. Stoughton is assigned to other duties.

For convenience in operation, the line has been divided into divisions and districts, as follows:

Southern Division—New London to Brattleboro. Brattleboro to South Londonderry. New York City Terminals.

Northern Division—Windsor to St. Johns. Burlington to Essex Jct. Montpelier Jct. to Rouses Point. Barre Jct. to Williamstown. Essex Jct. to Cambridge Jct. Swanton Jct. to Rouses Point. St. Albans to Richford. S. S. & C. Jct. to Waterloo. Farnham to St. Lambert. St. Cesaire Branch.

1st District—New London to Brattleboro, including New York City Terminals.

2nd District—Brattleboro to South Londonderry.

3rd District—Windsor to St. Albans. Burlington to Essex Jct. Montpelier & Williamstown Branches. Lamoille Valley Branch.

4th District—St. Albans to St. Johns. Swanton Jct. to Rouses Point. Missisquoi Valley Branch.

5th District—S. S. & C. Jct. to Waterloo. Farnham to St. Lambert. St. Cesaire Branch.

The new Co. has filed a mortgage for \$12,000,000 with the American Loan & Trust Co.

as trustee. This secures an issue of 4% gold bonds due 1920. The proceeds are to be used for acquiring & operating the Central Vermont & the Burlington & Lamoille Valley; also for buying the leases of the New London Northern & the Montreal & Vermont Jct.

A special meeting of G.T.R. shareholders will be held in London, Eng., May 29, to approve an agreement dated May 1, 1899, between the G.T.R. Co. & the C.V.R. Co., for working arrangements between the 2 companies.

Canadian Freight Association.

The 16th annual general meeting was held at Montreal, Apr. 6, 37 members present. The following were elected members: Active—R. M. J. McGill, Central Ry. of N.S. (vice J. Brignell); E. Fisher, Toronto, Hamilton & Buffalo Ry.; A. E. Rosevear, G.T.R. (vice C. J. Haigh); R. McEwan, Richelieu & Ontario Nav. Co. Honorary—C. J. Haigh, General Manager Lehigh Valley Fast Freight Line.

Chairman Earls reported that the new classification no. 11 was still at Ottawa awaiting approval. He also reported a number of additions & amendments which the Committee recommended. These amendments, if approved, to be incorporated in the new classification if possible; if not, to be promulgated as a supplement by the Committee. The report, including the amendments to the classification, was adopted.

It was decided that the classification be revised so that all freight now at 4th class C.L. shall not have a lower minimum than

16,000 lbs., & at not less than 4th class. Also that the Chairman recommend at next meeting an arrangement of minimum weights for cars over 40 ft. long.

Reports of the Freight Inspection, Car Service & Executive Committee were adopted. The Car Service Department has now been in operation nearly 2 years. As was to be expected, some opposition on the part of the public, as well as the local agents of the railway companies concerned, was developed at first. This has to some extent been removed after practical experience has demonstrated the fact that the companies were serious in their determination to carry out the rules adopted. A great improvement is apparent in the financial results of the working of the department during the past year, as illustrated in the Manager's report of money collected; but the number of cars still detained beyond the free time limit appears yet too large in proportion to the number of cars handled. The reasons given by the agents are in many cases sound so far as they are concerned, but the wish to accommodate a customer & stand in well with a shipper is still paramount in the mind of some of the agents, so as to render it difficult on their part to administer the rules without fear or favor. In many cases the serious delays to cars are attributable to causes beyond the agent's control, such as "want of sufficient engine power," "insufficient siding accommodation," "inability to place cars in the order of arrival," etc., etc. These are matters well worthy the consideration of the railways concerned, as the prompt handling of cars at all points must be of incalculable benefit to the railway companies,

C. P. R. LANDS.

The Canadian Pacific Railway lands consist of the odd-numbered sections along the Main Line and Branches, and in Northern Alberta and the Lake Dauphin District. The Railway Lands are for sale at the various agencies of the company in Manitoba and the North-West Territories at the following prices:

Lands in the Province of Manitoba average \$3 to \$6 an acre.

Lands in Assiniboia, east of the 3rd meridian, average \$4 to \$4.50 an acre.

Lands west of the 3rd meridian, including the Calgary District, generally \$3 per acre.

Lands in Northern Alberta and the Lake Dauphin District, \$3 per acre.

TERMS OF PAYMENT.

The aggregate amount of purchase money and interest is divided into ten instalments, as shown in the table below: the first to be paid at the time of purchase, the second two years from the date of purchase, the third in three years, and so on.

Interest on the outstanding purchase money is payable in one year, except in case of an actual settler who breaks up at least one-sixteenth of the land within that time. No rebate of interest is allowed on hay or grazing lands.

The following table shows the amount of the annual instalments on a quarter section of 160 acres at different prices under the new conditions:

160 acres at \$3.00 per acre, 1st instalment \$71.90, and nine equal instalments of \$60.
160 acres at \$3.50 per acre, 1st instalment \$83.90, and nine equal instalments of \$70.
160 acres at \$4.00 per acre, 1st instalment \$95.85, and nine equal instalments of \$80.
160 acres at \$4.50 per acre, 1st instalment \$107.85, and nine equal instalments of \$90.
160 acres at \$5.00 per acre, 1st instalment \$119.85, and nine equal instalments of \$100.
160 acres at \$5.50 per acre, 1st instalment \$131.80, and nine equal instalments of \$110.
160 acres at \$6.00 per acre, 1st instalment \$143.80, and nine equal instalments of \$120.

DISCOUNT FOR CASH. If land is paid for in full at time of purchase, a reduction from price will be allowed equal to ten per cent. of the amount paid in excess of the usual cash instalment.

Purchasers paying any instalment, or more, one full year before the date of maturity, will be allowed a discount on the amount of the instalment or instalments so paid at the rate of six per cent. per annum.

Interest at six per cent. will be charged on overdue instalments.

Write for maps and full particulars.

L. A. HAMILTON, Land Commissioner,
F. T. CRIFFIN, - Asst. Land Commissioner,

WINNIPEG.

ENAMELED IRON SIGNS

For Steam & Electric Railways, Steamship, Express, Telegraph, Telephone and Advertising purposes.

Railway Station Names, Street Car Route Signs, Express, Telegraph and Telephone Office Signs, Semaphore Arms, Switch Targets and Advertising Signs of every description of size and color made to order.

Railway, Steamship and Ferry Signs

For doors, etc., 23 x 3½ inches, blue letters and border on white ground, carried in stock with following lettering.

Waiting Room	Ladies' Toilet	Private Office	Dining Room
General Waiting Room	Men's Toilet	Freight Office	Lunch Room
Ladies' Waiting Room	Baggage Room	Ticket Office	Smoking Room
Men's Waiting Room	Agent's Office	Telegraph Office	No Admittance

The following are carried in stock, size 10 x 2½:—

Men Women Exit Fire Escape

Railway numbers for bridges, mile posts, signal houses, etc.; single figures on plates 8½ in. high.

These signs last practically for ever, they never fade or tarnish, they are ever bright and attractive, they are absolutely impervious to heat or cold, they are the only signs that will withstand the effects of weather in all climates.

For Prices, Illustrated Catalogues, etc., address

THE ACTON BURROWS COMPANY,

Agents for the Imperial Enamel Co. of Birmingham,
29 Melinda Street, Toronto, Canada.

BRANCH OFFICES—107 Lombard Street, Winnipeg S. A. Erskine, Resident Agent;
28 Broad Street, Victoria, B.C., D. H. Macdowall, Resident Agent.

& it is recommended that the attention of superintendents, or other general officers concerned, be directed to this subject as one calculated to greatly benefit their respective companies. The Committee recommended the adoption of amended rules & regulations to take effect May 1, & suggested that all the railway companies concerned re-issue these rules to all their agents within the territory embraced under the arrangement, with positive instructions to carry them out in their integrity.

A report of the special committee on uniform release & other special contract forms was adopted.

It was agreed that when shippers request railway cartage companies to distribute a carload of goods addressed to 1 consignee, to 2 or more parties, that an additional charge covering the extra expense of the several deliveries shall be collected, & the railway companies request the cartage companies to come to an agreement for the adoption of a uniform charge for this service. It is understood that railway agents will not accept orders for this distribution of freight, & will not assist the cartage company in sorting or handling—the extra deliveries being considered a matter entirely between the shipper & the cartage company.

The subject of payment for telegrams from shippers, re rates, etc., was discussed, & it was the sense of the meeting that such telegrams should be paid for by the shippers.

The officers & standing committees for the ensuing year were elected. A list of them is given on pg. 130.

The Executive Committee was empowered to fix the time & place of the summer meeting.

Railway Committee of Privy Council.

At a meeting in Ottawa, Apl. 21, the following cases were heard:

Bedlington & Nelson Ry.—The application made by this Co., at the meeting on Feb. 22, for running powers over a portion of the C.P.R.'s Crow's Nest Line was resumed. As mentioned in our Mar. issue, pg. 86, the B. & N. Co. first asked to run over some 15 miles of the C. N. line, but at the second hearing this was reduced to 8½ miles. The engineers estimated that it would cost the B. & N. Co. \$31,000 a mile to build a parallel line. G. M. Clark, for the C.P.R., intimated that this was not a case where the application should be granted. In any case, in the fixing of the terms, the C.P.R. did not think that the applicant should be allowed to make use of this paying stretch of the Crow's Nest line without paying for a certain proportion of the approaches on either side, which pass through a region which is not so profitable.

The Minister of Railways announced that the decision of the committee was that the principle of the application should be concurred in. In the matter of terms, it was agreed to give the parties one month to come to an understanding, the committee to confirm the same by an order at its next meeting. Mr. Clark assured the committee that the C.P.R. would facilitate a speedy adjustment.

G.T.R. Crossings. D. D. Rogers, M.P., appeared in support of an application for the G.T.R. to place electric alarms or other protection at the crossings at Collins Bay, Cataraqui & Perth roads. W. Wainwright, for the G.T.R., stated that an alarm was already being installed at Collins Bay, & an investigation would be made into the matter.

The Brandon & Southwestern Ry. Co. applied for approval of the plans of crossings of the Pembina & Southwestern branches of the C.P.R. in Manitoba. G. M. Clarke, for the C.P.R., consented to the crossing of the Pembina branch near Deloraine being made. In the case of the crossing of the Southwestern branch near Carroll, the natural difficulties are

much greater, & the parties will confer as to the best means of providing due safeguards.

At a meeting in Ottawa, Apl. 28, the following cases came up:

The United Counties Ry. asked permission to cross the Central Vermont Railway at Irberville. The case was struck out.

Montreal Electric Lines.—In the application of the G.T.R. re the fixing of the additional expense at the crossing of the G.T.R. by the Montreal St. Ry., it was announced by counsel that an amicable arrangement had been arrived at.

The Montreal Island Belt Line Ry. Co.'s application for permission to cross the Montreal St. Ry. on St. Catherine & Notre Dame streets was next reached. Mr. Mullarky, for applicants, asked that the case be postponed by reason of the unavoidable absence of their counsel, J. N. Greenshields. The Minister of Railways took the position that as the City of Montreal was not represented, & as the matter was of consequence to it, it should be given an opportunity for making its views known. Consideration of the application was accordingly deferred for a week.

Losing Cars out of Trains.

A recent press despatch from Bloomington, Ill., said railway men there were marvelling over a phenomenal occurrence on the Chicago & Alton. A freight train was going west on the Kansas City division. When near Prentice, Ill., on account of a broken wheel, one of the cars was thrown from the track into the ditch, nearly 15 ft. from the rail. The track was not injured. The couplings at both ends of the car were automatic, & the car slipped out without breaking those on the two cars next to the derailed car. The two sections of the disunited train soon came together again & coupled automatically. The air connection was broken, but, although the train stopped, & the air was again connected, the trainmen did not miss the car, & it was not missed until the conductor looked over his train at Roodhouse. The car was found in the ditch next morning by the roadmaster.

The Editor of THE RAILWAY & SHIPPING WORLD, remembering having heard Mr. Whyte, Manager of the C.P.R. western lines, speak of a case of a car getting lost out of a train without the trainmen knowing anything about it, wrote him calling his attention to the incident in Illinois, & asking for his experience. Mr. Whyte replied as follows:—"The only case where a car was lost out of a train unknown to any of the trainmen, that came under my own observation, was a good many years ago on the Grand Trunk. It occurred with a freight train from Toronto to Belleville. When the train reached Port Hope a coupling had to be made on account of a broken link or pin, I forget which, but this attracted no attention, as it was chiefly down grade from the station west of Port Hope, Newtonville, to Port Hope, but when the train reached Belleville the checker informed the conductor that he had one car less than he had waybills for. The conductor at first denied it, & was only satisfied after going out in the yard & checking his train. The missing car was found on the edge of Lake Ontario down at the foot of an embankment. The occasion that you mention of a car leaving a train between Winnipeg & Rat Portage occurred some few years ago, but the car simply jumped clear of the track, & the trainmen saw it. A more remarkable occurrence took place a couple of months ago on the Manitoba & North Western, when the boiler of the engine on a train exploded. The train had started on a down grade when the explosion took place. The engine, tender & refrigerator car left the track completely & quite unknown to any of the trainmen or passengers on the train, which

was a mixed one, & it was only ascertained when the train came to a stop that there was no engine on it."

New Brunswick Legislation.

At the recent session of the Legislature the following acts were passed, among others:—
To amend 54 Vic., chap. 2, so far as it relates to the Gulf Shore Ry.

To confirm an agreement between St. John city & the C.P.R. Co., & to enable the city to make tax exemptions in favor of the Co.

To aid in the construction of a graving dock at St. John.

To revive the act incorporating the Fredericton, Gibson & Marysville Electric Ry. Co.

To incorporate the Imperial Dry Dock Co., of St. John.

To continue the act incorporating the St. Louis, Richibucto & Buctouche Ry. Co.

To confirm a conveyance from St. John city to the C.P.R. Co., & for other purposes.

To incorporate the Shediac Coast Ry. Co.

From Winnipeg Town Topics.

Jones—"There goes a fellow who whistles at danger."

Smith—"Ah, he must be a very brave chap. Who is he?"

Jones—"Jim Brownlee, the locomotive engineer."

Passes for Members.—The oft-discussed question of members of Parliament accepting free railway transportation was discussed in the House of Commons recently, when Mr. Bostock's bill to compel railway companies to issue passes came up. The bill was opposed by Sir Charles Tupper, who asserted that the members of Canada were unswayed by any such motives as were held to be the result of accepting a pass from the railways. Sir Wilfrid Laurier suggested that the bill be withdrawn, but this Mr. Bostock declined to do. The motion for the second reading was declared lost on division.

Niagara District Guide.—Under the title of "The Indispensable Tourist & Wheelman's Guide to the Niagara District," J. M. Dixon, F.R.S. Edin., has written a most interesting & valuable pamphlet, which will enable anyone visiting this historic & beautiful district to see it to the greatest possible advantage. It contains a very complete description of the Falls & the vicinity, with historical notes, a carefully prepared series of routes for cyclists & other visitors, & a series of appendices in which the chief historic events in the district are faithfully described. The pamphlet is issued by the Niagara Falls Advertiser, Niagara Falls, Ont.

Manitoba Railways.—The speech from the throne at the recent opening of the Manitoba Legislature contained the following paragraph:—"Railway construction within the Province during the past year has been carried on to a very considerable extent, & the districts affected have been materially benefited thereby. In particular I may refer to the Swan River country, which a year ago was void of settlers, but is now a well-peopled district. A considerable portion of the railway to the southeastern part of the Province has also been built, with great advantage to the districts through which it runs, & with a promise of great & lasting benefit to the whole Province when it is completed to its objective point. The building of the Northern Pacific & Manitoba Ry. branch from Belmont westward has also been highly advantageous to the farmers in that district, whilst the settlers along the Foxton branch & the Reston extension of the C.P.R. have been equally benefited."

RAILWAY APPOINTMENTS, &c.

Canadian Pacific. The air has been full of rumors lately about supposed impending changes, & some of the daily papers have made out an extensive slate of appointments, etc. The old story that Sir Wm. Van Horne will resign the Presidency in favor of Vice-President Shaughnessy, & take the Chairmanship of the Board, has been revived, but it has not been confirmed, & Sir Wm. has declined to be interviewed on the subject. As we stated last month, it is almost certain that something will be done to relieve Mr. Shaughnessy of some of his present very heavy work, & we incline to the belief that the Passenger Traffic Manager, D. McNicoll, will receive promotion, & be next in command to Mr. Shaughnessy, though it is impossible to say what his title will be. Should this take place it would cause a number of other changes, & while we have no authority for so stating, we should not be surprised to see R. Kerr, now Traffic Manager of the western lines at Winnipeg, go to Montreal as Passenger Traffic Manager. C. E. McPherson, now Assistant General Passenger Agent at Toronto, would be likely to succeed him at Winnipeg, in which case the office there would likely be divided, & the freight business given to some one else, possibly to W. R. McInnes, now General Agent of the Freight Department at Chicago. A. H. Notman, now Assistant General Passenger Agent at St. John, N.B., would probably be promoted to Toronto, & this vacancy would likely be filled by a promotion from the St. John or Montreal offices.

The headquarters at Pittsburg, Pa., of F. W. Salisbury, Commercial Agent, have been removed from 427 Fifth Avenue to 409 Smith Building.

C. E. Bunting, of the Toronto ticket office, has been appointed Ticket Agent, a new position in Toronto, the office having heretofore been under the direct management of the Assistant General Passenger Agent.

Duluth, South Shore & Atlantic.—Notice is given that the office of the General Freight Agent of this line & of the Mineral Range

R.R. & the Hancock & Calumet R.R. is now located in the general offices at Marquette, Mich. All communications on freight traffic matters should be addressed as follows: Wm. Orr, General Freight Agent, Marquette, Mich.; W. W. Walker, Assistant General Freight Agent, Lyceum Building, Duluth, Minn.

Grand Trunk.—The reorganization of the Central Vermont has caused a number of changes in the G.T.R. Middle Division. E. H. Fitzhugh having been appointed Vice-President & General Manager of the C.V., has been succeeded as Superintendent at Toronto by G. C. Jones, heretofore Joint Superintendent of the Southern Division of the G.T. & Wabash lines at St. Thomas, Ont. Mr. Jones came to Canada shortly after Mr. Hays, & was for a time Assistant Superintendent at London, Ont. He is a comparatively young man, but has had considerable experience, & is looked on as a very efficient operating official. On leaving St. Thomas he was presented with a handsome pair of diamond cuff studs by leading citizens there.

The joint superintendency of the G.T. & Wabash at St. Thomas, vacated by Mr. Jones, has been given to L. J. Ferritor, heretofore Assistant Superintendent at London. Mr. Ferritor has been succeeded at London by F. W. Egan, heretofore Trainmaster at Belleville, Mr. Egan's place being taken by W. W. Ashald.

J. Pullen, appointed General Freight Agent of the Central Vermont, has been succeeded as Division Freight Agent at Hamilton by J. E. Dalrymple, heretofore Private Secretary to the General Traffic Manager, his territory being the portion of the Middle Division, south of the main line between Weston & Point Edward, & including the portion of the Northern Division between Stewarton & Hamilton. After leaving school in 1883, Mr. Dalrymple went into the G.T.R. Treasurer's office, serving there in various capacities until 1890. He then went to Chicago as Secretary to Mr. Reeve, then Traffic Manager of the Chicago & G.T.Ry., & returned to Montreal in 1896, when Mr. Reeve went there to assume the same duties for the system at headquarters. The territory which Mr. Dalrymple now

has under his direction represents about 800 miles of railway, & includes Hamilton, Brantford, London, St. Thomas, Windsor, Sarnia, Chatham, Buffalo, Woodstock & Galt. It is considered the most important after the Chicago division.

E. J. Bedbrook has been appointed Private Accountant to the General Manager, succeeding R. H. Ingram, who has gone to the Central Vermont as Clerk & Treasurer.

L. Macdonald, Chief Clerk of the General Traffic Department, has been appointed Private Secretary to General Traffic Manager Hays, succeeding J. E. Dalrymple. G. A. McNicoll succeeds Mr. Macdonald.

W. Mullins, Chief Clerk in the General Superintendent's office, Middle Division, under Mr. Fitzhugh, is now Chief Clerk to Mr. Fitzhugh in the C.V. General Manager's office. He has been succeeded at Toronto by W. White, for some time Private Secretary to General Superintendent McGuigan.

J. Powell, Chief Clerk of the Motive Power Department, has been appointed Chief Draughtsman.

The following station agents were installed during April:—Stark, N. H., J. H. O'Connor; Titus, Que., T. D. Ward; Whites, Que., C. H. Richardson; Oshawa (Frt.), Ont., D. J. Kain; Whitby, Ont., T. H. Coppin; St. Johns, Mich., W. H. Burke; Holly, Mich., R. G. Ward; Lenox, Mich., J. J. Waite.

Capt. W. Dewson has been appointed Station Agent at Windsor, Ont., succeeding T. Dow, who died Apl. 28, after 45 years' service.

P. Caron, for many years Conductor, has been appointed Station Agent at Bonaventure, Montreal, succeeding W. C. Wright, who died at Chatham, N.Y., early in Apl., as the result of an operation.

F. G. Hutchins, heretofore Relieving Agent, has been appointed Ticket & Passenger Agent at Point St. Charles.

Intercolonial.—The suspension of District Superintendent Ouellette, of the Montreal & St. Flavie, having resulted in his leaving the service, he has been succeeded by W. A. Dube, who up to the time of his appointment had been in the G.T.R. service for 25 years. At the early age of 18 years he had charge of

All C.P.R. Agents in

MANITOBA,
ASSINIBOIA,
ALBERTA and
BRITISH COLUMBIA

sell through tickets to the Old Country, cheaper than if passengers bought railway tickets to New York or Montreal, and then re-booked.

They also sell prepaid tickets to passengers coming from the old country, cheaper than the rate obtainable in Europe, and on favorable terms.

IMPROVED AND
WILD LANDS...

Do not fail to see my list, which includes lands in the choicest districts, near railway stations, churches and schools.

Any man with small capital can purchase a farm of 160 acres or more on very easy terms of payment, with buildings and cultivation, ready for immediate occupation.

Large sum of money to lend on mortgage at current rates of interest. Apply to

GEO. J. MAULSON,
195 Lombard St. WINNIPEG

the running of trains between Montreal & Island Pond, & was made Chief Train Despatcher at the age of 23, which position he held for 15 years.

Minneapolis, St. Paul & Sault Ste. Marie.—W. S. Thorn, Assistant General Passenger Agent, has, in addition, assumed charge of St. Paul City office, vice H. E. Huntington, transferred to the General Passenger Department. H. B. Carter has been appointed Travelling Passenger Agent, vice H. A. Olmsted, resigned.

Government Railway Officials.

The Civil Service List recently issued gives the following particulars of Government railway officials who are members of the service:

C. Schriber, Deputy Minister & Chief Engineer, born 1831, appointed 1892, salary \$6,000.

D. Pottinger, General Manager, born 1843, appointed 1892, salary \$6,000.

T. Williams, Chief Accountant & Treasurer I.C.R., born 1846, appointed 1882, salary \$2,400.

J. J. Wallace, General Freight Agent I.C.R., born 1847, appointed 1892, salary \$2,100.

J. M. Lyons, General Passenger Agent I.C.R., born 1850, appointed 1892, salary \$2,100.

E. T. Trites, Paymaster I.C.R., born 1844, appointed 1873, salary \$1,600.

J. R. Bruce, Traffic Auditor I.C.R., born 1848, appointed 1883, salary \$1,500.

W. T. Huggan, Accountant & Auditor P.E. I. Ry., born 1851, appointed 1882, salary \$1,500.

Mainly About People.

H. Upton, Auditor of the United Counties Ry. at Montreal, has also been appointed Traffic Manager.

Lord and Lady Mount Stephen dined at the Ritz Restaurant in Paris recently with the Prince of Wales.

J. Slavin has been appointed Master Mechanic of the Spokane Falls & Northern, vice C. H. Prescott resigned.

Mrs. E. Tiffin, wife of the General Freight Agent of the C.P.R. at Toronto, has returned from a visit to California.

T. Tait, Manager C.P.R. eastern lines, left Montreal May 13 by S.S. Californian for Liverpool, intending to be away about 2 months.

Miss Maud Dwight, daughter of the President of the G.N.W. Telegraph Co., has gone to Europe for a year, with her aunt, Miss Helliwell.

Mrs. Fisher, wife of the Superintendent of the Toronto, Hamilton & Buffalo Ry., died in Philadelphia Apl. 13, & was buried at Detroit, Mich.

Mrs. Tait, wife of the Manager of the C.P.R. eastern lines, will spend the summer at Birch Point, Muskoka, with her parents, G. R. R. & Mrs. Cockburn.

W. Stitt, of the C.P.R. Passenger Department, Winnipeg, has returned from his trip through California, the Southern States & British Columbia, having entirely regained his former health.

Jas. Bell, at one time Superintendent of the Montreal & Champlain division of the G.T.R., after which owing to failing health he became agent at Port Hope, resigning about a year ago, died in Toronto, May 15.

G. H. Watson, General Freight & Passenger Agent of the Ottawa & New York Ry., having resigned, the duties have been assumed by General Manager Gays. J. O. Hibbard, General Agent at Ottawa, having resigned, the office has been abolished.

J. F. Stevens, who resigned as Chief Engineer of the Great Northern (U.S.A.), July 1,

1898, has been reappointed to that position, succeeding N. D. Miller, & will have charge of the location & construction of all new lines, & of bridges, buildings, tracks & structures. Headquarters, St. Paul, Minn.

Sir Wm. Van Horne left Montreal about the middle of April for a trip to California, going by Chicago & returning by Vancouver & the C.P.R. He was accompanied by W. D. Matthews, Toronto, a director of the C.P.R., T. G. Roddick, M.D., Montreal, & R. M. Wells, Toronto, Solicitor of the Co.

The engagement is announced of Miss Mary Shaw, daughter of Col. Shaw, Watertown, N.Y., formerly U.S. Consul at Toronto & Manchester, Eng., & B. Folger, jun., of Kingston, Ont., General Passenger Agent of the Thousand Islands Steamship Co., & American Line. Miss Shaw is in Germany completing her musical studies.

Jno. Burton, representative of the G.T.R. on the Joint Traffic Association, died at Peak's Island, Me., May 16, & was buried at Hamilton, Ont. Mr. Burton entered the service of the Great Western Ry. in the 60's. At one time he was Secretary to Sir Jos. Hickson, when the latter was Manager of the G.T.R. He afterwards went into the service

T. HICKEY,

President Roadmasters' Association of America.

of U.S. lines. In 1889 he returned to the G.T.R., becoming General Freight Agent & in 1896 was appointed the Co.'s representative on the Joint Traffic Association.

J. Pullen, who has been appointed General Freight Agent of the Vermont Central, entered the service of G.T.R. as junior in the division freight office at Sherbrooke, Que., when G. B. Reeve, now General Traffic Manager of the G.T.R., was Division Freight Agent there. In 1881 he went with Mr. Reeve to Chicago as Secretary. In 1889 he was appointed Agent of the West Shore fast freight line. Subsequently he became Agent of the Reading Despatch & the Lehigh Valley Ry., until 1896, when he was made Division Freight Agent of the G.T.R. with headquarters at Stratford. After a year in that post he was promoted to be Division Freight Agent at Hamilton.

T. Hickey, President of the Roadmasters Assn. of America, whose portrait appears on this page, commenced railway work at the age of 17, in 1872, as laborer on a gravel train on the Fort Wayne & Jackson R.R. at Angola, Ind., now a part of the Lake Shore system. He started section work as a laborer in 1873, & in 5 months was appointed Section Foreman, being in the same year given

charge of a road train as Conductor, which position he held for 8 years, resigning in 1881 to accept one as Extra Gang Foreman on the Eastern Division of the M.C.R. In 1882 he was appointed Assistant Roadmaster of the same division, being located at Ypsilanti, Mich. In 1884 he was appointed General Roadmaster of the same road, with headquarters at Jackson, Mich., which position he held until 1892, when he was transferred to St. Thomas, Ont., as General Roadmaster of the Canada Southern division of the M.C.R., which position he still holds.

John Foy, whose portrait appears on the first page of this issue, was born in Toronto some 55 years ago, his father, Patrick Foy, being a member of the well-known firm of Foy & Austin, wholesale grocers. After being educated at Usshaw College, Durham, Eng., he travelled through France & Algiers & on returning to Toronto entered the service of Frank Smith & Co., wholesale grocers, remaining with them for a number of years & taking special charge of the confidential business of the head of the firm, Mr., now Sir Frank Smith, in whose interest he spent several years in London, Eng. On the organization of the Niagara Navigation Co. in 1878, Mr. Foy became a director, & in 1879 was appointed Manager, holding the position ever since & discharging its duties to the combined satisfaction of the Co. & the public. Mr. Foy, who is one of the best known transportation men in Canada, is certainly also one of the most popular. He married a daughter of Sir Frank Smith & resides in Toronto having a charming summer residence a Niagara-on-the-Lake.

Direction Signs for Trains.—The Winnipeg Telegram says: "The C.P.R. has adopted a system of sign-boards for all its out-going trains at Winnipeg. The system was found necessary on account of the large number of local trains leaving, & of the consequent numberless enquiries as to where each one went. In future as soon as the train is ready placards will be set up announcing the principal stations on the route, so that there will be no excuse for anyone taking the wrong train or missing the right one." The signs which have been adopted are made of enameled iron, & were supplied by The Acton Burrows Co., Toronto.

The G.T.R. & Muskoka. From June 5 to 10 the G.T.R. will have about 30 of its passenger agents from various points in Canada & the U.S. visiting Lakes Simcoe & Couchiching, Magnetawan River, the Lake of Bays, Georgian Bay & the Muskoka lakes; the object of the trip being purely an educational one. All the members of the party are engaged in securing tourist business, & the trip has been arranged for the purpose of letting them know intelligently what the attractions of the districts to be visited are from a tourist standpoint. The week's tour will enable them to thoroughly familiarize themselves with the tourist resorts and surroundings reached by the G.T.R. in Ontario.

Great Northern (U.S.A.)—It is said this Co., or persons allied with it, have acquired the Duluth, Mississippi, & Northern Ry., which starts from Swan River, on the Eastern Minnesota Division of the G.N.R., 93 miles west of Duluth, running northeasterly to Hibbing, 37 miles, & it is rumored that it is the intention to extend it some 80 miles, to Koochiching, which is situated on the Minnesota side of Rainy River, opposite Fort Frances on the Canadian side. From Koochiching connection could easily be made with the Ontario & Rainy River Ry., now under construction; & it is said that if the scheme is carried out an attempt will be made to secure running power over the O. & R.R. Ry. & the Manitoba & Southwestern to Winnipeg.

WHAT WE THINK.

For the information of the officials of the Kootenai Ry. & Navigation Co., who have their headquarters in London, Eng., we may state that Toronto is in Canada. The tired feeling that comes over us when we receive from officials of a Canadian railway, mail matter addressed "Toronto, U.S.A.," is beyond description.

Our esteemed contemporary, the Railroad Gazette, of New York, informs its readers that application has been made to "the Railway Committee of the Primitive Council" at Ottawa for running powers on the Crow's Nest Pass Ry. for the Nelson & Bedlington. What have Mr. Blair and his colleagues done that they should be thus libelled?

The Minister of Railways will do well to give careful consideration to the unanimous demand of the Nova Scotia boards of trade for improved passenger service in Cape Breton. The scenic beauties & splendid climate of that district have brought it to the front ranks as a summer resort, & it is every year becoming more popular, especially with visitors from the United States. It is also increasing in business importance, & requires a faster service than has been, which should be provided for the summer season, if not for the year round.

—As anticipated in our March issue the action of the Dominion Government in regard to the construction of a telegraph line to the Yukon Territory has resulted in a claim for compensation from one of the chartered companies. We have no objection to the Government building the line, though we think it could have been done more economically by a company, but the two charters to companies should not have been granted if the Government had any intention of building. If the decision to build by the Government was arrived at after the granting of the charters the companies should have been notified immediately to prevent them from incurring liabilities. Mr. Roche, M.P. for Kerry in the Imperial Parliament, recently stated that the company in which he is interested gave large orders for materials & supplies, & it is understood the company will ask compensation. We see no reason why it should not succeed in its claim if justice is done.

—The Rossland, B. C., Miner accuses the C.P.R. Co. of laying old rails on the Crow's Nest Pass line. As a matter of fact, better rails were put down than were required by the contract between the Government & the Co. That contract called for steel rails of a minimum weight of 56 lbs. a lineal yard for the whole length of the line. As will be seen by reference to the report of the Government Superintending Engineer, on pg. 114 of our April issue, rails of that weight were only used on the prairie sections & on the river bottoms,

where tangents & light curvature occur, the balance of the line being laid with a percentage of 60 lb. rails & fully 26% of the whole line having 73 lb. rails. The C.P.R. Co.'s record is of itself sufficient answer to any charge of scamping work. Even the Government standard is not good enough for it, as evidenced by the fact that when the Co. took over the B.C. section of the main line between Savona's Ferry & Emory's Bar it was found to be so much below the Co.'s standard that after most exhaustive arbitration proceedings the Co. was awarded \$579,255.20 to be spent in bringing it up to the C.P.R. standard. There is no doubt whatever that when the Crow's Nest line is fully completed it will be found just as good as the main line, but as Sir Wm. VanHorne has pointed out the management knows better than to put its heaviest rails on new earthwork, where they would be damaged during construction & early operation. On a great part of the Crow's Nest line the heavy rails are already laid, & the rest will follow in due course, & as soon as it is deemed wise to put them down. If the Rossland Miner wants to make points against the C.P.R. it will have to select some subject other than the quality of the Co.'s construction work, which is above criticism.

The Ontario & Rainy River Contracting & Supply Co., Ltd., has been incorporated under the Ontario Companies Act, with a capital of \$80,000, & head office at Port Arthur. The incorporators are, J. Conmee, A. W. Thompson, A. J. McComber, Mrs. Conmee & Mrs. Whalen, the first three named being the first directors. The objects are to carry on the business of contractors for the construction of railways & other public works, for the sinking of shafts & for other work in connection with the development of mines, & to manufacture & sell timber, ties, lumber, pulpwood & cordwood.

Dominion Notices to Mariners.

The Dept. of Marine has issued the following notices:—

No. 11, Apl. 18. British Columbia. 1. Change in the character of Sisters Rocks light. 2. Intervals between Prospect Point fog bell strokes.

No. 12, Apl. 20. Ontario. 1. Change in Parry Sound buoyage. United States inland waters. 2. Niagara river range rear light station. 3. Cleveland west breakwater light station. 4. Light on Carlton Island.

No. 13, Apl. 26. British Columbia. 1. Amended description of shoal off Cole Bay. 2. Possible uncharted dangers off the west coast of Vancouver Island. 3. Beacons in Baynes Sound destroyed. Empire of Japan. 4. Murotozaki lighthouse. 5. Taitatate lighthouse.

No. 14, Apl. 26. Ontario. Georgian Bay & North Channel pilot, 1899.

No. 15, Apl. 27. British Columbia. Garry Point light temporarily discontinued.

No. 16, Apl. 27. Quebec. Change in Platon beacons. New range lights.

No. 17, May 1, British Columbia. 1, Garry Point light again in operation. 2, Note on the use of the red sectors in Fiddle Reef light.

No. 18, May 10, Nova Scotia. 1, Color of Peases' Island fairway bell buoy. 2, Change of name of Hobson's Nose lighthouse. U.S.A., Maine. 3, Change in characteristics of fog signals.

No. 19, May 2, Nova Scotia. Government rifle ranges, McNab's Island.

No. 20, May 4, Ontario. 1, Burlington Bay inner light. 2, Discontinuance of Michael Point light. 3, U.S.A. The Great Lakes. Fort Gratiot range light station. 4, St. Mary's Falls canal, westerly entrance. North pier light discontinued. Vidal Shoal channel range lights. South pier light.

No. 21, May 5, Nova Scotia. 1, Harbor light at Port Medway, Quebec. 2, The Barre à Boulard range lights in operation.

Steamers for Newfoundland Service.

There are at present building in A. & J. Inglis' yard at Glasgow, 7 steamers for R. G. Reid, proprietor of the Newfoundland Ry., for service between that island & the Labrador coast, & also to maintain a coasting service around the island of Newfoundland. The vessels are handsome looking models, with fine lines, having clipper stems & topgallant forecastles, & every provision has been made for the comfort & convenience of passengers. A complete installation of electric light, including a powerful search-light, will be fitted, & special attention has been paid to the heating of dining-saloon & all staterooms. A complete system of steam radiators, with copper piping for supply & exhaust steam, is being fitted throughout the vessels.

In the Labrador vessel accommodation is provided for 42 1st class passengers amidships, a very commodious cabin being set apart for ladies, & all lavatory conveniences are of the latest & most approved type. Sleeping accommodation is provided for 75 2nd class passengers forward of 1st class rooms, with independent lavatories, etc., all complete; while in the afterpart of the ship a cosy smoking-room is furnished with all requisites. The officers' & engineers' cabins are alongside the machinery casing, all comfortably fitted up. The dining-saloon is situated on the main deck amidships & is handsomely panelled & fitted, a feature of the design being the arrangement of small side tables for the convenience of passengers dining in small parties. In the vessels which are intended for the coasting trade around Newfoundland the accommodation is on the same lines, but of less extent, but all the rooms are fitted with the same comforts & in the same style.

Special attention has been paid to the extra strengthening of all these steamers, in view of the conditions of their service, & a complete system of water ballast tanks in a cellu-

lar double bottom is fitted in all, while the Labrador vessel has in addition peak tanks for trimming purposes. Steam steering gear of the most approved type is fitted in all the steamers, & steam winches for the speedy handling of cargo. The upholstery-work in dining-saloon & all staterooms is of the most approved designs & of best quality. The vessels will be rigged as schooners with 2 pole masts & everything required about hull or machinery will be of the best description. The engines & boilers are being constructed by the builders, & the vessels will fully maintain the reputation for speed, comfort & efficiency that the steamship Bruce has obtained for herself. The Bruce runs between Port-aux-Basques & Sydney, N.S., & was also built by A. & J. Inglis, Glasgow.

Improvements in Murray Canal Lights.

Official notice is given that the Department of Railways & Canals has improved the character of the lights at the east & west entrances of the Murray Canal, adjoining the Bay of Quinte and Presqu'île Bay, Ont. The former lights were fixed red lights shown from small lanterns standing on brown pyramidal open frames. The new lights which are now in operation are fixed white lights elevated 27 ft. above the level of the water & visible 5 miles from all points of approach. The illuminating apparatus consists of large pressed glass lenses. The light buildings, which stand on the same sites as the old frameworks, viz: 30 ft. from each end of the north pier of the canal, are enclosed hexagonal galvanized iron cabins, with cylindrical columns surmounted by the lenses rising from the apexes of the roofs. Each is 18 ft. high, from the deck of the pier to the lens, & is painted white. By a very ingenious contrivance the lamp is elevated to top of signal from inside, so that it comes exactly in proper focus for the fresnel lens, which produces a powerful & brilliant light, the operator not requiring to go outside at all, the hexagon house at base forming a perfect protection from the weather as well as a convenient storeroom for oil, lamp chimneys, &c. The house & tube through which the lamp is conducted to the lens are made of heavy galvanized steel, & are practically indestructible. An iron ladder is provided on the outside to enable the attendant to clean the lens, which is 12 ins. in diameter, made of best flint glass in 3 sections. Mariners will appreciate the great advantage of the new lights, as the entrance to the Canal will be thoroughly marked, & if the red lights on the bridge are in range a straight course for the entrance is assured. The manufacturers & patentees are Noah L. Piper & Son, Toronto.

ELECTRIC RAILWAYS.

International Traction Company.

The consolidation of the electric railways of Buffalo, Lockport & Niagara Falls, N.Y., & Niagara Falls, Ont., has been completed under this title, the Co. being organized under the laws of New Jersey. B. Franklin has been elected President, & C. McVeagh, Secretary & Treasurer. It is the belief that these officers are only temporary, & that in the course of time W. C. Ely will become President of the Co., in fact, all signs point to this. The merging of the various companies now controlled by the syndicate under the new organization is gradually going on. In all, 16 companies are concerned, with a total of about 318 miles of track. It is the belief of the men who have invested in the new deal that the various lines can be operated by the new organization with much greater economy than has been the experience of the several companies that formerly operated them, &

that in this way a great saving will be effected. One of the first steps taken by the new syndicate was to reorganize the Buffalo Railway Co., which was done at a meeting in the office of J. P. Morgan & Co., New York, when an election of officers took place with this result: President, W. C. Ely; Vice-President, D. S. Lamont; General Manager, B. Van Horn; Sec.-Treas., R. F. Rankine.

The Niagara Falls Park & River Ry. was transferred to the Co. at a meeting held in Toronto, April 18, when the following officers were elected: President, W. C. Ely, Buffalo; Vice-President, W. B. Rankine, New York; General Manager, B. Van Horn, Buffalo; other directors, E. B. Osler, T. G. Blackstock, W. H. Beatty, Toronto; W. Hendrie, Hamilton; Sec.-Treas., R. F. Rankine. We have been officially informed that it is understood none of the Canadian employes will be removed, but there is likely to be some rearrangement & changes in operation.

The financial strength of the new syndicate is apparent from a review of the names of some of the men. C. H. Coster is of J. P. Morgan & Co., of New York. T. De Witt Cuyler comes from Philadelphia. D. S. Lamont was Secretary of War under President Cleveland. F. L. Stetson is Vice-President of the Niagara Falls Power Co., & W. B. Rankine is Secretary of the same Co. C. C. Cuyler is of the firm of Cuyler, Morgan & Co., of New York. W. C. Ely is making a reputation as a great electric road financier, & is a man of wealth & ability; to him is given all credit for putting the big deal through successfully. R. F. Rankine, who is Secretary & Treasurer of the Co., is a brother of W. B. Rankine. His assistant will be J. S. Beacher, who held a position under the old Co.

It is said the Co. proposes to spend \$500,000 in improvements during the coming summer & will make changes in the schedule & service wherever they will be for the advantage or convenience of passengers. Currency was recently given to a report that important extensions would be made to the Canadian part of the system, including a line from Fort Erie to Point Albino, & another line from Fort Erie to Chippewa, also a branch from Fort Erie to the race track, & to the grove at Erie Beach. Mr. Van Horn recently informed us that the Co. was not contemplating building any more lines on the Canadian side.

J. C. Brewster, Superintendent of the Niagara Falls & Suspension Bridge Ry. since 1891, has resigned. Under his management

W. CARLY ELY.

the road has been changed from a horse car line to an electric railroad. This Co. is included in the absorption by the International Traction Co., & for the present C. K. Marshall will manage this property in connection with the Buffalo & Niagara Falls Ry.

We are indebted to the Street Railway Review for the photographs of Messrs. Ely & Van Horn, given on this page.

The Lines in Western Canada.

B. C. Electric Ry. Co.'s earnings and expenses for March:

	1897-8.	1898-9.	Increase or Decrease.
GROSS EARNINGS			
Railway Vancouver branch	\$4,020	\$6,003	\$1,983
Victoria	6,732	6,175	557
Westminster	6,438	6,492	54
Logging Vancouver	8,240	9,875	1,635
Victoria	4,399	5,259	860
Gross earnings	\$39,729	\$34,014	\$5,715
Working expenses	\$20,339	\$22,376	\$2,037
Net profits	\$19,393	\$11,638	\$7,755
Aggregate Gross Earnings, April 1 to March 31	\$305,132	\$410,099	\$104,967
Aggregate Net Profit, April 1 to March 31	\$97,490	\$159,734	\$62,244

The aggregate gross earnings and net profit for 1897-98 are from April 15 only.

The directors have declared a dividend at the rate of 5% per annum on the preference shares. The profits for the year ended Mar. 31, 1899, after deducting fixed charges & the preference dividend, amount, subject to final audit, to £16,283, & the directors recommend a dividend on the ordinary shares of 4% per annum free of income tax, absorbing £8,275, carrying £8,008 to special & general reserves.

The Co.'s offices in Vancouver have been moved to the new terminal buildings, corner of Hasting & Carrall streets.

The Co.'s tracks are being connected with the C.P.R. siding at the Co.'s Vancouver terminal building, so that freight cars may be transferred to the Vancouver-Westminster electric line.

Contracts were recently let for the two miles of track mentioned in our Apl. issue, pg. 118. Orders have been placed for 2 closed & 2 open motor cars.

Nelson.—W. A. Macdonald, solicitor, acting for the British Electric Traction Co., has asked for a 35 years' franchise for an electric railway in Nelson. It is thought the Council will grant the application, but will not agree to exemption from taxation for more than 10 years, while a complete transfer system & cheap rates for school children is likely to be insisted on. If the project goes through, the first line will probably be built from the C.P.R. station along Baker st. to Bogustown, with a branch up Stanley st. 2 miles in all. Ultimately another line will probably be built along Vernon st., forming a belt line that will include Baker st., the cars running one direction on one street & the opposite direction on the other.

The Winnipeg Electric St. Ry. has placed an order for two "1,000" 2-motor equipments.

The Co. is experimenting with fenders. R. P. Roblin, M.P.P., wants the Legislature to give the City of Winnipeg power to decide whether the cars shall run on Sunday. Now it is prohibited by a general act.

Maritime Provinces Electric Lines.

Bedford Electric Co.—The prospects for the speedy completion of the electric tramway from Halifax to Bedford & along the shore are said to be very good. A Halifax paper reports that the work will go ahead this summer, & that an engineer from England will be there shortly in connection with the matter. The work of building the tramways, as well as the proposed pulp mill at St. Margaret's Bay will, it is said, be carried on simultaneously & may begin about the same time.

The **Halifax Electric Tramway Co.** recently paid a quarterly dividend at the rate of 5% per annum.

Ontario Electric Railways.

The **Brantford St. Ry. Co.** is installing six "800" railways motors.

Cornwall Electric St. Ry. Co.—In the case of Kirkpatrick vs. this Co., the Co. has appealed from the judgment of Chief Justice Armour, in favor of plaintiffs in a mortgage action for foreclosure & payment of \$100,000, upon the grounds that the mortgage deed contained no covenant for payment & no acceleration clause; that the mortgage could not be extended to property other than that which it specifically included; that the defendant had no power to hypothecate any property except its real & personal property, & could not, as it professed to do, charge its franchises & income.

Goderich to Kincardine.—An electric line between these towns is talked of. J. J. Wright, of the Point Farm, Goderich, is interesting himself in the proposal.

Guelph.—G. Sleeman, owner of the street railway, says he has been approached by the Cataract Power Co. for an option on his line.

The Board of Trade has been discussing the building of electric lines to Hespeler, Arthur & Erin. The first-mentioned line is the most favored. It would run via Puslinch Lake & connect with the Galt, Preston & Hespeler St. Ry. A local paper gives this estimate of cost:

11 miles grading	\$ 6,000
20,000 ties	5,000
1,000 tons rails	27,000
Anchor bars, poles & spikes	4,000
Laying track	1,000
1,000 posts	1,500
1,000 post holes	500
11 miles of wiring	6,000
4 cars	8,000

\$59,000

This does not include power, which could probably be obtained from the Guelph St. Ry., nor right of way. It is thought \$25,000 capital would be enough to raise, & that the line could be bonded for the balance. Guelph people do not seem to favor the idea of an electric

line to Hamilton, thinking it would take trade away from them.

The **Hamilton, Ancaster & Brantford Electric Ry. Co.**'s annual meeting, fixed for May 3, was postponed to May 20, to permit of the continuance of negotiations with New Yorkers in regard to financing the enterprise.

Hamilton Projects.—J. Patterson, of Hamilton, has written Col. Higinbotham, of Guelph, as follows:—"We propose to build a double track line from Hamilton to the brow of the mountain, near Clappison's Corners. We will cross the G.T.R. & Desjardines Canals about 40 ft. higher than the present G.T.R. track in order to be able to ascend the mountain easier. After getting on top of the hill one branch will go through Millgrove in, as nearly as possible, a straight line to Guelph. The other one will go over towards Greensville & Bullock's Corners, & from there in as straight a line as possible through Galt & Preston to Berlin & Waterloo. We do not know about the extension of which Dr. Burns speaks to Mount Forest. The present ideas of our Co. are only to build to Guelph, but if we can see any business at all we would continue up to Fergus & Elora. This we think is quite probable. We expect the line to be built very much in the style of a first-class railway, & not in the manner in which many electric roads are built. If it is properly constructed, as we propose, there will be no difficulty in hauling freight, & in running an hourly service between Hamilton & Guelph, making the distance in three-quarters of an hour. At Hamilton we propose erecting a very large cold storage warehouse, & connecting all the electric roads with it, as well as the G.T.R. & C.P.R. We propose by this to establish connection with England. Refrigerator cars will be run, connecting with fast steamers, & a very large business can be worked up in this direction. We also think it will make a very central distribution point for the fruit trade.

T. E. Hillman has made a survey for the line between Hamilton & Guelph.

In our last issue, pg. 119, we gave particulars of the plan to secure control of the Hamilton St. Ry. & the electric lines running from Hamilton, by J. Patterson, for the Cataract Power Co. The deal includes the Hamilton St. Ry., the Hamilton & Dundas Electric Ry.,

TORONTO ENGRAVING Co.
GUTS FOR ALL PURPOSES
BY ALL PROCESSES &
92 BAY ST.

FREE

56 PIECES FULL-SIZE, For Families.

There is no fake about this; send your address at once. Every person answering this advertisement can get a Handsomely Decorated Set, absolutely free—we mean it. There is no trick, no juggling with words, nothing but what is honest. Our offer is in black & white, no misrepresentation of any sort; everybody can receive & take advantage of it, & we positively will not go back on it no matter what it costs us. We wish to put our paper on top, & will do anything to get it in the lead quickly. It is one of the best & most interesting Fashion, News & Story Papers in existence. You can prove all we say, the absolute truth, if you will send us 10c. silver or 10c. stamps to cover expense of postage, mailing, addressing & packing, & we will send you the paper for 3 months free. If every one can have their choice of Breakfast, Dinner or Tea Set free. All Sets carefully boxed & packed at our expense. **POPULAR FASHIONS**

& the Hamilton Radial Electric R., also the Hamilton & Caledonia, & the Hamilton & Guelph projected lines, while the Galt, Preston & Hespeler Electric St. Ry. is also mentioned in connection with the deal, which with completed & projected lines would give a system of about 150 miles. The purchase of the Hamilton, Grimsby & Beamsville Electric Ry. has not been mentioned, & it may be contemplated to build another line to Niagara Falls. The capital stock of the Hamilton St. Ry. is \$205,000, with a bonded indebtedness of \$500,000. It was recently announced that \$103,000 of the stock had been secured at par, but some of the persons who are alleged to have given options have not transferred the stock, & proceedings have been taken against one of them, B. E. Charlton, to compel delivery of 179 \$50 shares. The idea is to operate the lines with power from DeCew Falls.

The Hamilton St. Ry. Co.'s receipts for the quarter ended Mar. 31, were \$26,083.36 against \$23,403.63 for corresponding period in 1898. The percentage paid the city for the 1st quarter of this year was \$1,565, & mileage \$1,854.96.

Threatened difficulty between the Co., the city & the employes has been averted by the Co. agreeing to work the men not more than 60 hours a week, & to pay not less than 15c. an hour. The Co. employs 70 regular & 18 spare men, & it is said they average \$450 a year each.

Kingston Electric St. Ry.—B. W. Folger says the Co. will extend its tracks to Cataraqui this summer.

London St. Ry.—Gross earnings for Mar. \$8,911.46, an increase of \$1,124.14 over Mar., '98. Gross earnings for Apr., \$7,760.89, an increase of \$181.48 over Apr., '98.

The employes have asked Vice-President Smallman to arrange a meeting, at which their alleged grievances may be discussed, & Mr. Smallman has replied, asking the men to send the directors a written statement of grievances. The men hold their case is set forth in the copy of the new agreement which they wish the Co. to sign; that they have received no answer from the Co. regarding it, & that they wish to discuss with the directors their reasons why the agreement should be made.

In the case of Fraser vs. the Co., the Co. recently appealed from the judgment of the Divisional Court (29 O. R., 411) sustaining a verdict for plaintiff in an action for negligence, while reducing the amount of the verdict from \$3,300 to \$2,000, or directing a new trial if the plaintiff should refuse to consent to the reduction. The plaintiff, while standing on the foot-board of one of the defendant's cars, was struck by one of the side-posts of a bridge over which the car was passing, the space between the post & the side of the car being only 14 ins. The Court below held that an invitation to the plaintiff to stand on the foot-board must be implied, & while there he was entitled to be carried safely, which the improper construction of the bridge prevented. The plaintiff has also appealed from the judgment of the Divisional Court reducing the amount of the verdict. Defendant's appeal has been dismissed. Judgment has been reserved as to plaintiff's cross appeal.

The Ottawa Electric Ry. Co. will extend its track 2 miles to Rockcliffe rifle range, if the Dominion Government will give satisfactory assistance.

This Co.'s bill, now before Parliament, has occupied a large amount of time both in committee & in the Commons. The principal fight has been over the proposal to operate on Sundays. An early statute affecting the Co. forbids this. It seems probable this provision will be repealed, & that the Co. will be left subject to Ontario legislation in this respect. The Co. is also asking power to build

through the townships of Hintonburg & Nepean.

The Peterboro & Ashburnham St. Ry. Co. not being able to extend & improve its line so as to make it a profitable undertaking, is said to be desirous of selling it to the town or of securing some assistance from the corporation.

Port Arthur Electric Ry.—The Port Arthur Commissioners are complying with the demands of W. Phillips, of Niagara Falls, who was sent by the Ontario Government to inspect the line to Fort William, & are putting in a heavier trolley wire and other improvements.

St. Thomas St. Ry.—This Co. is putting in a signal system. According to the St. Thomas Times the grades, curves & single track require a signal which will operate positively & hold the cars on switches until the track between switches is clear. This system is a manual one, & this method has the advantage of making the conductor responsible for maintaining the right of way. The system is operated as follows: A conductor before entering a section between switches pushes a switch rod which sets a signal at the turnout ahead, a magnet operating a red semaphore & incandescent lights behind a red disk. This makes the signal visible both night & day. This semaphore stays set until he reaches the switch ahead; then the conductor opens the circuit which sets that track behind him at safety. If on reaching the switch he finds the semaphore is set to danger, he has to wait on the switch until the car passes. Conductors only set semaphores ahead of them & release them behind. The car is controlled by the semaphores operated by the conductors of cars passing it at the switches, & the signal systems for cars operating in opposite direction are entirely independent. In each signal box there is also a pilot lamp which is extinguished when the section of track is opened & illuminated when the section is closed. This gives the conductor knowledge that his signals have properly operated at the distant switch. As the first signal set gives the right of way, there is no meeting between switches. It is operated from the trolley current & will be the first system of the kind installed. Companies heretofore which operated single track roads have been entirely dependent on the telephone, which, at its best, for this class of work has been an annoyance and delay. With this new system a conductor can tell the moment he reaches a switch if his meeting car is coming & if the track ahead of him is clear. If it is clear he immediately protects his own car by setting a signal at the switch ahead & goes on. In this way if one car is delayed the others can continue to run on time.

The Co. has added 2 open cars to its equipment.

Smith's Falls to Gananoque.—The Ontario Legislature, at its last session, incorporated a Co. to build an electric line between these points by way of Merrickville.

Toronto Railway.—The gross earnings are:

	1899.	1898.	Increase.
Jan.	\$95,860.12	\$86,302.36	\$9,557.76
Feb.	91,860.30	82,402.19	9,458.11
Mar.	103,234.88	92,318.42	10,916.46
April	95,212.37	86,898.83	8,313.54
	\$385,997.67	\$348,121.80	\$37,875.87

A city by-law provides that the Co. shall, during Nov., Dec., Jan., Feb. and Mar., maintain vestibules upon its cars for the protection from inclemencies of weather of those who have charge of them. The Co. placed vestibules upon the front ends of cars, but not upon the rear, contending that that was all that was required by the law. As previously stated in these columns, an action was brought against the Co. before a police magistrate to compel the placing of vestibules

upon the rear ends, and judgment was rendered against the Co., imposing a fine & costs for the delinquency. An appeal was taken to the Divisional Court to set aside the judgment, & Judge Macdougall has sustained the lower court, dismissing the appeal. By this decision the Co., if sustained on further appeal, will be obliged to provide all cars with closed vestibules on the rear end as well as in the front during the months mentioned in the by-law. The Judge said the question he had been required to decide was whether the defendant, according to the by-law, was bound to provide a vestibule for each end of the cars, & to protect, by a vestibule, the conductor as well as the motorman. Evidence as to the convenience of vestibules on the rear end has been offered, but it was beside the mark as far as his jurisdiction was concerned. Referring to the contention that the Toronto Ry. was a Dominion concern, & in consequence not bound to submit to any other authority than the Dominion Government, he said that the objection could not be sustained. As to the merits of the case, he held that the language of the by-law forbade the operation by the Co. of any street car unless it was supplied with proper & sufficient vestibules. That meant that there must be 2 vestibules, not "a vestibule." The defendant had argued that the words motorman & other persons in charge of the car while engaged in operating the car did not include the conductor. He was of the opinion that the conductor was in charge of the car within the ordinary & common-sense meaning of the expression, & had it been meant otherwise the by-law would read to protect "the motorman in charge of the car." The conductor gave the signals by which the car started and stopped, & was consequently the person in charge of the car, the duties of the motorman being much the same as those of a locomotive driver on a steam railway. He thought that without a doubt both the conductor & motorman were engaged in operating the cars, and in support of that quoted a judgment of Chancellor Boyd. The conclusion he arrived at was that the meaning & interpretation of the by-law was plain, & that the conviction should be affirmed.

The Co. is experimenting with a device to relieve the overcrowding. A car has been supplied with 2 rows of automatic seats, which can be folded over the ordinary seats when not in use, & which do not in any way interfere with the comfort of the passengers. By the new arrangement, the seating capacity of the car will be almost doubled. The new rows of seats run the full length of the car & are raised higher than the ordinary seats.

Superintendent Gunn was recently given a complimentary dinner by the roadmasters.

Quebec Electric Railways.

The Hull Electric Co. has paid the C.P.R. \$100,000, the purchase price of the Aylmer branch, from Hull to Aylmer, Que., 7.5 miles.

The Chateaugay & Northern Ry. Co. is asking Parliament for power to construct & operate a railway from any point on the boundary between the Province of Quebec & the State of New York, thence to a point in Soulanges County, to connect with the Montreal Island Belt Line Ry., & follow the same route to the Island of Montreal, thence north-easterly across the Island of Montreal, through Hochelaga, in rear of the mountain, to a point on the Great Northern Ry. in the County of Joliette, passing near L'Assomption, to Joliette. The Co. also wants permission to construct & operate an extension of its main line to & through Berthier, & to construct & operate by electricity circuit lines of railway in towns, villages & parishes along its main line & branches.

The Montreal Island Belt Line Ry. Co. is asking Parliament to amend its amended Act of incorporation, to alter & change its bonding sections, to increase its bonding powers, to amend and extend its powers concerning branch lines, to change its corporate name, to purchase or otherwise acquire, in whole or part, the railway, charter rights, franchises & privileges of the Chateaugay & Northern Ry., to ratify & confirm agreements with other companies, &c., & to further amend its charter powers.

Judge Burbridge has granted an application to make orders of the Exchequer Court two orders of the Railway Committee of the Privy Council which authorize this Co. to build a branch line from its main line along Davidson St., Montreal, to the Montreal Cotton Mills Co.'s factory. The application of the Co. for permission to cross the Montreal St. Ry. tracks on St. Catherine & Notre Dame Sts., is still before the Railway Committee of the Privy Council. The M.S.R. Co. is stoutly opposing the M.I.B.L.R. Co.'s attempt to run cars within the city limits. The latter Co. says that if it gets the right to run into the city it will double-track its line through to Bout de L'Isle.

The Co. has purchased the str. Mansfield, which has been running between Ottawa & Gatineau Point, & will use her as a ferry between the end of its line at Bout de L'Isle & Charlemagne & Repentigny, on the opposite side of the river.

The Co. will run the Bout de L'Isle Hotel this year under the management of R. Houle.

The Montreal Park & Island Ry. has made many improvements recently. A number of new cars have been added, & all the summer cars have been remodelled. The equipment throughout is in the best & most modern condition.

Montreal St. Ry.—The gross earnings are:

	1898-9.	1897-8.	Increase.
Oct.	\$133,419.69	\$116,093.09	\$17,326.60
Nov.	125,126.10	110,698.98	14,427.12
Dec.	127,078.00	113,079.33	14,698.67
Jan.	125,276.04	110,155.96	15,120.08
Feb.	114,838.02	102,425.99	11,412.03
Mar.	124,754.11	114,476.98	9,277.13
April	139,405.46	110,619.27	19,786.69
	\$879,497.92	\$777,499.60	\$101,998.32

On May 1 the Co. paid a dividend of 2½% for the quarter ended Mar. 31.

In 1894 the Co. entered into an agreement with the City Corporation, under which the latter was to remove snow from the streets occupied by the Co., the Co. to pay \$1,650 a

year per mile of street, which was estimated as half the cost. For the 5 years, 1893-4 to 1897-8, the total cost of removing snow was \$393,315.68, of which the Co. paid \$255,360.71, the City paying only \$137,954.94. The management contends that the City has failed in its obligations, not having expended sufficient to effectually remove the snow, & that the Co.'s operations have been hampered thereby, rendering it impossible to furnish a satisfactory service.

The judgment of the Superior Court in the case of Leipschitz vs. the Co., has been reversed by the Court of Appeal. The plaintiff claimed the recovery of \$500, amount of 2 cheques signed by him & delivered to the Co. under the following circumstances: A party named Alder having bought from the Co. for \$500 a quantity of old material which it periodically sells, subsequently applied for the purchase of another lot, but his demand was refused on the ground that the previous purchase had not yet been paid for. Thereupon Alder went to Leipschitz & got 2 cheques from him, one for \$400, to the order of the Co., & the other for \$100, payable to bearer, for the intended purchase of the old iron by Leipschitz. However, when Alder paid in the two cheques the proceeds were applied to Alder's own previous debt, & when Leipschitz came to get the material he found it had been sold to a third party. The Court below dismissed the action, but the Court of Appeal reversed that judgment & held that Leipschitz was entitled to recover the amount of his cheques, as in accepting them the Co. had placed itself in the position of trustee towards him; it was obliged to render him an account, & had no reason to apply the money to the payment of his agent's debt.

The views on page 155 show the improved summer cars of this Co., which have been specially designed to meet the requirements of a northern climate, where the mornings & evenings are cool, & the middle of the day excessively hot. The cars are partly closed with wooden sheeting on the devil strip side, & are equipped with curtains which, when closed, make them absolutely weatherproof. A considerable number of these cars are already running, & it is expected to have 100 in operation by the middle of June. They are meeting with entire approbation by the public.

The Côte des Neiges line has been built to Pine Avenue, within 1,800 ft. of the summit of the hill, to which point the City is endeavoring to get the Co. to continue it.

A large amount of track is being relaid, the ordinary rail being replaced by 83 lbs. girder rails.

The Co.'s shops will be transferred from Coté street to Hochelaga in a few months, when the new buildings are completed there. When the Coté street shops are abandoned it is intended to use them for car storing purposes.

As soon as arrangements with Verdun municipality are made by the council of that place, the Co. intends completing its line from the city limits to Rielle avenue.

Quebec Bridge.—The project of connecting the mainland with the Island of Orleans by a bridge is being seriously agitated. The proposition is to erect a cantilever bridge from the Island to the Beauport shore for vehicles, foot passengers & electric cars. The shoals run out so far both from the Island & from the Côte de Beaupre, that the distance to be bridged would not be unusually great. At certain seasons of the year, the residents of the Island are now perfectly isolated from the rest of the world. Constant, easy & rapid communication between the Island & the mainland, would, it is thought, quickly double the value of property on the Island, while the circuit of it by means of an electric railway would make it a fashionable summer resort.

The Quebec St. Ry. Co. has gone into liquidation, its property having been acquired by the Quebec, Montmorency & Charlevoix Ry. Co.

Openings for Electric Lines.

J. C. Langelier, in recently reporting to the Quebec Woods & Forests Department on the great field for the manufacture of pulp & paper in the Lake St. John district, said:—"There is probably no other place where electric railways could be built under such exceptionally advantageous conditions. In addition to the fact that the ground is level & building timber right on the spot, there would be all along the line, at comparatively short intervals, water powers capable of giving an unlimited supply of electricity. Starting from the west there are the Mistassini falls, & a mile further those of the Mistassibi; 9 or 10 miles further to the east the White falls on the Little Peribonca; 9 or 10 miles still further east, the falls of the Great Peribonca. From these falls to those of the Little Discharge is less than 20 miles. At the same distance from the Little Discharge

SUMMER CAR, MONTREAL STREET RAILWAY.

are the falls of the au Sable river, 249 ft. high. Six miles further & 12 miles from St. Alphonse is the Chicoutimi river, which could also supply power for producing electricity.

"It would be equally easy to establish an electric line between Mistassini & Roberval, the western terminus of the Quebec & Lake St. John Ry. From Mistassini to the Chamouchouan, there is barely more than 16 miles, & about midway the Tecouapee river could supply water-powers capable of providing an abundance of electric power.

"On the Chamouchouan the Bear falls could be utilized for the same purpose. From the Bear falls to Roberval, about 30 miles, the Salmon, Iroquois & Ouaitchouaniche rivers, nearly at equal distance from one another, also have waterpowers capable of supplying the electric power required for a tramway.

"The construction of an electric tramway between Montreal & Roberval, about 250 miles, could be effected under the most favorable conditions. The summit to be got over or the difference of level between the two places is about 725 ft. There would only be 2 bridges at all costly, those of the rivers des Prairies & St. Maurice.

"From Bout de l'Isle to the river Mastigouche, about 50 miles, there would be only the water-power obtained by damming the river L'Assomption for producing electricity by hydraulic power; but the Mastigouche, whose rapids & cascades could develop considerable motive power, there are the falls of the river a la Chienne, one 200 ft., the other 75 ft. high. the rapids of the Pabelognang & of the Vermillion, whose course is nothing but a series of cascades & falls; beyond the St. Maurice are the falls of the river Trenche, 6 miles from its mouth; those of the river Croche, & those of the river Ouaitchouaniche, which fall into Lake St. John at Roberval village. Finally, from the Mastigouche, 200 miles, water-powers capable of supplying an electric railway are not at greater distance from one another than 25 miles, so that there is no place where the current would have to be transmitted more than 25 miles.

"The traffic supplied by the paper mills would suffice to assure the success of such a railway, but there will also be many other sources, as it would serve to supply the great lumbering establishments on the Upper St. Maurice. It would likewise develop the settlements in the valley of the Mattawan, especially in the rich & fertile territory between the rivers Trenche & Croche, where there are nearly a million acres of the best farming lands, with a climate more favorable for farming operations than that of the neighborhood of Three Rivers."

Birmingham Tramways Company.

Jas. Ross, of Montreal, presided at the annual meeting in Birmingham, Apl. 5. The re-

port showed an available balance of £49,979, & recommended a dividend on the ordinary shares of 5%, while £33,686 was to be carried to reserve for depreciation of assets, redemption of debentures, & general purposes. In moving the adoption of the report Mr. Ross said that during the year large increases had been made in wages, & considerable had been expended on rolling stock, yet the net results were most satisfactory, & for the first part of this year there was a substantial increase in earnings. The property was in excellent condition, & improvements were being made continually. No progress had been made in arriving at a settlement of the difficulties with the City Corporation, which body had recently adopted a report in favor of the municipalization of the tramways. The Co. was formed in 1896 upon a resolution passed by the Council agreeing to give it 21 years' lease of the tramways, & he still relied upon the good faith of the Corporation & people of Birmingham to see that the Co. received fair treatment. The directors were at all times ready & willing to deal with the Corporation on the basis of any arrangement that would leave the Co. in as good a financial position as it was now in. He had hoped long before now to have taken part in a work of great public benefit by substituting a convenient & rapid electric service for the cumbersome & antiquated steam trams that ran in the streets of Birmingham.

H. Buckley, in seconding the resolution, said the Co. carried over 36,000,000 people last year. A resolution was adopted approving of the payment of dividends at the rate of 5% per year on the preference & ordinary shares. The retiring directors, J. Ross & H. Buckley, were re-elected.

H. Smith, in acknowledging the re-election of his firm as auditors, congratulated the shareholders upon the wise financial policy which the directors had marked out, by setting aside what they had done as provision

towards the repayment of capital. There had recently been letters in the Birmingham newspapers referring to some imaginary risk of the return of the capital when the leases fell in. Looking at the matter on the supposition that no further negotiations took place, & that the leases did fall in, he considered the course taken by the directors was the wisest they could take. At Dec. 31st last there was close upon £200,000 of what might be called cash assets in the bank & on deposit. The first leases did not fall in for about 8 years, & if the directors continued to put aside profits at the rate they had done it would mean an addition, leaving out the accumulation of interest, of between £200,000 & £250,000. So that by the time the first leases expired they would have over £400,000 cash assets, which was practically sufficient to provide for the repayment of debentures & more than half of the preference shares. They would retain for 5 years more certain other leases, which included the cable route, the most valuable of all, so that when those leases expired they would have another £200,000 roughly, which would more than provide for the remainder of the preference shares, & leave a very considerable sum for the repayment of the ordinary share capital. In addition to that, there were assets which would not fall to the Corporation, such as equipment, horses, cars, buildings, & outside lines.

Cuban Electric Railway Co.

E. Hanson, Montreal, writes: "The Company is now organized, the directors being A. F. Gault, E. Hanson, W. M. Doull & F. Paul, of Montreal; W. D. Matthews, of Toronto; B. F. Pearson, of Halifax, N.S.; Col. G. B. M. Harvey, of New York; P. Farquhar, of New York & Havana & Mr. Melvin, of New Jersey. F. S. Pearson, of New York, Consulting Engineer of the Metropolitan Traction Co., is the Chief Engineer of the Co., & under his supervision plans have been made for electrifying the railway belonging to the Co., which runs from Regla to Guanabacoa & through each of these two towns. We expect to have the work completed by Aug. 1, when we shall have the first electric cars in the Island of Cuba. As the steam railways of Havana are in a very dilapidated & fifth-rate condition, & as our line will be thoroughly equipped with heavy rails & the newest pattern cars, bright & airy, we have no doubt that we shall control the large suburban business at present done by the United Railways Co. as well as our own, & the Co., we think, may confidently look forward to a very successful future. The Co. also owns what is known as the Regla Ferry, running from Havana to Regla, & there connecting its electric line, & in connection with this ferry the Co. also owns first-class wharf property in Havana as well as in Regla, which is very useful as also very valuable."

SUMMER CAR, MONTREAL STREET RAILWAY.

The Gorge Route.—Work was started early in April to clear the track of the Niagara Falls & Lewiston R.R., but several more falls of rock occurred, some of them consisting of thousands of tons, & the work was abandoned. It is not expected that the line will be operated again this year.

A Newfoundland Electric Railway.—R. G. Reid, of Montreal, proprietor of the Newfoundland Ry., is about to build an electric railway in St. John's, Nfld. Power will be generated 8 miles from the city. Orders have been placed for cars, apparatus, plant, etc., & it is expected the line will be completed this year.

The Maritime Electrical Association met in Halifax April 18, when a number of interesting & valuable papers were read, one of which will be found in full on page 157 of this issue. The following officers were elected: President, F. A. Huntress, Halifax; Vice-President, P. R. Colpitt, Halifax; Sec.-Treas., R. T. Mackeen, Halifax; Executive Committee, H. Brown, St. John, N.B.; J. Eddington, Moncton, N.B.; J. A. Weddell, Charlottetown, P.E.I.; S. G. Chambers, Truro, N.S.; W. Pickles, I. Smith, J. A. Anderson & F. A. Hamilton, Halifax.

TELEGRAPHS & CABLES.

The G. N. W. Company's Defence.

Our Jan. issue, page 29, gave very full particulars of the suit to annul the agreement of 1881, by which the G.N.W.T. Co. assumed the control and operation for 97 years of the lines of the Montreal Telegraph Co., at a yearly rental of \$165,000. The plaintiffs are H. M. Morrow & W. A. Clark, jun., of Boston, Mass., who, as holders of 750 shares of the G. N. W., claim that the Co. had no power to enter into such an agreement, nor had the Western Union Telegraph Co. power to guarantee the rental, as it really did. The plaintiffs say the G. N. W. is in reality the Western Union, & that H. P. Dwight, who holds most of the G. N. W. shares & is President of the Co., is really an agent of the Western Union. They further say that the agreement in dispute is "an attempt by a foreign corporation, through possession of the majority stock of the G. N. W., to exercise & use the statutory powers & franchise of that Co. solely in their own interests; an attempted misuse & abuse of statutory powers & franchises."

In its statement of defence recently filed in the Ontario High Court the G.N.W. insists upon the validity of the agreement & the power of the Western Union to guarantee the rental thereunder. It says the agreement was made in the interest of all parties, & has for over 17 years been faithfully carried out.

Another paragraph of the statement of defence says:—"The holder of the shares now alleged to be held by the plaintiffs at the time of the entering into the agreement was Erastus Wiman, who was one of the most active shareholders in procuring the assent of the

companies to the agreement. The shares were used to vote upon, & by them the agreement was entered into. This defendant (the G.N.W.) submits such shares cannot now be used for the purpose of invalidating the same agreement, & that the plaintiffs are disentitled from using them for such purpose."

The other parties to the defence, the Montreal & Western Union companies, & Mr. Dwight, should the court consider him a co-defendant, set up the same pleas, with one or two additions. The Montreal Co. adds that even if the agreement, when it was made, was not strictly within the powers of the companies concerned, it was executed in good faith, & has been acted upon & carried out for nearly 20 years by the companies; that since then new rights & interests have arisen. For instance, the stock of the Montreal Co. has been purchased, & is now held as an investment, & the Co. says that the court should not interfere with the vested rights of innocent holders of such stock, but protect them.

The G.N.W. says the amalgamation was necessary to end the injurious competition that previously existed, & was advantageous to all parties. It also states that the dividends paid by the G.N.W. after the agreement was made were very high. Then, as the statement of defence relates, other telegraph lines came into existence, followed by a season of financial depression. It is added that but for the guarantee it would have been necessary to call upon the shareholders of the G.N.W. to make good the rental in arrear to the W.U. And that had not the shareholders of the G.N.W. insisted on receiving the \$325,000 as profits on their stock, there would have been ample to have paid a reasonable dividend of 6%, & also to have discharged the total liability guaranteed & paid by the W.U. But the prospects, it is said, are that the Co.'s earnings will be sufficient within a reasonable time to discharge the indebtedness to the W.U., & then pay reasonable dividends.

The G.N.W. also submits that if, for any reason, the court should hold the agreement of 1881 to be invalid, that the plaintiffs should be compelled to repay the large sums of money received by them as shareholders under the agreement, in order that the accounts, as between the G.N.W. & the W.U. may be adjusted.

The case will be heard at the next assizes.

C.P.R. Company's Telegraph.

Offices closed—Acadia Iron Mines, N.S.; Bass River, N.S.; Economy, N.S.; Five Islands, N.S.; Highland Village, N.S.; Mount Rose, N.S.; Port-au-Pique, N.S.; Shakespear, Ont.; Woodslee, Ont.; Seguin Falls, Ont.

New offices—Camp McKinney, B. C.; Columbia, B.C.; Fort Steele, B.C.; Moyelle, B.C.; Angus, Que.; Bishops Crossing, Que.; Hall's Stream, Que.; High Forest, Que.; Marbleton, Que.; Randboro, Quebec; Sawyerville, Que.; Hull Station, Que.

Since the Front St. fire, which badly damaged the C.P.R. wires, the various lines have been carried into the Toronto office by cables from the street poles. The protection against heavy electric light, or electric railway currents has been altered by substituting fuse wires for the electro magnetic breakers which have been in use for some years.

The first floor of the Burns & Murray building in Halifax, N.S., which was purchased by the Provincial Government a short time ago, has undergone a great transformation, & is now one of the finest office floors in the Dominion. The entrance on Hollis street, as well as the whole interior, is finished in American quartered oak, all panelled. The steps from the vestibule are of marble, & the floor is tiled in a pretty design of brown, grey & white. The ceiling is a neatly designed metal one. A hallway leads from the entrance in the centre to the stairways in the rear, & on either side are the telegraph & cable offices. The Commercial Cable Co.'s office is situated in the northwest corner, to the left of the entrance, & has oak counters the same as the other departments. The whole of the remainder of the north side of the floor is occupied by the C.P.R. telegraph offices, splendidly lighted from the windows on the Cheapside end of the building, while opposite, the south half of the floor is occupied by the Halifax & Bermuda Cable Co. The recorder & transmitter of the cable offices, & the operators' tables in the C.P.R. rooms are in view over the wide counters. The C.P.R. has always used a duplex wire to Montreal. To this equipment it is now adding quadruplex instruments, which make it possible at the same time, on one wire, to send 4 messages—2 simultaneously each way. All the operators in the C.P.R. office are expert typewriters, & the tables have been arranged for the use of either the pen or typewriter. In the rear of the respective operating rooms are the private offices of the Superintendent of the Cable Co., & the Manager of the C.P.R. Telegraphs. A portion of the basement floor is fitted up for the batteries, of which there are 500 cells of the gravity type. Adjoining this is the messengers' room. Another portion of this floor is used for the testing apparatus, etc., of the Cable Co. The wiring of the office was done by F. T. Jennings, Inspector of the Eastern Division C.P.R. Telegraphs, & is a very neat piece of work. Cables were used throughout. The new quarters are splendidly situated, are well lighted, airy & attractive, & by combining the three companies in what is practically one room, the interchange of business is greatly facilitated. The upper floors of the building are to be fitted up for Government offices.

At the annual convention of the Brotherhood of Railroad Telegraphers, which opens at Peoria, Ill., May 12, the C.P.R. telegraphers will have 9 representatives, & the G.T.R. 5. This will be the first time the G.T.R. men have been represented.

The Mail Job Printing Co.
 THE RECOGNIZED LEADING... LIMITED
RAILROAD AND STEAMSHIP PRINTING
 HOUSE OF CANADA
 FOR ESTIMATES AND SAMPLES, ADDRESS
 RICHARD SOUTHAM, MANAGER, TORONTO

To the Land of Sunshine.

Take the Sunshine Route from Chicago to Los Angeles, San Francisco and other points in California, and escape the rigors of winter in the East and North.

Pullman Tourist Cars for first and second class passengers leave Chicago every Saturday at 2 o'clock p.m. via the Chicago, Milwaukee and St. Paul Railway to Kansas City, thence to California via the Atchison, Topeka and Santa Fe Railway—a real Sunshine Route.

This is the earliest afternoon train leaving Chicago for the West after arrival of morning trains from the East, thus avoiding tedious delay.

The Sunshine Route is essentially the best and most patronized through car-line for men, women and children. Every attention paid to the needs of passengers en route.

Send for a Sunshine Route time-table folder. It costs nothing.

Address A. J. Taylor, Canadian Passenger Agent, 8 King Street E., Toronto, Ont.

BURN

E. B. EDDY'S

MATCHES

Great Northwestern Telegraph Co.

Offices have been opened at Burketon, Ont., & Les Ecureuils, Que. The office at St. Scholastique, Que., has been closed.

An elevator is being installed in the Co.'s office in Montreal, where a number of handsome suites have recently been fitted up & are under lease to two or three steamship lines.

The Co. has appealed against the municipal tax on its poles in Quebec city, on the ground that the by-law imposing the tax is ultra vires, the corporation having no power to pass it.

The proposed extension of the Northern Pacific Ry. in Manitoba, over which the G. N. W. has exclusive working arrangements, will open up for the Co. some new territory, embracing several places of considerable importance west of Portage la Prairie. The telegraph line along the Souris River branch has been completed, & some half dozen places have been given telegraphic communication for the first time.

The wiring in the Head Office, Toronto, is being re-organized. At present all wires come in through the tower on top of the building & are brought from there through grooved boards to the switch. The change now being made is doing away entirely with the tower & grooved boards, the wires being brought in directly back of the switch where all lightning arrestors & other protectors against foreign currents will be placed.

The officials are congratulating themselves on the success of their service between Eastern Canada & Vancouver & Victoria, B.C. The time made on mining quotations between Toronto & Vancouver recently has been a feat of which they claim to be justly proud. Toronto mining quotations are being got through & delivered in Vancouver inside of 10 minutes, a service which they say it would be only possible to surpass on a direct wire between these points, which does not exist. The business of the Company between Eastern Canada & Vancouver is said to be making rapid strides.

The Commercial Cable Co.'s report for 1898 states that the net traffic earnings from cables & land lines increased \$107,409.83 over 1897. Out of the balance to the credit of revenue account there has been set aside \$350,000 as an addition to the reserve, & also \$100,000 to the fund for the insurance of stations, apparatus & repair steamer, & these sums will be invested in first-class securities. The reserve now amounts to \$3,037,103.43, & the insurance fund to \$200,000. During the year there have been issued \$2,000,000 4% 1st mortgage bonds. The proceeds have been partly expended in acquiring the property of the Pacific Postal Telegraph-Cable Co., & further extensions of land lines, thereby adding to the Co.'s land line system 3,449 miles of poles, 12,841 miles of wire, & 468 offices. After providing for all operating expenses & reserves, the balance of net revenue, including the amount brought forward from 1897, amounts to \$1,908,758.83, out of which have been paid interest on bonds & debenture stock \$704,296.48, & dividends & bonus on capital stock, \$800,000, leaving a balance of \$404,462.35, to be carried forward to the present year.

The Yukon Telegraph. It is said the telegraph construction party sent out by the Dominion Government has lost no time in getting to work on the line from Lake Bennett to Dawson, Yukon. At the end of April the poles were cut down as far as White Horse, & the wire will very soon be strung to Cariboo Crossing. Two camps are operating, one from Bennett, & one from Cariboo Crossing, but as soon as the lake & rivers open, the construction corps will be divided into three parts, the men living on camp scows, which will drop down the river, keeping abreast of the work. The materials & supplies will be delivered on scows. It is expected the line will be completed this year.

D. C. Corbin, of Spokane, Wash., D. Ross, of Greenwood, B.C., & others have a bill before the Dominion Parliament to incorporate the Northern Telegraph Co., with a capital of \$50,000 & head office at Greenwood. Power is asked to construct & operate lines in Yale & East & West Kootenay.

The Northern Commercial Telegraph Co. is applying to the Dominion Parliament for an Act amending its charter by providing that the majority of its directors need not be resident in Canada; that branch lines built by it shall not exceed 70 miles in length; & to increase its capital stock; & for other purposes.

Mr. Carter, an old time Canadian operator, tells an interesting story of his work with Edison 25 years ago. The two were working at Stratford, Ont., where Edison was station telegraph operator. There was a mistake in some order, & a collision was narrowly averted. Edison, in consequence, had to face the Superintendent at the old Union Station, Toronto, who rated him roundly for his "criminal carelessness." It was more than the young genius could stand, & quietly exclaiming that he had had enough, Edison slipped on his coat & then severed his connection with the Co. A short time ago Mr. Carter visited Edison at Jersey City, & the two laughed over the Stratford episode.—Canadian Electrical News.

A New York despatch of Apl. 26 says:—"The record for long distance practical telegraphing was broken yesterday by the Associated Press on its regular system of wires, leased from the Western Union Telegraph Co. A continuous circuit of 6,000 miles, reaching from New York city to the Pacific coast, & from Chicago to New Orleans, touching Philadelphia, Pittsburg, Cincinnati, Atlanta, Memphis, St. Louis, & Kansas City, Omaha, Denver, San Francisco & all the larger intermediate points south & west, was successfully worked for several hours. There were 41 operators copying from a sender in New York with newspapers being served directly from this one circuit in 38 of the leading cities of the U.S. Longer circuits have been worked for short periods, but as far as known yesterday's record has never been equalled considering the number of operators copying, the number of newspapers served, & the territory covered by the circuit."

TELEPHONE MATTERS.

Long Distance Transmission.

By J. H. Winfield, Eastern Superintendent
N. S. Telephone Co., New Glasgow, N.S.

Long distance work is every day becoming a more important factor in the telephone business, & toll lines, instead of (as a few years ago) being regarded as mere accessories to the city exchanges, are now recognized as absolute necessities. We are talking over longer distances almost every month. A few years ago 500 miles was considered quite a feat, to-day we have conversations carried on over 1,000 miles of wire with perfect ease. In view of this it may not be amiss to speak of a few of the difficulties that are encountered in the design, construction & operation of these long lines.

The apparatus used in making a toll line connection may be divided into three parts: 1. the line; 2. the instruments; 3. the switching apparatus. The chief factor in extending the talking limit, has been the improvement in the line. Grounded circuits of iron wire are now practically obsolete, the recognized standard being a metallic circuit of hard drawn copper wire, generally no. 10 B. & S., weighing 170 lbs to the mile, but sometimes for short distances of no. 12, weighing about 104 lbs to the mile. The New York & Chicago line is constructed of wire, weigh-

ing 435 lbs to the mile, but that is an exceptional case.

In speaking of the line I shall confine myself to the electrical rather than the mechanical difficulties that have been met with and overcome. Our object is to so construct the line & arrange the apparatus, that the sounds at the receiving end shall possess the following characteristics: loudness or volume; clearness; quality. Of these three clearness is by far the most important, for a faint sound, if clear, is perfectly intelligible, & a change in quality may only have the effect of disguising to some extent the speaker's voice. Volume is affected by any conditions which alter the amplitude of the wave.

Clearness is affected by any conditions which alter the position of the waves in regard to each other. Quality is affected by any conditions which alter the form of the wave. Therefore, the volume is reduced by resistance, leakage, static induction, & self-induction, the effect of these properties being to reduce the amplitude of the wave.

Clearness is reduced by static induction, & self-induction, these tending to alter the inter-relations of the waves; static induction causing a rounding off of the top of the wave, thereby involving a loss of sharpness, & both static induction & self-induction produce an unequal retardation of phase for vibrations of different periods, thus causing interference & a resulting deformed wave. In other words, the telephone current being an alternating current of a frequency varying from 200 to 1,500 periods a second, according to the sound produced, static induction & self-induction produce a greater retardation on the waves of high frequency than on the lower ones, thus mixing up the waves to some extent, & rendering the speech muffled.

Quality is changed by all the properties which reduce the clearness, & by self-induction in another sense as well, this effect of self-induction being to reduce the amplitude of the overtone waves to a greater extent than of waves of a longer period.

Evidently then, in order to accomplish good telephonic transmission of speech we must make the self-induction & electro static capacity of our line & apparatus as low as possible, resistance & leakage being of less importance, though of course they should not be lost sight of. A small & well distributed leakage is often an advantage, as it allows the static charges to escape, clearing the line & to some extent neutralizing the effect of capacity, the slight loss in volume being more than counter-balanced by the gain in clearness. When iron wire is used there is a much further deformation of the waves than is caused by the increased resistance, due to the fact, the wire is circularly magnetized & this magnetism has to be reversed twice in every vibration. There is also a considerable increase in self-induction due to the magnetic properties of the metal.

The self-induction of a copper metallic circuit of no. 10 or 12 wire is very small, but the self-induction of the apparatus which always forms part of a telephone circuit is sometimes very high & has a considerable effect on the current. Long distance lines would be particularly liable to disturbance from cross-talk if no means were taken to prevent it. There are two cases in which cross-talk will not be produced on a metallic circuit by a neighboring wire. The first is when the disturbing wire is at an equal distance from each of the wires of the metallic circuit. Were it always possible to string wires in this manner, there would be no trouble from cross-talk; but a little consideration will show that this is only possible for two circuits. The second method is known as transposing. The two wires of the metallic circuit are transposed at regular distances, or, in other words, they change places, A changing to the pin B was on & B going to the pin A was on, the effect being to

Benefits given by the I.O.F.

- 1.—Social and Fraternal Privileges of the Court Room.
- 2.—Free Medical Attendance by Court Physician where not dispensed with by Court by-law; also trained nurses in certain cases.
- 3.—A Sick Benefit of \$3 to \$5 per week, subject to provisions of the Constitution and Laws of the Order; optional, and when taken cos's extra.
- 4.—A Total and Permanent Disability Benefit of one-half of face value of policy, with exemption from further payment of premiums or Court Dues.
- 5.—An Old Age Benefit consisting of exemption from payment of premiums and Court dues after age 70.
- 6.—An Old Age Disability Benefit of one-tenth of face value of policy payable yearly for ten years, on being declared totally and permanently disabled by infirmities of age after the seventieth birthday.
- 7.—An Old Age Pension payable during disability, which may be taken as a substitute for the Old Age Disability Benefit.
- 8.—A Burial Benefit of \$100 at death of a Pensioner.
- 9.—A Funeral Benefit of \$50 at death of a member enrolled in Sick and Funeral Benefit Department.
- 10.—The Mortuary Benefit of \$500, \$1,000, \$2,000, \$3,000, \$4,000 or \$5,000.

The Members, the Benefits, and Their Assurance

At 31st December Each Year.

Year.	Total Membership.	Benefits Paid.	Total Surplus.	Surplus per Capita.	Death Rate per 1,000.
1881	1,019	\$ 1,300 00	\$ 4,568 55	\$ 4 48	4.50
1882	1,134	12,058 86	2,967 93	2 61	11.00

Or Any Officer or Member of the Order.

place each wire of the circuit at an average distance from the disturbing wire or wires. As the number of wires on a pole increases, the difficulty of planning the transpositions increases also. With two circuits it is an easy matter; if, however, we have a third & transpose it, the same as we did the second, there will be cross-talk from the second to the third, because their relations to each other are the same as if there had been no transpositions at all. To get over this difficulty we must transpose the third twice as often as we did the second. A fourth circuit may be transposed at the middle points of the third, & so on. It has not been found necessary to transpose each circuit so that the induction currents are exactly balanced, & it is possible to use the same transpositions for every second cross-arm, so that the 1st, 3rd & 5th are alike, also the 2nd, 4th & 6th. Transpositions are usually placed half a mile or a mile apart.

There has been very little change in the instruments in the past few years. The transmitter usually used is of the Hunnin's type, & is known as the solid back; it does its work remarkably well. Some of them require a little attention now & then on account of the packing of the carbon granules, but a judicious tap generally puts matters to rights. The ringer magnets of the call bells should be wound to a resistance of 1,000 ohms on long spools, bringing the wire close to the core, & thus giving them a high co-efficient of self-induction, which effectually prevents any shunting of the high frequency telephone, while allowing the ringing current to pass freely, the ringers being bridged across the circuit.

In order to connect a metallic circuit to a grounded line, what is known as a repeating coil or transformer must be used, otherwise the balance of the circuit would be destroyed and the line would become noisy. This piece of apparatus is nothing more than a specially made induction coil, the metallic circuit being connected to the primary & the grounded line to the secondary, the other end of the secondary being put to ground. In connecting together two metallic circuits through an intermediate office, the connections should be so arranged that the lines are directly connected, & the two transformers cut out; otherwise, as a transformer only has an efficiency of from 85 to 90%, there would be a serious loss in volume.

All apparatus at intermediate stations should be bridged across the lines & the parts that are permanently in connection should have a high self-induction in order to avoid shunting the telephone current when the line is being used to stations farther on. Ring off drops should be wound to 1,000 ohms resistance & also bridged. It is a good plan to use a tubular drop, as it not only increases the self-induction, but it also tends to prevent cross talk between the coils themselves, which is a frequent cause of disturbance and often not suspected.

Long distance lines should always be well equipped with protective devices. The best form for protection from lightning consists of two carbon blocks, separated by a thin sheet of perforated mica, one block being connected to line & the other to ground. These have proved very efficient & when properly installed generally prevent any damage to instruments or transformers. They also prove useful in another respect, as the static changes seem to find their way across from one plate to the other, clearing the line to a great extent. Many lines could be improved by a judicious use of these protectors at different points such as the way stations. A fuse is also generally inserted in order to prevent the entrance of heavy currents which might otherwise do considerable damage, when, as sometimes happens, an electric light or power wire comes in contact with the circuit.

In regard to the operation of toll lines, long

distance telephony is much more expensive than telegraphy, as may easily be seen when we consider that a single iron telegraph wire can easily transmit 40 messages an hour & when duplexed the number is doubled; whereas in the telephone work we have to use 2 wires & they must be of copper instead of iron, and even then under the best conditions it is hard to get more than 7 or 8 messages through in an hour. Add to this the fact that the sender of the message is aware of every minute of delay, & is usually very impatient when he has to wait a few minutes for the line, where in sending a telegram he just hands it in at the office & thinks no more about it even though the message may not be sent for half an hour or longer; & it is easily seen that not only must the telephone message cost more than a telegram, but the lines are apt to be choked with business during a few hours in the middle of the day & comparatively idle the rest of the time. A great deal can be done by keeping the subscribers posted in reference to the hours when the lines are rushed, & very often they can so arrange their business so that it will not come in the rush hours. They would thus save themselves the annoyance of having to wait for a connection & the lines would be worked more steadily.

The foregoing paper was read at a recent meeting of the Maritime Electrical Association in Halifax. In the discussion which followed Mr. Hamilton expressed surprise that telephone communication between cars on trains had not become more popular. Mr. Freeman stated that telephones were used for that purpose in Pennsylvania.

The Bell Telephone Company.

In the Ontario Divisional Court, May 3, in the case of *Bonn vs. Bell Tel. Co.*, Judges Boyd & Robertson gave judgment on motion by defendant to set aside verdict & judgment for plaintiffs in action for damages for injuries sustained by them, caused by the buggy in which they were driving coming in contact with a telephone pole planted in Main St., Wallaceburg, 14 ft. from the south limit of the street & leaving a passage way on the north of 22 ft. The Erie & Huron Ry. Co. had procured authority from the corporation to run its line over the town streets & subsequently made an agreement with defendant to use its wires, the defendant on its part to keep the poles in order, the pole, the cause of the accident, being placed there by it, the former one placed by the railway having worn out. Defendant contended that the pole was not an obstruction of the highway. The jury found that the public right was sensibly interfered with by the pole being placed where it was, & that it formed a place of danger, owing to the proximity of the railway track, which laterally encroached on a great part of the street. Held that the defendant had no right to use the streets without legislative sanction, either directly or indirectly, though the action of properly authorized municipal bodies & the right of the public was to have the whole width of the roadway preserved free from obstructions, & it is not confined to that part which is used as the *via trita*. The effect of Canadian legislation is to legalize the obstruction created by the poles so far that they cannot be abated or complained of as a public nuisance, but the defendant may be liable for particular injury to a traveller if the obstruction is found to be dangerous, as in this case. Motion dismissed with costs.

Wm. Quinn, of Lindsay, has been appointed Manager of the Co.'s branches at Port Hope & Cobourg, Ont.

The Co. has decided to place its wires on Main St. & Portage Avenue, Winnipeg, under ground, as asphalt pavements are to be laid shortly.

Underground conduit cables & wires are

being placed in a number of additional streets in Toronto. Similar work is being done in Hamilton.
